 into that rich and low cadence which seems like the
 whispering voice of the one we love—then suddenly
 bursting forth its notes, harsh and loud, yet still pleas-
 ing, like those of a rich harp-string, rise higher and
 higher, until our fancy tells us 'tis the shriek of some
 poor wretch that's wandering houseless in the storm.

Hark, what a blast was there! The timbers of the
 old house in which I sit, still creak with the shock, and
 the pen seems almost to tremble in my hand. No sine-
 cure, king Æolus, hast thou, if thy charge be to restrain
 such unruly spirits as are now roaming over the face of
 the earth! Where art thou now? Are the keys of
 thine office resigned in despair, or art thou, unmindful
 of thy duty, revelling with thy compeers in the realms
 below? Methinks 'twere reasonable, at least, for thee
 to have turned the bolt on those restless sons of the air,
 ere thou startedst to have shaken the birchen wand
 about their ears, and warned them of the penalty for
 blowing up such a breeze.

Listen again! There goes the whistle of old Boreas,
 as his signal to his cousins the zephyrs; and now, away
 they go, frisking and frolicking over hill and dale, with
 all the freshness and life and animation of a boarding-
 school miss or a sophomore in vacation. 'Tis pleasant
 to listen to them ~~scampering away~~—now snapping their
 fingers in delight at their freedom—now cheering each
 other on in the game—and now, joining ranks, present
 the semblance of a fight; but soon, with spirits far too
 buoyant, break through all restraints, and like our own
 valiant militia, kicking up their heels, vow to fight on
 no one's hook but on their own.

Yes, reader, it is pleasant to listen to such music as I
 have attempted to describe; but, believe me, it is won-
 derfully improved by an accompaniment. To be en-
 joyed in perfection, it must be listened to by the noisy
 crackling of a hickory fire, such as now blazes on the
 hearth before me—one that goes roaring up the wide-
 mouthed chimney, and diffuses so complete an air of
 cheerfulness around. Brightly it burns, and beautifully
 too; but, no matter, take the poker and stir up once
 more that glowing bed of coals, and see the army of
 sparks, bright and shining, that, like spirits, start up at
 the touch! Ah, there now is a generous warmth that
 penetrates even to one's heart, and seems to render him
 kindly disposed toward every living being. Alas! for
 those who now lack such comforts as a cheerful home
 and a glowing fire.

Hush! what was that? It sounded like the voice of
 one in distress—but no, 'twas merely the moaning of
 the wind, as it swept furiously by. Yet stay—there it
 is again: "Let me in; let me in!"

"Yes, friend, you shall come in;" and I hastened to
 the door, but it opened on nought but a roaring wind,
 and drifting clouds. I hastily closed the door, for the
 evening air was keenly cold, and had returned to my
 seat beside the fire, when again the plaintive cry, "Oh,
 take me in, take me in!" was heard.

"'Tis singular!" said I, as I walked to the window,
 and again looked forth on the landscape. The sha-
 dows of the clouds, as they passed over the face of the
 moon, were flitting rapidly across the fields—now and
 then some distant window-shutter, blown by the wind,
 slammed heavily, and a venerable thermometer, that

hung just without the window, grated nervously against the side of the house.

"Can there be any one exposed to the cold to night?" murmured I.

"To be sure there can. Why, in thunder, don't you let me in?" was the answer. I started and looked something like "nine ways at once," but said nothing.

"Ugh, you rascal—hav'n't you any bowels of compassion for me, eh?"

"Yes, friend, and if you'll just give me a glimpse of your bowels, you shall come in."

"Well then, here I am."

"Yes, but *where*?"

"Where! why *here*;" you can't see, eh? Well you shall *hear* at least;" and a blast of wind dashed one end of my thermometer furiously against the window, making the room ring with the report.

"Whew! the deuce! Is that you, my old friend? Verily you *shall* come in;" and I raised the sash, and lifted the old fellow from off the hook on which he hung.

"A pretty stiff breeze out, to night," said I, to start the conversation.

"Stiff!" rejoined he; "well, I don't know as to that: but I know I'm tolerably stiff. Can't you get me a little nearer the fire, eh? That looks like a passably comfortable berth, there, beside the poker. My dear fellow, (to the poker,) could you possibly make a little room there for me?"

The poker growled a little at being so unceremoniously dislodged from its comfortable quarters, but to console it, I thrust one end under the fore-stick, and, resting the other against the fender, allowed it to swell and expand at its leisure.

"Well, now this is what I call *life*," observed the Thermometer from his resting place, after having shaken the frost from his locks, and indulged in some twenty or thirty yawns. "Some difference between this and shivering out there in the cold."

"I'm glad you like the change," I observed.

"Like it!" retorted he. "Egad, you just go and hang there forty years, as I have done, and see if you wouldn't like a good fire afterwards."

"Forty years! oh, you're joking," said I.

"No joke at all," he replied warmly; "at least, I hav'n't found it so, but a most serious and solemn fact, upon the honor of a Thermometer."

"A complete quiz!" observed the Poker contemptuously, from his station under the fore-stick; "why, I'm only twenty-five years old."

"None of your impertinence, there!" cried the Thermometer, rapidly rising in warmth.

"You be blowed!" said the Poker coolly.

"Scoundrel, rascal, liar!" screamed the Thermometer. "I do defy thee for a false knave."

"Would you fork the old chap?" said the Poker to me.

"Aye, do it if you dare," continued the Thermometer; "I'm a match for a dozen of you! so come on, old Brazen-Face!"

Up sprung the Poker, and hard struggled the Thermometer to descend from his elevation. "Here, friend," he cried to me, "just unhook me, will you? And whilst you're about it, just turn that screw in the back of my neck—it's a trifle too tight."

I did so, when lo, out leaped the old fellow from his rusty case, and, seizing a pair of dividers that lay on

the table, he brandished them over his head, and yelled forth a fierce defiance to his antagonist. The Poker, nothing daunted, courageously seized the snuffers and bid him 'come on, if he dare!' Then, pale with rage and indignation, became the Thermometer as he advanced to the attack.

Direful was the combat. Brightly flashed the fire from their clashing steel, but still more brightly flashed the fire from their fiercely sparkling eyes! All creation was in an agony of expectation, as now the Poker drove the Thermometer across the room, and then again was obliged to fly in his turn.

"*Habet!* a hit, a hit!" cried old Virgil, from his leathern case on the table, as a well-aimed thrust seemed about to pin the Poker against the wall. "*Minime!*" said Sallust, as by a sudden turn of the body the blow was dexterously avoided.

"*Nunc surgite remis!*" solemnly cried Milton, in a deep tone encouraging them both.

"Pooh, what old fool of a pedant is that?" contemptuously sneered Virgil, imagining he saw '*soft sawder*' in the quotation.

And now were the combatants waxing weary—the Poker, pale with fatigue, and the Thermometer some ten degrees, at least, 'below Jehu'—when the former, in his distress, shrieked out for aid to his friends the Penates, who, at the cry, came rushing on, in flocks innumerable. Alas, now, for the Thermometer! But no! great Jove himself, beholding from high Olympus the fearful odds, forthwith despatched Mercury to his aid, who, in himself a host, came thundering down, and, at one sweep of his potent wand, sent some three score of the *Dii minores*, packing off to the realms of Pluto! The rest stood aghast with terror, which, when the Thermometer saw, he concentrated all his strength into one terrible blow, and leaping on his antagonist, felled him to the ground!

As sometimes on the Appalachian Chain, some mighty gum-tree, monarch of the woods, rent by the lightnings of Heaven, falls heavily to the ground! the earth is shaken to its centre, and the unlucky travellers that are cracking stalactites in Wier's Cave, frightened at the sound, fly for safety to its mouth! so did all the earth tremble at the fall of our friend the Poker, and so did the rats and mice run *howling* to their coverts, terrified at the shock and at the roar of applause which followed.

"Now, old fellow, I reckon you've got it," said the Thermometer, as he stood above his fallen foe; "confess or die!"

"Well, what shall I confess?" said the Poker.

"Why, first, that I'm the most valiant and doughty warrior on earth."

"I'll see you in Guinea, first!" interrupted the Poker.

"Well, then," said the Thermometer, "if your conscience won't permit you to do that, retract your assertion that I have not witnessed two-score revolutions of the sun."

"With the greatest pleasure," gasped the Poker.

"And acknowledge that I *have* witnessed them."

"Yes!"

"Or *ten times* two-score!"

"Zounds! fix the matter any way you like it," said the Poker, "only, for Heaven's sake, let me up!"

"Up with you, then!" said the Thermometer, and

the poor crest-fallen Poker slowly rose and shook off the cinders that had gathered on him.

"*Quos Deus vult perdere,*" &c., muttered he. "A consummate fool was I, to cross weapons with such an infernally vitreous, transparent character as that! A streak of light! pooh, a streak of light were a barn-door target, compared to him. I might as well have tried to pin down my own shadow, or raise a breeze from my consumptive friend the Bellows, as expect to have succeeded in the attempt. Yet I showed myself no coward, I trust!"

I paid the compliment which I saw was expected, and then turned to the Thermometer, who was stalking backward and forwards across the room, evidently much elated at his success.

"Pretty fairly done, taking all things into consideration," said I to him.

"Oh, a trifle—a mere trifle!" he replied, in a tone that showed he thought it any thing *but* a trifle. "When I was of your age, such a bout was a thing of almost every half-hour's occurrence. But that was a long while ago; yes, yes, long enough!"

"Then the valiant Sir Poker was wrong in supposing your remark a quiz?"

"A quiz? do I understand you?" and he grasped the dividers.

"Oh, your pardon, sir! I wouldn't wish to intimate any doubt of the fact *myself*; but you know!"

"Yes, I know—I know! Hark you, my young friend! I've taken a particular sort of a fancy to you, for sundry reasons; but don't presume too far! I wear a sword!"

"Ha, ha! that's a good one!" laughed I.

"A good one! eh? Excuse me, my dear sir, but I must take the liberty to tweak your nose, for that last remark."

"The deuce you must!" echoed I.

"In the politest manner imaginable, of course," said he, and he leaped up and tugged away at the aforesaid article, until I saw double, and roared for mercy most lustily.

"Egad, you're a screamer!" I remarked, as he let go his hold, half a mind to kick him out of the window for his impertinence.

"Oh, I beg of you, *keep* the compliment," he replied; "it's needed at home."

"I never resent a hint," said I.

"No, nor a pull of the nose—Ha, ha! pretty good!"

"I can't see the pith of it," I rejoined.

"Very possible, very possible! However, my friend, this is not very profitable conversation—suppose we change the subject. I rapped at your window, this evening, partly because you looked so consummately comfortable here—partly to ask a favor—partly for the sake of giving you a little advice, and partly to deposite in your hands my last will and testament. You smile, my young friend, but it's no smiling matter, I can assure you. Yes," continued he solemnly, and pausing at the end of every sentence—"I feel it—I'm fast going—and soon will this world know me no more. I sometimes tremble, when I reflect how the world will get along without me—and then I partly doubt whether I shall be permitted to depart at all. But Moses and Solomon, Julius Cæsar, Alexander, and other great men, have died, and they say the world turns on its axis about as

often as it did during their lives—though I'm inclined to doubt it myself. However, if *they* died, I suppose I must go too. Well, well, *Ilum fuit*—Troy fell. It's hard for those that survive—but, my young friend, you must learn wisdom from experience. Quickly will the few more years, that I have to spend on earth, have sped—let me then hasten to perform my duty!"

"Really, my dear sir," interrupted I, "you must have lived long, and must have a tolerably lengthy message to deliver, if two or three years won't allow you to jog on at your leisure. Pray, sir, if I may be so bold, when, where, and in whose company, did your optics first open on this world of corruption?"

"You're right, my friend—it *is* a world of corruption. But to answer your question, which, as it was asked in a spirit of meekness and humiliation, I take pleasure in answering—"Know then," said he, "and, my friend, expand not your eyes to the saucer size, as you drink in the knowledge, that I date my birth from the 14th of November, A. D. 1638, O. S. I was fashioned, sir, by the hands of the immortal OTTO GUERICKE, than whom a greater or better man never lived. I must ask your pardon, perhaps, for speaking with so much warmth of this man—but I have seen many persons in my life; I have been honored with the inspection of GALILEO and DES CARTES; I have hung in the chamber of NEWTON, and afterwards conversed with LA PLACE; I have been consulted by your own FRANKLIN and JEFFERSON; by the latter for many a long year—all these have I seen and heard, yet still, my veneration and respect for the plain, unpretending philosopher of Germany, has never decreased."

"Really, sir!" said I, "you have been quite a traveler in your day."

"You may well say that, my friend. I have seen much, heard much, and, I trust, reflected more. Ah, sir, if I chose, I could many a tale unfold—but, pshaw! I see the moon peeping around the corner, and soon she will be gazing full upon my station. Excuse me, sir, but I must leave you for the evening."

"Oh don't go—it's not late," I cried.

"True enough," he replied; "but what, think you, would the world say, if, after having faithfully performed my duty for two centuries, I should be found wanting at the eleventh hour? And as for skulking, when Madam the Moon mounts guard, let me tell you, sir, the idea's an absurdity. Besides—confound the jade!—she's one of the most complete gossips that ever reflected on the doings of this world—she plays the very deuce with the character of an old fellow like me, if she can once pick a flaw in it! So, good night! Just hang me once more on my old stand. Gently—gently! for I'm growing old. There, that'll answer—now leave me. Good night to you again—keep cool until we meet once more, and many a pleasant dream to you meanwhile!"

"And many pleasant dreams to you!" thought I, as I tumbled into my couch; "though, according to my way of thinking, old fellow, I stand the fairest chance for them."

And, reader, the same to you, sleeping or waking, until we meet again, which, if so be that we part mutually pleased, I trust will be ere long.

Baltimore, March, 1839.

E. R. M.

FROM MY NOOK IN THE NORTHERN NECK.

MR. WHITE: Did'st ever visit this most interesting portion of the Ancient Dominion? This land, if not "of the myrtle and vine," yet, of aristocratic ruins and crumbling shrines—where in days gone-by, the princely halls resounded with music and revelry, and where still Virginian hospitality delights to linger. If thou hast not, leave the Messenger to the printer's devil, and join me in a pilgrimage to the monuments of our olden time.

Let us visit each hall and bower,
Once bright and gay, now wrapt in gloom;
Explore each shrine and mouldering tower,
And muse in silence o'er each tomb.

Where'er we turn, on ev'ry hand
We find some time-worn object nigh,
And crumbling ruins round us stand,
To tell us "all is vanity."

Behold yon venerable pile;—
Its massive walls still loth to yield:
Stern Time hath spared it yet a while
To frown o'er that deserted field.

'Time was, the eye of beauty glanc'd
Delighted through its lovely bow'rs;
And sportive children lightly danc'd,
Like fairy sprites, among its flow'rs.

And often, with the rosy morn,
The huntsman issuing from its court,
O'er hill and dale, with hound and horn,
Pursued in eager joy his sport.

Here too, in silent closet sate,
The austere statesman, and resolv'd
Things of vast import, and the fate
Of nations in his mind revolv'd.

Where now are they? forever gone!
Each in his turn hath past away:
Old Hall, thou dost survive alone,
In mock'ry o'er their swift decay.

Thy offices, raz'd to the ground;
Thy terraced walks, thy garden-wall,
In hopeless ruin strew'd around,
Thou seest, and still surviv'st them all.

Proud old Hall, thy haughty bearing
Reminds us of some stalwart knight,
Who, the brunt of battle daring,
Beholds his sons hew'd down in fight.

Full soon, tho' strong in ev'ry part,
Thou too shalt totter to thy fall:
Nor height nor strength, nor human art,
Can save thee—proud and dark old Hall.

And see! without a fence to check
The intruding beasts,—its aisles o'ertrod
By filthy swine—there stands the wreck
Of what was once the house of God.

Sacred ruin! how sad thy fate!
Time was, thy grandeur form'd the theme
Of ev'ry tongue—now o'er thy state,
Foul desecration reigns supreme.

The wheeling bat, and hooting owl,
Usurp the echoes of thy roof—
Thy font is gone, thy altar's foul,
Thy floor's the prey of ev'ry hoof.

No more thy sacred walls shall hear
The sound of solemn pray'r and praise:
No more shall priest or flock appear,
And here "their cheerful voices raise."

Would that alone, of all thy kind,
Thou wert thus to contumely given;
Then might we hope some plea to find,
To avert the wrath deserv'd of Heav'n.

But ah! throughout this happy land,
How oft do all, thy fellow see,
Despoiled by man's unholy hand,
Defil'd, decay'd, destroy'd like thee!

We turn now to another scene:
From this hill, in yon field, afar
Reflecting bright the harvest's sheen,
Seest thou that mound?—a tomb is there—

A patriot's tomb;—there lies interred
All that decay has spar'd of Lee:
Whom "list'ning senates" raptur'd heard,
Bid proud Columbia rise, be free!

Approach, and view this hallow'd spot,
Profan'd and trodden by a slave!
See, those who pass have long forgot
They move upon a statesman's grave.

Th' encircling wall destroy'd—he lies,
With nought to bar the cattle's tread;
The burden'd slave, with labor plies
His task above the patriot's head.

Virginia!—'tis a lasting shame
That thus thy noble son should lie,
Like some dull clown, unknown to fame,
Or wretch deep-dy'd in felony.

Columns, in other lands attest,
The conqu'ring hero's bloody deeds—
With trophies wrung from worlds oppress'd,
His vanity the tyrant feeds,

And rears some gorgeous monument,
Proof of towns and cities blasted,
Of blood and gold in conquests spent,
Of nations by ambition wasted.

But thou! no mark hast rais'd to show,
Thy thanks to them who did the deed,
That sav'd thee from the tyrant's blow,
And left thy soil forever freed.

Peace to thy shade, illustrious Lee!
Thy country lives, to sound thy fame;
That country falls, no longer free,
When she forgets thy glorious name.

"*Aut insanit homo,*" &c. &c. say you. I beg pardon, sir, most humbly—but really the fit was upon me, and despite my efforts to avoid it, I have committed—shall I say poetry?—no! prose run mad. Well, "what is writ is writ," and you must take it for better for worse, if at all. I commenced this paper with the intention to give you a sketch of some of the most interesting relics of antiquity, with which I have met on a tour through the Northern Neck; but having already occupied more space than falls to the lot of such a rambler, I must content myself with condensing my sketches into notes, to the annexed rhymes.

1st. The mansion alluded to, is Nominy Hall in the county of Westmoreland, the ruined seat of a branch of the Carter family. 'Tis a gloomy old castle of the *Udolpho* style—dark and grey, abounding with corridors and closets, winding stairs and trap doors. It is almost a ruin. Nothing is left but the Hall itself: the offices, laid out on a grand scale, have long since been levelled with the ground; and the materials of what was once the pride of the Carters, are now to be traced in many a hovel, in the shape of "chimney backs" and hearth stones, or, "patching a wall to expel the winter's flaw." The avenue from the northern gateway, composed of fine old native poplars, still remains. But 'tis said, the people of these parts have a mortal aversion to fine spreading trees; which under the horrible name of "shadders," they extirpate in the most cruel manner: sometimes by slaying them outright; sometimes by the slow torture of *belting*, and lastly and most shockingly, by lopping off every limb and branch, leaving the poor tree standing like a maimed beggar on the road side, an object of commiseration to every passer-by. How often have I seen a royal oak—the lapse of ages chronicled in its trunk; the lofty and wide-spread grandeur of which were enough, one would think, to fright the assassin from his purpose—how often have I seen such a tree, destroyed for no offence, save that it stood on the border of some poverty-stricken field, and cast the shade of its branches over some bumpkin's "nubbins." Our noble avenue stands in this dangerous juxtaposition, and we may expect soon to see this last relic of the taste and grandeur of the "Counsellor" Carter, pass away, and the place shall know it no more forever.

2nd. The church of which the ruin is deplored, is Pope's creek church, in the same county. This noble edifice is now reduced to a heap of bricks and mortar. One or two of the arches in the front wall are yet standing, and exhibit a beauty of material and workmanship, seldom equalled now-a-days. It is one of those fine old Episcopal churches, the melancholy ruins of which meet the eye throughout lower Virginia. A few are yet standing in good order, and are used by congregations returning "to the old paths." The spoliation of the others is a lasting stigma upon all who aided in it. The particular church of which we are speaking lies almost in sight of the birthplace of Washington.

3d. The grave of Richard Henry Lee, lies in an open field, as described in the stanzas. The ingratitude of republics is a proverb; and we, as a nation, have done nothing to avert the charge from us. What has America done to reward her warriors and statesmen? What monuments commemorate their heroic resistance of tyranny, their sufferings and their triumphs? A few tardy pension acts, and the "leg pieces" in the capitol at

Washington, are all the tributes their worth has received. We cannot complain, however, that the lesser glories of Lee and Henry, of Hancock and Adams, are not illustrated as they should be, when we remember that no National Monument has yet been erected to the man who was "first in war, first in peace, first in the hearts of his countrymen!"

R. O.

LETTER FROM MALTA.

A Visit to the Church Yards of Malta—Epitaphs—Monument to Sir H. Hotham—Tombs of deceased Americans.

"The yellow leaves went whispering by,—
Each in its passage seemed to say,
Companion, learn of us to die,—
We go the self-same way."

As a stranger passes through the narrow gateway, by which the Protestant dead are carried to their long homes, he will observe, in the first ground, a small grove of the evergreen cypress—the trees which, of all others, have in such places a grave appearance, and are in accordance with the thoughts of those who sometimes shun the crowded city to ramble and ruminate among the tombs of the English fathers of Valletta. Our only way of entrance was by scaling a wall, which we, with much difficulty, effected. Landing on a marble tablet, it unfortunately gave way under our feet, and lamed one of our party so seriously, that he did not for weeks recover. Leaving our disabled friend seated on the broken marble, we entered a narrow pathway, which skirted around the ground, and through which we found some difficulty in making our way, encumbered as it was with the rank weeds of many a long year's growth. We were all strangers in an English burial place—and as we leaned over a splendid monument, which, placed at the head of the principal avenue, first drew our attention, we noticed, that if there had been a difference of rank in life, there was none in death—for here were the remains of a colonel, and in a line with him was the humble stone which marked the resting place of his bugler, and of some twenty of the rank and file of his regiment. Seeking the grove of cypresses, we found ourselves within a small enclosure, in the centre of which stood four small marble tombs, all of the same size and shape—erected by fond parents to the memory of their departed infants. A few days after their birth they were gathered "to smell sweet, and blossom in the dust," and though of different families, they had all died about the self-same time. How applicable to this melancholy spot are the beautifully plaintive lines of Mrs. Hemans:

"There have been sweet singing voices
In your walks, that now are still—
There are seats left void in your earthly homes,
Which none again may fill."

It has been customary with the Levantines for centuries, on the decease of a relative or friend, to plant near his grave a cypress tree—a custom which we would most willingly see introduced among christian nations.

Who, as a traveller, has ever been at Smyrna, and not visited those beautifully shaded, secluded, and melancholy plots of earth, which border on the classic shores of the ancient Meles?—and who has not admired the site for a burial place, covered, as it now is, with the evergreen cypress and weeping willows, thickly planted among the avenues of the dead? The grave yards of Malta might, from the soil and climate, with but little labor, be made gardens of flowers—while at this day they are but enclosures, as it were, of broken grave stones, half sunken tombs, and dilapidated monuments. There is, however, an excuse for their being in this condition, which we most freely give. Valletta is but a garrison town, and the regiments which are sent from England to this Island remain but two years, and are then ordered to the Ionian Islands—the relatives, (if any there are,) of those who have died within this brief period, immediately leave, the vacancy is filled, and the departed forgotten.

One of the most chaste and classical monuments which we observed in this ground, was of white marble—and as he whose remains it covered, was one of a nation—so it stood, and towered alone. As we approached, the stars engraven upon it, but too well told, even before we were sufficiently near to read the inscription, that it was to the memory of a countryman. Some days after our visit, we heard that it was erected by the present Greek consul, Thomas McGill, over the remains of H. G. R*****, of New York, who died at this Island in October, 1811. The beautiful design is as honorable to the one who planned it, as the monument is worthy, as far as frail marble can make it so, to record the virtues of him who tarries beneath:

“Tarry I here, I but attend on death—
But fly I hence, I fly away from life.”

The shaft was, not long since, broken by some idle lads, whom I would name, did not their youth in a measure excuse them. We had it repaired, and it may remain for another score of years, unless overturned by thoughtless boys, or despoiled by older rogues, who at this Island rob the Protestant tombs to sell the broken marble.

While seeking the second ground, which lies in another bastion farther to the south, we hoped that as the burials had been more recent, the tombs would not be found so much neglected—we were, however, in error, as every thing we saw but plainly showed, that if the hand of Time had been busy, that of mortals had proved far more destructive. On entering, encircled as we were with bushes, brambles and weeds, we could not but observe that a different arrangement had been made for the laying out of this yard, inasmuch as all the expensive monuments were to the right by themselves—while the humbler head stones covered the area and left of the yard. This may have occurred by chance, although it savors of aristocracy, even in these habitations of the dead. Most of the tombs were to the military; while now and then we observed one which had been erected to a traveller, merchant, or officer of the navy.

It would seem that the English, of all people in the world, were most fond of inscriptions and grave-yard epitaphs;—we read some which had been well selected from the Bible, and appropriately taken from the

Psalms—but many of those which were original “offended wofully against grammar, taste, common sense and religion: This is not a fault in Malta only, for in England it prevails to a much greater degree.” Go with what solemn thoughts one may, into these grounds, it is with no little difficulty he will be able to refrain from smiling while reading some of the doggerel lines, which almost at every step will meet his eye. We give the following, which are passable as compositions. The three first are inscriptions to the memory of soldiers of the 80th regiment:

“The king of kings a warrant sealed,
And sent it out by Death—
And charged him to serve the same
Upon my feeble breath.”

“Every tear is wiped away,
Sighs no more shall heave his breast,
Night is lost in endless day,
Sorrow in eternal rest.”

“Rejoice for a brother deceased—
Our loss is his infinite gain;
A soul's out of prison released,
And freed from its bodily pain.”

On the plain head stone to Mrs. T****, the wife of an American missionary, we saw the following lines:

“Thank God, he gives me the victory
Through the hand of Jesus Christ.”

From a tablet of black marble, placed over a distinguished poet, we extracted the following beautiful lines, translated from the Italian—as true as they are poetical:

“The past! what is it but a gleam?
Which memory faintly throws;
The future! 'tis the fairy dream,
That hope and fear compose.

The present! is the lightning glance,
That comes and disappears;
Thus life is but a moment's trance,
Of memories, hopes and fears.”

When we entered the cemetery, which is now being filled, we could not but be gratified on observing the decided improvement which has been recently made in the laying out of this small ground—and of the care which was taken, by men hired for the purpose, in rolling the paths, (beautifully hedged as they are with geraniums,) watering the plants, trimming the cypresses, and guarding the tombs. Several splendid monuments are to be met with in this yard—two of which we will name—that erected to the memory of the late rear admiral Sir H. Hotham, who died in 1833, in command of the English Mediterranean fleet—and the one built by the Hon. Mr. Frere, over his departed wife.

Serving, as the harbor of Valletta has, for the last few years, as winter quarters to the English fleet, this ground is in a measure occupied by those who were in the naval service of their country. From a few inscriptions which we have copied, it would appear that the epitaphs on the tombs of seamen, are as curious as those which were taken from the head stones of soldiers. In

every instance the monuments were placed by the crews of the ships to which the deceased belonged. We took the following lines from a marble:

To a seaman of the Revenge 74, who died in 1835.

"Though Boreas' blasts and Neptune's waves,
Have tossed me to and fro;
Yet I at last, by God's decree,
Doth harbor here below;

Where at anchor I do rest,
With many of the fleet—
In hope once more to rise again,
My Saviour Christ to meet."

To one of the crew of the "Caledonia," 120—who was killed by a fall from the rigging, while engaged in sending down the top-gallant yards at sunset:

"When I was called unto my duty,
I fearless went aloft;
But Him, that spares neither youth or beauty,
Was pleased to call me off.

My nerveless grasp gave up its strength,
And I was forced to fall—
But who can tell thy mercy's length?
For thou art Lord of all."

On a monument, to a seaman of the Rodney, 80, found murdered, was this extract from Job:

"O, earth! cover not thou my blood."

Even in this small congregation of the dead, we passed a sculptured stone to the memory of a young American.

Malta, July 31st, 1838.

THE DESULTORY SPECULATOR.

NO. IV.

SKETCHES.

The 25th Congress of the United States has at last closed its labors and its existence. Of the good or evil it has done, I shall not speak; but of some of those who formed it, it may not be uninteresting to give a few brief sketches, for the benefit of such of your readers as may not have enjoyed the pleasure of witnessing their parliamentary efforts. I begin with

R. H. MENEFEE.

This gentleman was a representative from Kentucky, and first took his seat in Congress at the extra session in 1837. During that session he made his *debut* on the floor of the House, on the sub-treasury bill. It was a masterly effort and established his reputation as a parliamentary orator. It satisfied both parties of the superiority of his mind, and the rank he was likely to hold in the body to which he belonged. His fame had not preceded him, and his first effort was as unexpected as it was astonishing. Mr. Menefee does not appear to

be more than thirty years of age; in person, he is tall, lean and meager; his hair is light, but worn very thick over his head, which is finely moulded, though he is far from being handsome; his face is narrow and long—his mouth unusually wide, and his eyes grey, but full of expression. The distinguishing features of his mind are acuteness, strength, clearness, and fertility. He marshals his arguments with much skill, and enforces them with great subtlety and power. He has not the imagination or fertility of Prentiss, of whom I shall speak presently; but he has more strength, and equal power of analysis. His reasoning is logical, but not dry, and his topics are selected and his arguments arranged with great perspicuity and skill. There is great vigor in his style—his figures are usually strong and appropriate, but sometimes too low. His elocution, though not rapid, is easy, his sarcasm extremely bitter and mordant, and his declamation often rises to splendor. I never saw a person of his age so calm and collected, when addressing such a body, as he appears to be. He stands self-poised and unmoved by the gaze of the House, and generally fixes his keen and sparkling eye on the member he is answering, without addressing himself to the Speaker. In the famous philippic he delivered a few weeks before the close of the last session, on a resolution introduced by Mr. Prentiss, to expel from the House a member, who had published an offensive article in the *Globe*, he kept his eye so steadily fixed on his victim, and rolled out his denunciations with such biting and terrible effect, that after writhing for some time in apparent agony, and unable any longer to endure the torture to which he was subjected, he started up once or twice to call Mr. Menefee to order, because he was looking at him instead of the Speaker. Mr. Menefee's manner is always earnest and impressive. He seldom or never indulges in the humorous, and is more of the philosopher than the wit. As an orator, he is not at all artificial—he neither studies his attitudes nor his action; both appear to be natural and appropriate. His voice wants melody of intonation, and descends from the higher to the lower tones too rapidly for effect; while his cadences are sometimes lost in indistinctness. Mr. Menefee's talents are such as to beget the belief, that he will attain to high distinction in public life, should he devote himself exclusively to it; and become as eminent and useful, as a statesman, as he now is distinguished as a public speaker.

The compeer of Mr. Menefee in oratory, is the highly talented member from Virginia,

HENRY A. WISE.

This gentleman, though an older member, is not an older man than the representative from Kentucky. In person, they bear a considerable resemblance to each other. They are both lean and almost fleshless—looking like persons in a consumption. Mr. Wise is not quite so tall, nor his hair quite so light as that of Mr. Menefee; but his features are more regular, and his eye more expressive and eloquent. Mr. Wise wants the Shaksperian pile of forehead; but he has great intensity of feeling, which compensates, in some degree, for the deficiency in the imaginative faculty. Mr. Wise's mind is quick and comprehensive; he seizes upon the weak

points of his opponent's argument, with great facility, and turns them against him with much skill and ability. He depends mainly upon the native powers of his intellect, which has not been very highly cultivated or disciplined. He has not devoted much of his time, probably from the necessity of early action, to the acquisition of knowledge, but his mind is perhaps more vigorous and acute than it would have been, if it had been more polished and enriched with other men's thoughts. He thinks for himself, and thinks deeply. His thoughts, though not often magnificent or beautiful, are nevertheless original and striking. As a satyrist, he has not the delicacy, point and polish of the orator of Roanoke, but he has more vigor and intensity of indignation. He feels deeply, and pours out the overflowings of his indignation in "words that burn," and in language which bears the strong coloring of his feelings. Those feelings are lofty, honorable and delicate, but excitable. His soul seems to loathe and spurn all that is mean or dishonorable in human action. His hatred of vice and political dishonesty and profligacy is innate, and he deals out his denunciations against those he believes to be guilty, whether elevated or humble, with indignant and bitter eloquence. His victim shivers and writhes beneath his lash. He is bold, fearless and independent, and throws out his shafts without regard to the elevated rank which those he aims at may hold in the world. His love of country is intense and ardent, and he looks upon all whose conduct endangers its liberties or tends to cover its character with dishonor, as his enemies, whom it is his duty to expose and denounce. There is, however, the greatest possible difference between Mr. Wise on the floor of the House, and Mr. Wise in the private circle. A stranger would scarcely believe them to be the same individual. While addressing the body of which he is a member, he often seems to be animated by a species of fury, or by some strong and uncontrollable passion—his eyebrows lower, his eyes sparkle with indignation, and his whole countenance and action indicate the most violent mental agitation; while surrounded by his friends, and even among strangers, he is mild, affable and humorous, producing laughter by his *bon mots* and jokes, and laughing himself at the jokes, wit or anecdotes of others. He has a good deal of the irritability of genius, but it is seldom displayed, except in the hall of legislation. In the domestic circle, he is kind, tender and affectionate, and in private, affable and even playful among those with whom he is intimately acquainted. Since his first appearance among the representatives of the nation, he has undergone a considerable change. He is, I think, less intemperate and violent in his manner and feelings, and has more staidness and dignity, but not less energy and vehemence. Every one listens to him with interest, when he addresses the House, because every one is pleased with excitement. Mr. Wise's talents, ardent feelings and boldness of character have given him a high rank in the House of Representatives; but he is *fortunæ majoris honos, erectus et acer*. Though young, he is an expert and able debater—always prepared to attack or defend, as the case may require, and never sparing his opponent, either in the offensive or defensive. He wields the battle axe and mace, and leaves the small sword and spear to those whose ardor is less intense or whose indignation is more controllable.

When Mr. Wise first appeared in the House, some ten years ago, it was thought from his voice and manner, that he was an imitator of John Randolph; but it was soon perceived that he was an original, and afterwards ascertained that he had never seen his supposed model, the great eccentric of Roanoke. "None but himself can be his parallel." He stands alone, often unsupported, and boldly and manfully breasts the fury of party rage, and treats with scorn the denunciations of the minions of power. He has great nerve as well as sensibility, and his fearlessness and independence command the respect even of those who are opposed to him in political opinion and who believe him to be wrong. Like all men of strong feelings, he is generous as well as brave, and he would as readily weep over the misfortunes of a prostrate enemy as over those of a beloved friend. The following short extract from a speech of his, recently delivered in the House of Representatives, will give not only an idea of his temper and the nature of his feelings, but of the style of his eloquence:

"Is it not egregiously unjust," says he, speaking of the conduct of the House to him in relation to the duel between Mr. Graves and Mr. Cilley, in which he was concerned as a second, "that any judge should pursue this course? I demand a trial. Come when it may I will expose the guilty. The most guilty were the very busiest in arraigning me—the most hypocritical in the hue and cry after the most innocent in that transaction. Put me on trial, and I will then drag from their seats here, and in the other House, the real culprits—the very wretches who instigated that duel—who wept crocodile tears over the bier of poor Cilley, and who got up excitement, the most loathsome, for no end whatever of religion or morality, but for the vilest of political purposes—wretches, who would have dragged the corpse of the victim of their machinations from Washington to Maine, with his heels to a chariot and his head upon the flinty rock, if it would have served the sinister and infamous designs of a party. He (Mr. Gray of New York) says the Speaker himself has been denounced as a supple tool of the Executive. Yes, the Speaker has been told to his face worse than that. You and I know, Mr. Speaker, what I said: Whenever I had been arraigned I would have given the reasons why I took the Speaker by the arm, as he was leaving that chair, and said to him—'You are the petty tool of a tyrant.' Did I mean merely to insult him? No, no—the Speaker was not my man. No, I discharged a high and solemn duty—I defend the freedom of debate and the forms intended to preserve it. When I found the Executive presiding *every where*—when I found the President sitting *there*, (pointing to the chair,) as well as upon the throne in the White House—overstepping the constitutional walls of partition between the co-ordinate departments of the government—encroaching by silent corruption upon the province of this House—I spoke out as Brutus did in Rome, or as Sidney would in England—I will speak or die on all such occasions. When I see the daring or insidious invasion of the freedom and independence of legislation attempted, I will denounce the invader, and denounce the principle of invasion. Why? Because I love the government and prefer its preservation for my children, better than I love any man who breathes. I forget persons, am heedless of

personalities in the struggle to maintain our institutions. I am responsible always, personally and legally, for the language I employ. I bow to the law and the judgment of my peers."

Mr. Wise always speaks what his feelings, rather than his judgment dictate, and seems to take a pride in "calling things by their right names"—which, as a speaker, gives to what he says the effect of sincerity, though it sometimes indicates a want of taste. His style is vigorous, but not polished—his elocution impressive and easy—his action appropriate and not ungraceful—and his voice, clear and distinct, and would always be audible, if he did not sometimes let it fall too suddenly below the proper pitch, at the close of a sentence. As a patriot, a parliamentary speaker, and a legislator, I know of no man of his age in this country who can be ranked as his equal. Though apparently feeble in health, he is nevertheless indefatigable in the discharge of his duties, and untiring and ceaseless in his efforts to accomplish what he believes to be conducive to the glory and prosperity of his country. Such a man should always be in the councils of the nation.

Not less eloquent, but less ambitious of parliamentary distinction, is the man he is proud to call his friend—

S. S. PRENTISS.

This gentleman made his first appearance at the bar of the House, during the extra session of the twenty-fifth Congress, in support of his right to a seat in that body as a representative from Mississippi. On that occasion he spoke for three days, with a force of reasoning, a rapidity and beauty of elocution, and a splendor of declamation, that astonished all who had the pleasure of hearing him. Mr. Prentiss is small in stature, and has a lameness in one of his legs, which compels him to resort to the use of a staff, on which he rests his deformed limb when he moves—he is, however, said to possess uncommon strength of body, and to have great vigor of muscle. His head is large and out of proportion to the rest of his frame—his features are good, and his countenance, though not what would be called handsome, is not ugly. He is said to be a native of Maine, and commenced life, like most of our distinguished men, in poverty. He taught school, while quite young, in Mississippi, to which he had removed to seek his fortune; afterwards studied law, and soon became eminent at the bar, where he acquired both reputation and wealth. He appears to be about thirty years of age. Mr. Prentiss has all the elements of the orator in him; his mind possesses great fertility and expansiveness; it is logical, imaginative, sarcastic and humorous. The faculties of judgment, imagination, memory and taste, are equally prominent and always exercised, when he speaks. After a laborious train of reasoning, in which he shows his strength as a logician, his hearer is astonished at some apt and felicitous illustration, drawn from history, poetry, philosophy, or romance, which he calls up by the power of memory, and apparently without an effort of the will. His early reading seems to have been confined to the sacred volume of inspiration, with which he is perfectly familiar, and from which most of his illustrations are taken, which are always happy and striking. He has the faculty, moreover, of gliding rapidly from grave to gay, from

the impassionate to the humorous; and from the declamatory to the coolest and most philosophical reasoning. His imagination furnishes him with the finest images, his invention with the strongest arguments, his judgment with the most logical application and most lucid arrangement of them, and his memory with a great variety of incidents and facts, which he has treasured up in the course of his reading and observation, and which he can call up with singular felicity, and apply with great effect. Mr. Prentiss possesses genius, as well as talent; his thoughts are poetical and often beautiful, but always under the control of good taste. His reading seems to have been more among the imaginative than the philosophical lights of the world, and he has read more for amusement than for the acquisition of knowledge. His mind is more excursive than profound—it delights more in the romance than the realities of life, and takes greater pleasure in reposing in the Idalian bowers with Homer, than in communing in the groves of Academus with Plato. His diction is sometimes very splendid, and his elocution singularly fluent, rolling along without hesitation and almost without a pause. His touches of humor and wit are excellent, and his sarcasm exceedingly pungent—sometimes putting the House in a roar of laughter, and at others exciting it to an almost irrepressible burst of indignation. His voice is, however, defective, and his cadences are not always harmonious or pleasing to the ear, and his action is too uniform for grace. Had he the inclination, he would be an admirable debater, but he prefers his own ease to the exertion which eminence as a debater requires. He is, however, more of an orator than a debater. His mind is too rich, affluent, and imaginative for the latter; and he likes to exert his intellectual energies, only when it can be done with effect, and when a sense of duty or the love of fame impels him to the effort. It is to be regretted, that he should find the great political arena of Congress so little suited to his taste, or so hostile to his interests, as to induce him to withdraw from the councils of the nation, and to return again to a profession from which he derives more wealth, if not so much fame, as from the career of legislation, which he has just abandoned, and in which he is so well fitted to excel.

I shall conclude these hasty sketches with that of

OGDEN HOFFMAN.

This gentleman, like Mr. Menefee, made his first appearance in Congress, at the extra session in 1837, as a representative of the city of New York. His reputation as an advocate had preceded him, and he soon had an opportunity of displaying his talents in a new sphere and a wider field than any to which he had before been accustomed. Every one who heard him on that occasion, was not only delighted, but astonished at the power of his eloquence and the splendor of his declamation. It was in the finest style of parliamentary oratory, and had not been surpassed for many years in the House. Mr. Hoffman's mind is imaginative and elegant, and his memory appears to be rich in the lore of history, upon the treasures of which he draws with great success, and from which he borrows his finest illustrations. His style is courteous, polished, innate, and sometimes beautiful. His reasoning is never dry,

his argument never tedious. Imagination casts over the workings of his mind a perpetual charm, and strews with the richest flowers, the path his judgment may select. The ear is delighted, and the fancy pleased, while the reason is satisfied. He is a man of genius; his temperament is ardent and his mind poetical. The creations of his fancy, as he rolls along, are often gorgeous and beautiful; he uses no vulgarisms, no low allusions, no trite or common-place illustrations; and his thoughts and images, if not always original, are presented in such a form, and surrounded with such drapery, as to possess the charm of originality. In the highest and most difficult range of eloquence, I mean the pathetic, I should judge that Mr. Hoffman would excel. There is something in the mellow and plaintive tones of his voice, in the excitability of his imagination, and in the nature of his feelings, that must give him great power, while addressing himself to the sympathies and passions of his hearers, and which must render him, on such occasions, almost omnipotent before a jury. His style is rich in rhetorical ornament—perhaps too much so, for classical simplicity; and he employs the “dazzling force of argument,” with great effect. In person, Mr. Hoffman is about the middle size, and his body well proportioned. His complexion is fair and ruddy, his eye blue and indicative of genius, and when he smiles, his countenance looks sunny and assumes the most pleasing expression. His voice is soft and musical, and his intonations are well modulated though somewhat monotonous. His cadences fall upon the ear with the softness of music, and the tones are pleasing even when the meaning is lost. His attitudes and gesticulation are graceful and appropriate, and his elocution unstudied, impressive and fascinating. His style and manner are more parliamentary than forensic; but notwithstanding his acknowledged talents, I fear his habits are too indolent to enable him to retain, though he has reached, a high rank as an eloquent debater, in a body organised like the House of Representatives. He but seldom addresses the House, but when he does, he is always listened to with pleasure; and if he does not always convince, he never fails to please.

Washington City, 1839.

G. W.

SPRING.

The Spring! the Spring is coming,
And the birds are singing gaily;
The busy bees are humming,
And the buds are bursting daily.

The Mockingbird, with his lively song,
And his voice so shrill and clear,
Is heard on my chimney all night long,
In this season of the year.

The Red bird, with his plumage gay,
And the gentle cooing Dove—
The Robin, and the pretty Jay,
To their mates are making love.

The meadows, with their vernal green,
And streamlets running clear,
And buds that everywhere are seen,
Announce that spring is near.

The pretty lambs, that sporting play,
O'er fields both far and near,
Almost seem themselves to say
The charming Spring is here. W*****.

THEORY OF ANIMAL MAGNETISM.

1. Article—“Animal Magnetism”—*Rees' Encyclopedia*.
2. Col. Stone's Pamphlet.

There are few figures to be found among all the treasures of imagery, contained in sacred or profane writings, more strikingly appropriate or more happily adapted to present at one view to the imagination, a clear and living picture of their object, than that which represents human society under the emblem of a sea. The several states of feverish activity and death like torpor, of mad excitement and stupid insensibility, of wild rejoicing and bitter sorrow, ever incident to social life, are the source of ideas closely related to those suggested by the ocean's agitations and commotions; by its hoarse roar, its low mutter, its winds and waves, its calms and tempests. Hence, this relation has been abundantly resorted to, both by inspired and uninspired writers, for illustration and embellishment, and has been the origin of many gems of comparison and metaphor. Indeed, so common is this association of idea, that the ‘sea of life’ is an expression no longer confined within the circle of poetic thought and writing, but has become stereotyped in the more common intercourse of men.

The winds, from which the storms and agitations of this sea originate, are many and various—of different strength, and of different duration. As the waters of the natural sea need the ordinary motion of waves to prevent the stagnation necessarily resulting from constant calms, so the social sea is kept from the decay and corruption consequent upon unvarying quiescence, by the waves of activity and exertion and enterprise, produced by the winds of change and accident. These are in general of so moderate and equable a nature as to serve only to enliven society, and to give an interest to its circumstances and relations. Indeed, they are, to a certain extent, necessary to prevent the dead calm of moral and intellectual stagnation—to impart that life and vigor to the human mind, so essential to the healthful exercise of its faculties. Were man a being exposed to no change—were his moral and physical constitution such, as to prevent him from being diverted from a certain fixed routine of feeling and action, either by the internal workings of his own mind, or by

the influence of external incident—were one day of his life the exact counterpart of another, it requires but little foresight to see that he would of necessity be a degenerating being. All experience goes to show that human excellence, whether moral, intellectual, or physical, must depend for its origin and enhancement upon change, excitement and exigency. Some disturbing agency then is necessary to the animation and purity of the waters of the social sea.

Sometimes, however, there are winds stirring the bosom of the ocean of life, too violent and tempestuous in their nature, to exert a salutary influence. Such are the winds of faction and discord, of war and revolution. The immediate consequences of these are, in general, fearfully destructive and blighting, but are sometimes in some degree counterbalanced by changes of an accidental and adventitious nature, which result in good, after the subsidence of the tempest. For, sometimes, like thunder storms, these convulsions decompose sickly effluvia—the noxious accumulations of centuries, and thus cleanse and purify the moral atmosphere. Sometimes they submerge by their agitation floods of ignorance, bigotry and vice, and bring up from the depths, where modesty and adversity have hid them, the fresh and sparkling waters of intelligence, liberality and virtue. Thus they act like certain volcanoes in arid and sterile countries, which, though, during the period of their eruption, they waste and bear away and overwhelm the scanty growth of the soil, throw up from their deep recesses rich and fertilizing agents, which bury the ancient surface, and thus are made to occupy in place of former barrenness, the region of vegetation.

Again, there are winds, which, like the 'trades,' are periodical in their nature—returning at distant and somewhat regular intervals. To this class belong the winds of speculation, set in motion by the sudden opening of some unoccupied avenue to wealth. These, as far as history shows, have been felt by all nations, and seem to be incidental to all civilized countries. They are, doubtless, always prejudicial, both as it regards their direct and ultimate consequences. To convince ourselves of this, let us for a moment watch the course of one storm of speculation—look at its results in each of its successive stages. The first stage is certainly the least disastrous. During its prevalence, the adventurous barks, whose sails are swelled by the strong but steady breeze, are borne along rapidly and prosperously, and may, if prudence is at the helm, reach the haven of wealth. In this period of the storm all the resulting evil consists in the undesirable general consequences of the voyage which it facilitates. The transfer of wealth produced by such voyages is, as experience shows, not conducive to the general good of the country. It is in most cases removed from where it has

been amassed by industry and care, and where, as a consequence proved by observation, it will most usefully and providently be applied, to be accumulated and enjoyed by those unpossessed of the prudence resulting from a long course of industry, and thus unfitted for its most desirable management. Speculation then, even in this its earliest and most promising stage, is an evil—its very success is prejudicial to the general good of society. Its second stage, however, presents a far darker picture. The prosperous gale rises to a tempest, and the vessels of all subsequent adventurers, multiplied and encouraged by the example of the few first successful voyagers, are dashed, shattered wrecks, upon the shore. Then follows another stage of the social disorder. For, when the ruin of its victims is accomplished, and the storm dies away, a dead calm succeeds. Confidence is destroyed; the arm of commerce is palsied; the channels of gradual and wholesome profit, resulting from regular industry, are impoverished and obstructed, and the face of society is covered with burdensome and unsightly wrecks—wrecks of fortune—wrecks of happiness, and wrecks of character. In time the dead calm too passes away. A healthful circulation again returns. Soon the convulsion is forgotten—a new wind arises, and the same scene is acted anew. This is a faithful picture of almost all speculations.

We might stop here to moot the point of christian duty in regard to the encouragement of speculation, thus proved to be an evil in all its stages; especially in regard to the propriety of taking a part personally in efforts to raise the wind, so prejudicial to the interests of society. The settlement of this question, however, in all its bearings, might well be made the topic of separate discussion, and we must now hasten to the consideration of what is more properly the subject matter of the present article. We ask pardon of the reader for wading so far through a windy exordium, before touching upon what is more legitimately before us. We trust, however, that we shall not again be blown so far leeward of our true direction.

Another example of this class of intermitting or periodical winds—the one at which we have been looking through the whole preceding course of generalization, as our ultimate object of investigation—is afforded by those systems of supernatural agency—those unexplained and apparently inexplicable mysteries, which have, in different ages, agitated the popular mind. That treated of in the papers, whose titles appear at the head of this article, (*Animal Magnetism*,) forms the most perfect and important specimen of these systems, and may serve as a type of the whole class. The history of this *delusion*—as most men are, at first view at least, inclined to consider it—is in the highest degree, striking and singular. For an age, it has been making its appearance, at distant

intervals of time and in different countries; under various names, it is true, and differing in some unessential characteristics and circumstances, but distinguished by the same general features and identified by the same fundamental peculiarities. 'La Mesmerisme' of the French, 'Die Verklarungen' of the Germans, and the 'Animal Magnetism' of our own age and country, are all members of the same natural family, possessing trifling distinctions, resulting from circumstances connected with the time and place of their birth, but sufficiently alike to be classed under the same generic division.

We have said that the first impulse of all sound and well balanced minds is to pronounce the whole thing a delusion—to pity the weak and superstitious notions of those who yield it their belief, and to stigmatize its inventors and professors as knaves and impostors. But a closer examination of some of the facts of Animal Magnetism—a deeper investigation of the foundations of their claims to belief, is calculated to shake the incredulity of the soundest judgment. And, indeed, before descending to a critical examination of the facts themselves, evidence of some reality in the case is to be derived from the general history of the system. The repeated revival at distant intervals of time, and in different nations, of one and the same mystery,—always, wherever introduced, characterised by the same distinguishing features; never varying in any important degree from one fixed routine of apparently supernatural agency,—is enough to induce a belief that an explanation is to be sought from some other source than the invention of designing men. Imposture is ever varying and changeable—inventive and constantly in search of novelties—not satisfied with appearing in the cast-off garments of a former age, but eager to shine in a new dress—to clothe itself in a disguise unknown before, and in consequence better fitted for concealment. Hence, as we conceive, the constant reappearance of this old and stereotyped system of wonders—admitting, as it would seem, of no essential change, or remodeling—may form the basis of a strong argument in favor of some origin more fixed than the ever varying conceits of the human mind.

We can by no means, it is true, admit the belief of all the facts submitted to public notice. It cannot be doubted, that sometimes, and indeed generally, the alleged exploits of the *soi disant* initiated, though gaining credit for a season by means of dexterous legerdemain and successful imposture, are finally exposed, and this exposure tends to throw disgrace and derision upon the whole matter. But then it is equally impossible to doubt that sometimes facts occur, which the keenest scrutiny of the most shrewd and judicious minds cannot explain or set aside. Persons whose honesty and integrity no one can question, have for a

time, been the possessors of the mysterious magnetic power, and this, without understanding the nature and origin of the influence they feel themselves to have, and without deriving the least advantage or profit from its exertion. We have an instance now in our mind of a man of known and established character—one who is not only a pattern of morality, but to all appearance a devoted christian, who has found that he has the power of affecting, magnetically, persons of certain temperament. The magnetization has been performed in the presence of several persons of the most unimpeachable veracity, who have attested its actual occurrence. We were originally firmly entrenched in settled disbelief of the whole system of somnambulism. We considered it so absurd—so utterly at variance with all established truth and reason, that we almost felt irritated when its merits were even honored so far as to be canvassed by men of sense and discernment. But we must confess that the instance we have just noticed, supported as it is by evidence of such a nature, as that it is more difficult to repudiate it, than to believe the facts themselves, has seriously encroached on the entrenchments of our incredulity.

The first of the papers, whose titles introduce this article, is an account, prepared for Rees' Encyclopedia of Animal Magnetism, or Mesmerism, as it existed in France and Germany about the middle of the last century. The author seems to consider the whole matter as an arrant imposition, palmed upon the community by Mesmer and his followers. Indeed, he represents Franklin and the other commissioners appointed by the French government to examine the claims of Mesmer, as having proved that the whole thing was a delusion; that in the instances in which he seemed really to have exerted a mysterious influence on those submitted to his manipulations, the imagination of the patient was to be looked to for the origin of the wonder. Now, we are very ready to admit, as we have already stated, that many cases of fraud and imposture may have been detected, and, what is more, that many surprising phenomena might have been correctly traced to the imagination, excited by disease. But is it possible to account for the general belief in the reality of the magnetic influence, which, as the writer of the paper acknowledges, prevailed for a long time throughout France and Germany, and was cherished by enlightened and learned men, without supposing that the pretensions of the system were supported by undoubted instances, of such a nature, as not to be traced either to the ordinary nervous excitement of the patient, or to the trick of the magnetizer? Indeed, the very fact of the formal appointment of commissioners by the French government to investigate the subject, shows the importance with which it had been invested in the eyes of the nation by the testimony in its favor. We freely

confess, however, that a condemnatory sentence in the case, appears at first view, so well to besit a sober judgment, that the decision of Franklin and his colleagues would have set our own mind at rest with regard to the claims of Animal Magnetism, were it not for its revival and the well authenticated evidence in its favor at the present day. Col. Stone's pamphlet affords a very good portraiture of the mystery in its modern garb. We do not adduce the account of his connection with the matter, because we look to it as our principal source of suspicion of the reality of somnambulism. Other cases have served in a much greater degree to influence our decision. But the pamphlet in question contains the only evidence in the case which has appeared in print. Other, and to us more indubitable facts, have reached us orally, and hence, though satisfactory to us, cannot be laid before the public. We would by no means rest the proof of the plausibility of Animal Magnetism on either of the papers under consideration. We would refer to them rather as sketches of the nature of the system, than as sources of absolute evidence. Indeed, as will presently appear, we write rather to suggest a reasonable method of explanation to those whose own information has led them to suspect the truth of magnetic facts, than to win over those so fortunate as still to have a store of incredulity sufficient to bear them out in charges of imposture and absurdity.

We hold it to be the part of sound wisdom and sober judgment, in relation to such subjects as that under discussion, to stand out against testimony so long as there is any reasonable ground for setting it aside, or even for distrusting it; to resist all arguments in favor of what appears so utterly inconsistent with the common course of nature, until, from the overwhelming weight of evidence, and from the clearness of demonstration based thereon, resistance is no longer a virtue; then, after clearly weighing and closely investigating all the circumstances and relations of the case, to receive so much as true as the undeniable proof embraces, and no more, and to account for and explain this truth, if indeed explanation is practicable, in such a way as shall be most consistent with reason and the sober realities of life. This is the path which we have traced out for ourselves, and which we have attempted to follow. We believe that the seats of many of those who claim the possession of the magnetic influence, are mere tricks and impositions. But then nothing is more natural than that such a system, even if of the greatest reality and importance, should be counterfeited and presented in a spurious form by knaves, either for the purpose of gain, or of exciting admiration. Were we perfectly convinced that such a thing as Animal Magnetism existed, one of our first conclusions in regard to it would be, that there would be innumerable counterfeits and imitations. The detec-

tion and exposure; therefore, of such counterfeits, can form no solid foundation for an argument against the existence of any thing genuine in the matter. From duly weighing these considerations, we are compelled, however reluctantly, to confess, that we cannot disbelieve, at least with any degree of firmness, that there have been instances of the real and *bona fide* exertion of the magnetic influence, to an extent far in advance of any thing that can be accounted for on scientific or metaphysical principles. This impression having been made upon our mind, it is, as we have already said, the part of sound reason to endeavor to think of such an explanation of the matter as shall diminish as much as possible the degree of its inconsistency with nature and common experience. This we have attempted to do, and have so far succeeded, as to arrive at conclusions, which, since they have been satisfactory in some degree to ourselves, we have supposed might be interesting and perhaps useful to others.

Let us consider in the outset what is the tendency as to advantage or injury of Animal Magnetism. Is its discovery as a true system, or, as the case may be, its invention as an imposture, prejudicial or of benefit to the public, and more particularly to the public morals? Is it one of those winds, to return to our original figure, which blow no one any good, or the contrary? The slightest consideration will, we think, decide this question. If the possessor of the magnetic power be able, as he asserts, to gain from the person under his influence, information in regard to any events which are taking place in the world, however distant or retired the place of their occurrence—if he be able to send his sleeping spy to scrutinize the private transactions and conditions of social life, it is at once evident that all secrecy is at an end. Men must live in society with the perfect consciousness that all their doings are, or may be known at any time by others. Here, then, if we go so far as to admit the claims of the somnambulist to this gift of almost unlimited *clairvoyance*, which is the last and least frequent reach of his peculiar power, we have in the outset of our examination a radical and insupportable evil—subversive of the order and well being of society, as at present constituted—nay, if we mistake not, incompatible entirely with the social relations of man. But then that should be taken into account, which has been, to our mind, one of the most fruitful sources of objection to the reality of Animal Magnetism; we mean that, though it has presented itself to public notice repeatedly, at intervals, during the last century or more, it has never at any one time been perseveringly and successfully carried out. Though at each period of its recurrence, its pretensions have been supported and the public attention secured by single and isolated instances of the exertion of the mys-

terious influence, the reality of which has defied all scrutiny to render it doubtful, yet the possession of this influence has never become at all universal—has never been found in more than one or two individuals—and has never been retained for any length of time even by these—has soon been lost by them as singularly as it was acquired, and they with their mystery have disappeared from public notice. The evil then which we have specified consequent on violated secrecy, though, as every one must at once perceive, inevitably the result of the general prevalence of the magnetic power, has never, on account of the limitation and restriction of this power, been the source of any practical inconvenience. It is an evil, which the periodical reproduction of the system rather threatens, than occasions.

But there is an evil which is incident to the thing, even in its present imperfect condition, and which on this account is really and practically of a more serious nature than the other. It consists in the tendency which the public exhibition and description of the mysterious influence has to weaken the effect of religious truth and to foster infidel sentiment. Besides nourishing a species of superstition directly inimical to vital religion, the tendency of the system, of itself considered, is to undermine religious belief, and to unsettle christian principle. It has been remarked, even by men of extensive information and liberal feeling, that, were they firmly convinced of the reality of Animal Magnetism, their faith and the foundation of their hopes would be materially shaken. Now, it is true, that we consider such expressions as this as unreasonable, and founded on erroneous views of the matter, and we shall in the sequel resume this branch of the subject, and try to show the error in the case—but then, whether this idea of the consequences of the reality of the system be wrong or right, it shows what influence the thing actually has upon the mind,—that it weakens the conviction of divine truth, and induces doubts of the certainty of revelation.

We have thus entered somewhat at length into an investigation of the effects upon society of the system we are considering, because we think that they afford us, to some extent, a clue to its satisfactory explanation. If these effects are, as we concluded, throughout prejudicial,—if the magnetic gift or power, not only is and may be abused, but can never be anything else but pernicious in its consequences,—if it is a gross and serious evil *per se*, and cannot be so ordered or modified as to result in any good, we have been, and we think that others, taking what has been said into consideration, must be struck with the probable correctness of the notion, that the whole originates from Satanic agency. Many may at first be startled by this, and may be disposed at once to reject and ridicule the idea; but let such listen to a

few suggestions which have presented themselves to our own mind, and have strengthened our conviction of the reasonableness of what we have broached. In the first place, let us settle the question whether Satan, if he had the power, would be disposed to communicate such a gift to man. Would he consider it to his advantage, or rather adapting our language more to the known motives of his actions, to the disadvantage of men, to bestow this mysterious ability upon them? This query, in another form, we have already answered. We have shown that the exertion of the magnetic power would, as far as it should become general, be extremely prejudicial to the interests of society, and that, even in its actual imperfect and limited condition, its mere appearance at distant intervals,—the evidence of this appearance being as conclusive as it is,—tends to unsettle and disturb the popular mind, and encourage the growth of infidel sentiments. Effects like these are just such as all the influences which the Evil One exerts upon mankind are intended to produce, and, what is more, to produce which he leaves no means within his power untried. No one, then, will object to the conclusion, that Satan would, if he could, grant this pernicious faculty of *clairvoyance* to man.

This point being settled, let us inquire, again, whether he can bestow this faculty. The generality of those capable of judging on subjects of this kind, forming a conclusion from what is revealed in regard to angels and fallen spirits, as well as from what appears to reason, unassisted by revelation, as most probable, have held it as their opinion that Satan, though unable to foretell future events, can know all present occurrences, however remote the places where they happen may be from each other; and that with similar certainty, he can know the situation and characteristic circumstances and relations of men, and of all material things. This knowledge he may arrive at, either from the partial omnipresence of his own mind, or from the number and power of his emissaries,—from the possibility of their being scattered throughout the earth, and of their bringing him instantaneous advice of conditions, changes and events. Possessed of such information, his ability, if not divinely prevented, to communicate it to men, no one, who receives religion as true, will, for a moment, doubt; for we know that our minds are constantly exposed, in a greater or less degree, to his insinuations and deceptions.

As we have already said, the ability of the Devil to instil such knowledge into our minds can only exist in case of no divine interposition,—in case of God's withdrawing all opposing or preventing influence. Now it may, perhaps, naturally be objected to what we have advanced, that the Divine Being, since he exercises a guardian care over the human race—and, of course, as a consequence of his om-

nipotence, has the power to avert the evil, would not permit so ruinous an influence,—especially as this influence, if universally, or indeed very generally exerted, would, as we have seen, subvert the order and arrangement, and even threaten the existence of that system of social relations, which we have every reason to believe God intends to continue as long as man is in his present state of being. This, at first sight, seems a serious objection, but farther investigation will, we think, show that not only are the limitation of Satan's agency and the preventing power of God not inconsistent with our idea of the origin of the magnetic influence, but that the experienced and recorded instances of such agency and the known extent and degree of such preventing power, are exactly analogous and compatible with the nature of the mysterious gift we are considering. God had power to forbid the temptation of our first parents; but, notwithstanding this, in order to render their probationary state complete, and thus to fulfil his all-wise, though mysterious purposes, he allowed it to take place. He had power too to forbid the subsequent temptation of themselves and their descendants in their fallen condition, but this we know from our own experience, he has not seen fit to do.

But, in addition to this, we have instances on record of forms of demoniacal agency, having temptation and moral injury as their object, which are similar, as far as their miraculous and mysterious nature are concerned, to that under discussion. We believe that it is most generally thought by judicious and learned men, that it was through the assistance of Satan that the magicians of Egypt were enabled to imitate the miracles of Moses, and thus to lessen their impression upon the mind of Pharaoh. Again, it is more than probable, that the witches and sorcerers, and those possessed of familiar spirits, whom we read of in the Bible, were but instruments in the hands of Satan, instructed and influenced by him to deceive and tempt the human race. We have instances too of mysterious transactions recorded in profane history, which are best explained by having recourse to the same source. Is it not most consistent with reason and probability to suppose that the claims of the Delphic oracle of Greece, and the other celebrated seats of augury, so much confided in, in times gone by, must have been backed by something more real than the legerdmain of juggling priests and priestesses? Is it not most likely that the fame of the oracles was first established by some miraculous disclosures and warnings communicated to the priests by Satan, or some of his emissaries—and that, though many of the subsequent responses were mere instances of imposture, random guesses and decisions, whose equivocal nature rendered their truth certain, yet that, at distant intervals, the popular belief was con-

firmed by renewed cases of an undoubtedly miraculous nature? Such a supposition is rendered more necessary from a consideration of the learning and refinement of the Greeks at the time these oracles were most resorted to. In addition to this, the claims of the oracular divinity were directly tested. We are told by veritable history, that Cræsus, in order to satisfy himself of the veracity of the Delphic responses, sent by an ambassador to demand what he was doing at a certain time. The Pythian priestess replied that he was cooking a tortoise and a lamb in a vessel of brass. This Cræsus was actually doing in a secret chamber of his palace. Now, if this be true—and we must give up as false a great deal of well-accredited history, if we doubt it—we cannot but admit that the priestess had derived, from some source or other, a temporary power of what in modern times we call clairvoyance; for we cannot believe that so powerful and sagacious a king as Cræsus should not have conducted the experiment in such a way as to prevent all collusion or imposition. Indeed we are inclined to suspect that there are many such instances recorded in history, in case of which it is much more difficult to reconcile it with reason to suppose that they were mere results of trick and artifice, than that they were consequences of the influence of the Devil communicating miraculous information to the deliverer of the response.

There is no cause for believing that what has happened in one age of the world may not happen in another. If Satan was permitted to impart superhuman powers to the old magicians, witches, augurs and oracles, there is no ground for denying or doubting that he may be allowed to exercise his arts upon the modern somnambulist. And here we may observe how well such a view of the subject agrees with and explains the limitations and speedy disappearance of the magnetic gift. God does not permit the inspiration so often to be repeated or so long to be continued, as to make it a serious evil in society, or even to cause universal belief in its existence. Only a few actual cases of genuine magnetism, as it would appear, are allowed at each period of the revival of the system, and all the other examples submitted to public notice are the effects of trick and collusion, instigated, it is true, by Satan, as are all frauds and impostures, but unattended by any extraordinary assistance from him. Finally the whole matter dies away and is forgotten, since all miraculous nourishment and support is withdrawn.

In treating of the probable origin of the somnambulist's gift, we have noticed only the effects of this gift upon the powers of the mind. The physical changes produced on the patient's body—to wit, sleep, convulsive motion, &c.—may, with equal reason, be traced to the same source. If the Devil have an influence over the mind, an influence

over the body being much less important in its nature, can surely be conceded to him. Indeed, we can derive from the scriptural account of his complete control of the bodies of those represented as possessed of devils, conclusive proof of the possibility of both the mental and physical faculties of man being given up for a time to the guidance of his will. The former conclusions, then, being just, the physical phenomena of the magnetic inspiration can present no difficulty in the way of their adoption.

We may then, as we conceive, look upon Animal Magnetism as one of those temptations of the Evil One, which, like all other temptations, is allowed by God to try the age. We need feel no fear as to its universal spread and diffusion, trusting that, like the magicians and sorcerers of old, those who claim to possess the influence will receive but a small measure of demoniacal inspiration, and retain this but a short time. Such then are the ideas which we entertain in relation to this subject. We are still open to conviction of its vanity and unreal nature—and, indeed, would on the whole greatly prefer to find that the affair may all be contained within the limits of the tricks and deceits of men. But to the views we have now laid before the reader, we must resort, and seek repose of mind and satisfaction in case of settled belief in the fact, that cases of actual magnetic influence have existed. We think that such an explanation is at variance in no point with the history and experience of man, the known laws of his being, the plan of God's government, or the relation he sustains to fallen spirits. The adoption of these sentiments leaves the mind in a state of comfortable rest in regard to the whole subject,—careless, as far as the ultimate interests of religion are concerned, as to its reality, or non-existence, unaffected by any wonder at its being subversive of scientific principle,—and untroubled by any conviction of its irreconcilableness with the truths of revelation.

In concluding the exposition of these views, it may not be amiss to notice certain deductions of a practical nature, which may be made from what has been advanced. If the gift of *clairvoyance* be of Satanic origin, it is manifest that it is not right to encourage those claiming its possession,—that it is by no means proper to subject one's-self to their manipulations, or even purposely to witness their performances. We know that, in ancient times, the people of God were strictly forbidden to have recourse to witches, astrologers, soothsayers and necromancers, or in any way to second, or assist them. One of Saul's greatest sins was his visiting the Witch of Endor, and availing himself of her art. No duty can be more clear than that of resisting and keeping aloof from all the wiles and temptations of the Evil One; for it is evident that, if he makes the system a means of deceiving men

and leading them from the truth, all those who connect themselves in any way with the matter, even in the way of investigation or experiment, are but instruments in his hands for the injury of their fellow men.

Again, the declaration, which we have heard made, that a belief in the reality of Animal Magnetism is directly, and, of necessity, calculated to unsettle a christian's faith, and to destroy the foundations of his hopes, is, we think, not only highly unreasonable, but criminal. We have seen that all the powers ordinarily ascribed to the somnambulist, are analogous in their nature to those most probably possessed by the sorcerers and oracles of old. Their existence in a limited extent, is, we think, by no means inconsistent with any of the revealed attributes or laws of God. Indeed the Scripture leads us to expect, in these last days, just such signs and wonders, adapted to absorb the attention of men, to lessen their faith and respect for religion, and to tempt them to deny the superintending providence of God. In our opinion, a christian, reposing with undiminished confidence upon the omnipotence and all-wise benevolence of Providence, should consider the whole matter, with all its ingredients of deception, imposture and reality, as an artifice of the enemy, permitted, though limited in extent, by God,—as a token of the present depravity of the world, and as an earnest of the near approach of better days.

SIEGE OF FORT WHEELING.

In the year 1777, a formidable assault was made upon the little stockade fort, at the mouth of Wheeling creek, on the Ohio, by a large body of savages, under the command of that infamous renegade, Simon Girty. The Indian force, it is said, exceeded four hundred fighting men; whilst the garrison in the fort numbered no more than ten or twelve men, besides a few boys. Notwithstanding this disparity of numbers, the fort was defended, throughout the whole siege, with a zeal and an intrepidity unsurpassed in backwoods warfare, and scarcely equalled in Spartan history. Girty, finding that all his efforts to reduce the works proved abortive, discontinued his fire, and summoned Colonel Zane, the commandant, to surrender, promising him at the same time, that the lives of all within the fort should be spared, and their persons respected. This offer was peremptorily rejected.

While the negotiation was going on between Zane and Girty, the restless warriors of the latter chief found a hollow log, which they readily concluded would make an excellent substitute for a cannon; and having already in their possession a quantity of howitzer balls, (which they had taken, during the day, from a canoe, in the river, destined to the falls of the Ohio,) they lost no time in entering a smith-shop, hard by, where they found a number of log-chains and traces, which they tied around their wooden gun, to add to its strength.

After making a touch-hole, they dragged this powerful cannon to a point on the high hill in rear of the fort, where they loaded it, and directed its muzzle towards the works. Large numbers of the Indians crowded round the gun, to witness the result of their first experiment in artillery tactics. The fire was applied—the cannon was shattered into a thousand fragments—and some twenty of the anxious Indian warriors were suddenly hurried to their long home. The survivors made an instantaneous retreat, which neither the threats nor entreaties of the disappointed Girty, was able to arrest.

The foregoing account is believed to be strictly true. The following droll and unpretending rhymes, descriptive of this battle, are copied, by permission, from an old manuscript. They are probably from the pen of one who was familiar with the event he describes.

In days of old, near where the bold
Ohio's waters sport,
A stockade stood—all built of wood—
Yclep'd the Wheeling Fort.

The settlers all, both great and small,
Took shelter in its bound;
The men were few, yet they were true,
And dearly lov'd their ground.

A glorious thought, the red men wrought
Within their boundless ken,
That they were brave, and they would have
The fort and all its men!

And ere 'twas long, a num'rous throng
Of dusky faces came;
Four hundred men, they number'd then—
All men of might and fame.

A man was seen,—of haughty mien,
And painted in relief,—
To mount a stump, and with a thump,
Declare that he was Chief!

"Take but a look," proud Girty spoke,
"At these, my warriors great!
"A single rush, your fort will crush;
"Then think upon your fate!

"Surrender now! I make a vow
"You shall be free from harm;
"These warriors here, all shrink with fear
"When Girty waves his arm!"

"Curse on your hoax," cried Wheeling folks;
"Bring on your warrior braves;
"And while we live, we'll never give
"Our fort to such vile knaves!"

Their great array, they thought would fray
The men within the wall;
And Simon swore, that in an hour
The stockade fort should fall.

For many hours, tremendous show'rs
Of lead the fortress bore;
In spite of all, no fort would fall,
Which griev'd poor Simon sore.

Just at this state, big with the fate
Of men and wooden walls,
The Indians spied, upon the tide,
A craft with cannon balls.

Old Neptune's son was seized upon,
As was his cargo too;
"These balls," they said, "more blood will shed
"Than Pontiac ever drew!"

A log was found upon the ground,
And hollow at the end;
With mighty pains, they tied great chains
Around their new-made friend.

And so at length, with wond'rous strength,
They haul'd it up the hill—
All with a tact, which did in fact
Display much martial skill.

Powder and ball, wadding and all,
Were stow'd into its port;
And then in haste, its mouth was plac'd
T'wards th' devoted fort.

The flaming brand, by savage hand,
Was flourish'd high and low;
All hearts beat high—"The whites must die!
"Their coward blood must flow!"

A horrid yell—the white men's knell—
Re-echoed to the skies,—
"That wooden wall will quickly fall,
"And blood will be our prize!"

With souls inspir'd, the piece was fir'd,
When—dreadful to relate—
To tell the worst—the ordnance burst,
And horrid was their fate!

On ev'ry side, the red men died—
Arms, legs, and scull-caps flew;
And on that day, a score, they say,
The wooden cannon slew.

All in a fright they took to flight,
With sad and mournful hearts;
And then they swore they would no more
Confide in white men's arts.

THE MIND.

How limited in its horizon! how changeable is the mind of man! When engaged in some fascinating pursuit, (as for instance some favorite science,) each one of us thinks that there can be no happiness without it, and we wonder why all other persons do not, also, pursue it—wholly forgetting that different minds are differently constituted with respect to happiness. And even we ourselves, after a dream of a few hours, may quit it with weariness and disgust.

G.

THOUGHTS AND REFLECTIONS.

I.

All immaterial things have their material types ; and the type of God's love is the world-surrounding air, which encompasseth and pervadeth all earthly things.

II.

The last lines of the Adonais ! how singularly do they adumbrate the fate of their author :

"The breath, whose might I have invoked in song,
Descends on me ; my spirit's bark is driven
Far from the shore, far from the trembling throng,
Whose sails were never to the tempest given.
The massy earth and sphered skies are riven ;
I am borne darkly, fearfully afar ;
Whilst burning through the inmost veil of Heaven,
The soul of Adonais, like a star,
Beacons from the abode where the eternal are."

Shelley.

III.

The continuance of grief is like that of clouds. When it is very serene, it soon weeps itself away—like the short-lived thunder-clouds of summer : but when destined to last long, it is rarely very violent in the commencement—like the long-continuing clouds of winter.

IV.

When after a lapse of time we revert to the precise moment at which we first became acquainted with persons, with whom we have since been on intimate terms—who have since perhaps greatly influenced our destiny—we are almost astonished at the indifference which we then felt towards them. Could we have then foreseen the powerful influence which they were afterwards to exert upon our future life, with what deep, with what overwhelming feelings, would we have met them. When thus looking back, from our knowing them so well now, it appears strange, that there ever should have been a time when we were unacquainted with them.

V.

Save in the wild dreams of his imagination, the poet does not dwell in the present : his thoughts are fixed upon the misty and legendary past, with its numberless thrilling associations ; or upon the veiled future, which he mentally figures as an altar to his genius—a temple for his fame.

VI.

The love of hearing news, generally coincides in intensity with the love of communicating it.

VII.

Though there be no such essence as destiny, yet some persons are so mentally constituted, that their dispositions will as surely lead them to pursue a certain course of conduct throughout life, as if they had been impressed with the seal of fate.

VIII.

We frequently have ideas of persons whom we have never seen, as to their figure and appearance, and we imagine some symmetry or agreement between their figures, talents and character. This, in my mind, has been particularly the case with respect to our most eminent men in public life. It may arise in some measure from the associations connected with the sound of the name, (see Blair's Rhet., library edit. lect. vi, p. 61,) or

the name itself of the person. Or it may result from the mental view as to form, which we take of something material or immaterial connected with or appertaining to the person ; (for, in the mind's eye, immaterial as well as material things, it appears to me, assume some form, however shadowy,) as, for instance, the leader of a political party appears to our mental sight, in the same shadowy aspect as his party itself does.

IX.

The desire of fame is given us by our Creator, not so especially for our own good, as for that of others.

X.

Analogy, with the generality of mankind, is the most convincing mode of reasoning, because it particularly gratifies our strongly inherent love of order. And scarcely any theory is fully and confidently believed and trusted in, unless it be in consonance with analogy.

XI.

Historians must frequently err in deducing the motives and characters of persons from their actions. For how numerous are the motives that impel us to any line of conduct ; how complicated in their intertexture ; how frequently are they what no one would guess them to be.

XII.

We frequently meet with cursory remarks in books, or hear them in conversation, which dwell in our minds long afterwards ; modifying our trains of thought, increasing or diminishing our happiness, and thus sometimes influencing the whole course of our life.

XIII.

The desire of fame in men, is substituted in most women by the love of admiration. But how short-lived is this admiration—even that paid to the greatest belle. Two or three years pass, and her reign is over, being terminated by age or marriage. To be happy, she must never gaze on the future, but must be wholly intent upon the present.

XIV.

Poets, and other persons of imaginative temperament, are apt to disbelieve the Bible, because the idea there conveyed of the Deity, does not seem to them sufficiently poetical.

XV.

Men who study the moral, are much oftener found to be superstitious than those who study the physical sciences. One reason for this, is, that many superstitious notions take their origin from the actions and phenomena of animals and other natural objects. Now the natural philosopher understands the cause and operation of these actions and phenomena, which the moral philosopher does not, and he is therefore led to consider them to be supernatural.

XVI.

Whensoever a person mentions to you a remark made to him by another individual, and his remark is contrary to your knowledge of that individual's character, always inquire what led to his uttering this remark or opinion—what conversation preceded it. For we frequently advocate opinions, and utter sentiments in the heat of argument, which we would be far from supporting in cooler moments. Frequently too, when we hear persons or things rated in any particular point much higher than they deserve, we, through a feeling approaching to indignation, rate them much lower than

they should be placed, and even much lower than we think them to deserve. And so, also, in some degree of the contrary. Dr. Johnson very often acted in this manner.

XVII.

As every wave of the sea influences each one subsequent to it, so does every idea influence all those subsequently entering the mind, either modifying or calling them up.

XVIII.

In reading, we almost always identify things, persons and places, with those with which we are acquainted. The whole mental view, however, is not real, but mostly imaginary. Where the described object will not wholly agree with the known one, (which indeed is almost always the case,) our imagination supplies that part which is wanting, so that the complex idea is partly real and partly imaginary.

XIX.

In memory's deep cavern, how many are the treasured thoughts, which we are wholly unconscious of possessing.

G.

THE COPY-BOOK.

NO. VI.

Having long observed the prevalent fashion among our younger writers, (and too often even among the older,) of stuffing and interlarding their (otherwise creditable) pages with quotations and extracts, stringing them into an absurd farrago, an incongruous patch-work, like Sancho Panza's proverbs, without order or relevancy—I, many years since, began to meditate a work, which, being perfectly free from such faults, might (if haply it should survive so long,) go down to future ages, a complete model of style in this particular. The following story is the result of my labors in this behalf, in which (if I am not most egregiously deceived,) I have succeeded in supplying an important desideratum in our literature. The ingenious reader cannot fail to remark the scrupulous care with which I have steered clear of the error of which I complain. It is true, a number of favorite passages, out of our best authors, in prose and in verse, (and some of them very apt to the matter in hand,) occurred to me while writing this story; but I had an object before me, and I was not to be diverted from it, either by the syren voice of habit on the one side, or example on the other. "It is (in the opinion of the poet Crabbe,) sufficient for an author, that he uses not the words or ideas of another *without acknowledgment*, and this, (says he) and no more than this, I mean by disclaiming debts of the kind; yet resemblances are sometimes so very striking, that it requires faith in a reader to admit they were undesigned."

The expression in a following page,—“we stepped softly and cautiously around him,”—I have (while these sheets were preparing for the press,) discovered, bear some faint resemblance to a line of Byron:

“but not before

The ground with cautious tread is traversed o'er.”

I need hardly add, that the consimilarity (which is indeed almost too slight to be worth mentioning,) was entirely accidental.

The phrase, “all ages, sexes, and conditions,” I have lately had pointed out to me, (by an obliging friend, who had the goodness to look over the manuscript,) in the ‘Declaration of Independence:’ “an expression of so particular a kind, that its occurrence to two writers must appear an extraordinary event; for this reason I once determined to exclude it from the relation; but, as it was truly unborrowed, and suited the place in which it stood, this seemed, on after-consideration, to be an act of cowardice, and the lines are, therefore, printed as they were written.” These explanations could be corroborated by my learned friend, M—c—l R—h, had he not unfortunately gone out on the late Exploring Expedition. “But I trust the reader will give me credit.”

THE BUFFALO BAITING.

“Where mightiest of the beasts of chase,
That roam in woody Caledon,
Crashing the forest in his race,
The mountain bull comes thundering on.” Scott.

“The flood is angry, sheriff;
Methinks I'll get me up into a tree.” John Kemble.

“When wild, they are a fierce and formidable race; and there is no method of escaping them, but by climbing some immense tree. A tree of moderate size would be no security, for he can easily break them down; and many travellers have been instantly gored to death, and then trampled to pieces by their feet.”—[Mrs. Trimmer's Nat. His., Art. Bison.

When I was a small boy at school, under a teacher who predominated over us with a most despotic rod, we one day heard that a buffalo had come to town, and was going to have a most grand battle-royal with a whole parcel of bull-dogs. The news created a prodigious sensation—nothing was ever so enchanting. In accordance with the bill of rights, which recommends a frequent recurrence to fundamental principles, throwing ourselves back upon our reserved rights, a large and respectable number of us resolved, in the gloomy recesses of minds capacious of such things, to go it or bust; in three words, we played truant. True, as we set off we had our misgivings, our doubts, our forebodings; but, gay creatures of the element, insects on the wing, we careered in the balmy sunshine of the present hour, postponing all thought of the winter of our discontent; and all the clouds that lowered o'er our house were in the deep bosom of the ocean buried. It was the sweetest of all possible summer mornings, bridal of the earth and sky, when we crossed the sequestered little river, (where Pocahontas used to fish for minnows,) in Indian file, along an antiquated narrow foot-bridge,* (now, alas! consigned to the tomb of the Capulets, and numbered with the things that were; fuit Ilium, et ingens Gloria Hectoris.) On our right flank lay the island—like Robinson Crusoe's, inhabited by goats—the river banks crowned with flowers and foliage, where the honeysuckle, the woodbine, and the wild rose breathed on the liquid air their freshest perfume; the

* Hector McNeill's bridge.

morning mists hung suspended o'er the water, the sun painting their fleecy skirts with gold; the cloistered thrush, in sere and tangled brush-heap, chanted his orisons, while the mockingbird exulting tuned his melodious pipes in a grove hard by. Oh! it was an oasis in the Zahara of life—one of those particularly green spots in the retrospect of an ordinary existence, to which, in after days, memory will often revert with fond emotion,—and all that sort of thing.

Bill Dangerfield, (I have not seen him for years, but I well remember his mild face and sweet temper,) Bill, inspired by the occasion and the scene, recited like a young Garrick, Toby, or not Toby? that's the question. Tom Beverley followed with, Plato, thou reasonest well, else why this pleasing hope, this fond desire, this longing after immortality? Harry Mercer informed us that his name was Norval, on the *Grampian hills*—to which I replied, but no where else; and brought up the rear with *Tityre tu patula recubans sub tegmine fagi*; translating it—Tityrus, O thou, recubing under the tegmen of a patulous fagian. Happy group! the mildew had not yet fallen on our young hearts! happy hours! *cheu quantum fugaces!* We at length reached the scene of action; there stood Bison, as large as life—aloft in awful state, the warlike varmint stood; he stood in the centre of an area, which area was encircled by a barrier of rope—outside of which rope the spectators were to stand. Bison was made fast by a ring in his nose, and a stout cord to a stake planted in the centre of the area aforesaid. He excited our warmest admiration. He was the first of the species we had seen: we were happy of his acquaintance; still we were disposed to keep up a certain degree of ceremony with him; sudden intimacies are not to be approved of, especially with strangers from a distance. We stepped softly and cautiously around him, and reconnoitred his outlandish form, his short peculiar tail, his extrordinary hump, his eyes glittering like diamonds, fierce as ten furies, black as two o'clock at night, and savage as a meat axe: *monstrum, informe, ingens.*

By this time had assembled a large concourse of people, of all ages, sexes, and conditions; white, black, and mulatto; good, bad, and indifferent; men, women, and children; tag, rag, and bobtail:

Then to the crowded circus forth they fare,—
Young, old, high, low, at once the same diversion share.
The lists are oped, the spacious area clear'd,
Thousands on thousands piled are standing round;
Long ere the first loud bull-dog's note is heard,
No vacant space for lated wight is found.

The butchers now stood ready to cry havoc, and let slip the dogs of war. Hushed is the din of tongues. On that memorable day, I had on, for the first time, a pair of new blue brooches, (rather an epoch,) adorned with bell-buttons. I felt all the pleasing consciousness and individual satisfaction, which a circumstance so novel and so agreeable would naturally inspire, and strutted about pretty large; with my hands in the new and unaccustomed pockets, I decorated and cheered the elevated sphere, I just began to move in, glittering (that is the bell-buttons,) like the morning star, full of life, and splendor, and joy.

The fight began: when lo!

The den expands, and Expectation mute,
Gapes round the silent circle's peopled walls,—
Bounds with one lashing spring the mighty brute,
And wildly staring, spurns with sounding foot,
The sand,—nor blindly rushes on his foe;
Here, there, he points his threat'ning front, to suit
His first attack, wide waving to and fro
His angry tail; red rolls his eye's dilated glow.

The dogs rushed to the onset, and furious every bull-dog barked, to join the dreadful revelry. Bison stamped, bellowed, reared up, fore and aft; poor fellow, they tore his nose awfully, but not with impunity; one of them, (a brindle,) he slung right up in the air, perpendicular, over his head, fifteen feet; and the way he yelped was curious—and when he landed, he lay there as limber as a dish-rag.

On foams Bison, but not unscathed he goes;
Streams from his flank, the crimson torrent clear;
He flies, he wheels distracted with his throes;
Dog follows dog, bow, wow, loud bellowings speak his woes.

When the buffalo made a dash at the dogs, the crowd gave way before him—and when he rushed on the other side, they closed up again behind him—thus receding and advancing like a wave of the sea, on Tampa's lonely shore.

One gallant dog is stretched a mangled corse;
Another, (hideous sight!) unseamed appears,—
His gory chest unveils life's panting source;
Though death-struck, still his feeble frame he rears,
Staggering, but stemming all.

And the way the folks hustled and jostled, and got rammed, and crammed, and jammed, topsy-turvy, pell-mell, and higgle-de-piggledy, was no body's business. And among 'em they pretty near mashed off one of my toes, (it had the worst kind of a stone-bruise on it, where I stumpt it playing bandy—it was the next to my little toe on my left foot, or my right—I won't be positive.) In view of all these facts and circumstances, (and being always of a retired disposition,) I determined to climb up a tall cedar that nodded graceful over the field of battle. Oh! who can tell how hard it is to climb!—amid the baying of dogs, the shouts of battle, and the shock of arms, and most unearthly roarings of the buffalo, and after encountering immense difficulties in the ascent, (I am no lizard, nor bear, to run up trees,) I at length, with a deal of wear and tear, gained the very pinnacle of the cedar: there I sat like a bird of prey, perched up, 'solitary and alone.'

Our eyrie buildeth in the cedar's top,
And dallies with the wind, and scorns the sun,
Like a drunken sailor on a mast;
Ready with every nod to tumble down
Into the fatal bowels of the deep.

Wiping off the drops of perspiration (we called it sweat in them days,) that began to course one another down my innocent nose in piteous chase, I enjoyed, with complacency, all the pleasing advantages of my

present elevated position. Secure, I speculated upon the belligerent scene below : I was a looker-on in Venice ; a mere spectator of other men's affairs ;—it was my privilege, *procul e cedro Bisonem spectare furentem*.

Oh ! what a sight it was to see ;
What a din, what a glorious rattle !
And I, so snug perch'd up in a tree,
Had a bird's eye view of the battle :
Ambition is the hero's boast,
Therefore I chose so high a post.
To be calm and cool, is a hero's rule—
Then tell me pray, in the midst of a fray,
Where, where could I be so cool as in a tree ?
And near to the top, I was safe from a pop.

'Tis pleasant, through the loopholes of retreat, to peep at such a world ; to see the stir of the great Babel, and not feel the crowd ; to hear the roar she sends through all her gates, at a safe distance, where the dying sound falls a soft murmur on th' uninjured ear. Thus sitting and surveying, thus at ease, the globe and its concerns, I seem advanced to some secure and more than mortal height, that liberates and exempts me from them all. It turns, submitted to my view, turns round with all its generations ;—I behold the tumult, and am still. The sound of war has lost its terrors ere it reaches me ; grieves, but alarms me not.

But, alas ! I never sought a day's repose but some sharp thorn soon pierced my breast. A change came o'er the spirit of my dream : a rude sea of hoarse noises assailed my ears ; the buffalo had broke loose—once more through all he bursts his thundering way.

Then rose from earth to sky, the wild farowell ;
Then shriek'd the timid and stood still the brave ;
Then some leapt overboard with dreadful yell,
As eager to anticipate their grave.
And first one universal shriek there rush'd,
Louder than the loud ocean, like a crash
Of echoing thunder ; and then all was hush'd,
Save the bull-dogs, and the remorseless dash
Of *Bison* ; but at intervals there gush'd,
Accompanied with a convulsive splash,
A solitary shriek, the bubbling cry
Of some small climber in his agony.

Then ensued a scene, the like of which no eye hath seen, no heart conceived, no tongue can adequately tell. Stunned with the noise, seized with the contagious panic, I fell, incontinently, headlong down the cedar tree—casting one longing, lingering look behind : and Freedom shriek'd when Kosciuszko fell. In the course of my descent I performed several diurnal revolutions on my own axis, tearing my breeches all to flinders, from stem to stern, battering my head, bruising my shins, and suffering divers abrasions and solutions of continuity in my body corporate, and the integuments thereof—scarcely paralleled in the most barbarous ages, and totally unworthy the head of a civilized people. Oh ! what a fall was there, my countrymen ; *facilis descensus cedri*. It is the easiest thing in the world to fall down a cedar tree ; *haud inexpertus loquor*—I speak from personal knowledge ; *quantum mutatus ab illo* !—what a change had come o'er the spirit of my breeches ! *non sum*

qualis eram : and there lay the climber, distorted and pale : I lay like a warrior taking my rest, with my breeches in tatters about me :

Oh ! bloodiest picture in the book of time,—
Sarmatia fell unwept, without a crime !

I lay *ab imo pectore gemens*, resolving in my alter'd soul the various turns of fate below. Darius, great and good, by too severe a fate, fall'n, fall'n, fall'n, from his high estate, and weltering in his gore. O, what a revolution ! and what a heart must I have, to contemplate without emotion, that elevation and that fall. What shadows we are,—what shadows we pursue !

Here rests, his head upon the lap of earth,
A youth, to fortune and to fame unknown ;
Fair science frown'd not on his humble birth,
And Melancholy mark'd him for her own.

But in the harrowing recollections of that disastrous day, let me not be guilty of ingratitude ; every trial in this transitory life of ours, carries with it some correspondent consolation ; and as coming events cast their shadows before, I comforted my mind by ruminating on the probable nature and extent of two several flagellations—one at home about the breeches, the other at school in respect to my playing truant—of both which I felt the strongest moral assurance, quite as strong as if I had a policy at the Phoenix office. The crowd had dispersed, leaving me alone to my glory. Pinning up the sad relics of my breeches, as well as I could, slowly and sadly I arose, and took up the line of march. Alone to the banks of the slow-rolling Appomattox, fair Adelaide hied when the battle was o'er. Alone, unfriended, melancholy, slow, I turned my steps homeward, softly murmuring to myself,

Oh ! buffalo, where are the charms
That sages have seen in thy face ?

Petersburg, Va., 1839.

THE TIRED HUNTER.

(SUGGESTED BY A PAINTING.)

BY PARK BENJAMIN.

Rest thee, old hunter ! the evening cool
Will sweetly breathe on thy heated brow,
Thy dogs will lap of the shady pool ;
Thou art very weary—oh, rest thee now !
Thou hast wandered far through mazy woods,
Thou hast trodden the bright-plumed birds' retreat,
Thou hast broken in on their solitudes,—
Oh, give some rest to thy tired feet !

There's not a nook in the forest wide,
Nor a leafy dell unknown to thee ;
Thy step has been where no sounds,—beside
The rustle of wings in the sheltering tree,
The sharp, clear cry of the startled game,
The wind's low murmur, the tempest's roar,
The bay that followed thy gun's sure aim,
Or thy whistle shrill,—were heard before.

Then rest thee!—thy wife in her cottage-door,
 Shading her eyes from the sun's keen ray,
 Peers into the forest beyond the moor,
 To hail thy coming ere fall of day;—
 But thou art a score of miles from home,
 And the hues of the kindling Autumn leaves
 Grow brown in the shadow of Evening's dome,
 And swing to the rush of the freshening breeze.

Thou must even rest! for thou canst not tread,—
 Till yon star in the zenith of midnight glows,
 And a sapphire light over Earth is spread,—
 The place where thy wife and babes repose.
 Rest thee awhile—and then journey on
 Through the wide forest and over the moor;—
 Then call to thy dogs and fire thy gun—
 And a taper will gleam from thy cottage-door!

THE PREDICTION.

BY A LADY OF VIRGINIA.

CHAPTER I.

"Tell me, thou bright minister, whether my name be writ in thy calendar for good or evil."

"Nurse," exclaimed the young Henrie Montauban, (a bright smile lighting up his naturally pensive countenance,) "pray come with me into the green room, and I will show you something so pretty. You will love it, Jacinta. I do, though I never saw it before."

"What does the child mean?" said she, following the quick pace of the boy.

"Look," uttered he, in the wildness of delight. "See! it smiles on me—it loves me! Tell me, sweet nurse, (embracing the melancholy form that stood gazing on the object which had excited so suddenly the attention of the child,) who is it, and when came she here?"

"It is your mother's picture, Henrie."

"My mother!" repeated the lips of the impassioned gazer, reaching his arms as if to clasp the portrait to his heart. "Yes it is—it is she, I know; the same sweet face you told me of, when she took me in her arms to bless me. Oh! nurse, will she stay here always? Can she love me still?"

Tears stole down the withered cheeks of the meek Jacinta.

"She does love you, master Henrie; but it is as the angels love in Heaven;—there I almost think I see her now, without a shade of sorrow on her fair brows."

Tears trickled down the sunny cheeks of little Henrie.

"I wish I could be with her there. Why, if she loved me, good Jacinta, did she leave me?"

"Ah! that was a sad day, master Henrie—it was the heaviest my poor heart ever saw, though it was the same your dear little self was born."

"Will you tell me all about it now? Please, Jacinta—I will be quiet ever after, if you will tell me all she said that day."

"Blessed Virgin! the child talks like he was inspired! How his little breast pants! You are not well,

master Henrie—we will first take the fresh air, and when we come in, I will talk to you about your sweet mother."

They withdrew from the apartment, which Jacinta carefully closed. It was one from which the boy hitherto had been excluded. A succession of childish sports were tried for his amusement, but all in vain. A new spring of emotion was opened in his bosom—the hidden fountain of love, which was to well up forever. The child was no longer to be put off—he again entreated Jacinta to begin her story.

"Ah! master Henrie," murmured the sad voice of his faithful nurse; "it is a sweet thing to be loved even after we are dead, but sweeter still while we are living. Had she felt but one heart twining like the young tendrill around her's."

"Did not every body love her? Did not my father love her?" said the boy, in a low and suppressed tone.

"You ought not to ask such questions; your father is a great man at court; people ought not to speak as they please about great men—they will not like it perhaps. You will be high and noble one day too."

"I sha'nt, Jacinta," he replied, in an imperative tone. "I shall not live at court, as my father does. Who says I will?"

"Father Antonio read your fortune in the stars when you were born."

"Did he?" replied Henrie, a pale hue overspreading his countenance. "What said the stars, Jacinta? Do they love me? Then I may be happy if they do—but I fear that father Antonio who lives in the wizard's tower—he talks with the evil one, Oswald says."

"Holy Mother! hear the child! What would the Baron and father Joseph say, if they heard you going on so?"

"Well, go on nurse—I will be still."

"About the time you were born, your father, the Baron, and Antonio, were shut up in the wizard's tower. My lady was sinking fast, and I sent Oswald to tell the Baron to come to her directly, for I feared the worst. He did not come for a long time, and I asked Oswald the reason. He told me that he looked through the shutter, and saw Antonio moving a great instrument, with which he showed the Baron the infant's destiny, as he called it."

"Did he hear what answer the stars gave to the astrologer?" inquired the anxious boy.

"Oh! yes—he said there was shown the figure of a bright crown on your temples, and signs to tell that you were to receive the honor and submission of men; and all pleased the Baron mightily well, until a cloud came over the brightness—then he looked angry; but the astrologer set his mind at ease by explaining to him what the cloud meant. He called it 'the curse of heresy,' which was to tempt the Baron's heir to disobey the mandates of Mother Church, and ally himself with her enemies. The Baron swore he would guard against this—and said all the vengeance of the Holy See might fall upon his house if a son of his ever departed from the true faith."

The child was awe-struck at the malediction, though he understood little of its import. He asked if his mother liked what was foretold about her child.

"Your mother never cared for the titles of this world. The kingdom that she loved was that of the heart—and

she thought, at that moment, of nothing but the tender life of the babe she pressed to her bosom for the last time."

The heart of the young listener swelled with the intensity of feeling.

"Oh! that I could have been born to love and be loved! I would not be happy, nurse, unless I could make every body I loved so too."

"Who says you may not? Your little brain is turned, surely!"

"But unless I can act as I please, how can I? The dark spirits will do with me just as they please."

"Come, master Henrie, leave off fretting yourself; think of poor Jacinta. If you look cross or say strange things, the Baron will be angry with me, and then who will be sorry?"

"I will never say a word to trouble you, Jacinta. When do you expect him here?"

"Oh! very soon—perhaps to-morrow; and he always watches all that is going on at the castle."

Henrie was the only descendant of the Baron Herman Montauban, a distant branch of the house of Medici, once so famed for its haughty and overbearing pretensions. The Baron, in the days of his youth, could boast of attractions beyond the common herd. Accomplished in all the gallantries of the French court, he added the fascinations of art to the natural advantages of superior personal grace and beauty. Such was the indescribable charm of his attractions, that it might be said he ruled like a wizard the realm of fashion and beauty, without ever appearing to be conscious of his power. And yet under this ingenuous exterior, flowed a current of deep disguise, dark intrigue, and hidden policy, moved by the ever-restless spring of selfish ambition. In early manhood, the heart of the Baron Montauban was not insensible to the passion of love. The beauty of the young Countess de Montfort was like the fresh and dowy light of morning—so new and so inspiring. The Baron saw her—and his feelings were wrought into intense and passionate love, and urged him to brave every difficulty to win so desirable a prize. He foresaw the family prejudice to be overcome—the favor of the father to be propitiated—and, hardest of all, the heart of a girl—whose fondness was all towards a religious life—to be moved and won. No magician ever waved his wand more successfully, than did the Baron ply his scheme of ingenuity to the attainment of his object. The young Countess was borne, like a timid bird, from the sheltering covert to the gay capital, where she mingled in the empty masquerade of pomp, without a single throb of pleasure, except in the smiles of him whose magic spell had won her from the shades of solitude. She too soon found these smiles passing away with the passion which had lighted them. The weary hearted Baroness saw her husband's look grow colder each day, while his days and nights were given to society of which she knew nothing. Her health began sensibly to decline, and the Baron was advised to remove her residence to the castle of Montauban, where she pined in solitary sadness, her seclusion seldom broken by the presence of the master.

Though the Baron was endowed with a spirit of enterprise and endurance, never faltering in the attainment of any end in view, yet there was in his constitutional temperament one weakness—a superstitious fear of invisible beings—which led him to propitiate their

mystical agency in every great event. He frequently visited the wizard's tower, where dwelt the old astrologer, Antonio—and in secret counsel they consulted the horoscope of coming events by the bright luminaries on high.

The approaching birth of an heir to his house, detained the Baron at his castle, for Antonio had warned him that much would depend on casting the nativity of the child. Great preparations were made on the part of the magician in awaiting the eventful moment, and lavish promises on that of the Baron, should the answer of destiny be favorable to the future prospects of his family. The wished-for hour arrived—the Baron hastened to the tower, where the astrologer was fixed with his instruments; and so intently was his mind occupied with the interpretation of the cabalistic symbols, that he heeded not the voice which told him that she who had borne him a son, was sinking in the arms of death. The magician determined to gratify the wishes of the Baron, and at the same time make all subservient to the supremacy of Mother Church. The Baron waited in anxious expectation.

"The star of your son's destiny," said Antonio, "is bright,—it promises power, dominion,—the smile of princes—an alliance with the throne of France."

The wizard paused.

"Enough! wise Antonio. I ask for no more," said the Baron, scarcely able to restrain his delight.

"This is not all, Herman Montauban;—a dark cloud threatens to blot out the fair record and cover the luminary in black night."

"What does it portend? Can it be averted by human power?" exclaimed the affrighted Baron.

"It can," returned the other, in a solemn tone. "The cloud denotes the curse of heresy, which alone can blot out the glory of your house."

"Never!" replied the determined voice of the Baron. "Antonio, I swear before these symbols of thy mysterious power, that I will see the last blood of the Montaubans perish, ere a son of mine prove recreant to Holy Church."

"It is done," replied the magician, taking up the rich purse which the Baron had laid on the table, and slowly leaving the apartment.

"Yes! he shall rival the highest," muttered the ambitious father, hastily descending to the chamber of the Baroness. He opened the door without warning. All was still in that dim room.

"Ha! Jacinta—so silent! Where is the heir of the house of Montauban? I hope his lineaments accord with the destiny of the high-born."

The trembling hand of the nurse pointed to the couch where reposed the dying Baroness—and her tears told more than words could express. Montauban started—his mind had been so absorbed in the predictions of the astrologer, that the situation of his wife had passed without notice. Now all too late—the memory of the hours of happiness he might have enjoyed with her, the loveliest in creation, came with the anguish of a scorpion's sting. He rushed to the bed, and seized her lifeless hand—the pulsation was gone. He called her name—her last sigh was breathed, unconsciously, at the sound! Montauban stood a moment by the bed of death, gazing on that placid, heavenly brow. The waves of bitter recollection and regret rolled over his

soul in that brief space. The next minute they were absorbed in the one great passion of his soul, and he turned away with a heart as cold as the pallid clay beside him. His first words were concerning the heir of his future pride and glory.

"Jacinta! my boy has the marks of noble blood. His features bespeak a nature born to command. A nurse must supply the natural aliment of life—let no expense be spared to procure every means of lusty health, that his powers of mind and body may be speedily and vigorously developed."

Jacinta pressed the infant to her bosom, but she answered nothing to the cold words of the Baron.

The Baron only remained at his castle until the obsequies of the Baroness were performed. As soon as decency permitted, he was again at the court, more assiduous than ever in insinuating himself into the favor of Richelieu. With an eagle's eye, he surveyed the political horizon, and saw that his elevation must depend on complete subserviency to the will of the cardinal, whose supremacy was felt alike by the weak young monarch and his court. The first great enterprise of the prelate, was to crush the Huguenots; against whom his cruel nature, now that he possessed the power, exhibited itself in every form of oppression. He found the Baron a supple instrument in his hands, to work their downfall. He was the secret and ingenious negotiator, between the See of Rome and its emissaries, in the work of destruction. It is not surprising, that this agency gained him universal confidence in the spiritual councils, and prepared the way for his obtaining the richest gifts in its power. The hereditary pride of his lineage wrought in the Baron's inmost soul. The coronet which the augury promised, glittered already in his sight, and tasked every faculty of his mind to attain it. He watched the course of events. The Italian dukedoms were, one after another, falling under the dominion of the cardinal. Should his ambition content itself with a ducal crown? His eye looked still higher. The province of Lorraine was in the field of contest, and must soon belong to the throne of France. The prelate would have its bestowment—and it had been already hinted, that it would form the rich dower of his niece, the young Countess De Mailleé. This was a prize to engage the active energies of the Baron. It afforded a field of intrigue, entirely suited to his spirit of under-plotting. An union between his son and the Countess, was already determined on in his own mind, and suggested the idea of immediately visiting the castle of Montauban, and placing the boy under proper tutelage.

It was shortly after Henrie had heard the story of his nativity, that the Baron arrived. The occasional returns of his father to the castle, had not been calculated to win upon the affections of the boy. There was a cold reserve in his manner, and a searching glance of his eye, that made little Henrie always anxious to shun his presence, when he could do so without being observed. On the present occasion, when he saw himself the entire object of the Baron's thoughts and attention, he almost quailed beneath his eye; for there was a vexed and lowering aspect of his brow, as if something gave him displeasure. The fact was, the Baron was totally disappointed in the appearance of his son. Instead of the fresh and rosy cheek, the quick and

bounding step, and buoyant play of the muscles, all betokening the rapid development of the man, which he expected from the early promise of the child, he beheld the languid and spiritless countenance, which bespeaks insidious and radical disease. There was a change in Henrie's looks, but the cause was unknown to his father. He had heard from Jacinta a tale that preyed upon his spirits. He was the subject of a dark mysterious power, whose thralldom was to take from him the exercise of his free will, and make his every action dependant on a blind destiny. This idea, so revolting to his naturally bold and generous disposition, haunted him day and night, and poisoned all the springs of his early pleasures. The Baron thought he could rightly conjecture the cause of his son's decline. He called the nurse to him.

"Jacinta," he said, "Henrie's faculties require exercise. I have been too negligent in this matter. His whole system stagnates in the confinement of the nursery. He shall enjoy a change of scenery—travel among the great objects of nature, and be familiar with things that will divert and surprise him. This will restore the vigorous and healthy flow of his blood, and give animation and beauty to his countenance. Let every preparation be made, Jacinta, for his departure from the castle."

He next called for his confessor, father Joseph—to whom he confided the care and tutelage of the boy—charging him to use every effort to amuse and invigorate his mind, while he kept the great object on which the hopes of his house depended always in view. Father Joseph was eminently fitted to work the purposes of the Baron. Cool, insinuating and calculating, he proceeded silently, but effectually towards the end in view. His stony eye, and abject gait, betrayed not the deep and untiring energy with which he could labor for the accomplishment of the object on which he had set his mind, nor the humble and placid smile, the cruel perseverance with which he could hunt down a victim. The Baron alone knew how to read and appreciate him. They suited each other well, and wrought in concert.

Henrie Montauban was scarcely fourteen years old when the map of his travels was displayed before him. All was strange and fascinating to the eye of the young wanderer. Father Joseph assumed the indulgent friend, as well as the amiable and interesting guide. He directed their course towards the provinces of the Lower Rhine, still picturing to the boy's fancy the romantic beauty with which these regions were invested. Henrie was delighted at the prospect of seeing the feudal castles and monastic towers, whose traditionary lore had amused the hours of his childhood and fed the natural bent of his mind towards whatever was tinged with the dark superstition of the times. The monk availed himself of this constitutional trait, to impress more deeply on his pupil's mind a reverential submission to that power, whose frown alone had laid in ruins the ancient seats of princely magnificence and feudal pride, as soon as their haughty chiefs refused obedience to her mandates. Arrived at the ruined crags of Drachenfels, Henrie was on tiptoe to hear the story of its fall—and its narrator took this occasion to work effectually on the fears which he wished to make the groundwork of his future actions.

"Two brothers, who were twins, inherited the ample domains of Drachenfels. It had been foretold at their birth, that one should fall by the hand of the other. Arrived at manhood, one vowed to consecrate his estate towards the endowment of a religious order, and insisted on his brother's doing the same. He refused, defying at the same time the spiritual power of the church. His blasphemy was punished by the pontiff sending a holy crusade to demolish the rebel castle in which the impious heretic had taken refuge, and where he perished by an arrow, shot by the hand of his own brother."

An involuntary shudder came over the young listener, as he heard the conclusion of the awful tragedy which seemed to bear so direct a confirmation to his belief in a dark overruling destiny. The monk marked the effect, and was satisfied that there was one chord by which the bold and independent spirit of the heir of Montauban might be held in check.

They found nightly quarters in the neighboring monasteries, where the inquisitive mind of the boy still found a succession of objects to charm, by their new and endless variety. Thus constant amusement brought again the color to his cheeks, and a renovation in the whole appearance of the young voyager. The thought struck father Joseph that a temporary abode in these regions might be advantageous to his pupil in several respects—and with the next post, he despatched a letter to the Baron, requesting permission to place Henrie under the care of the Benedictine monks, whose monastery occupied one of the loveliest heights of the Rhine, where there was every thing to occupy and please the youthful imagination, without the danger of intercourse with other society than that of the brothers, who would afford their young charge every facility in the attainment of the sciences in which they were known to be so deeply skilled. The Baron highly approved the plan father Joseph had suggested, as being not only most conducive to his views respecting his son, but affording him the agency of the confessor in the immediate prosecution of his designs at the French court.

Henrie was not averse to remain at the monastery. Unconstrained now by the incessant supervision of the confessor, and the associations of his presence, he roamed free and boundless through the enchanting scenes around him without any control; for the pious fraternity were told not to repress his ramblings, while they contributed to invigorate his health or lent buoyancy to his spirits. He soon acquired the favor and confidence of the monks, by the docility of his manner and the readiness with which he mastered the most difficult parts of learning; so that he was considered among them as gifted by nature with a secret key to the mystic lore. They little knew the power of a mind, fresh from a communion with nature, in her most sublime and beautiful attractions.

It happened that he wandered one day into some of the wilder tracts of the mountainous regions stretching out before him, and becoming faint from thirst, pursued the sound of a gurgling brook, hoping every minute to come upon it. It led him, farther and farther, down the opposite side of the mountain, still tantalizing him with its murmur, while he looked in vain for the source. At last he turned suddenly, and found himself on a perpendicular fall in the mountain, and approaching the precipice cautiously, saw that it over-

hung the fountain whose music had cheated him so long. He crept still nearer, and beheld beneath him a dozen little cascades dashing their merry waters against the sun, and hanging wreaths of glittering spray on the narrow arch of bright sky that smiled down upon them. Henrie looked and looked, and almost feared to breathe, lest he should dissolve the enchantment. He longed for a clearer view of the magic beauty, and wound his course around the declivity. What was his surprise, when he descended near the waterfall, to perceive two persons already there. One was a man of middle age, whose venerable mien, at first sight, inspired deep reverence—the other, the one which took deepest hold on his attention, was a young girl, who sported at the side of the elder. In busy pleasure she bent over the tiny flood—her golden locks floating in the mist which slightly veiled her figure, and inspired the beholder with the idea that the lovely being he was gazing upon, was a creature of ethereal mould. While he fondly mused on the apparition before him, she turned, with a look of delight, towards her companion; and now he saw, for the first time, the radiant countenance. It was Hope embodied, whispering happiness and cloudless sunny days. Her eyes were blue as the depths of ether, shining through sunbeams—her voice, as in sportive accents it roused the contemplative, sage from his reverie, to share her joy, sounded like the melody of birds in early spring. He came, complacently smiling, to praise the mimic structure she had reared over the foaming current, before another sweep of the tide should destroy it.

"My Gertrude is a happy girl," said the father, in a tone of deep tenderness; "but she must not build her hopes on a foundation as frail as this bridge."

She replied—a bright smile playing on her arched lips—"Yes, dear father, but I can enjoy it while it lasts, you know. I almost knew it would fall the next minute,—but then cannot I build another bridge, and so always be happy? When one pleasure is gone, another will rise, like the bridge, in its place."

"Far be it from me, my child, to dash the cup of thy young life with fear of evil; but sad experience must teach us all that we are pilgrims on earth. The star of our hope must be kindled at the throne of the Eternal, or it will fail us in the days of adversity."

Gertrude's joy was checked, and she listened to her parent's words in silence, for she felt the deep pathos of his voice, though she knew not its cause. The falling shadows reminded the father that it was time to leave the spot whose charms frequently tempted him to linger longer than was wholesome in a humid climate, and he was assisting his daughter to loose her straw hat from an impending bough, with a design of immediately returning homewards, when his hand was withheld, by her suddenly starting and grasping his arm. Her father asked the cause of her surprise—she pointed to the spot where Henrie stood looking down upon them. Perceiving himself discovered, he assumed as much self-possession as possible, and advancing, begged pardon if his unexpected appearance had been the cause of alarm. He then related the accident which had brought him to the beautiful spot near which they were standing. There was a natural grace and frankness in the young stranger that commended themselves, while his extreme youth, and the sensibility of soul which shone in his full

dark eyes, and which had already traced lines of sadness on his brow, won the deep interest of the father, and perhaps a tenderer sympathy in the heart of the daughter. She first suggested his needing some other refreshment than the water-brook afforded, before he attempted to regain the monastery—and when her father kindly invited the weary stranger to spend the night at his cottage, pleasure dimpled her rosy cheek. Henrie might have refused, had he not seen the eyes of Gertrude turned towards him with a kinder welcome than he had ever received before.

The cottage of De Fleurie, (for this was the name of the venerable stranger,) was situated in one of the beautiful vales of Hesse, shut in from the boisterous world by vine-clad mountains. Here it was that the pious Huguenots took refuge from their persecutors, and amongst the number were De Fleurie and his little flock, driven from their beloved France by the proscriptions of Richelieu. This lovely recess was dotted over with the white cottages of the humble followers of the good Huguenot, for whom they had built a habitation in the centre.

Henrie knew nothing, an hour before, of the pastor or Gertrude, and yet his heart could repose on them, even as it used to do on the kind Jacinta, without fear of being deceived. The latter soon drew him from the habitual reserve which former associations had given his manner, (for the innocent and undisguised nature of the young is always disposed to overleap the gradations that suspicion and cold caution teach those who are versed in the school of experience, to observe, in approaching strangers,) so that before they had reached the home of De Fleurie, she knew every incident of Henrie's life, except that one so deeply hidden in his bosom, and whose fearful import gave a gloomy coloring to his whole existence. This he dared not name, though he saw the countenance of his young listener still fixed upon him in earnest and unsatisfied attention. His breast heaved, while a sigh escaped his lips.

"Are the Benedictines unkind to you, master Henrie?" said the girl, touched with emotion at his suppressed grief.

"I have no reason to complain of them."

"Then why are you not happy?"

He gazed at the lovely questioner, and tears were on both their cheeks—but still he could not utter the dark secret. He asked Gertrude if she had always lived in this sweet place.

"Oh, not always—my father once dwelt in France; that reminds me that our country is the same; perhaps we shall like each other still better for that."

"I need no farther reason to attach me to people who have already showed me so much real kindness," replied he, with warmth.

"Ah, my mother!" said the girl; "she is coming to meet us—I must tell her that you are from France—she loves every one there."

She ran to meet Madame De Fleurie, and returned leading her forwards towards the stranger. Henrie was struck with the appearance of the mother of Gertrude. Her beauty had been extreme in youth, and though somewhat faded by time, still filled the beholder with admiration. It was of that sort that reveals every passing emotion, melting with softness and kindling

with joy, like the beautiful sky, when clouds and sunshine are both sitting over it. She received Henrie, as her daughter had said, as one entitled to a warmer reception from the kindred tie of country which bound them all together. After the evening repast was over, Gertrude led their young visitor through the simple, but tastefully decorated apartments of the house, then into the gardens, which all displayed the same pure and unpretending elegance. His spirits grew lighter and lighter in her society; and listening to the floating music of her voice, he lost all fear of evil. The weariness of the day's toil wore away as the hours flew—and when the time to seek repose arrived, he felt little disposed to quit her whose presence alone had power to inspire him with hope. Sleep came to his pillow, but it was in a dream of the rainbow-beauty of the face which had shone on him that evening; and he would have been happy even in sleep, had not the arch of promise been broken again and again by adverse clouds. The contending elements of hope and fear struggled in his bosom, and his slumber was unquiet.

The morning chime assembled the family for prayer—they waited the appearance of their guest, but he came not—breakfast was announced by another bell, and still he did not appear. De Fleurie, thinking that probably the previous day's fatigue had rendered his slumbers deeper than usual, went himself to summon him to the breakfast room. He knocked gently at the chamber door—there was no answer—he opened it, and called the name of Montauban—he heard nothing but the uneasy breathing of the sleeper. Growing uneasy, he approached the bed, and perceived that the unnatural sleep of the youth was caused by a burning fever. He took his hand, and marked the rapid vibrations of his pulse, and the alternate flushings and palor of his brow, all indicating strong excitement of the brain. The pastor was deeply concerned about his state, and stole softly out of the room to give his family warning, and desire that perfect quiet might be preserved, while the fever continued. The little group gathered around to hear the sad news, and every face wore the aspect of distress. Even little Annette stopped her play, and pulling her mother's gown, said, "I and Gerdie will not run and wake the poor boy."

"What a sweet child," exclaimed her sister, (imprinting a kiss on Annette's cheek, while a tear glistened in her own eye.) "You are the first to promise, but we all will help you to make poor Henrie well and happy too."

"Why do you think he is not happy?" said her father, in an altered tone.

"Because he is a wanderer from home and country, without one to love or care for him."

"He has a father, my child—one of the proud nobles of France."

"He may be, father; but Henrie is not proud, and perhaps his father does not love him on that account."

De Fleurie pressed his daughter to his bosom, for her words always fell on his ears like dew on the early flower, and hastened back to the sick chamber. The fever had gained additional strength since he left the invalid, who was now tossing from side to side in wild delirium. His mind seemed to contend with frightful phantoms.

"Destiny! why shouldst thou appoint me splendid

misery? Why chain down my actions to thy dark decrees? A heretic! Say you she is a heretic? She is an angel! I defy all the universe, and you, ye tyrants of the unseen world."

De Fleurie listened to the wild and inexplicable ravings of Montauban. Could they be all illusions of the fancy—or had they some incipient cause of fear as their basis? Hour after hour, he sat alone by his pillow, awaiting with anxiety the recess of the scorching heat which throbbed in every muscle. On the third day, there was some abatement, and so great the collapse of the system, that the pastor, deeply skilled in the physical system, feared for the consequences. However, his fears were succeeded by confident hope, when the invalid opened his eyes with something like natural expression.

"Father Francis, is it you," he said, regarding the pastor with a perplexed look. "Oh! what a dream I have been in!"

The pastor approached him.

"You are still at the cottage of De Fleurie, and have been ill several days."

"Have I?" asked Henrie, attempting to raise himself, and sinking in the effort. "Yes—I feel that I have. What will the monks do, when they miss me? But oh! that dream! Could it have been all a dream?"

"Compose your mind," said the gentle voice of the pastor—"it will all pass away with returning health. Here is some refreshment, prepared by Gertrude—you will be better when you have drunk it."

"Then, she thinks of me! Give me the cup—I will drink it for her sake. Oh! De Fleurie, that I had been born in this valley, to share the lot of Gertrude in making every one happy."

"Remember," replied the pious man, "that ours is the lot of the humble. The great would call our contentment misery. Can you, who are born to enjoy the splendor and renown of a court, envy the poor cottager of the Rhine?"

"De Fleurie," said Montauban, trembling with emotion, "I shall never feel any thing but wretchedness, amidst the splendor that waits on my lot—but you shall know all."

"Not now, Henrie; this agitation may be the cause of difficulties to me, that you know not of, by throwing you into a worse state than that from which I hope you are fast recovering. Let us think of gaining sufficient strength to join the family, whom I now see assembled under the old oak."

"Well, De Fleurie," said the invalid, whose cheeks were already crimsoned by the state of his feelings—"I fear you have found me a refractory patient, but I will endeavor to be quiet to-day, with the hope of joining the little group under the oak to-morrow."

The arrangement was made, and the next day every thing was prepared by the young people in the most comfortable manner, to receive the convalescent. Gertrude fixed with her own hands the cushions, which were to form a seat, with the trunk of the beloved oak for a support at the back; and all being ready, the young people waited in animated expectation of each having an opportunity to contribute something towards the accommodation of their guest. He at length appeared, but so weak, that the whole strength of the pastor was scarcely sufficient to support him. Ger-

trude saw his faltering step, and brushing away the tear which unconsciously was stealing down her cheek, ran to offer her shoulder as an additional aid. It was not all from feebleness, that the arm of Henrie shook, as it reposed on the white shoulder, shaded by the stream of golden hair which fell over it in rich profusion; and his heart vibrated with a quicker motion, as his swimming eyes met the tearful glance of the girl turned towards him in deeper interest than words can express.

Montauban received the kindness of De Fleurie's family with the sensibility of a grateful heart, and grew daily in their esteem and admiration. It was only when conversing with Gertrude, that the eloquence of the eye seemed to supply the place of words—the deep and anxious look, with which he regarded her, spoke a more intense language than the tongue, and acted like an electric chain from one heart to the other—or else, why was it that the silken lash of the young maiden was cast down towards the changing cheek? This was, perhaps, as much a mystery to herself as to us, for Nature does not always reveal her secrets, even to her favorites. To-day, and another, and another passed by, and Henrie's dream of happiness continued. New and engrossing emotions expelled the fearful visions of his early fancies. De Fleurie thought him sufficiently restored to bear the journey back to the monastery, and though concerned at the idea of parting with a youth of so amiable and interesting a character, he still felt constrained to propose his return to the monastery. Henrie acknowledged that he had stayed too long, and that the brethren had reason to be uneasy at his absence. It was concluded that De Fleurie should himself be the guide, and that they should set out early the next day, on the sure-footed mules which are accustomed to these mountain passes, towards the monastery. It was only in determining to leave the hamlet, that Henrie Montauban felt that his only hope in life rested there. The pastor perceived some secret cause of dejection preying on the spirits of the youth, but he could not hope, so far removed were their spheres of life, to afford him any relief; yet as the Bible had enjoined, without distinction, that we should "weep with those who weep, and rejoice with those who rejoice," he refrained not to offer his humble, but ready help, to remove any difficulty or distress his young friend might be in.

Montauban reflected a few moments, before returning an answer to De Fleurie. "What if the curse of heresy should, by a strange fatality be fulfilled, in his meeting with Gertrude?" The thought was distraction—he shuddered at the possibility—for, as yet, he had never heard what religious sect De Fleurie's family followed.

At length he spoke—

"You are right, De Fleurie. Though born to the noblest titles of ambition, I am miserable. A hidden source of unhappiness broods here, at my heart—a cause, which my free will must ever resist, without the hope of overcoming. The time will come, when you must know all; and then, perhaps, the cup of my destiny may be full. I only ask permission to revisit your cottage once more, before I leave the Benedictines."

"Certainly," replied the pastor, "if it will afford you pleasure."

Henrie pressed his hand, as an expression of his gratitude. A few hasty preparations were completed,

and Montauban advancing, bade Madame De Fleurie adieu. Gertrude had escaped into the open air, and was busily engaged twining a wreath for Annette's hair.

"There, sister Gertrude; he is coming to tell us adieu too," murmured the sad little voice.

Gertrude could not look up or venture to speak, when Henrie bade her farewell, for then the swollen fountain of her heart would have revealed itself. He pressed her slender hand, from which the wreath had fallen unconsciously, and whispering, "We shall meet again—do not forget me," shot through the distance, to where his mule stood waiting.

CHAPTER II.

The Benedictines heard the tale of their young charge without displeasure, and thought it a fortunate accident which had thrown him on the hospitality of the cottager of the Rhine. They had failed in hearing tidings of him in the neighboring habitations, but fortunately had delayed giving his father intelligence until further search could be made. Montauban endeavored to occupy his mind with a closer attention to study, especially as he found this the ready road to the favor and good opinion of the brethren. Sometimes indeed, his soul would burst away from its shackles, and indulge the hope that he should one day be happy, united to Gertrude; but neither her name nor any thing connected with the hamlet, ever passed his lips—he knew too well the inquisitorial power of the fraternity, should suspicion be awakened.

Time flew by our hero, and bore on his pinions days and months and years, without destroying the one sweet reverie of his heart. At last the long expected summons from his father came for him to appear in the capital. Henrie asked a few days' indulgence of the brethren, before his final leave, to revisit the picturesque scenery which had afforded him so much pleasure. This wish being accorded, how quickly did he fly back to the spot of his romantic adventure. He stood on the highest point of the mountain, overlooking the quiet vale of the hamlet. The revolving seasons had swept the forest of its garniture, and seared the verdure of the fields—but she whom he loved! suppose the blast of adversity, or worse, of death, had passed over her! it could not be.

The dews of evening were falling, when Montauban knocked at the pastor's door. His coming was greeted with the joy of sincere friendship. The family were at their evening meal when he entered. All looked the same as when he left them, except Gertrude. There was a new inspiration about her—a cast of deeper thought—as if a shadow veiled the pure skies for a moment, and then passed away. This rendered her not less lovely, but more celestial in Henrie's eyes. Something repressed the step with which she met Montauban. It could not be indifference—pleasure sparkled in the flush that came over her face, as she saw the full light of his eye fixed upon her, and heard her name pronounced with a low accent, trembling between hope and fear. Another moment told him that Gertrude's heart was his, and this thought lent an animation to his countenance, that made De Fleurie believe his former sadness only a part of his nervous malady.

The evening passed gaily with the whole party, and every one seemed too much occupied in participating the pleasures around, to be observant of others. The pious father alone, could not rest on his pillow: a secret fear had crossed his mind, that Montauban loved his daughter, and that she, though unconscious of the reality, was not insensible to the attractions of the young stranger. He did not hint his suspicions even to Madame De Fleurie; but the next morning he arose with the determination to speak to Gertrude in private, and warn her against the snare which Montauban's attentions and her own heart might lay for her. He called for his daughter. She had already gone out with the young gentleman and Annette. She had promised to show him the grotto her brothers had made for her in the moss glen. De Fleurie was still more dissatisfied. What would he have given that Montauban and his Gertrude had never met! The fact is, that Henrie had sought this opportunity to unburden his heart to the only being in the universe in whom he could feel perfect confidence that every fear and every sorrow of his bosom would be shared by hers. In the effort to bring himself to reveal the dark omens that hung over his existence and rendered the future pathway of life gloomy, he walked silent, and as if unheeding even the presence of Gertrude, who glided softly by his side;—at last, his deep reverie was broken by the merry voices of the children, who had arranged the rural cell for their reception. They descended through tangled foliage to the dell, where stood the fantastic structure, which the triumphant little architects were filling with bursts of wild delight, calling upon Montauban to conduct the queen of the fairy grotto to her throne, pointing to a seat of moss erected by their tiny hands. Montauban could not help participating in their joy, while Gertrude was its object, and re-echoed the strains in which they sung the praises of their sylvan queen.

"Gertrude," said Montauban, when the children had left them, to pursue some other sport—"nature has endowed you with the gift of bestowing happiness—those children are blest when you smile on them."

"Heaven has given us all, Henrie, the power of bestowing and receiving happiness, if we will use it. Can you think otherwise, while you hear the mockbird singing for our entertainment? Even the many-winged insects make all the music in their power for our enjoyment. Our good Creator designed the whole universe to be happy; and it would be ungrateful not to enjoy the blessings he has given us."

"Divine priestess of nature!" exclaimed Montauban, gazing intently on the deep azure of her heaven-lighted eye; "if, indeed, there is bliss in store for me, you, and you alone, have the gift of bestowing it. Until I saw you, Gertrude, existence was to me a load of sorrow, which I seemed destined to bear without sympathy or hope; but you have taught me that there is happiness in sharing our grief with a kindred heart. You pity me, dear Gertrude; those tears tell me that you do—and this thought alone inspires me with joy."

"You must, you will be happy, Henrie," murmured the voice of the girl, scarcely able to suppress the strange agitation of her bosom as she proceeded: "You must be happy, when every thing will contribute to make you so, in the gay court to which you are going."

"Never! never!" exclaimed he, seizing her hand, and pressing it to his heart. "Hear, Gertrude, the dark secret of my destiny. I was doomed by a mysterious power to tread a pathway at variance with every desire, every object of my heart. My nativity was cast by an astrologer, who is capable of reading the unseen mysteries of futurity, and my fears tell me, too truly, that there is reality in his predictions."

Gertrude looked at Montauban, while he was relating the incidents of his future destiny, with a countenance of unutterable astonishment. At last she interrupted him:

"Henrie, is it possible that you are superstitious? Can you believe that the stars know any thing of our destiny, or that any being but the God who made us, can direct it?"

He shuddered, while he replied—

"Listen, Gertrude, before you pronounce me weak. I have always had a consciousness that there is a supernatural agency at work against me, and that my father the Baron Montauban, and his confessor, are only instruments employed for my misery. My experience, thus far, has confirmed this belief; and now, Gertrude, I am going to ask you a question on which hangs more than my tongue can express."

"Nothing that I can say, dear Henrie, shall ever give you trouble—fear not to speak your whole heart to me. Perhaps there is something that I can do to relieve you of this strange delusion."

"Would to Heaven it were," muttered the lips of Montauban. "Gertrude are you a heretic?"

"What do you mean by a heretic? I thought you knew that we are Huguenots, exiled on account of our faith. My father is a preacher of the pure gospel, and does not own himself a heretic, though the haughty prelate, Richelieu, calls him so."

"Too fatal!" exclaimed Montauban. "'The curse of heresy!'—this is now fulfilled—but the warning comes too late. From this hour I war against the decrees of destiny."

Gertrude startled:—

"What does he mean! Oh! Henrie, your words agonize me! Why do you tremble so? Is not Gertrude near you? Did you not say it was my voice alone that could soothe your grief? What must I do to ward off the evil that threatens you? Oh! believe that Gertrude is happy or miserable as you are."

The enraptured Montauban clasped the angelic girl to his heart, and, in spite of the maledictions of fate, vowed to live for her only. He told her of the malignant powers which opposed his alliance with a heretic, of the awful prediction connected with this event, and of the probable loss of every blessing, except that of her love.

"But this is not all, Gertrude," he said; "the wrath of an invisible power may descend on both of us, in an incensed father's hatred. Persecution, perhaps death, may be the fruit of my rebellion against the mandate of the church; and yet I feel, that dying with you is better than living the magnificent, but miserable toy, that a court would make me."

"Henrie," said Gertrude, "I cannot put confidence in these omens; my faith has given me a surer guide to trust in; but I do believe in the responses of nature, and that Heaven does not frown on the union of two

hearts ready to devote themselves to the happiness of each other. Let ours be the love that casts out fear. Why should we dread any thing? Can there be harm in loving each other as we do—without wishing evil to any one in the whole world?"

"Heaven must inspire your words, Gertrude," replied Montauban; "but will you ever think and speak thus? Perhaps many weary days and even years may elapse before we meet again."

"Look at the blue sky that bends over us, Henrie—a cloud may obscure it, but you are certain that it will pass away and leave the bright arch as beautiful as ever. So shall my heart be, through changing years."

The pastor was the first person who met the lovers, on their return from the glen. Gertrude saw that her father was disturbed, and kissing his hand, with the usual morning salutation, passed on, leaving Montauban to tell him the result of their interview. The good De Fleurie, heard with painful interest, a tale which involved so deeply the future peace of his family; and but for his confidence in the mercy of a superintending Providence, he would have trembled at the idea of drawing down the anger of the proud Baron on the humble roof which had sheltered his son, and, in extending kindness, incurred the vengeance due to the guilty only. He found Montauban unmoved by his arguments to dissuade him from thinking of an union with the daughter of an exiled Huguenot. He called for Gertrude, hoping to awaken her mind to the evils of so rash and presumptuous a step. While she listened to her fond parent's words, with the reverence of filial duty, she confessed that it was impossible to sever the bonds of the heart which united her to Montauban. She would obey her father, but she could not forget Henrie—even though in obedience to him, they should never meet again. De Fleurie could scarcely repress a tear in witnessing the emotion of these two young hearts, (separating, as he believed, forever;) and placing the hand of Gertrude in Montauban's, he exacted a promise from both of them that they would hold no communication with each other, until Henrie had spent two years, at least, amidst the gaities and magnificence of the French court.

Montauban left the hamlet, confident that he should not be forgotten by her whose image would be to him the talisman of hope and perseverance in all his trials. He was wending his way towards the monastery of the Benedictines, when he was overtaken by a horseman. The traveller inquired if he was in the direct road to the monastery, and being answered in the affirmative, passed on. Montauban's curiosity was excited by the appearance of a stranger bound towards his own destination, and he walked on more rapidly. On arriving, he was presented with despatches requiring his immediate departure from the monastery, and appearance at the capital of France. To facilitate his arrival, the express who had overtaken him was despatched. The Baron feared his son might not have thought the first summons so urgent as to hasten his movements—and as the favorable moment to introduce him into the great minister's household might arrive before he was aware of it, he pressed him to lose no time on the way. The aspiring Cardinal had reached the height of his glory, and had places and even kingdoms in his gift. His prime agents, in all these plans of aggrandizement,

were the Baron, and his confessor, Joseph. The statesman wished to attach the former more firmly to his interest; and hearing, through the artful speech of the confessor, of the elegant accomplishments and personal grace of the young Montauban, he suggested to the Baron his wish to see the heir of his house, and, if he answered his expectations, introducing him to the court on the approaching festival. The ambitious father thought he could almost see the coronet glitter on the brow of the future representative of his house, as he marked the high approbation with which the Cardinal surveyed the fine person and noble bearing of Henrie. There was an indifference to rank and titles about the young Montauban, that pleased the minister, who saw all around him restless to obtain favors. Besides this, he found his new favorite skilled in letters—able to unravel the abstruse questions of the schoolmen. In this lore the prelate himself showed some vanity, and boasted of being a patron of learning. He soon elevated Montauban to the first place in his household, and showered on him all the favors that the jealousy of the court, against a new favorite, would permit. Henrie Montauban submitted to be an actor in the pageantry of the court, without an emotion of any thing but disgust and abhorrence; yet from reasons of policy, he determined to conceal his feelings, while the term of his probation continued, and, as far as his conscience permitted, conform to the observances required of him. As soon as the Baron saw Montauban established in the good graces of Richelieu, he began again to move the spring of his ambitious views. He pretended to ask the minister's influence to negotiate a marriage between his son and the young Countess of Artois. The Cardinal fixed his proud and searching eye on the Baron, without perceiving the sinister motive lurking beneath the fair seeming of his words.

"Montauban, how dare you propose an alliance between one of my household and the Count of Artois? You know he is the secret instigator of my enemies. I have hitherto passed him by in my wrath; but I was wrong—he shall no longer be overlooked."

The Baron had gained his end—the Cardinal would select a match for his favorite, and doubtless it would be his own niece, the Countess De Mailleé.

The next day the Cardinal proposed gracing his court with the presence of the young Countess, still residing in the convent of St. Ann's for her education.

"Most noble prelate," said the Baron, "the young lady is reported to be in languishing spirits."

"Impossible!" exclaimed the other; "she has just reached the sixteenth year of her age—the hey-day of youth and pleasure."

"It is said," replied the Baron cautiously, "that the Countess pines with a disease somewhat common to the sex."

"What mean you?" exclaimed the Cardinal.

"That she has a hopeless passion for her confessor."

"If this be true," said the prelate—ire burning on his cheek—"the Abbess of St. Ann's will rue the day."

"I know only what the many-tongued voice of report says," replied the artful plotter.

The Cardinal was roused to immediate action on the subject, which was all the Baron wanted. He gave directions for the Countess De Mailleé to be conducted to his palace, and arrangements to be made for her pre-

sentation at the court. He sent for Montauban the day before the brilliant spectacle was to take place, and informed him of the distinguished part he was to perform in it, as the most favored of his household, and next the Countess in the heart of the prelate. Henrie evinced his readiness to perform the wishes of his patron, but without that elation of spirit so natural to a young courtier, on being promoted to so proud an eminence. The minister thought it the dignity of a superior mind, and admired his favorite still more for it. It required the penetrating eye of father Joseph, to see, beneath the calm surface of Montauban's manner, the agitation of a mind ill at ease. He knew what was the fervid temperament of the boy—it scorned a cold medium. There must be some concealment of a passion, that occupied his energies and made him insensible to every thing around him.

The hour of the grand gala approached, and the retinue of the Cardinal was to receive the young Countess at the vestibule of his palace, and thence conduct her into the presence of majesty. First in the cortege appeared Montauban, distinguished above all the other gallants by the splendor of his costume. But what gave peculiar lustre to his presence, was the symbol he wore on the right shoulder—this was the "order of the holy cross"—composed of the finest diamonds, and only conferred on such as had obtained the highest place in the royal favor. The rustling of silken drapery announced the approach of the Countess and her female train. The envious eyes of the courtiers in waiting, were turned on the young favorite of Richelieu, as he advanced to receive the Countess, who appeared surrounded by a band of young ladies, all brilliantly attired, though none rivalling the magnificence of the Cardinal's niece, the richness of whose dress, marked her out in the glittering throng. A tissue of silver and gold invested her figure, which was of less than middle height, but greatly disproportioned in rotundity, which gave her carriage a most ungraceful stiffness. The costly necklace, composed of pure diamonds, might have adorned a bosom of less earthly swell than the one on which it rested. Yet the face of the Countess De Mailleé might not have been devoid of beauty in other eyes than those of Henrie Montauban, who contrasted it with the almost spiritual loveliness of Gertrude de Fleurie. The Countess's mother was of Spanish extraction, and the daughter bore a resemblance to the race from which she sprung, in the soft and clear olive of her complexion, and the deep lustre of her black eyes and hair. Her lips, cheeks, and forehead, gave the idea of chiselled smoothness and symmetry; and the long silken lashes, drooping pensively over the full orbs beneath, all were beautiful in themselves, and would have inspired the beholder with delight, but for an expression of the countenance, that they were intended to minister to the senses rather than the soul. The Cardinal presented his young protégé to his niece, with the most flattering expressions of commendation. She lifted her languid eyes to salute him. There was something about the young stranger that caught her attention, and soon fixed it in admiration. The manly grace of his person, joined to the modest deference of youth, and the embarrassment which only revealed itself in a deeper crimson of the cheek, were new to eyes which had only gazed on

the dark and artful features of monks and confessors. She smiled in taking Montauban's arm,—his own trembled—and she thought it a charming expression of the timid joy that filled his heart, in being promoted to the honor of escorting her.

The Baron blest the day that gave him so bright a prospect of success—for he could not doubt the angury of the astrologer, when he beheld the Countess and his son advance together to the foot of the throne, greeted by the acclamations of the crowd, and receiving the smiles of majesty itself. Too indolent to reflect, and too weak to resolve, the monarch called upon his minister to award some princely gift to the young Countess, the heiress of the house of Richelieu. But the wary Cardinal knew too well the awakened jealousy of the court, to name, on this occasion, the fairest jewel in the crown, as the portion of his niece, and such was the ample domain to which he aspired. He thanked his majesty for his munificent designs, but declined naming any present for his niece. The king then extended his hand, which was kissed first by the Cardinal, then by the Countess and Montauban—after which the assembly dispersed, and the retinue of the minister conducted the Countess back to the palace.

It was evident to every one that the Cardinal had chosen Montauban as the partner of his niece, though as yet, he had said nothing to either on the subject, for fear of revolting those affections which he wished time to fix by constant intercourse. In the mean time he went into secret conclave with the Baron and father Joseph, with respect to a treaty with the Holy See, for the province of Lorraine, which he wished as the marriage portion of his niece with Montauban. The Baron was anxious for this consummation, because on it hung his every hope; and still he could not help fearing there was no inclination on the part of his son towards the Countess, while her growing attachment for him admitted of no disguise. He could think of no cause for this indifference, but the tale of the love affair between her and the Abby de Lille, whispered in the convent whence she came. He consulted father Joseph. He too had marked the coldness of Montauban, but came to a different conclusion.

"The Countess is not beloved by your son, Baron Montauban; but another is. Beneath the thick-ribbed ice, which seems to encrust his heart, a flame, deep as that which kindles Vesuvius, lives and burns in its hidden chambers."

"Impossible!" exclaimed the Baron, palid with emotion. "He is insensible to female beauty."

"Since he has been here, I confess it," replied father Joseph; "but he may have seen some object to inspire love in the solitudes of the Rhine—and the early illusions of the fancy are hard to dispel."

The Baron clenched his teeth at the bare idea.

"Joseph—does surmise only prompt these suspicions, or has rumor whispered this tale?"

"My suspicions are founded alone on the conduct of your son. I have marked that he always avoids any allusion to his residence at the monastery. I have purposely referred to it several times in conversation, and an instant change has come over the spirits of Montauban, while his manner assumed a constraint, as if he were afraid of revealing something which he wished secret from my knowledge."

"Your suspicions, father Joseph, seem preposterous, and yet they fill me with uneasiness."

"Hasten these nuptials with the Countess, before they are verified," returned the father.

"Would to Heaven they were concluded," replied the Baron. "The Cardinal alone has the power of ratifying the contract."

"This is true, Baron Montauban; and still the haughty Richelieu may be forced to resign the Countess and her dowry of Lorraine, into the hands of your son, as soon as to-morrow, if you desire it."

"Are you dreaming, Joseph, or sporting with my credulity?"

"What, if the Holy See make it a condition of the accession of Lorraine, that its new governor pledge himself to take immediate possession for the extirpation of heresy and the establishment of the ancient rites of the church? I boast not my influence with the Pope, but I have power to enforce the ratification of this treaty when I think proper—and foreseeing the evil the remedy is provided."

The Baron looked at the monk as if he thought him endowed with supernatural power to control the destinies of men, while the other enjoyed the only triumph his dark soul coveted—the power of ruling the actions of men so as to effect his own purposes, without employing any visible agency.

The following day the confessor requested admittance to the minister, and showed him the Pope's edict with respect to the occupation of Lorraine. He knew the petulant and vacillating temper of his holy majesty, and that no time must be lost in executing the ceremonials of the marriage between Montauban and the Countess. He desired the immediate attendance of the young courtier, figuring to himself the delighted surprise that would fill his bosom when he should hear from the lips of his indulgent patron himself the high destiny that awaited him.

The prelate was pacing the floor of his cabinet, pleasantly ruminating on the successful issue of this favorite project of his own mind, when Montauban entered. The stern visage of the minister relaxed its usual harshness, as he greeted our hero, who was quite at a loss to conjecture the cause of this sudden suavity in the Cardinal's manner.

"Henrie Montauban," he began, "you are the heir of a faithful son of the church and loyal servant of the state."

"I feel proud, my Lord Cardinal, of this last distinction, both for myself and my ancestors."

"But neither your own merit, let me inform you, young man, nor that of a proud ancestry, can raise you to that high eminence which the favor alone of Richelieu designs for his favorite. The first honor in the kingdom is yours."

"My lord, you astonish me," replied Montauban, standing in amazement—not able to comprehend the prelate's meaning; while dark and undefined forebodings passed through his mind of what this high destiny imported, not without a dread that it was connected with the Countess de Maille, whose preference for him was apparent to every eye, and seemed to meet the approbation of the Cardinal.

The prelate paused. Was it possible that Montauban's usual acuteness had not guessed the blessing in store for him! Must he be more explicit?

"Montauban, it is not my wont to trifle—time presses, and I must inform you, in as few words as possible, of the good fortune that awaits you."

"I am unworthy, my lord, of higher honor than that already bestowed on me by your kindness," replied the young favorite, in dreadful suspense. "I should feel oppressed by the obligation of receiving further favors at your hand."

"I know," resumed the Cardinal, "that all gifts are valueless in the eyes of a young lover, except the one that has fixed his heart. What say you to receiving the Countess de Mailleé as your bride, and the rich province of Lorraine as her princely dowry?"

"Reverend prelate," exclaimed Montauban, (grasping the pillar near him, and endeavoring to calm the deep agitation which shook his whole frame,) "it is too late to disguise. Were fortune, life, destiny at stake, I could not accept the honor you design me. I am not insensible to the high elevation to which you would raise me, or to the condescension of the Countess de Mailleé. I know, also, that I must brook the wrath of an offended father—the scorn of the world—not to speak, my lord, of the almost resistless power of your arm, which holds nations at defiance; and still I must, and do renounce all the favors in your bestowment, except this one, which I solicit on my knees—to leave France with the freedom of my own will."

For a moment the minister could scarcely credit his own senses—the next, his eyes shot arrows of scornful revenge at the youth who would dare to countervail his wishes. His proud spirit never stooped to the arts of persuasion or remonstrance, even where he felt most indulgence. The quick vibration of his muscles, and the force with which he pulled the bell, were the only symptoms of his deep displeasure. His call was answered by the man in waiting.

"Let the Baron Montauban be requested to attend me here, as soon as possible."

The waiter perceived there was a storm brewing on the brow of the minister, and withdrew with haste. Montauban's look was fixed on vacancy, and his mind absorbed in the probable consequences attendant on the step he had taken, when the Baron entered. His countenance wore the bland smile of the courtier,—but he no sooner turned from the lowering brow of the minister to the unmoved gloom of his son's, than he hid the keen presage of disappointment in the honied phrase of dissimulation.

"My good Lord Cardinal—and you, my sweet son—I hope no evil foreboding clouds the sunshine of our near happiness, that your visages wear the hue of grief rather than joy."

"Your son, Baron Montauban," said the Cardinal, darting a glance of contempt at Montauban, "declines an alliance with the poor house of Richelieu. He has hopes of a richer coronet than that which glitters on the brows of the Countess de Mailleé."

The Baron struggled hard to command his rage at the folly and madness of his son—but he knew to yield to its force then would have lost him the hope of deceiving his master, and bending his son to the object of his great ambition. He said nothing to Montauban, but besought the Cardinal to give him a moment's private hearing before he pronounced the penalty of such ingratitude and disobedience. The Baron's inventive

faculties had already hit on a plausible apology for the conduct of his son. He began by an humble entreaty that his master would excuse the fondness of a father's love, which had sought to conceal a misfortune of nature from even his partial eye. He then informed him, that Montauban had been subject in boyhood, to a sort of mental alienation, which showed itself in fits of melancholy abstraction, and sometimes aversion to what was dearest and most pleasing to him at others—and this aberration was apt, most unfortunately, to succeed any deep emotion or sudden success. He had thought him entirely cured, and he still must believe no slighter cause, than one involving so much unexpected happiness, would have thrown him into his present state. The Cardinal believed the Baron—and not being able to divest himself of partiality for the son, felt his anger soften down into a still warmer regard, in which sympathy was mingled with admiration. It was determined that the union of the young couple should not be pressed, or even alluded to in the presence of the bridegroom elect, until his mind had resumed its natural tone of tranquillity. In the mean time he should be suffered to pursue the bent of his own mind, so as to feel that he was not acting under constraint. After settling these points, they returned to the cabinet, where they found Montauban awaiting them. His eyes were fixed upon the Baron, with an inquiring glance, but nothing was visible in the cold and placid smile of the diplomatist. In the prelate's manner there was a favorable change.

"I see, Montauban," he said, "that the hot blood of youth will not bear the rein of riper years—I leave time to chase the demon from your mind, and restore the hopes which should animate your bosom."

Henry only replied, that his feelings could never change, and hoped the Cardinal would not suffer himself to be deceived.

The Baron had used this stratagem only to deceive the Cardinal, and gain time to remove the obstacle which prevented his son from giving his assent to the marriage proposed by the minister. He lost not a moment in seeking father Joseph, and consulting him on the best course to be pursued. It was agreed between them, that the object of this fatal passion must be found, and put out of the way. To discover, and to remove the cause of obstruction to the Baron's plans, was a business that suited the sly ingenuity of the monk, and to him it was confided.

It was deep night when a rider left the postern gate of Paris. He carried the signet ring, and sped his course unmolested. His horse grew tired—the same symbol procured him another, and another, until the Benedictine gates opened to admit the legate of Holy Church—for such father Joseph purported to be in this embassy. The brethren paid all due rites of hospitality, and kissed the hand which bore some gracious behest of the Pope to their simple and retired fraternity. The monk inquired as to the distance and state of the neighboring convents, and casually, as it were, referred to his having brought the young Montauban to their monastery a few years ago. This led to remarks on the peculiar habits and turn of mind of the young man, and his fondness for rambling through the wild mountainous tracts that stretched beyond the Rhine. The monks seeing father Joseph in-

terested in the story of his old pupil, related the adventure by which he was near falling a sacrifice to his passion for roaming. The wily father inquired the name and residence of the kind villager who sheltered the sick lad and restored him to his rightful protectors. They only knew that he called himself De Fleurie, and lived near the foot of the mountain opposite. This was a sufficient clue. The traveller took his leave, regretting that his visits to the other monasteries would prevent his seeing the Benedictines again. He could not doubt that Montauban's sojourn at the hamlet of this De Fleurie had something to do with the aversion he manifested towards a marriage with the Countess. About sunset the monk gained the opening prospect, and perceived beneath him the neat and simple cottages of the inhabitants of this quiet valley, peeping at intervals through the leafy bowers by which they were surrounded. He stopped to survey the scene—not to enjoy its touching loveliness—but, like his arch antitype, to scan the most effectual breach. Some peasants happening to pass, he joined himself to their company, affecting to inquire for the nearest inn. He gradually drew from them the history of their little settlement, of which De Fleurie was pastor. This was enough to crush him with the Jesuit; but this was not all. The countrymen related with heartfelt affection, the sad tale of the persecution which had driven De Fleurie to take refuge, with his little flock, in this distant spot—where he lived in humble happiness, surrounded by a lovely family, all walking in his footsteps, and growing up to be the delight of the neighborhood where they dwell. The monk inquired the size and number of the pastor's family, and whether he had a son likely to succeed him as minister of the flock.

"Oh! yes," replied the one most enthusiastic in praise of the clergyman; "in time, master Robert will be such another. But it is Miss Gertrude, the eldest hope of the father, that shines the brightest star amongst them all. She is just grown up—and though she is handsome enough for a queen, she looks so gentle that the meanest creature needn't be afraid to speak to her."

"Good people," exclaimed the monk, appearing affected by the picture of the pastor's family, "I also am one of the exiled remnant of the Lord's inheritance. I long to behold the pious brother you tell me of, and mingle my prayers and tears with his, for the restoration of Zion."

The peasants heard, with veneration, the words of the monk, and gladly undertook to conduct him to De Fleurie's habitation. They found him seated under the elms that embowered his cottage, instructing the youth of his charge, in the simple but beautiful morality of the Sermon on the Mount. The stranger was introduced as a brother, in like manner suffering for the "testimony of Jesus;" and the heart of the good De Fleurie embraced him, while his lips uttered a warm salutation. The peasant could not take his leave of the monk without whispering in his ear—

"I thought you would not be long in noticing her. I saw your eye fix upon her before I had time to point her out. But you mark that cast upon her face—it has come over her lately. A little while ago she was as light-hearted as the lark—but time will bring care, I reckon, even to the young."

The monk had indeed singled out Gertrude from the crowd of young catechists, and marked the look of pensive thought which conveyed a volume of circumstantial evidence to his mind. A door of access to the hearts and confidence of this pious family, was opened for the monk, by their believing him to be a sharer in the same faith, and also a sufferer in the same trials which had dispersed the true followers of the Saviour in distant lands. In this way, he soon wound his way into the intimacy of friendship, and drew from the good pastor the secrets of his bosom. Night rolled her heavy car over the sleeping world, but so pleasant was the converse between the pastor and his new friend, that they could not separate. They spoke of the haughty Richelieu, and his cruel proscriptions of the Huguenots. Father Joseph became still more confidential. He wanted to feel the pulse of the other with regard to the house of Montauban; and spoke of the Baron as not only an accomplice of the Cardinal in the persecutions they endured, but as the originator of the bloody deeds of which the minister had the credit. The countenance of De Fleurie changed, and exhibited uneasiness at this last communication. The Baron was encouraged to proceed. He whispered that some of the most independent minds had prophesied this thralldom would not continue much longer. God would rid his church of these enemies—but who would be his chosen instruments, was yet to be revealed. De Fleurie shuddered at the suggestion of a conspiracy.

"God, brother, will vindicate his own cause when he sees fit. To suffer is our part—to punish his."

"Do you know the Baron Montauban, personally?" asked the monk.

"Not at all," replied De Fleurie; "but as the father of Henrie Montauban, I could have wished him a better man."

"Why should you suppose him better disposed than his father? He appears the true scion of the old stock of the Medicis. The seeds of cruelty and ambition confined, are springing up already, and promise to bear a full crop of bloody deeds in after life."

"Can it be possible?" said the pious De Fleurie, heaving a deep sigh. "I had hoped differently."

He then told the monk the circumstance which brought the young Montauban to his house, and the interest which his unaffected and amiable manners had excited. He said nothing of the attachment between the stranger and his daughter—a subject that had always pressed on his heart; and now more than ever, after hearing so dark an account of his disposition towards the Huguenots. The ingenious monk perceived there was still something in the back-ground of the pastor's communication and touching another string. He spoke of the projected alliance between the houses of Richelieu and Montauban as an event of ill omen to the Huguenots. The pastor expressed surprise. He had lived in perfect ignorance of what was transacting at the French court. There was deep solicitude in his countenance, as father Joseph related the general report, that a marriage between Henrie Montauban and the Countess de Mailleé would very shortly be consummated. While he thought with regret of the broken vows of the young lover, and the shock that poor Gertrude's spirits would receive at the tidings, he could not lament that the spell of enchantment would so soon be broken, and she return to

the humble associations of her early life. He could no longer restrain his sense of the goodness of God in the turn things had taken; and in the fulness of his gratitude imparted to the monk the tale of the unfortunate attachment between Montauban and his daughter. The traveller seemed to sympathize warmly in the feelings which burdened the heart of De Fleurie; and hoping that the disappointment might be tempered to the strength of his lovely daughter, sought repose until the morning beneath the hospitable roof of the pastor. As he lay on his pillow, his ready invention framed a scheme to separate Gertrude and Montauban forever, by rendering her father odious not only in the eyes of her lover, but affixing a crime to his name that would bring death to him and ruin to all connected with him. This was the only way the monk could devise to tear Montauban from the idol hope of his heart. He knew too much of the nature of the young lover, to attempt to deceive him with respect to the purity or fidelity of the mistress of his heart—but in destroying all hope of obtaining her, might he not yield in despair to the fate that awaited him? This was the conclusion of father Joseph's mind, and we shall see how skilfully he pursued it. Early the next morning he prepared to leave the pastor's habitation—but before departing, obtained a promise from him to attend the consistory in La Vendée, which had been granted them by their tyrants under the show of pacification. De Fleurie hoped the best results from this meeting of his brethren; and it did not require much persuasion on the part of the monk to induce him to make an engagement to be there, taking Madame de Fleurie and the young people along with him, as far as the beloved spot of his former residence.

CHAPTER III.

The monk lost no time in retracing his way to the capital. He saw the Baron—and in the secrecy of solitude communicated the discoveries he had made. He told him of De Fleurie and his beautiful daughter—of the ingenuous, unsuspecting character of the benevolent Huguenot pastor, and the subdued, but lovely countenance of the girl, seeking to hide the secret of her bosom from the eye of a stranger. The Baron could scarcely restrain his rage while the confessor narrated the story of the engagement between his son and the peasant girl, as told him by the pastor.

"By the holy cross," exclaimed he, "the whole race shall be blasted. My vengeance shall never sleep until the contemptible heretics lie crushed beneath my chariot wheels."

"Stop," said the monk; "there is only one means of bringing your son to submission. He believes in the agency of the unseen world. Let him be warned, by the dark and mysterious fatality which would make the father of this girl the murderer of his own parent, that the stern frown of destiny forbids this union—that bitterness and a curse will rest on those who would defy its power, and the bold and lofty spirit will bend to the purpose you wish."

The monk looked cautiously around to see that no one was passing near, and then detailed his stratagem to ensnare the pastor, and prove him guilty of the most

horrible plot to take the life of the Baron, and his master, the Cardinal.

The pastor, he said, would certainly attend the approaching Diet of the Huguenots. This body was naturally suspected of secret enmity towards the minister and his favorites. It must be proved that a conspiracy is on foot to assassinate these obnoxious persons, and restore these heretics to their former rights. De Fleurie must be shown to be the head of this conspiracy—and that his chief motive in pursuing the life of the Baron, was a selfish one—to remove the obstacle to an union between the young heir and his own degraded family.

All this could be brought about through the monk's perfect knowledge of the persons whom he intended should be actors in the pretended plot. All should result in detection—the prisoners tried publicly and sentenced to death. The Baron gave his sanction to the stratagem of his spiritual guide, without evincing the least scruple of conscience. The monk departed to meet De Fleurie at the Diet, leaving it for the Baron to keep up the delusion of his still being absent on a commission to Rome. He found De Fleurie already there. The open-hearted pastor introduced and recommended this new brother to the notice of his brethren, as one deeply concerned in their cause, and worthy to mingle in all their counsels. Thus father Joseph had an opportunity of using every word or incident in the way that suited his dark purposes. He suggested to De Fleurie the idea of presenting a petition to the Cardinal, for the restoration of certain property unlawfully taken from the Huguenots by an edict of the Queen Regent—a name become as odious to the minister as to the subjects whom she oppressed by cruel exactions. This memorial, he proposed, should be drawn up by De Fleurie, and submitted privately to two judicious friends for consideration, before it was introduced before the Diet.

The pastor was pleased with the plan, and forthwith proceeded to write the petition, requesting the advice and assistance of the monk as he went on. When it was done, the father desired to look over the paper deliberately before it was presented; and that no time might be lost, proposed that De Fleurie should spend the interval in seeking out the two brothers named, and arranging a secret meeting. The pastor readily agreed to the place and time, both mentioned by the other. St. Simon's Tower, an old ruin on the skirts of the city, was selected for its solitude; and the time, midnight of the same evening.

Father Joseph's skill in penmanship was almost miraculous. As soon as De Fleurie was gone, he sat down to counterfeit his hand-writing, and produced so perfect a fac simile, that the writer himself could not have told the difference. He carefully secreted the original, putting his own in its stead. De Fleurie returned. He had seen the brothers De Saix and Charpentier. They would be punctual at the place and hour. The monk rejoiced in spirit, beholding the ease with which he could rule the minds and actions of men.

The pastor was anxious that the monk should be one of the consulting party. But to this he naturally objected, fearing he might be a restraint on the freedom of discussion among friends as confidential as De Fleurie and his intimate associates. The truth was, father Joseph intended to be there also, but with ano-

ther invisible witness of the scene, which he meant to pervert into the groundwork of this plot. The convocation met. Father Joseph and De Fleurie were present—but as soon as the former thought himself unobserved, he slipped out, and taking a circuitous route, called at the house of the Bishop of St. Austin's. This ecclesiastic, though devoid of the cruel bigotry of the times, was known to be steadfastly attached to the Catholic Church, and though conciliating in manner was unbending in principle. He did not at first recognise the monk, though he faintly remembered his face. The father seeing this, reminded him of the Castle Montauban, and instantly they were good friends. The monk asked a few moments' audience of business of deep moment, and assuming an air of fearful import, informed the Bishop of the reasons he had to believe a plot on hand to murder the Cardinal and Baron Montauban. In confirmation of what he had said, he only requested the Bishop to follow him to the spot where the actors in this horrid tragedy were to meet for consultation that night, and where they might hear, unobserved, the result of their interview.

The Bishop firmly believing the tale to be true, promised to meet the monk at the ruins a quarter of an hour before the time arrived for the conspirators. It was a night of surpassing splendor—the full moon was "treading with silvery feet" the wide expanse of the deep blue skies, pouring from her round orb a flood of that soft liquid light, which seems to invest every object it touches with hallowed beauty.

Father Joseph and the Bishop reached the tower time enough to choose a favorable situation for observation, without being themselves seen. The monk prepared the mind of the Bishop to put a wrong construction on all that transpired between the pastor and his two friends. He said they must not expect a full disclosure of the plan, even among the conspirators themselves—guilt is ever secret, and deals only in dark hints. The hour of twelve sounded, yet no tread disturbed the silent repose of the unfrequented ruins. The monk ventured to look abroad from his hiding place, but quickly returned.

"I thought they would not let the time slip," he whispered. "I hear a soft step on the old corridor. Now mark their every motion and look, for it is fraught with death."

De Saix and Charpentier came first. They stood on the broken columns awaiting their comrade De Fleurie.

"He surely will not fail to be here. He knows he is looked up to, to carry the thing through," was the remark of one. The other replied—

"Never doubt his moral courage—he is the man among us to sway the minds of men."

The monk touched the Bishop's arm—"De Fleurie, you perceive, is the prime organ of action."

While they talked, he arrived, and was greeted warmly by the others. Having wiped the perspiration, occasioned by quick motion, from his brow, he led them into a more retired part of the old chapel, where the beholders had a still plainer view of their proceedings. De Fleurie drew from his pocket a match, and after creating a light, produced a paper, on which the eyes of his companions rested in solemn and eager expectation. He looked around on the ivied wall. He listened. The chirp of the beetle alone broke the stillness. He opened

the scroll, which he held in his hand, and presented it to the others. They read in a low murmur. Their visages were contracted in deep thought. At one part they paused, as if overpowered with the fearful import.

"It is a bold step, brother," said De Saix. "What if we should fail?"

"I leave that to God," replied De Fleurie. "The remainder of wrath he has promised to restrain."

"Hear the assassin," again murmured the monk in the ear of the Bishop.

De Fleurie now appeared animated, and his words were more energetic.

"Let us act wisely, but holdly. Too long have we crouched beneath our tyrants. If this attempt should fail, and draw on us a severer punishment, let us die contented. We fall in the struggle for liberty."

Here the words were lost; but the Bishop had heard enough to make him tremble at the horrible purpose of the conspirators.

The other two seemed to catch the spirit of high wrought enthusiasm from the lips of De Fleurie, as he proceeded in accents too low to be heard by the spies.

"Brother," they replied, "we will not swerve in this enterprise—we feel confident that the Lord will speed the arrow to the hearts of our tyrants. They must yield."

Then the names of Richelieu and the Baron Montauban were heard indistinctly, and with ominous glances.

Father Joseph touched the Bishop with still more emphasis—

"It is too certain," said the ecclesiastic. "Measures must instantly be taken to arrest them."

The monk motioned to him to be silent, while the Huguenots were retiring. As soon as they were gone, the Bishop grasped the hand of the monk, telling him that the Church and the State owed him the life of their two noblest sons. The monk asked the Bishop if he would testify to the guilt of these men. He said he could feel no hesitation in preventing so diabolical a plot. The monk proposed to counterfeit friendship with them, until he should complete the evidence, by getting possession of the paper which contained the sum and substance of their guilt. This he thought he could manage, by following De Fleurie, and taking the room next his. The Bishop commended the plan and zeal of the monk, and warned him not to lose sight of the conspirators for a moment.

Father Joseph sought his secret chamber, and spent the whole night in framing an instrument of death for the good pastor. In this paper, which he intended as a substitute for that the Bishop had seen in the hands of De Fleurie, he only preserved the hand-writing of his victim, while the substance was fraught with treason against the government, and death to the two hated individuals. Father Joseph wound up the labors of this night, by hiring a safe messenger, at high cost, to convey to the Baron, with the utmost despatch and secrecy, an account of the success of his undertaking. Until the charges were made out, the prisoners arrested and conducted to the capital, he hinted to the Baron to put the Cardinal on his guard, and take every means to exasperate him against the criminals.

Montauban's mind had assumed a still gloomier cast, since his interview and explanation with Richelieu.

Bound by every consideration, not to divulge the secret of his engagement with Gertrude, while he remained at the French court, his bosom labored under a weight of anguish, while his countenance wore the fair and false exterior of a gay and careless mind. It is true, that the freshness of his cheek had faded, and the rounded proportions of a matchless figure, given place to leanness with its chilly aspect; but this was the tendency of the atmosphere of courts, with its forced and artificial life. None thought of looking deeper for the cause, except the Baron, and his agent, father Joseph.

It was midnight. Montauban was still up, gazing from his balcony on those bright and mysterious travelers, in which he feared the astrologer had read too surely the volume of his fate; and as he marked their brilliant procession and disappearance, thinking how soon, perhaps, the star of hope would set to him forever, he paced the long archway of the portico that communicated with the court below. At this moment he was startled by a noise beneath. It suddenly occurred to him that the confessor had been absent an unusual length of time, and that there was something singular in the Baron's never alluding to him since his absence. Dim and undefined suspicions crossed his mind, and made him lend a more attentive ear to the sound below. A voice called the name of Baron Montauban. Montauban perceived that it proceeded from a traveller on horseback. What could such a person want at that hour! He descended hastily. The stranger eyed him sternly and repeated the words:

"The holy mystery."

To which Montauban replied, "Dwells in the breast of the faithful."

These words he had most fortunately discovered, on another occasion, to be the passport between the Baron and father Joseph, and they saved him from detection, on receiving the packet from the stranger, meant, he doubted not, for the Baron. The messenger disappeared before Montauban broke the envelope which enclosed the despatches. He glided softly to his chamber, where a dim lamp still burned. His hand trembled, and the flush of wounded honor burnt his cheek, as he, for the first time in his life, was about to commit an action of which he doubted the propriety. His deep anxiety to know whether the suspicions he entertained of the monk, had any ground of reality, prevailed over his honorable scruples, and induced him to break the seals. He tore open the letter. It was from the monk, and with an intense interest Montauban sat down to decipher its contents. Amazement and horror scarcely suffered him to breathe, while he tried to gather the meaning of the writer. But when he could no longer doubt, that his father was not only the repository of the diabolical plot, but the cause and mover of so black a crime, he fell back in utter abandonment, and would have yielded up a life become now almost insupportable, but for the thought that truth and mercy and honor called on him, even in the depth of his despair, to save the innocent, though at the risk of throwing back the blow on the guilty head from which it had proceeded.

"Ye powers of justice and truth!" exclaimed the frantic Montauban—"bear me through the conflict, while I seek to rescue the innocent from the fangs of the destroyer, although in doing so, I bring eternal reproach and infamy on the blood that gave me being!"

He looked again at the monk's communication to the Baron. It contained enough evidence to upset the criminal proceedings against De Fleurie, and convict his accusers. He secreted it carefully, resolving to make its disclosure the last resort in the issue of the trial. In the mean time he avoided, as much as possible, the presence of the Baron, fearing that the deep indignation of his feelings might betray itself in his manner. Day after day elapsed, and yet the Baron received no token from the monk. He became restless and uneasy. Could the enterprise have failed? Henrie Montauban alone could have solved the difficulty, but he gave no intimation of the fearful anticipation that filled his own mind. The first notice that the Baron received of the success of the stratagem, was given by the great bell of the palais royal, calling the military to arms. A general panic seized all ranks—they ran confusedly together, inquiring the cause of so sudden an appeal to arms. The Baron was himself confounded, and hastened to the Cardinal. The prelate had just received accredited information of a plot to assassinate the persons most odious to the Huguenots—the minister and the Baron Montauban—the whole plan, concocted by the ejected ministers of that faith at the consistory then sitting, discovered by the Bishop of St. Austin, who would attend the prisoners to Paris. The Baron received this intelligence with the most apparent surprise, and declared himself ready to venture his own life to defend that of the minister, at which no doubt the miscreants principally aimed. The Cardinal acknowledged the firm fidelity with which the Baron had always served him, even in jeopardy of his own life, and promised that the reward should equal the sacrifice. Orders were issued for the life guards of the Cardinal, commanded by Montauban, to rendezvous immediately at his palace, ready to defend his person if assailed. The messenger returned, without accomplishing his errand. The commander of the life guards was missing—no one could give any account of him. How strange and unpardonable this conduct appeared!—but no time was now to be lost; another officer was appointed in his place, and the body guard paraded before the palace of the minister.

De Fleurie and his two brethren, De Saix and Charpentier, entered Paris, escorted by an immense crowd of armed men, prepared to quell any movement of the people in their favor. They were marched in procession through the principal streets of the city, to the door of the prison, where they were lodged under a strong guard to await their final trial. The countenance of the pastor wore the same upright and heavenly composure, as, when seated amidst his own simple flock, he expounded to them the lessons of holy writ. He had been arrested on an accusation without the slightest ground of reality. He had been seized by the hand of violence, while in the performance of his legal rights; but his consciousness of the rectitude of his motives, and the trust he reposed in the divine government, prevented his being intimidated by the malice or wrath of his enemies—and instead of repining at his own situation, he thought only of inspiring his comrades with the same christian fortitude. The day of trial arrived. The prisoners were led through a double file of glittering javelins, to meet their accusers and answer to the charge which involved them in the guilt of designing

the assassination of the Cardinal and Baron Montauban. The prosecution for the crown opened by a summons for the witnesses to appear. De Fleurie had never heard even their names, and looked, expecting to behold only the faces of strangers in his accusers. What was his amazement, his sickening horror, to recognize in one of them, the man, who under the guise of pious friendship, had entered the sanctuary of his domestic happiness—heard the artless tale of his joys and sorrows—communed with him on the sufferings of the Lord's people, and united in the fervent petition to Heaven for the restoration of the persecuted remnant! Then it was that the countenance of the pastor grew pale—and his heart sunk within him, when he saw the perfidy and diabolical malice of his pretended friend. The monk assumed the same calm and unmoved expression of feature, as was his wont when he wished to appear unconscious of the thoughts of others. Such was the look with which he encountered the eye of De Fleurie, fixed upon him in astonishment and disgust.

The paper, purporting to be an instrument of agreement between the prisoners, was produced by the monk, and read to the court. They denied all knowledge of such an agreement.

De Fleurie was asked by the judge, if he did not exhibit to his fellow prisoners an instrument of writing, on such an evening, at the chapel of St. Simon's? He confessed that he did.

"It was a memorial to be presented to the minister, Cardinal Richelieu, for the restoration of certain rights."

"Was that petition in his own hand-writing?"

"It was," replied he, firmly.

"Let him produce it," muttered the monk.

De Fleurie presented the memorial.

"Do you deny," said the prosecutor, "that this is also your hand-writing?" (holding before his eyes the forged conspiracy of the monk.)

"Great God!" exclaimed the pastor, "defend thy servant from the machinations of darkness in this trying hour. Thou only knowest my innocence of the crime alleged against me!"

"Answer to the question," was reiterated by a thousand voices.

"I do confess this is my hand-writing, while I protest before my Almighty Judge, that I never indited one word of this paper," said the prisoner, casting his eyes to Heaven.

"You have acknowledged all we require, that both these papers are your hand-writing," said the prosecutor.

"I cannot deny that they are," replied De Fleurie.

The testimony of the Bishop was then taken.

He was asked if he recognized the prisoners to be the same he had seen in the ruins of St. Simon's chapel.

He said—"They are the same persons."

"If their discourse was such as implied their guilt in this conspiracy?"

"It was, so far as he heard it."

"Could he swear to the fact of their exhibiting the paper containing the plan of a conspiracy to make way with the Cardinal and Baron?"

"He could not doubt that was the substance of the paper over which they were consulting at the chapel."

The testimony of the Bishop, given in so candid and

unprejudiced a manner, produced an instant effect on the minds and feelings of the spectators. A general murmur of impatience for the sentence of the law, ran through the crowd. The marshals found it necessary to elevate their badges of office, as they moved through the assembly, and restored order, while the chief justice rose from his seat, to pronounce the doom of the prisoners.

The Cardinal and Baron had taken no part in the prosecution, having wisely committed it to sure hands, but sat on an eminence apart from the crowd. The countenance of the prelate wore a still more elevated and supercilious expression, as he felt his enemies sinking beneath his frown, and the acclamations of the multitude ready to pronounce his triumph, while the gratified and complacent air of the Baron told that he already enjoyed the death of the prisoners.

The voice of the judge commanded breathless attention, as he began,

"Have you, Justine de Fleurie, Ernest de Saix, and Constant Charpentier, any thing further to say in extenuation of your guilt?"

"Hear! hear!" reverberated through the agitated populace.

"Nothing," replied the prisoners, in a distinct voice, lifting their clasped hands to Heaven.

"Then I proceed to pronounce"—

Here a confused sound began in the crowded vestibule of the court. In a moment it spread from rank to rank of the vast multitude, eager to catch the sound, and ready to act from any new impulse. The cries of a human voice were heard above the mingled agitation of the throng.

"Hold! hold! Arrest the sentence in the name of the king of France!"

At the same time a man, issuing from the multitude, made his way rapidly through the gleaming swords of the gens d'armes, towards the bench of justice. As he moved onward, the assembly recognised the noble son of the Baron; and the cry of "Hear! hear! the heir of Montauban," echoed through the lofty halls. The judge paused in the sentence, while the young courtier, bowing respectfully, approached the bench.

"My lord chief justice," he said, (mastering the agitation of his natural sensibility by the moral energy of his soul,) "and you, my lord Cardinal," (turning towards the prelate,) "I bear the king's mandate, that these proceedings be arrested, until another investigation of this charge be instituted."

Saying these words, he delivered to the judge the monarch's protest, bearing the regal signet. The Cardinal bit his lip with suppressed ire at this interposition, while the Baron writhed with fear and anguish at the probable consequences to himself. The judge, with a lowering brow, broke the seal, and read aloud the king's behest. It required the suspension of the sentence of the law against the prisoners, accused of a conspiracy against the lives of the Cardinal de Richelieu and the Baron Montauban, until the testimony of Henry Montauban should be heard in their defence. The eyes of the court were turned in wonder on the spectacle before them! A son advocating the cause of his father's murderers! For such they esteemed the prisoners. The soul of Montauban was borne beyond the sphere of human weakness, in the part he was

about to act. With a steady eye and an unfaltering accent, he addressed the court. He produced the despatches from the monk to the Baron, (which he had intercepted in their passage,) detailing the whole plan to entrap De Fleurie; to destroy whom, the whole plot was fabricated. He displayed before the counsel a corroborating letter, written by the monk to the Baron, while he was on this embassy of death to the house of the pastor.

"This letter," he said, "I have surreptitiously drawn from the repository of darkness. My motive alone can justify the action by which I came possessed of it. But," turning to the monk, who now for the first time felt the horror of his situation, confounded and petrified, by the overflowing power of the truth, "I defy you, the confessor of Baron Montauban, to disprove what I declare, or the evidence by which I have sustained this assertion, that you are the author of this abominable plot."

The iron sinews of the monk began to relax. He trembled with fear, while with a chilled and ghastly expression of countenance, he looked towards the Baron, and said:

"There is one in this assembly, my lords, who can tell whether I deserve the first place in the penalty of this crime. I call upon him to speak. It is too late to falter. The last card is played."

All eyes were directed towards the Baron, who fell from his seat as the monk ended his appeal. His vacant eye and the convulsive motion of his muscles, gave evidence that he had lost the power of comprehension, in the stunning effect of this fatal disclosure.

"My lords," exclaimed Montauban, with the courage of a martyr, "the appeal of the confessor shall not be lost. He has said truly, that he was but the instrument. The guilt is another's. I am the representative of the house of Montauban. Be just, my lords. On me, let the sword of justice fall. I claim to take the place of your prisoner."

A moment of silence prevailed, like the hushed voice of the coming storm; then, ere the judge could speak, the shouts of the multitude drowned every sound with acclamations of praise towards the generous, the noble Montauban. The court was touched with the grandeur of the scene—a son offering to bear the guilt and penalty of a father!—but in this case the judge informed Montauban no substitute could be taken. The suit was reversed, and the proceedings must be arrested, until one of the parties (the Baron Montauban,) was capable of attending. The other person concerned in these machinations, the Baron's confessor, must be safely lodged in the city prison to await trial. Having given De Fleurie and his companions passports to pursue their way unmolested to their humble homes, the court was adjourned, and the crowd quickly dispersed, leaving Montauban still standing in the same position, unconscious of the moving mass of human beings, by which he was surrounded. De Fleurie too, remained on the spot. He could not depart without one expression of the deep gratitude that filled his heart. The tears gushed from their full fountains, as he seized the hand of Montauban. Their eyes met—but the emotion of Montauban could only express itself in a still closer pressure of the other's hand.

"Montauban, to you I owe my life, and its every

joy—but at too great a sacrifice on your part"—were the words of the pastor.

Montauban shook the hand of De Fleurie again, with fervor, and dashing through the assembly, was out of sight in a moment.

Baron Montauban was borne, in a state of insensibility, to his own palace, where he lingered a few days in deathlike stupor, without giving any signs of returning reason. His son was not near, to see darkness gather over those faculties which had labored day and night to accomplish the high destiny of his race. Father Joseph, his only confidant—where was he? In the deep recesses of a dungeon—cursing the day that bound him to such a master, and such a fate. Drawing out a protracted life, in the agonies of a guilty conscience, whose remorseless folds were wreathed around his soul, and only extending his existence to add still another pang to his sufferings.

Words cannot paint the anguish of Madame De Fleurie and her daughter, when they heard of the imprisonment of the pastor. They determined to go directly to Paris, if it were but to share the death that awaited him. Travelling was performed with little facility and frequent delays, so that it required all the patience and perseverance imaginable, to make a long land journey, in the times when Gertrude and her mother set out for the capital of France. At every stage they inquired, with throbbing hearts, the news from that quarter. They heard from the keeper of an inn, where they stopped to refresh their horses, that the whole country was pouring into Paris to witness the trial of the Huguenots.

"Of what crime are these Huguenots accused?" asked Madame De Fleurie, endeavoring to subdue her feelings.

"A conspiracy against the lives of the Cardinal and the Baron Montauban."

"Montauban!" exclaimed Gertrude—"then our last hope is gone!"—and sinking on the couch near her, she swooned away.

"My child! my Gertrude!" cried the frantic mother, as she chafed the blue temples of the girl, and called for help in the extremity of her woe.

"What name is that?" said a hollow voice, suddenly issuing from the recess of another room, while the person from whom it came, sprung forwards as if electrified.

"Two travellers, Monsieur, just arrived," said the host. "One of them, a young girl, has suddenly fallen ill."

The stranger rushed to the door of the apartment where they were. He beheld a mother wringing her hands in despair over her insensible child, while her lips, again and again, ejaculated "Gertrude." Impelled by that name, he sprung to the spot where the pale and attenuated form of the unconscious girl lay.

"What do I hear?" exclaimed the wretched Montauban, (for he it was who had been awakened from the deep agony of reflection by the sound.) "Can this be the daughter of De Fleurie?"

"The same! the same!" replied the voice of the mother, encouraged by the manner of the stranger, to pour into his ear her tale of sorrow.

"It is the fate of De Fleurie that has broken the heart of his Gertrude. Mine is a double calamity—a husband and a daughter, both torn from me by the

same stroke; while the last, the only hope, that of perishing together, is denied us. De Fleurie will die, without embracing his wife or daughter more!"

"Both shall be restored—both shall live!" said Montauban, kneeling by the swooning girl. "The voice of hope will rouse her from this fearful dream. I am the bearer of joyful tidings to you. Your husband, the father of Gertrude, has triumphed over the machinations of his enemies."

"He lives then!" exclaimed Madame De Fleurie, clasping the lifeless Gertrude to her bosom. "Your father is liberated, my child—let the joyful news inspire life and happiness."

A sigh heaved the bosom of Gertrude. Montauban could scarcely restrain the wild tumult of his feelings in hearing her pronounce the words "My father." "Gertrude," he said, "there was once another name dear to your heart."

A flush of crimson tinged her cheek, as she murmured the name of "Henrie."

Her heart was still his, but he dared not claim it, while he felt the stain of infamy and guilt resting on his name. He tore himself from the presence of Gertrude, without being able to give the circumstances of De Fleurie's acquittal. Just as he was going to leave the inn, to wander he knew not where, his eyes fell on a notice in the "Courier." It was in these words:

"The Baron Montauban is no more! His death was sudden, and connected with circumstances which prevent its being further commented on at this time."

The paper fell from his hand. A cold and sickening feeling of horror and grief combined, shook his frame, and urged him to fly from every association of happier times. In ascending the diligence, he put a note into the hands of the servant. It was for Gertrude, and bore Montauban's adieu.

"Dear Gertrude," he said, "my destiny still rolls in darkness. Your father will tell you all. Shame and dishonor are now added to the burden of my existence. Can I ask you to share a lot coupled with crime, and that too against your best earthly friend? I dare not—but if ever time should obliterate or even soften this just resentment, or the remembrance of past days make you willing to brave misfortune and shame with me, then may I cease to wander an outcast, and looking up to the God of Gertrude, defy the hand of destiny itself."

The heart of Gertrude was overwhelmed by the contents of Montauban's letter. How little did he know the strength of her attachment, to think it could be influenced by the mysterious crime he had spoken of. De Fleurie arrived at the inn, while she was revolving Montauban's meaning, and after uniting with his wife and daughter in a grateful return of thanks to Heaven for his safe deliverance, gave an account of the plot that was laid to take his life, and of the noble sacrifice at which Montauban redeemed it. The bosom of Gertrude throbbed with pride and joy, as she listened to the glowing words of her father, and no shadow dimmed the sunshine of her soul, as she sealed the pledge to be Montauban's forever. The hands of the happy couple were united by the good pastor, and Montauban felt his bliss beyond the power of destiny itself to destroy—based as it was on the exercise of an upright and benevolent mind, dispensing happiness on all around him. Disgusted with the pageantry of the court, he retired

with his lovely bride to the rural shades of Castle Montauban, whose portals were opened for them by the faithful Jacinta, who thought herself supremely blest in serving "Master Henrie."

We will only add, that the astrologer's tower soon lost all its solemnity, in becoming the play-ground of the reckless little progeny of the castle, who played havoc with the symbolical instruments of the mystical science, without the least remorse of conscience.

CURRENTE CALAMOSITIES:

NO. V.

BY THE AUTHOR OF "THE TREE ARTICLES."

APRIL FLOWERING AND SHOWERING.

Now, doth

"—well-apparelled April on the heel
Of limping winter tread;"

now, may we understand the forceful beauty of the comparison, which Proteus, that "Gentleman of Verona," uses when he says,—

"Oh: how this spring of love resembleth
The uncertain glory of an April day:
Which now shows all the beauty of the sun,
And by and by a cloud takes all away!"

The fair Portia's servant of the Caskets fitly describes "An ambassador of love" by telling her mistress, that

"A day in April never came so sweet,
To show how costly summer was at hand,
As this fore-spurrer comes before his lord;"

and Iris, in "The Tempest" praises "Ceres, most bounteous lady," for

"Those banks with peonied and lillied brims,
Which spongy April, at her host betrimms."

When Antony saw his Octavia weeping, as she took her mournful leave of him, he said,

"The April's in her eyes: it is love's spring;
And these the showers to bring it on!"

Oh! how beautifully do all times and seasons, in their changeful revolutions, expound and illustrate the genius of Shakspeare! He has a line for every phase of the sky, for every variation of the landscape, for every humor of the fitful elements. "Turn him to any cause of policy, the Gordian knot of it he will unloose, familiar as his garter." See, too, how after-coming poets do but repeat the simplest conceits of him, whom "Rare Ben" was pleased to call "Master."

Thus Drummond:

"A beauty, fading like the April flowers;"

and Mallet:

"Her face was like an April-morn,
Clad in a wintry cloud," &c.

and, later still, Corn-law rhyming Elliott:

"His life was but an April day:
He lived, and loved, and died!"

and, (the last that now occurs to me,) that sweetest of the age's minstrels, "L. E. L."—

"Come back, come back together,
All ye fancies of the past,—
Ye days of April weather!"

How suddenly, and how darkly has closed the career of this sweet singer of Spring songs! How rude the clash that struck to earth the lyre of the "Improvisatrice!" A moment here, and the next, forever gone! Like "the lost Pleiad," which she sang so truly, she has dropped from the circle of living bards,—but, unlike the star, she died but to live again, "the cynosure of wondering eyes," in the zenith of fame, immortally.

A few days ago, (it was the first day of April,) I opened a post-brought missive, which was redolent of the sweetest spring aroma, as I broke its ruby seal. It contained the first violet of the year, from a garden, on the banks of the Potomac, and was the nursling of a pair of sisters, among the fairest and the loveliest of all who, monthly, turn your pages, dear Messenger, in quest of amusement and instruction. The first violet of the year! As I opened the yet damp sheet, and found the flowret in perfect shape, and full of fragrance, I thought of Carew's "Primrose."

"Ask me, why I send you here
This firstling of the infant year?
Ask me, why I send to you
This primrose, all be-pearled with dew?"

Then, I bethought me of Habington's "Description of Castara," as I recognised the hand-writing of the fair donors:

"Like the violet, which, alone
Prosper in some happy shade,
Doth Castara live, alone,
To no common eye betrayed:
For she's to herself untrue,
Who delights in public view!"

"Such is her beauty, as no arts
Have enrich'd with borrowed grace;
Her high birth no pride imparts,
For she blushes, in her place.
Folly boasts a glorious blood,—
She is noblest, being good!"

"She obeys with speedy will,
Her grave parent's wise commands:
And so innocent, that ill
She nor acts, nor understands," &c. &c.

Albeit unused to the rhyming mood, I next began to think that the Muse should thank the givers of so rare a boon; and the conceit being strong upon me, in this hour of my weakness, I actually took down my rusty lyre from the willows, where it has hung for many a year, and essayed, as followeth. Forgive my intrusion among such company, as I have been calling around us; contrasts, you know, are pleasing, and I will take off the rough-edge, by and by, with a screed from "The Golden Violet."

TO S. AND J.

On receiving the first Violet of the year, from D——n.

Fair friends! I left you when the winds
Of winter howled around,
And when the sere and withered grass
The landscape sad embrowned.

Nature seemed dead: no bud, no bloom
Appeared within your bowers:
No promise to the eye gave hope
Of quickly-opening flowers.

And yet, a germ was latent there,
Fast struggling into birth;
One of a thousand, heaven-sent,
To glad the sorrowing earth!

Sweet violet! the first, that Spring
In beauty breathed upon,
Amidst the bowers, by fair hands nursed,
Of lovely D——n!

A lesson dost thou read to me,
Thou teacher, mild and fair!
Bidding me 'mid the gloomiest hour,
Ne'er madly to despair!

The darkening hour, when friends beloved
Must from each other part,
Falls on the soul, how drearily!—
That winter of the heart!

And yet, if to thy lesson mild,
Fair flower! I yield free scope,
How am I taught, that, 'midst this gloom
Still springs the germ of hope!

In wintry hours, she promises
That flowers shall deck the plain:
And, to the hearts of parting friends,
That they shall meet again!

And so forth! What a plague have I to do with weaving rhymes? I'll no more of it! And now for "The Golden Violet!"

It is the eve of May-day; and thus sings its poet:

"Farewell to thee, April! a gentle farewell!
Thou hast saved the young rose in its emerald cell;
Sweet nurse! thou hast mingled thy sunshine and showers,
Like kisses and tears, on thy children, the flowers!
As a hope, when fulfilled, to sweet memory turns,
We shall think of thy clouds, as the odorous urns,
Whence color, and freshness, and fragrance were wept:
We shall think of thy rainbows,—their promise is kept!
For there's not a cloud on the morning's blue way,
And the daylight is breaking, the first of the May!"

But these lines are transcended in beauty, methinks, by the fair and hapless poetess, in the following stanzas to April:

"Of all the months that fill the year,
Give April's month to me,
For earth and sky are then so filled
With sweet variety.

"The apple-blossoms' shower of rose,
The pear-tree's pearly hue,
As beautiful as woman's blush,
As evanescent, too!"

"The purple light, that, like a sigh,
Comes from the violet bed,
As there the perfumes of the East
Had all their odors shed.

"The wild brier rose, a fragrant cup
To hold the morning's tear;
The bird's eye, like a sapphire star,—
The primrose, pale, like fear.

"On every bough, there is a bud,
In every bud a flower!
But scarcely bud or flower will last
Beyond the present hour.

"Now, comes a shower-cloud o'er the sky,
Then, all again sunshine:
Then, clouds again, but brightened with
The rainbow's colored line.

"Aye! this, this is the month for me!
I could not love a scene
Where the blue sky was *always* blue,
The green earth *always* green!"

And of the violet, as April's own flower, she seems to be no less enamored. Behold!

"Violets! deep blue violets!
April's loveliest coronets!
There are no flowers grow in the vale,
Kissed by the sun, woo'd by the gale,—
None by the dew of the twilight wet,
So sweet as the deep-blue violet."

"And when the grave shall open for me,—
I care not how soon that time may be,—
Never a rose shall grow on that tomb,
It breathes too much of hope and of bloom:
But there be that flower's meek regret,
The bending and deep blue-violet!"

One more! Nay, I must!

"Though many a flower may win my praise,
The violet has my love.
I did not pass my childish days
In garden, or in grove;

"My garden was the window-seat,
Upon whose edge was set
A little vase,—the fair and sweet,—
It was the violet!"

"It was my pleasure and my pride;
How I did watch its growth!
For health and bloom, what plans I tried,—
And often injured both!"

"At length, the perfume filled the room,
Shed from its purple wreath;
No flower has now so rich a bloom,
None half so sweet a breath!"

"I gathered it: and oh! it seemed
A rich gift to bestow!
So precious in my sight, I deemed
That all must think it so!"

"Let Nature spread her loveliest,
By spring or summer nursed,
Yet still I love the violet best,
Because I loved it first!"

I began with Shakspeare on "April:" let me close with Shakspeare on "Violets." He makes Titania's bed of them:

"I know a bank, whereon the wild thyme blows,
Where ox-lips and the nodding violet grows.
There sleeps Titania, sometimes of the night,
Lulled in the flowers, with dances and delight!"

And, thus does Perdita, in the "Winter's Tale," discourse of them to the Old Shepherd, and the disguised Camillo:

"Here's flowers for you! daffodils,
That come before the swallow darts, and take
The winds of March with beauty; *violets, dim,*
But sweeter than the lids of Juno's eyes,
Or Cytherea's breath!"

Music by night, he describes as "coming o'er the ear,

"Like the sweet south,
That breathes upon a bank of violets,
Stealing and giving odor!"

And, as if to rate this modest little flower highest, for fragrance in the blossoming parturition, he declares, that

"To throw a perfume on the violet,
Is wasteful, and ridiculous excess!"

How prettily and how gallantly does the Duke of York demand of his new-arrived son, what court beauties were ascendant, when he left London:

"Welcome my son! Who are the violets, now,
That strew the green lap of the new-come Spring?"

Laertes describes Hamlet's profession of love for Ophelia, as

"A violet in the youth of primy nature,
Forward, not permanent,—sweet, not lasting,—
The perfume and suppliance of a minute;—
No more!"

And poor Ophelia, herself, in her madness, said,

"I would give you violets, too: but they withered all, when my poor father died!"

* * * * *

A kind of *Postscriptum* for my friend Fisher, of the Pittsburgh Visiter. Our quarrel, (like that in which Sir Lucius O'Trigger had a prominent part to play,) is "a very good quarrel, as it stands: explanation would only spoil it." Let's nurse it, and keep it warm, (as Tam O'Shanter's wife did her's with her husband, upon a memorable occasion,) until we meet again, as of yore we used to meet; and then we can settle it all, in the old way. As long as my chosen "name is great in mouths of wisest censure," in various parts of this reading land, other than that which my good friend inhabits,—and as long as it is "my name that is his enemy," and not I,—why should I change it now, in this, the fifth month of my *pen-runings*, (to translate literally,)—why? "What's in a name?" I am sure I would, do any thing in reason to accommodate my friend, upon occasion: and, with Falstaff, "I would to Heaven I knew where a commodity of good names were to be bought," that he might have his pick and choice, to give such of his neighbors' bantlings, as he would like to see well-christened. I will take his judgment in my next series, for a name: at present, I have only to say to him, in the line of pungent Martial,—when he takes up a number of the "Currente Calamositias,"—

"Quid titulum poecis? versus duo tres ve legantur!"

J. P. O.

New York, April 30th, 1839.

TO A LADY PLAYING ON A HARP.

(From a new work entitled "Pericles and Aspasia.")

Come sprinkle me soft music o'er the breast,
Bring me the varied colors into light
That now obscurely on its tablet rest,
Show me its flowers and figures fresh and bright.
Waked at thy voice and touch, again the chords
Restore what restless years had moved away,
Restore the glowing cheeks, the tender words,
Youth's short-lived spring and pleasure's summer day.

BE GLAD WHILE YET YOU MAY.

Addressed to an interesting little boy at play.

BY H. M. G., JR.

Bound, bound away, beautiful boy !
 Bound in thy joy away !
 Ring out thy voice to hill and glen,—
 Be glad while yet you may.

Laugh to the light winds hurrying on
 Upon their viewless way :
 They'll never fan thee younger, boy !
 Be glad while yet you may.

Speed for the restless butterfly,
 From shrub to floweret gay :
 Shout to the wild-bird hastening by,—
 Be glad while yet you may.

Go where the notes of music ring
 Out in their mingling play :
 Leap to their wild and joyous sound,—
 Be glad while yet you may.

Hie to the gushing stream, and through
 The livelong summer-day,
 Wanton its sparkling waves among,—
 Be glad while yet you may.

The days roll on, when joys like these
 Thy heart no more can sway :
 Woe ! for the sorrowful hours then !
 Be glad while yet you may.

New Glasgow, Va.

DR. MITCHELL'S POEMS.

Indecision—a Tale of the Far West, and other Poems ; by J. K.
 Mitchell, M.D. Philadelphia : E. L. Carey & A. Hart ; 1839.

Poetry, as an elegant writer has said, "is the divine-est of all arts." Its mission is a blessed one—to arouse and kindle those deep and pure emotions which lie in the depths of every soul, and to expand and lift them up in lofty and heavenward aspirations. True, it has been used for base and corrupt purposes—employed to excite the worst passions—fettered to the purposes of faction, breathed in licentious numbers, and used even in the bold and impious conceptions of blasphemy—still it has never entirely lost its own peculiar power—its individual beauty—but has beamed with a starry or gem-like lustre, amid the wildest and darkest formations. In the language of the author before quoted, poetry "cannot wholly forget her true vocation. Strains of pure feeling, touches of tenderness, images of innocent happiness, sympathies with suffering virtue, bursts of scorn or indignation at the hollowness of the world, passages true to our moral nature, often escape in an immoral work, and show us how hard it is for a gifted spirit to divorce itself wholly from what is good."*

* Channing—Remarks on the character and writings of John Milton

It is perverted, then, from its true purpose, darkened and degraded, when employed as the means of vice or chained to grovelling associations. It manifests its divinity, when linked with the beautiful and pure—it exercises its proper office, when it awakes the slumbering soul and turns its eyes upon its own vast world of consciousness within, and nerves it up with high thoughts and dauntless purposes—when it unbinds and throws off the gross fetters which are so mated with our flesh, and smites the fountains of feeling in the heart, until they well up with gushing purity and flow forth in light—when it refines the mental vision until it learns to know the beautiful and the true, and opens the spiritual ear until it drinks in, understandingly, a portion of that harmony which belongs to our immortality, and which will thrill upon us when we "tread the stars." Such is poetry in the true exercise of its functions—forming right emotions, awakening deep sympathies, and exalting our moral nature. Its mission, we say then, is a blessed one.

Poetry has a universal language, and its interpreter is the great heart of humanity. Like the principal of mind, its primary characteristics are everywhere the same, and it is perceived and felt in whatever it animates. It may be couched in an humble strain—clothed even in uncouth and vulgar language—but its power and mastery are there, and the soul acknowledges its presence. It needs not the expression of words nor the medium of printed characters. It is seen in the generous sacrifice and the virtuous action—it sparkles in the tear of sympathy, and has an utterance in the unbreathed thought. It is, in fact, the great principle of the beautiful—spreading throughout the universe, yet glowing and perfect in each particular part. It is in the flashing fountain and the bending rainbow—the gem that comes glittering from its bed, and the cloud that goes up, like incense, before the great altar of the sun—in the stream that murmurs to its sedgy banks, and the rain-shower that shouts among the leaves—in the calm, blue, arching sky, that spreads above us, and the waters that break in star-light on the shore; there is nothing in material or spiritual existence, around and within us, but is pervaded with its deep and living spirit. He who inhales and pours forth this spirit, in his song, his oration, or his speech, is a poet, and possesses the true inspiration of Pindus. He who has it not, cannot be one, whatever may be his other advantages and attainments. The delicacies of refinement, the wealth of learning, the gaud and the jewelry, cannot make poetry; without its indwelling and original power, the most gorgeous and externally beautiful are but cold, inanimate forms, and all these are but garlands around the empty chalice—kingly robes and wreaths of beauty upon the motionless limbs and cold brow of the statue.

The inbred spirit of poetry, then, is vitally essential to him who would be successful in this department of literature, or who would earn the name of poet. We are aware that this seems like a stale and unprofitable truism, and that, in theory, it will be universally acknowledged as a correct remark; but we know, also, that it is a truism, which it is necessary to repeat, and which circumstances will render necessary to be repeated, until many cease from practically denying it. How many are there who manufacture jingling rhyme and decorate it, perhaps, with gaudy and meretricious orna-

ment, and imagine that they are absolutely writing poetry? They have never breathed its inspiration—they have never quaffed from its deep and silent, and holy well-springs—they possess no pulse that moves within them when they look out upon the lovely and sublime, or that thrills, in answering measures when the hand of a master is sweeping the lyre-chords—in short, they have none of that noble and lofty and burning emotion, which stirred in the breast of Fuseli, who, when asked concerning the future existence of the soul, answered—"I don't know whether you have a soul or no, but * * I know that I have." In how many obscure drawers and beneath how many editors' tables, lie the effects of this ill-judged estimate of abilities, and mistaken idea of poetry? We trust that our remarks, trite and feeble and desultory as they may be, will engage the consideration, and work the conviction of many such, and if these are too difficult to remember, or too obscure in their meaning, we commend to their attention the whole essence of what we have said, contained in the well-known maxim—"Poeta nascitur."

One word more upon the importance and high office of poetry. We are aware that there are judicious fathers and grave men of business, who look with an eye as contemptuous and severe upon any thing like poetry, as did ever Mr. Osbaldistone, senior. There are others too, doubtless, who consider it as a kind of trifling accomplishment, fit for nothing but our leisure hours—and who conceive of one who is really and professionally a poet, that he must of course be some starved and poverty-stricken mortal, living upon crusts in a garret and dressed in a threadbare and elbow-worn suit of black—who is, probably, love-smitten, and who pours out the grief of his wounded soul in album-sonnets and newspaper madrigals. We are sorry that impressions like these should prevail. If there were no other evil result, the fact that they check the growth of literature, and prevent and pervert the energies of true genius, would be enough to cause us to deplore such an error. But this is not all. Such ideas of poetry darken and obscure its true dignity and importance. Poetry is not such a trifling and useless principle. We have shown its great and glorious purposes, and, from its vocation, it will be seen that it demands an elevation by the side of philosophy and history. It has been shown, also, that it is not confined to any special mode of manifestation or utterance. Hence one great source of the errors and prejudices concerning it, is removed. If it were indeed meted out only in smooth-turned rhyme or doled in piping measures, it might be thus despicable and unworthy. But it has an influence and operation in every great theme, whether it burn on the lips of eloquence, or flow out in the solemn teachings of wisdom. In the speculations of philosophy and the theories of science, is poetry—kindling and triumphant and beautifying poetry. It is important, also, as being a powerful medium through which to reach the affections and sway the minds of men. It is an easy and popular method of preserving memorable events and moral lessons, and therefore should it be respected and cultivated in its purest and loftiest capacities. It fastens easily upon the memory, and preserves literature, and maxims of virtue perhaps, through the changes of centuries—when, if committed to the treacherous parchment or the crumbling tablet, they might have been

forever lost to posterity. For the memory of a mighty deed—the immortality of a great name—there are no chronicles like the hearts of a people. The storied lay of a thousand years and the thrilling legend of the olden-time, were sung by the stream-side and told upon the threshold and the hearth-stone, but yesterday. The deeds of old Thermopylæ and Bannockburn, embodied and pervaded by poesy, in some far age of the future, may summon up a spirit of liberty in the silence of the mountain glen, which shall be cradled in the earthquake and burst forth in the storm; and the strains of Homer and Milton, may foster a taste in the bosoms of the dwellers of some wild, lone island that we know not of, until it rises from the ocean, another Delos, beautified with the classic temple and adorned with the sculptured marble.

Such are the importance and dignity of poetry, briefly, and we are aware, when compared with the subject, feebly set forth. We did not sit down to write an essay, but, as the title to this article indicates, to pass our opinion upon a recently-published volume of poems; and it may seem to our readers, that we have wandered away, or rather, kept aloof from our legitimate subject, in the remarks which we have made. But we wished to give utterance to our few thoughts, and we deemed the present a fit opportunity for doing so. We have before us an American work, and we deem it proper upon such an occasion to speak of true poetry and its office. We wish those who are anxious to build up our national literature, and consequently to increase our national honor, whether they be poets or patrons, to consider this subject deeply, and act justly in reference to it—the former, by writing only from the real impulse of poetry, and the latter, by properly estimating and respecting its dignity and importance, and by extending to it those refreshing influences which shall vivify and expand it, and cause it to bud and blossom in light.

The main poem in the work before us was "written in the midst of arduous professional duties," and "at short, infrequent and irregular periods of time," and consequently we cannot expect to behold, in every respect, a finished production, moulded in every word to suit a refined and cultivated taste. He who looks for this much, will, probably, be disappointed. The eye of close and analytical criticism will, doubtless, discover many blemishes. The author tells us, in his introduction, that he "does not expect to be shielded from the criticism to which every public production is necessarily liable." The work, however, has been spoken of in tones of high commendation by the press, and may be fairly said to have passed, successfully, the ordeal. We have not read it with that deep attention which is requisite to close criticism, nor do we intend, were we able, to institute such a process of investigation. We think that its faults will be found to lie on the surface, and that, mingled to be sure with common earth, there will be found many rich and beautiful and flashing gems, and we intend to direct the attention of our readers to some of these treasures. We pronounce, then, as the great excellence of the work, that it contains true poetry and abundant manifestation that it was written by a poet. Dr. Mitchell is a poet. Its spirit has thrilled in his heart, and its breathings are visible in the words to which he gives utterance. He never could have written, in the first instance, merely to see his

name and his productions in print. The lively principle stirred within him, and he obeyed its promptings—the burning thoughts “came crowding thickly up, for utterance,” and he spoke. In this much, then, our introductory remarks are applicable here. We present “Indecision,” as an illustration of “the spirit of true poetry.”

The poem opens with a description of embarkation from Scotland—

The sail is loos'd, the swinging anchor free,
The boat is hoisted, and the ship for sea.

After a short eulogy upon Scotia, we have a description of the multitude who throng the deck of the departing vessel, and the different feelings which agitate the various bosoms of those who are leaving kindred and home and sacred graves, to seek a shelter in the clime of “the teeming West.” The following passage contains a fine description and simile.

The old, with thoughtful brow and sadden'd eye,
Still watch the land-hues fading into sky,
As if reluctant to avert the view
A moment from the shore's receding blue,
As, trembling on the ring'd horizon, peep
The topmast peaks above the rising deep.
The tender sapling, torn from natal sod,
Transplanted blooms, and spreads its arms abroad,
But aged trees, when sever'd from the earth
They once have shaded, know no second birth.

We are next introduced to “Norman,” the hero of the tale. Possessing many advantages and virtues, he lacks one, and an all-important one, “MORAL COURAGE”—and this defect in his character, besides causing him much trouble and sorrow of spirit, appears to give name to the poem—“INDECISION.” Fortune failing him, he shares his remaining pittance with his aged mother, and with

— His wife, and child, and hope, and health,
Embarked to seek in western wilds that wealth,
To which the blinded world around him bent:
And he, tho' wiser, *dared not* to dissent.

In the course of the first night of the voyage, we have a description of the manner in which the groups on deck passed their time—a “Song of the Prairie,” an “Adieu, my ain Sweet Land,” and a description of a storm. The ship weathers the gale, the morning-sun breaks brightly forth, and in describing the gaiety and carelessness of the crowd just escaped from the perils of wreck and death, we have the following piece of philosophy:

— 'Tis ever so,
With human weakness; eloquent in woe,
Of virtuous promise; but the danger o'er,
The sorrow gone, the lesson's read no more—
The heart is like the hard sepulchral stone,
On which repeated blows inscribe alone,
Its truth or falsehood; trials, to be blest,
Must be by sorrow's frequent hand imprint.

A solemn and melancholy change comes over the spirit of Norman. Here is poetry, sweet and beautiful.

His wife alone, of those who knew him well,
Appear'd unconscious of the fearful spell.
Enshrouded in affection's blinding haze,
She mark'd not what would draw a stranger's gaze;
Or, if she saw an altered look, her heart
Indulg'd itself in that love-nurtured art,
Which kindly teaches sorrow to conceal
The utter woe it cannot live and feel.

With gentle care, she loosed the lengthened plaid,
That bound her baby firmly to her side,
And casting off a kerchief from her wrist,
She smiled, tho' sadly, as his brow she kissed.

‘ You cannot guess, my husband, why I drew
This knot so tightly! Oh, it was that you
Might fix the noose upon your arm, and so,
With me and my sweet babe, united go
To weal or woe; a common fate to share,
With thee and it, was ever Emma's prayer.
I hop'd, too, that the surge might kindly sweep
Our corpses upward from the cold, dark deep,
And gentle hands afford a grassy grave
To those who were not sever'd by the wave.
In Scotch earth, with all I lov'd to lie,
Seem'd not to me a gloomy destiny,
Since oft I fear'd for my dear babe and thee,
A darker doom beyond the western sea.
But God, whose goodness curb'd the raging main,
May, *will*, protect confiding hearts again.’

Day follows day, and the vessel proceeds on her course, and Norman's madness increases in its wildness and intensity, and he becomes furious in his nature to all, even to her, whose

— Very eye,
Whose smile before, to him, was ecstasy;

to all, save his child, of whom he becomes possessed with a slavish fear, and whose every whim he obeys. His wife can no longer hide from her heart his altered disposition; but it was some solace

— to find
His loss of love to her, was loss of mind.
It soothed her hopeless sorrow to reflect
That those who most are lov'd, where reason's wreck'd
Are hated most, as wintry-spells of decay
The most that spot the richest flowrets grace.

His wife dies. The scene of her departing hour is prophetic of the lot of her loved ones, and is powerfully wrought. With this closes the first part of the poem.

Our author has a fine graphic talent. Witness this description of morning—

A booming point just tips the doubtful verge,
Where sea and sky their dubious colors merge,
And up at one bright leap, in glory springs
The sun, and o'er the ocean spreads his wings.
Along the rippling waters, golden light,
A trembling causeway paves, so pure, so bright,
A path to Heaven, it seems to fancy's eye,
Continued upward thro' the yellow sky,
In clouds like cluster'd gems of every hue,
To pale the ruby's blush and shame the sapphire's blue.
The sportive dolphin, like a floating flower,
Of thousand tints, adorns his waving bower.
The curving porpoise, on the crested pride
Of curling billows, takes his liquid ride;
And silver flying fishes dash away
Before the breeze, and in the sunbeams play.
There is a freshness in the breezy air;
There is a joyous spirit every where.

Norman's child is swept overboard by the “boom” and drowned. Reaching harbor, the bodies are borne to the grave, while the unhappy father, “idiot-like,”

— Mov'd not as the earth received its trust,
Nor seem'd to hear the awful ‘dust to dust.’

Awakened to the consciousness that they are his wife and child, he refuses to leave the grave, and decks it and watches it day after day, until his comrades miss him, and discover no trace of him, save marks of violence near and upon the freshly-covered mound. Norman returns to the grave once more, however, but re-

turns only to bid adieu to "the sleepers," and then journeys to the "far West." Here he recovers his reason, re-marries, acquires wealth and honors, and attains to the dignity of a magistrate. Among the prisoners brought before him, is one found guilty of the charge preferred against him, but who, by an extraordinary influence over the mind of the judge, not only obtains release from confinement, but, by his rapacious claims for money, the wealth of Norman also. The felon brings a number of his companions into the neighborhood with him to share in his good-fortune, and Norman's neighbors become suspicious of him, as being linked with the ruffians, by their knowledge of some dread truth against him. Fortune gone, honor lost, our hero now sinks into a deep despair, but is sustained and soothed in his darkness by his gentle partner, who by her eloquent entreaties, succeeds in wresting from him his secret of grief—a secret which he *dared* not to entrust her with before their union. It appears, that in seeking for flowers to decorate the burial place of his wife and child, he despoiled a private garden—was pursued to the grave, where blood was shed and he finally taken and conveyed to a prison. Hence the brand of felony was on him, and, after visiting the grave as has already been seen, he journeyed to the West with this bitter memory of a stained reputation gnawing at his heart. This was his secret, and the explanation of the mysterious influence exercised over him by the criminal at the trial. The following gives us another specimen of Dr. Mitchell's descriptive power:

The last faint trace of day had ceas'd to smile
On lengthen'd Alleghany's waving pile,
And clouds, so lately bath'd in golden light,
Were softly silver'd by the queen of night;
And one by one, in autumn's deep blue sky,
The stars put forth their brightest blazonry.
O'er darkened vales the mountain shadows slept,
Through dying leaves the mournful zephyr swept;
The night hawk's scream, the moan of whip-poor-will,
The cricket's cry, the tree-frog's cadenc'd trill;
The panther's hungry howl, the wolf's wild bay,
The screech-owl's requiem o'er departed day,
Conspire to cast o'er western night a tone,
To other lands, however wild, unknown.
The very clearness of the air is drear,
It seems to bring the awful blue so near;
And that wild light is just enough to show
The wildest shapes of wildest things below—
We feel as if too near the panther's swoop,
We pause to hear the Indian's mortal whoop;
The dead-grass, rustling in the stifful gale,
Suggests the rattlesnake's envenom'd trail;
And giant bats, with sick'ring pinions near,
Seem restless spirits from another sphere.

The following well describes the feelings of a wife:

She did not doubt—but would the world confide?
Must she its alter'd look of scorn abide,
And, ah! far worse, behold the blush of shame
Suffuse her children's cheek, at Norman's name?
That name, so link'd with love's entrancing dream,
That name, embalm'd in reason's high esteem,
That name, round which, in clustering beauty glow,
The flowers of joy, the balm for every woe.
There was no bud of promise—fruit of bliss—
No earthward good—no heavenward happiness—
Which seem'd a boon to her, if 'twere not also his.
The cup of pleasure sparkled to the brim,
When pledg'd in sweet companionship with him;
And joy seem'd only joy, when Norman's face,
Illum'd with smiles, inspir'd the unbought grace,
Which sense and sentiment alone bestow,

To lift the heart from earth, or sky-tint all below.
Still darker thoughts career'd through Norman's brain,
Till thought itself became exhausting pain;
And he, like holy men on Olive's steep,
Who vainly strove their master's watch to keep,
In eadness slept—for grief prolong'd will bring,
When too intense, a feverish slumbering.
But she, a very woman, could not sleep,
While none were left o'er him a watch to keep.
Though sore fatigue from aidless labor press'd
With treble force, upon her care-worn breast;
And sleep's oblivious antidote might bring
Both strength to toll, and balm to suffering,
The tireless heart of love repuls'd repose,
And, as the mortal sank, the angel rose.

We fear that we are becoming too minute for the occasion, and that we have already made our article too long. We shall, therefore, hasten to a close, and forbear making those extracts which we otherwise should. While Norman sleeps, his wife is assaulted by a ruffian (one of the felon-band) who is prevented from taking her life and that of her husband, and is killed by a panther. Norman awakes to find "Harden" dead, and his wife with a shattered mind. Her reason, however, soon returns, and, leaving the dangerous neighborhood, they arrive at the house of her father. Here the stain upon his reputation is eventually removed, and although sorrow darkens around him and his heart is grief-worn, his spirit learns to draw its happiness from a better fountain than any of earth, and

He lived to value love, to conquer pride,
To kiss the rod that smote him—and he died;
But left, in dying, this impressive truth,
To guard from Norman's woes the thoughtful youth,
'That indecision marks its path with tears;
That want of candor darkens future years;
That perfect truth is virtue's safest friend;
And that to shun the wrong is better than to mend.'

We read this poem hastily, but we believe that we have preserved, above, the thread of the story. We cannot say, that we particularly admire the plot, but we do admire the many beautiful flowers of poetry that cluster and breathe their fragrant influence through it. We have omitted, as we before remarked, passages which well deserve a place here. But we must give the following tribute to maternal affection:—

'My mother!' what a chain of blissful thought
Is in that home endearing sentence wrought!
Is there on earth a melody so dear,
As that sweet sound to gentle childhood's ear?
My mother soothes my grief, refines my bliss,
And asks but what I love to give—a kiss.
Aye, though the truant heart of manhood stray,
To other charms and other friends away;
The memory of a mother's love, at last,
Returns, like bread on Nile's rich waters cast,
To prove the solace of the stricken heart,
When sorrows come, and hope's gay dreams depart.
There's not a wither'd leaf that does not yield
Undying odors, when thro' childhood's field
Of sunny days and ever blooming sweets,
To hail a mother's smile the cloudless memory fleets.

And this metaphor:

There, sat enthroned the love that could not die—
The faith that saw, behind the clouds, the sky,
Still beautifully blue, still richly dight
With stars, that borrowed from the soul the light
They seem'd to shed; as gems reflect the ray
With added lustre, back upon the day.

There are several minor poems in this volume. We have read but a few of them, but there appears to be in them the same pure aspiration of poetry. Indeed, we think them, as compositions, better than the main poem. We give below two or three specimens.

THE NEW AND THE OLD SONG.

A new song should be sweetly sung,
It goes but to the ear;
A new song should be sweetly sung,
For it touches no one near:
But an old song may be roughly sung;
The ear forgets its art,
As comes upon the rudest tongue,
The tribute to the heart.

A new song should be sweetly sung,
For memory glides it not;
It brings not back the strains that rung
Through childhood's sunny cot.
But an old song may be roughly sung,
It tells of days of glee,
When the boy to his mother clung,
Or danc'd on his father's knee.

On tented fields 'tis welcome still;
'Tis sweet on the stormy sea,
In forest wild, on rocky hill,
And away on the prairie-lea:—
But dearer far the old song,
When friends we love are nigh,
And well known voices, clear and strong,
Unite in the chorus-cry,

Of the old song, the old song,
The song of the days of glee,
When the boy to his mother clung,
Or danc'd on his father's knee!
Oh, the old song—the old song!
The song of the days of glee,
The new song may be better sung,
But the good old song for me!

THE HARP OF JUDAH.

Oh, harp, that once in Judah's hall,
In sweet inspiring strain,
Entranc'd the fiery soul of Saul,
And sooth'd a monarch's pain!

How oft, when all my earthly joys
Appear but as a dream,
I welcome thy consoling voice,
Thy heaven-directing theme!

Though gone the hand that wak'd thee first,
Though clos'd thy minstrel's eye,
And they who caught thine early burst
Of glory are not nigh;

Of thee no string is broken yet;
Thy deep and holy tone
Can make me earthly cares forget,
And dream of Heaven alone.

Oh harp, if Judah's shepherd flung
Such charms around his theme,
When o'er time's distant scenes he hung,
In dim prophetic dream;

What now thy spell, could David's hand
Awake, once more, thy strains,
And tell to every thrilling land,
The Lord Immanuel reigns!

BLESSED ARE THE DEAD WHICH DIE IN THE LORD.

'Tis a blessing to live, but a greater to die,
And the best of the world, is its path to the sky.
Be it gloomy or bright, for the life that he gave,
Let us thank Him—but blessed be God for the grave!
'Tis the end of our toil, 'tis the crown of our bliss,
'Tis the portal of happiness—aye, but for this,
How hopeless were sorrow, how narrow were love,
If they look'd not from earth to the rapture above!
But the portals of death open out on the skies,
And the mortal who enters in ecstasy flies,
An angel of light, to the throne of the King;
While the echoes of Heaven in harmony ring
With the song of the seraphs, Oh! "blessed are they
Who die in the Lord," and from earth come away—
They rest from their labors—the works of their love
Have followed, and crown them with glory above.

It will thus be seen that our author employs poetry in its divinest office—that of a handmaid to Religion. True genius pours forth its loftiest strains upon sacred subjects—it gathers its sweetest flowers by the banks of "the river of life."

We trust that our author may long live, to awaken the echoes of the West with the music of his lyre, to breathe a contribution of true poetry into our national literature, and to twine bright wreaths of laurel around his brow.

ADIEU OF MARY STUART.

(FROM BERENGER.)

France, lovely land! Adieu! adieu!
My fondest love is thine for ever!
From thee my childhood's joys I drew,—
Alas! 'tis death from thee to sever.

Land of my choice! home of my heart!
Banish'd by cruel fate from thee,
I hear the deep sigh as I part—
France, lovely France! remember me!
The breeze springs up—we leave the shore—
The Gods, unpitying all my pain,
Deny the storm, that might restore
Me back, in joy, to thee again.
France, lovely land! Adieu! adieu! &c.

When, with the glittering lilies crowned,
'Mid crowds I loved, admir'd, I shone;—
Less praise the lilies circled found
Than that my simple spring-time won:
No charm for me has Scotland's crown—
Its dreary grandeur lures in vain;
I would that France my sway might own,
Or that I'd ne'er been born to reign.
France, lovely France! Adieu! adieu! &c.

Love, wit, and glory, shed their beams
How brightly! o'er my vernal clime,
Alas! the change, to those dull gleams,
That dimly light rude Scotia's clime.
What horrid vision do I see!
Thrilling my inmost soul with fear;—
How dire the fate, it tells to me—
That phantom-scaffold—phantom-bier!
France, lovely France! Adieu! adieu! &c.

France! ever, when assailed by fears,
The daughter of a royal stock,
As now she turns to thee in tears,
Shall still to thee address her look.
Heav'n's! the ship already speeds
Her eager course 'neath other skies,
And now thy shore in mist recedes,
Curtain'd by night from my fond eyes!

France, lovely land! Adieu! adieu!
My fondest love is thine for ever!
From thee my childhood's joys I drew,—
Alas! 'tis death from thee to sever.

PENCILLED PASSAGES;

From "*Pericles and Aspasia*,"* chosen for the *Southern Literary Messenger*, by "P. B."

I.

Politics.—Domestic affections can no more bloom and flourish in the hardened race-course of politics, than flowers can find nourishment in the pavement of the streets.

II.

Despair is not for good or wise,
And should not be for love;
We all must bear our destinies,
And bend to those above.

III.

Youthful Tears.—Tears do not dwell long upon the cheeks of youth. Rain drops easily from the bud, rests on the bosom of the maturer flower, and breaks down that one only which hath lived its day.

IV.

The death of a young man.—O! he was too beautiful to live! Is there anything that shoots through the world so swiftly as a sunbeam?

V.

Pondered Praise.—Ah! no studied eulogy does honor to any one. It is always considered, and always ought to be, a piece of special pleading, in which the pleader says every thing the most in favor of his client, in the most graceful and impressive manner he can.

VI.

Over-praise.—If you toss up the scale too high, it descends again rapidly below its equipoise; what it contains drops out, and people catch at it, scatter it, and lose it.

VII.

An ordinary poet.—He is among the many poets, who never make us laugh or weep; among the many whom we take into the hand like pretty insects, turn them over, look at them for a moment, and toss them into the grass again. The earth swarms with these; they live their season, and others similar come into life the next.

VIII.

There is such a concourse of philosophers, all anxious to show Alcibiades the road to Virtue, that I am afraid they will block it up before him.

* By Walter Savage Landor, just issued in beautiful style by Carey & Hart, Philadelphia.

IX.

Sorrow of past love.—There is a barb beyond the reach of dittany; but years—as they roll by us—benumb, in some degree, our sense of suffering. Season comes after season, and covers, as it were, with soil and herbage, the flints that have cut us so cruelly in our course.

X.

We cannot love without imitating; and we are as proud in the loss of our originality as of our freedom.

XI.

Never was there a poet to whom the love of praise was not the first and most constant of passions.

XII.

With most men, nothing seems to have happened so long ago as an affair of love.

XIII.

Deep love.—There is a gloom in deep love as in deep water; there is a silence in it which suspends the foot, and the folded arms and the dejected head are the images it reflects. No voice shakes its surface; the Muses themselves approach it with a tardy and a timid step, and with a low and tremulous and melancholy song.

XIV.

Doubtless there may be very fine pearls in very uninviting shells; but our philosophers never wade knee-deep into the beds, attracted rather to what is bright externally.

XV.

Mental gymnastics.—Logic, however unpurged, is not for boys; argumentation is among the most dangerous of early practices, and sends away both fancy and modesty. The young mind should be nourished with both simple and grateful food, and not too copious. It should be little exercised, until its nerves and muscles show themselves, and even then rather for air than anything else. Study is the bane of boyhood, the aliment of youth, the indulgence of manhood, and the restorative of age.

XVI.

As there are some flowers which you should smell but slightly to extract all that is pleasant in them—and which, if you do otherwise, emit what is unpleasant or noxious; so there are some men with whom a slight acquaintance is quite sufficient to draw out all that is agreeable—a more intimate one would be unsatisfactory and unsafe.

XVII.

Politeness is in itself a power, and takes away the weight and galling from every other we may exercise.

XVIII.

The man who is determined to keep others fast and firm, must have one end of the bond about his own breast, sleeping or waking.

XIX.

Aspasia says—"Dracontides was very fond of Agapenthe; she, however, was by no means so fond of him, which is always the case when young men would warm us at their fire before ours is kindled."

XX.

Three affections of the soul predominate; Love, Religion and Power. The first two are often united; the other stands widely apart from them, and neither is admitted nor seeks admittance into their society.

XXI.

We may be introduced to Power by Humanity, and at first may love her less for her own sake than for Humanity's, but by degrees we become so accustomed to her as to be quite uneasy without her. Religion and Power, like the Cariatides in sculpture, never face one another; they sometimes look the same way, but oftener stand back to back.

XXII.

Religion and Love.—Religion is never too little for us; it satisfies all the desires of the soul. Love is but an atom of it, consuming and consumed by the stubble on which it falls. But when it rests upon the gods, it partakes of their nature, in its essence pure and eternal. Love indeed works great miracles. As in the Ocean that embraces the Earth, whatever is sordid is borne away and disappears in it, so the flame of Love purifies the temple it burns in.

XXIII.

The power of Virtue.—If any young man would win to himself the hearts of the wise and brave, and is ambitious of being the guide and leader of them, let him be assured that his virtue will give him power, and power will consolidate and maintain his virtue. Let him never then squander away the inestimable powers of youth in tangled and trifling disquisitions, with such as perhaps have an interest in perverting or unsettling his opinions, and who speculate into his sleeping thoughts and dandle his nascent passions; but let him start from them with alacrity and walk forth with firmness; let him early take an interest in the business and concerns of men, and let him, as he goes along, look steadfastly at the statues of those who have benefitted his country, and make with himself a solemn compact to stand hereafter among them.

XXIV.

There are things beyond the art of Phidias. He may represent Love leaning upon his brow and listening to Philosophy; but not for hours together: he may represent Love, while he is giving her a kiss for her lesson, tying her arms behind her: loosing them again must be upon another marble.

XXV.

To offend any person is the next foolish thing to being offended.

XXVI.

Politeness is not always a sign of wisdom; but the want of it always leaves room for a suspicion of folly, if folly and imprudence are the same.

XXVII.

Sculpture, Painting and Poetry.—Sculpture (said Pericles,) has made great advances in my time; Painting still greater: for until the last forty years it was inelegant and rude. Sculpture can go no farther; Painting can: she may add scenery and climate to her forms. She may give to Philoctetes not only the wing of the sea-bird, wherewith he cools the throbbing of his wound; not only the bow and the quiver at his feet, but likewise the gloomy rocks, the Vulcanian vaults, and the distant fires of Lemnos, the fierce inhabitants subdued by pity, the remorseless betrayer, and the various emotions of his retiring friends. Her reign is boundless, but the fairer and the richer portions of her dominions lies within the Odyssey. Painting by degrees will perceive her advantages over Sculpture; but

if there are paces between Sculpture and Painting, there are parasangs between Painting and Poetry. The difference is that of a lake confined by mountains, and a river running on through all the varieties of scenery, perpetual and unimpeded. Sculpture and Painting are moments of life; Poetry is life itself, and every thing around it and above it.

XXVIII.

Happy the man, who, when every thought else is dismissed, comes last and alone into the warm and secret foldings of a letter.

XXIX.

How many, adorned with all the varieties of intellect, have stumbled on the entrance into life, and have made a wrong choice in the very thing which was to determine their course forever! This is among the reasons, and is perhaps the principal one, why the wise and the happy are two distinct classes of men.

XXX.

We think too much upon *what* the gods have given us, and too little *why*.

We both are young; and yet we have seen several, who loved us, pass away; and we cannot live over again as we lived before. A portion of our lives is consumed by the torch we follow at their funerals. We enter into another state of existence, resembling indeed and partaking of the former, but another! it contains the substance of the same sorrows, the shadow of the same joys. Alas! how true are the words of the old poet:

We lose a life in every friend we lose,
And every death is painful, but the last.

XXXI.

Those people who cannot keep their hands from violating the purest works of ancient days, ought, if there are not too many of them, to be confined in separate cages, among the untameable specimens of zoology.

XXXII.

There are proud men of so much delicacy, that it almost conceals their pride, and perfectly excuses it.

XXXIII.

Philosophy does not always play fair with us. She often eludes us, when she has invited us, and leaves us, when she has led us the farthest way from home. Perhaps it is because we have jumped up from our seats at the first lesson she would give us, and the easiest, and the best. There are few words in the precept,

Give pleasure: receive it:

Avoid giving pain: avoid receiving it.

For the duller scholar, who may find it difficult to learn the whole, she cuts each line in the middle, and tells him kindly that it will serve the purpose, if he will but keep it in his memory.

XXXIV.

Many things pass across the mind, which are neither to be detained in it, with the intention of insisting on them as truths, nor are to be dismissed from it, as idle and intrusive. Whatever gives exercise to our thoughts, gives them not only activity and strength, but likewise range. We are not obliged to continue on the training ground; nor on the other hand is it expedient to obstruct it or plough it up. The hunter, in quest of one species of game, often finds another, and always finds what is better—freshness and earnestness and animation.

XXXV.

A good historian will be a good philosopher, but will take especial care that he be never caught in the attitude of disquisition or declamation. The golden vein must run through his field, but we must not see rising out of it the shaft and the machinery. We should moderate or repress our curiosity and fastidiousness. Perhaps at no time will there be written, by the most accurate and faithful historian, so much of truth as untruth. But actions enow will come out with sufficient prominence before the great tribunal of mankind, to exercise their judgment and regulate their proceedings. If statesmen looked attentively at every thing past, they would find infallible guides in all emergencies. But leaders are apt to shudder at the idea of being led, and little know what different things are experiment and experience.

XXXVI.

Old men more willingly talk of age than hear others talk of it; and neither fool nor philosopher likes to think of the time when he shall talk no longer.

XXXVII.

A slender shrub, the ornament of your private walk, may, with moderate effort, be drawn strait again from any obliquity; but such an attempt, were it practicable, would crack every fibre in the twisted tree that overshadows the forest.

XXXVIII.

We might as well in a drama place the actors behind the scenes, and listen to the dialogue there, as in a history push valiant men back, and protrude ourselves with husky disputations. Show me rather how great projects were executed, great advantages gained, and great calamities averted. Show me the generals and the statesmen who stood foremost, that I may bend to them in reverence: tell me their names, that I may repeat them to my children.

XXXIX.

Affectation.—There is nothing in poetry, or indeed in society, so unpleasant as affectation. In poetry it arises from a deficiency of power and restlessness of pretension; in conversation, from a desire to pay to the Graces, from an intercourse with the ideal, and a misinterpretation of better.

XL.

Oblivion throws her light coverlet over the infancy of life; and, soon after we are out of the cradle, we forget how soundly we had been slumbering, and how delightful were our dreams. Toil and pleasure contend for us almost the instant we rise from it; and weariness follows, which ever has carried us away. We stop awhile, look round us, wonder to find we have completed the circle of existence, fold our arms, and fall asleep again.

XLI.

It is in the regions of the earth as in the regions of the air, the warm and genial are absorbed by the cold and void, and tempests and storms ensue.

XLII.

Secresy and mystery drive the uninitiated into suspicion and distrust; an honest man will never propose, and a prudent man will never comply with the condition. What is equitable and proper lies wide open on the plain, and is accessible to all, without an entrance through labyrinth or defile.

XLIII.

The business of philosophy is to examine and estimate all those things which come within the cognizance of the understanding. Speculations on any, that lie beyond, are only pleasant dreams, leaving the mind to the lassitude of disappointment. They are easier than geometry and dialectics; they are easier than the efforts of a well regulated imagination in the structure of a poem. These are usually held forth by them as feathers and thistle-down; yet condescend they nevertheless to employ them; numerals as matter and mind; harmony as flute and fiddle-strings to the dances of the stars. In their compositions they adopt the phraseology and curtsy to the cadences of poetry. Look nearer; and what do you see before you? the limbs of Orpheus, bloodless, swollen, broken and palpitating on the cold and misty waters of the Hebrus. Such are the rhapsodical scraps in their visionary lucubrations. They would poison Homer, the purest and soundest of moralists, the most ancient and venerable of philosophers, not out of any ill will to him, but out of love to the human race. There is often an enchantment in their sentences, by which the ear is captivated, and against which the intellectual powers are disinclined to struggle; and there is sometimes, but very rarely, a simplicity of manner, which wins like truth. But when ambition leads them toward the poetical, they fall flat upon thorny ground. No writer of florid prose ever was more than a secondary poet. Poetry, in her bright estate, is delighted with exuberant abundance, but imposes on her worshipper a severity of selection. She has not only her days of festival, but her days of abstinence, and, unless upon some that are set apart, prefers the graces of sedateness to the revelry of enthusiasm. She rejects, as inharmonious and barbarous, the mimicry of her voice and manner by obstreperous sophists and argute grammarians, and she scatters to the winds the loose fragments of the schools.

XLIV.

Men of powerful minds, although they never give up Philosophy, yet cease by degrees to make their professions in form, and lay ultimately the presents they have received at the feet of History. The deeds of past ages are signally reflected on the advancing clouds of the future: here insurrections and wrecks and conflagrations; here the ascending, there the drooping diadem; the mighty host, the mightier man before it; and, in the serener line on the horizon, the emersion of cities and citadels over far off seas. There are those who know in what quarter to look for them: but it is rarely to their hands the power of promoting the good, or averting the evil is entrusted. Yet, all is not hideous in the past, all is not gloomy in the future. There are communities where the wisest and best are not utterly cast aside, and where the robe of Philosophy is no impediment to the steps of men. Idly do the sages cry out against the poets for mistuning the heart and misgoverning the intellect. Meanwhile they themselves are occupied in selfish vanities on the side of the affections; and, on the side of the understanding, in fruitless, frivolous, indefinite, interminable disquisitions. If our thoughts are to be reduced to powder, I would rather it were for an ingredient in a love-potion, to soften with sympathies the human heart, than a charm for raising up spectres to contract and to coerce it. If

dust is to be thrown into our eyes, let it be dust from under a bright enlivening sun, and not the effect of frost and wind.

XLV.

Philosophy is but dry bread : men will not live upon it, however wholesome : they require the succulent food and exciting cup of Religion. We differ in bodily strength, in compactness of bone, and elasticity of sinew ; but we are all subject to the same softness, and nearly to the same distemperature, in the nobler animators of the frame, the brain and blood. Thus it is in creeds : the sage and simple, the ardent enthusiast, and the patient investigator, fall into and embrace with equal pertinacity the most absurd and revolting tenets.

LINES

WRITTEN FOR A YOUNG LADY'S ALBUM.

Dear Caroline, the boon you ask
Demands from me no easy task.
Let others frame the lofty line,
And round their brows the laurel twine,
In me the poet's fire is dead,
Fancy and love, and feeling fled.
The gush of feeling, and love's thrill
Wax faint, when gath'ring years distil
Their poppies on the heart ; and mind
Partakes the doom to man assigned,
Sinking in gradual, slow decay.
Time quenches reason's brightest ray,
And withers fancy's fairest bloom :
" And who can then that light relume ?"
These are the springs, the living springs,
Where the muse laves her glitt'ring wings,
And plumes them for a flight sublime,
Above the mould'ring things of time.
The warm line, gushing from the heart,
Love's impulse can alone impart.
Touch'd by bright fancy's magic wand,
Before the enraptured poet stand
" The forms of things unknown," and shed
A glorious halo round his head.
" When passion owns its secret stings,"
By feeling taught, the poet sings
In melting strains, the plaints of woe,
Writhing with sorrow's recent blow ;
In verse of fire, the throes of rage,
Revenge, despair, those foes that wage
With human bosoms ceaseless strife,
And darken all the shades of life.
In me, alas ! those founts are dry ;
From me those fairy visions fly.
From youth alone you might obtain,
To grace your book, a fitting strain.
With fancy, yet undimm'd by years,
With bosom, yet unscath'd by cares,
With feelings pure, and free, and strong,
Youth pours at will the poet's song :
Who, that recalls that time Elysian,
When life is all a fairy vision,
When music breathes in ev'ry sound
And all is light and fragrance round,

When hope, to our enchanted gaze,
Its bright and gorg'ous prism displays,
And mocks the urchin's wand'ring view
With visions of fantastic hue ?
Who, but would be a child again,
Nor deem such bright delusions vain ?
Who would not flee from toil and strife—
The dull realities of life,
To taste the exulting joys of youth ?
Blest age of innocence and truth !
'Tis in that season of life's spring,
That passion first unfolds her wing :
Then glows the cheek with love's first blush ;
Then throbs the heart with the warm gush
Of feelings fresh, sincere, and pure ;
Feelings, which time cannot restore
To manhood's tainted bosom, riv'n
By passions fierce, and madly driv'n
To toil and anguish, vice and woe,
Till pierc'd by death's last welcome blow.
Yet for our life's declining day,
To brighten its expiring ray,
Some calmer pleasures yet remain,
Some fainter joys their hold retain ;
Wife, children, friends, their ties combine,
And round our hearts united twine.

D.

LINES

WRITTEN FOR AN OLD LADY'S ALBUM.

Where smooth Ohio's waters pour,
Through fertile vales their limpid wave,
'Tis said the streams possess the pow'r
To turn to stone whate'er they lave.
Thus oft as time's strong currents roll,
The coming ills of life revealing,
The cold stream petrifies the soul,
And indurates each after feeling.
Thus as our cares, our griefs increase,
And time dissolves each tender tie,
It kindly bids our sorrows cease,
Numb'd by the touch of apathy.
But yet the tear that promptly flows,
Beams lovely on the cheek of youth ;
Shed for its own or others' woes,
Those dew the throes of anguish soothe.
More beautiful, because so rare,
The flow'r of feeling loveliest blows
In age's bosom, lone and drear,
A gem of beauty on its snows.
What though its frozen surface deck
No plants, in sunnier climes that grow—
Though waste and dreary, yet this speck
Of verdure shows the warmth below.
Like that unwith'ring flow'r whose hues
On Scotia's snow-clad peaks expand,
Winter's cold breath its tints renews,
As when by gales of summer fann'd.

Though all its hopes and joys expire,
 Oh never may the tide of time
 In age's bosom quench the fire,
 That warm'd the heart in youth's first prime!

Still may that heart responsive beat,
 Till time's last ebbing sands have run,
 To those emotions soft and sweet,
 Which thrill'd it when life's course begun.

Then, when the polar night of years
 Involves us in its thick'ning gloom,
 Will mild Religion calm our fears,
 And sympathy our path illumine.

D.

THE NEW YORK REVIEW.

The April Number of this work answers well to the expectations which its precursors had excited. At least the usual proportion of its articles may be pronounced decidedly able; and not far inferior to the North-American, which, in our judgment, ranks next to that intellectual leviathan of Reviews, the Edinburgh.

The New York Review has its matter classed under four, great heads: 1. *Reviews*, modernly so called, being in fact copious essays or ample narratives, wound about the books which they profess to criticise, as their nucleus; 2. *Critical notices*—being shorter commentaries upon works too slight, too tame, or too formidable, to be subjects of reviews; 3. *A Quarterly Chronicle*, of Politics and Literature; and 4. *A Quarterly List* of new publications. The *Quarterly Chronicle* is a new feature to us, in such periodicals; and a valuable feature. It sketches, in some fifteen pages, the events and transactions, political, scientific, and literary, of the civilized world, for the last three months: and is one of those comprehensive prospects, which ought often to be taken by statesmen and philosophers. We are strongly tempted to incorporate such a summary, monthly, into our own work.

The Reviews in this number consist of eleven articles. I. On LITERARY PROPERTY, or the justice and utility of extending the benefits of our Copy-right laws to foreign authors: II. On the life and character of the late Dr. BOWDITCH: III. The CONGRESS OF 1774, being an examination of some historical testimonies touching that body: IV. LONGACRE'S NATIONAL PORTRAIT GALLERY of distinguished Americans: V. GERMAN POEMS, of Goethe and Schiller, translated by John S. DWIGHT: VI. SCIENTIFIC ASSOCIATIONS: VII. The ABORIGINES OF OHIO, treated of in a recent Discourse of GENERAL HARRISON: VIII. Keith's EVIDENCES OF CHRISTIANITY: IX. Modern French Romance—especially Balzac's novels: X. New translations of the Book of JOB: XI. STEAMBOAT EXPLOSIONS.

Article III. settles, with apparent clearness, the several priorities of the claims which the anti-Revolutionary colonies have to the honor of having originated a general Congress. It seems put beyond doubt, that PROVIDENCE, R. I., first broke ground on that subject

in 1774. A meeting of her citizens recommended a Congress, on the 17th of May. Philadelphia on the 21st of May. New York, 23d of May. Virginia, 27th of May. Baltimore, 31st of May. Norwich, Conn., 6th of June. And so on.

NEW PUBLICATIONS.

The past month has given birth to two new periodicals in our fair and growing metropolis; the *Virginia Lyceum* and the *Odd-fellows' Magazine*. The former has superseded the Journal lately published by the Richmond Lyceum, and is designed to promote the same cause to which its predecessor was devoted. Its first appearance, if an index of future usefulness, is highly promising. The editorial matter and contributions are generally written with taste and abound in vigorous thought, and the selections are, some of them, curious and very interesting. The poetry, both original and selected, is decidedly good, and upon the whole the first number furnishes two or three hours of excellent and entertaining reading. We regret that our limits will not permit a particular designation of the articles. The critique on Captain Kidd is laconic, pungent and perfectly just, manifesting a right spirit of independence in the department of criticism. We recommend the work to the public, and especially to the young, who may be stimulated to try their intellectual strength in its pages. The habit of composition is the habit of thought; at least it stirs up, concentrates and invigorates the thinking faculty. The work is published by an association of gentlemen, and is edited by L. R. Streeter.

The *Odd-fellows' Magazine*, by J. C. Walker, editor and proprietor, like its contemporary, the *Lyceum*, is very neatly printed at the press of Mr. P. D. Bernard—and appears to be principally designed to promote the cause of the Order from which it derives its name. Our readers are, perhaps, not generally apprised that the society of Odd-fellows is a secret fraternity like that of the Free Masons, and that their Lodges are multiplying in our own State as well as in other parts of the country. Like Free Masonry, their processions, and we presume their private meetings, are conducted with prescribed ceremonies and an imposing display of the peculiar insignia of the order. Like the Masons, too, they profess to have in view the advancement of the cause of Benevolence and Charity. Friendship, love and truth,—three most excellent things,—constitute we believe the motto of the Odd-fellows,—and the great object of Mr. Walker's periodical, as we understand it, is to strengthen this golden chain and to knit in closer bonds the dispersed members of the fraternity. The Magazine promises also to devote some attention to polite literature, the arts and sciences. There is one article in the April number which we regretted to see,—we allude to that by Carlos, from an unpublished MS. We hope that the remainder of the MS., if like the fragment which has seen the light, will be buried forever.

SOUTHERN LITERARY MESSENGER.

PUBLISHED MONTHLY AT FIVE DOLLARS PER ANNUM—THOMAS W. WHITE, EDITOR AND PROPRIETOR.

VOL. V.

RICHMOND, JUNE, 1839.

NO. VI.

WILLIAM H. CRAWFORD.

[The subjoined reminiscences of this distinguished man, whilst American Minister at the French Court, will be read with great interest. They have been communicated by Eugene Vail, esquire, now in Paris, who officiated as his private Secretary at the period referred to, and whose opportunities, of course, for accurate observation, were undoubted. They place the character of Mr. Crawford in some new and striking points of view.]

Ed. So. Lit. Messenger.

WILLIAM H. CRAWFORD, the subject of the following remarks, was a man approaching, as near as can be, the "noblest work of God," as defined by the immortal Pope. He could bear scrutinising in every sense. Take his heart, or take his mind, you would meet in each enough to satisfy the most fastidious. Destined to be a statesman, he possessed that firmness of purpose which may be termed civil courage. Had he been a soldier, he would have been brave to audacity. To this, many circumstances but little known, except by those in the habit of a close intimacy with him, can testify.⁴

In the year 1813, when it was deemed fit that an envoy extraordinary, uniting weight of character with talent, should be sent to France, Mr. Crawford was selected by Mr. Madison for that delicate mission—but immense indeed were the difficulties that interposed. Our sea-ports were closely blockaded; and if perchance a vessel eluded the blockading squadron, new and greater dangers still awaited her at the entrance of a French harbor. Yet the necessity that our minister should reach the imperial court without delay was imminent, and accordingly he embarked on board a sloop of war, whose gallant captain had most positive orders to avoid as much as possible an action with the enemy. The safe landing of the minister, being the main object, a recourse to arms was to be had only in the defensive. This vessel successfully evaded the British cruisers on our side, and rapidly strode across the Atlantic. She made for L'Orient, in the vicinity of which she had nearly been barred by a far superior force. We shall never forget, although we cannot justly describe, the manner of the noble commander, now no more, when he narrated to us the struggle, that like a tempestuous sea arose in his breast, at the near, and at times nearer, approach of the armed vessel, which, as the fastest sailing ship of the British squadron, had been detached for the purpose of intercepting ours. Cruel was the temptation, and burning the desire, to grapple with an enemy they were conscious they might have subdued, even before the other forces could have come up. What pen could justly describe the impatient step of the commander, as he paced the deck—the glistening eye of the young officer that bespoke indignation, the bosom that heaved a sigh, and may-be an imprecation against the order that propelled onward the noble vessel. However intense the feeling which pervaded the whole gallant crew,

more imposing still was that sense of obedience that kept her on her track. From the hesitating movements of the chase, it was evident that over-confidence did not exist on board of her, and that she but little relished the idea of separating herself too much from her consorts behind;—at times drawing back, she would at others come closer; and when the latter happened, more arduous became the duty of the American commander, inasmuch as he had to look both to the rigid execution of his orders to force sails which otherwise might perhaps purposely have been but sluggishly hauled, and to the no less important duty of keeping his passenger from harm's way. This, however, was no easy task. By this time, Mr. Crawford had fully identified himself in feeling with the ship's company, and would willingly, had an action been unavoidable, have exchanged his ministerial charge with the humblest member of the crew. Mounted upon a gun, he keenly watched the enemy's movements, and seemed at times to rejoice at her superior sailing. There he stood like a target, and would inevitably have been the first object aimed at on board. True it is, that at the captain's request, Mr. Crawford would step down and return to the deck, where, even his high stature towering over the gangway still marked him for the first fire which was every minute expected—and true it is, that upon observations made by the captain, he would occasionally retire into the cabin, but he was no sooner there, than up again he was seen. This was so oftentimes repeated, and placed him in such imminent danger, that, at last, the captain felt under the necessity of notifying his prisoner, that were it to occur again he would have to enforce his orders and to keep him down by compulsion. Of this thorough contempt of death, of this complete self-denial in Mr. Crawford, many proofs can be adduced.

The sudden transposition of the plain matter-of-fact republican from the plough, to the dazzling circles of European society, is frequently the cause of extreme embarrassment to the uninitiated, and of mirth to others. Excessive modesty, that frequently borders upon awkwardness, naturally intimidates at first; whilst on the other side, we have seen that a long residence abroad had a tendency to divest some of our citizens of those habits of candor that befit them much better than an outlandish mimicry, which, to their disgrace, too many of them do adopt. Against all this, William H. Crawford was proof; and, whether surrounded by the most refined—whether at Woodlawn or at the Tuilleries, he ever remained in manner, and in deed, an American.

In the drawing room, without fastidiousness, he was courteous and attentive to ladies in general, who found a great charm, not the least for being novel to them, in his frank and open conversation; and we have ourselves heard Madame de Staël,—than whom, in such matters, no better judge could be found,—assert that she had rarely conversed with a foreigner who had edified

her more than he. That very simplicity of manners, indeed, stamped as it was with energy and natural grace, far from being detrimental to him abroad, proved rather the reverse. There was a straightforwardness in all he did, that contrasted singularly with the sophistry and less sincere refinements of the members of the society in which he moved, that forcibly drew the attention towards him.

His natural antipathy against every thing like ostentation, made it particularly burdensome to him to have to wear at court the prescribed costume; and he frequently wondered that a man of such genius as Napoleon could be so tenacious upon a subject apparently so trifling—but the great man was sunk in the king, for king he must be, and in lowering himself from his high position of a conqueror (Imperator) to the pageantry of his diminutive colleagues, he had likewise adopted all their weaknesses. Whilst on the subject of Napoleon, it may not be amiss to observe that he possessed a degree of inquisitiveness and curiosity somewhat embarrassing, and which bore principally upon descriptions of the persons of individuals who interested him. In such cases his questions were incessant. Upon Mr. Crawford's first presentation to the Emperor, the latter was remarkably talkative—inquired particularly about the country, but more minutely still, concerning the person and appearance of Mr. Madison, his age, &c. &c.

"And pray, sir," said he, "is Mr. Madison tall?"

"Not at all," quickly replied Mr. Crawford; "he is on the contrary *quite small*—no taller than that," raising, as he spoke, his arm at a right angle with his body. In order to see the mark, however, Napoleon had himself to look up—a singular comment upon the altitude of the conqueror.

Mr. Crawford had a high opinion of the skill and bravery possessed by Napoleon—but he never did think him, as some of the liberals in the latter period of his reign did, (in the one hundred days,) susceptible of sacrificing to liberty his lofty notions of military grandeur and glory.

In the year 1814, the Minister of Marine having died, the whole diplomatic corps, with all other distinguished characters in Paris, were invited to attend the funeral. The former repaired to the rendezvous, in costume, the American minister excepted, who, unaware that it was necessary on such an occasion, assisted in a plain black frock, and in boots. His appearance, he being the only one so dressed, naturally excited attention; but when the procession, which was to move from the hotel of the deceased to the church, was formed, Mr. Crawford was omitted in the arrangement, and left to take his place as he might among the crowd. In this emergency, he soon discovered the dilemma into which he had been, perhaps purposely, placed by the master of ceremonies. Wellington, the then lion of the day, in his full costume, had been placed at the very head of the procession, whilst two by two, following him, came the other diplomats. Perceiving this, Mr. Crawford quietly walked up, and composedly took his stand by the side of the conqueror of Waterloo! Many were then the inquiries set on foot among the assistants, as to "who was the tall man in black," and whether he should not be requested to fall back from the place he had usurped. We overheard one of the masters of ceremony observe, that if he knew who he was, he

would unhesitatingly do so—and upon receiving from us, for answer, that the person in question was the minister from the United States, he observed, "Ah! c'est différent." This man, although high in office, it had probably not been in the power of the *legitimate* king to imbue with the ideas of reverence and awe, then the fashion, for every thing English. This last remark, however, applies to the large body of the French nation, which, if supposed to be under any obligation to England, may be termed ungrateful indeed. The mass of gratitude was to be found in and about the court—but it required some courage in one depending upon its favors to avow a contrary sentiment. However, this frank deportment of our minister did not seem to displease his self-made neighbor, who immediately entered into, and continued a familiar conversation with him during the whole duration of the march,—he having soon found out from his tone and language who he was. Since that singular introduction, Wellington was exceedingly courteous towards Mr. Crawford, and continued so whilst they both resided at the French capital. He it was who having, in the midst of the night, received a courier with the announcement of the signature of the treaty of peace at Ghent, was the first to have it communicated, with his own congratulations, to our minister. Never was slumber more agreeably disturbed than was that at the American legation that night.

The penurious salaries allowed our diplomatic agents abroad, a fact which may at first glance appear unimportant, is nevertheless extremely detrimental both to the individuals sent, and to the prosecution of the interests confided to their care—one which, as an American loving his country, and having personally not the least interest in the matter, we wish we could seriously impress upon the common sense, justice, and generosity of our people—that circumstance, we say, bore with peculiar hardship upon Mr. Crawford, himself almost without any property of his own. Aware of this, he had left his numerous family on his farm, and had, alone, repaired to Europe. Whilst, on one side, in the honesty of his heart he had promised himself that there he would spend the whole of his salary, justice to his growing family had likewise led him to hope that no encroachment upon his diminutive individual property would be rendered necessary. The promise was rigidly kept, but the hope could not be realized. His establishment befitted his official character—was neither the most elegant, nor the least so, of the diplomatic circle. But, in the dispensation of his civilities he was, as all our ministers are, much more stinted than he should have been—and, although from the nature of circumstances, he must inevitably receive invitations without number, but very few could he reciprocate. Between the alternatives of receiving without returning, or of ruining himself, he chose a medium course—declining civilities extended to him by strangers, and keeping his house open to his fellow-citizens alone, and a few other distinguished characters who sought his familiar society. Every American citizen who visited Paris at that period, must remember that his table and board were liberally accessible to him, and will readily render justice to the frankness and republican-like manner with which his hospitality was tendered.

His intimates among the French, were Lafayette, Barbé Marbois, Baron de Staël, son of Madame de

Staël, the venerable Dupont de Nemours, and Benjamin Constant. They seemed to find great pleasure in his society, and frequently courted his advice even on matters relating to the politics of their own country. Through the first named it was, that in 1814, after Napoleon's downfall, but whilst we were still at war with Great Britain, Mr. Crawford was enabled to ascertain the favorable impression entertained by the Emperor Alexander towards our country, and of his desire to bring about a reconciliation between England and the United States. This indirect conversation by the means of Lafayette, whom Alexander, although his political antipode, personally respected, was frequent and animated. As a proof that the Emperor highly valued the opinion of the American statesman, he requested from him a clear and succinct narrative of the causes of our differences with England, which was handed him by General Lafayette. The ardent desire shown by Alexander upon this score, renders it more than probable that the opinion of the leader of the holy alliance, so termed, had considerable weight with the British cabinet, who, certainly, in the latter stage of the negotiation, had shifted around, and considerably deviated from the stiffness of their original pretensions.

During the time that Mr. Crawford's mission lasted, from 1813 to 1815, events of a most important character, as affecting the face of the civilized world, happened at the French capital. The affairs of France had now reached the lowest ebb. Efforts, amounting to heroism, were now making by Napoleon to stem the last blow aimed by the whole of combined Europe, at the heart of that devoted country. Little time was left the Emperor and his ministry to attend to negotiations not having for their immediate object the salvation of the country. Thus it is, that Mr. Crawford was unable to bring to a successful issue the advocacy of our claims for indemnity, although he ceased not to press the subject upon the attention of the French government as strenuously as decency and the unfortunate state of circumstances did then allow. But although he could not possibly accomplish the principal object of his mission, he was far from remaining inactive at his post; and the passing events that followed each other with fearful rapidity, afforded Mr. Crawford an opportunity of showing his government of what degree of perspicacity his mind was capable. His correspondence with the department of state would testify both as to his industry and to the wisdom with which he, at an early period, prophesied what did subsequently happen.

In Paris, the interest became more and more intense as the enemy with his millions of bayonets narrowed the circle within which what remained of the French army had to move. Napoleon, by one of those decisive and unexpected movements, that had so often succeeded before, abruptly and with a chosen few, forced a passage through the ranks, and from being within, found himself outside the circle, bearing upon the enemy's rear, whom he expected by that means to have thrown into disorder. But, whether it was that the allies felt confident of their immense numerical superiority—or, as has been asserted by Napoleon, that they knew not, in their confusion, what to do—it is, nevertheless, the fact, that instead of receding, they pushed onward. The cannon was soon within hearing of the capital. Marmont, who had been ordered to defend it to the last, did on the

contrary yield, after a bloody but useless conflict had taken place under the very walls. Inside of this town, which, since the wars between the French and English monarchs for the possession of the French crown, had not seen a foreign foe, all was consternation and despair. How the exasperated soldiery of the coalition might behave after their entrance into it, no one could possibly tell, and a general plunder was much apprehended.

In this emergency, it behoved the American Minister, both on account of his national dignity, and because of its being now made the depository of certain funds, the property of the United States, which had previously been deposited with the bankers, but were now placed here for greater safety—it became him, we say, to take measures for the protection of the hotel of the legation; and, accordingly, Mr. Crawford ordered the national flag to be hoisted over his door; but there was not such a thing as a flag of the United States to be had in Paris for love or money. Great indeed was the anxiety, which grew more and more intense, as reports came in every moment announcing the approach of the Cossacks. At every cost, the neutrality of the American hotel must be preserved, and there existed no means of doing that, as long as it was not marked by the ordinary national sign. Instructions were given for the purchase of the materials to make a flag—but the merchants were fighting at the gates; all the shops were shut up; and it was not without the greatest difficulty, and after a long and tedious search, that blue, white and red patches could be assembled sufficient for its completion. The scene was now worthy of a painter's pencil. Into a tailor's shop was transformed the Legation of the United States, whose minister extraordinary, with his secretaries, busied themselves in cutting, or rather tearing, for time was precious, and then putting together, rather unartist-like, as may well be imagined, the stripes of the star-spangled banner! At this remote and quiet period, and when it is considered that the apprehensions then entertained of violation were not realized, this little episode may seem to be trifling and superfluous; but the event itself was not so. Agitation sat upon every countenance; American citizens, with their families, flocked for protection under the roof of their minister; and the fears of the former, contrasted with the calm earnestness of the latter, imparted to the whole an interest, the recollection of which time has not obliterated.

Nor can it be supposed, that the apprehensions then felt were imaginary, as is evidenced by the fact, that so close to the city were the enemy, that a cannon ball struck in the garden of the American hotel, where it was picked up. Here again did Mr. Crawford exhibit that character—a fearlessness of all personal danger—he possessed to so high a degree. Desirous of witnessing the rare and awful spectacle of a field of battle, he repaired to one of the gates near which they were at the time engaged—and here he desired to be allowed to go out, that he might, from the heights of Montmartre, take a general view of the bloody strife. But the officer commanding at the gate remonstrated, and observed to him that to go then would be attended with the greatest risk, as there was a cross-fire carried on between those heights and the plain below. Mr. Crawford insisted, however, and upon mentioning whom he was, request-

ed that permission be asked to that effect of the commander-in-chief, whose answer was soon received. It was an imperative and absolute refusal. To his great mortification, he had to return—and could only visit the field of battle after the capitulation had taken place, which he immediately did. To his view was it exhibited in its most awful aspect. Deprived of action, there remained of it nothing but the sad result, the dying and the dead; and among the heart-rending scenes we have heard him describe was, that hearing some groans proceeding from under a heap of dead bodies, he, by the removal of some of them, discovered a poor fellow in whom life was not yet extinct, but who was nearly crushed under the weight of bodies that had fallen over him!

Time had hardly been given unfortunate France to breathe quietly under the inglorious reign of the Bourbons, when, in March, 1815, Napoleon's Eagle plucked and trampled under foot the fleurs de Lys. Some men of the liberal party, who had fancied that they might have snatched from the weak Bourbons a greater degree of liberty than they ever could expect from Napoleon, exhibited a violent opposition to the Emperor's return. Some of them wrote violent philippics against him, and among them, in particular, the celebrated Benjamin Constant. By a singular fatality, owing to the extreme rapidity of Napoleon's movements from his place of landing in France, the strongest of those appeals to the French against the Usurper, as he was then called by Constant, appeared in the French papers the very morning the Emperor entered the capital. However great was the capacity of the philosopher's head, no less pusillanimous was he as a man; and he now trembled lest the powerful man he had so untimely apostrophised would now visit him with his wrath. Constant knew not where to hide his head, until he bethought himself of Mr. Crawford, upon whose kindness and mercy he threw himself. Mr. Crawford's ministerial capacity could not have allowed him to make of his house a political sanctuary, but far different was the present case. The event had, *without* his agency, actually taken place, and honor and delicacy forbade that *by* his agency it should now be averted. The most cordial hospitality was extended to the proscribed during the time, which was several weeks, he kept in his hiding place. His uneasiness was rather increased when he understood that the Emperor had repeatedly sent to his house for the purpose of inquiring where he was to be found. After proposing several contrivances for the final disposition of his person, one of which was to go and embark at Nantes, by stealth for the United States, he was after a great deal of persuasion by some of his political friends, among whom was Gen. Lafayette, induced to present himself voluntarily before Napoleon, and to abide by the consequences. We have heard this interview related by a witness, and here give as we received it.

Mr. Constant having entered the apartment, "Advance," said the Emperor in an authoritative tone. And as Constant seemed to hesitate,—"*Eh! que Diable, avancez donc que je vous embrasse.*" He then added: "*Vous m'avez haï parceque vous ne me connaisiez pas; moi, je vous honore, parceque vous êtes un honnête homme. Monsieur Benjamin Constant, je vous fais Baron.*"

One may easily conceive the pleasurable wonderment of the philosopher, whose philosophy did but ill resist such a burst from such a man, and with that manner so peculiar to himself. Napoleon knew well how to act upon the human heart—he was in fact the man of antithesis. But to return to Benjamin Constant—proofs of his excessive timidity, to call it by the most indulgent name, abound, and among others, the following. When, on some public occasion he was professing in enthusiastic terms his republicanism, and had added, that strict adherence to one's *principles* should be evinced, even unto death—

"Why then," rejoined one present, "did you, Baron, bow before Napoleon?"

"Because," replied he, "I am not a *principle*. You may stifle a principle, but if you stifle a *man*" * * * *

Mr. Crawford's political life is before the people, and that we leave to abler pens to portray. But in the discursive remarks we have made, we cannot omit a circumstance connected with his ministerial mission—one which we have already, on a more public occasion, stated, going far from its peculiar nature towards substantiating what we have asserted of his highmindedness, and of the nobleness of his character. As we have previously stated, a sort of indirect communication had been carried on by the medium of Lafayette, between Alexander and Mr. Crawford. Pending this, a proposition, indirect at first, but which, if countenanced, would eventually have been rendered serious, was hinted, that our claims for indemnity might be included in the account adduced by the coalesced powers against France. The amount of our's was a mere trifle when compared with the excessive demands into which, almost unfelt, it would thus have been merged. But no sooner was the idea thrown out, than Mr. Crawford unhesitatingly repelled the proposition, alleging that "It were not for the United States, the most ancient and perhaps only friend France then had, to join her enemies at the worst period of her adversity; that, determined as they were to see justice ultimately done them, the United States would, notwithstanding, wait for better times."

Now, we fear not to aver, that to take upon himself such a determination, without instructions from home, at such a moment, when hopes of final remuneration were faint indeed; when a contrary course would no doubt have gathered him at home an immense harvest of popularity; simultaneously to do an act so self-denying, so much stamped with a noble generosity, denotes a man who considers the settlement of a question of dollars and cents far inferior to the preservation of national character—the true wealth of a nation.

Paris, 1839.

SPECIAL PROVIDENCE.

The man who does not recognise a special providence directing the currents of his life towards good issues, is as deficient in philosophical sagacity as he is in spiritual worth.

T. H. S.

THE FOUNTAIN.*

BY WILLIAM CULLEN BRYANT.

FOUNTAIN, that springest on this grassy slope!
Thy quick, cool murmur mingles, pleasantly,
With the cool sound of breezes in the beech
Above me in the noontide. Thou dost wear
No stain of thy dark birth-place; gushing up
From the dark mould and slimy roots of earth,
Thou flashest in the sun. The mountain air,
In winter, is not clearer, nor the dew
That shines on mountain blossom. Thus doth God
Bring, from the dark and foul, the pure and bright.

This tangled thicket on the bank above
Thy basin—how thy waters keep it green!
For thou dost feed the roots of the wild vine
That trails all over it, and to the twigs
Ties fast her clusters. There the spice-bush lifts
Her leafy lances; the viburnum there,
Paler of foliage, to the sun holds up
Her circlet of green berries. In and out
The chipping-sparrow, in her coat of brown,
Steals, silently, lest I should mark her nest.

Not such thou wert of yore, ere those old woods
Bowed to the white-man's axe. Then hoary trunks
Of oak, and plane, and hickory o'er thee held
A mighty canopy. When April winds
Grew soft, the maple burst into a flush
Of scarlet flowers. The tulip tree, high up,
Opened, in airs of June, her multitude
Of golden chalices to humming-birds
And silken-winged insects of the sky.

Frail wood-plants clustered round thy edge in Spring;
The liverleaf put forth her sister blooms
Of faintest blue. Here the quick-footed wolf,
Passing to lap thy waters, crushed the flower
Of *Sanguinaria*, from whose brittle stem
The red drops fell like blood. The deer, too, left
Her delicate foot-prints in the soft, moist mould,
And on the fallen leaves. The slow paced bear,
In such a sultry Summer noon as this,
Stopped at thy stream, and drank, and leaped across.

But thou hast histories that stir the heart
With deeper feeling; while I look on thee,
They rise before me. I behold the scene
Hoary again with forests; I behold
The Indian warrior, whom a hand unseen
Has smitten with his death-wound in the woods,
Creep slowly to thy well-known rivulet,
And slake his death-thirst. Hark! that quick, fierce cry
That rends the utter silence!—'tis the whoop

* This beautiful poem was originally published in the *Democratic Review*. Our attention was first called to it by a literary friend. It is "gorgeous," to use his own expression, and truly worthy of the author of "*Thanatopsis*," and the "*Water-Fowl*." Who will say that there are no more themes for the poet, when a summer cloud, a "bright, particular star," or a "fountain," affords inspiration to the spirit and music for the lyre? And why, why are our literary periodicals filled with so much poetry of an inferior nature, when there are such writers in the land as Bryant, Percival and Halleck?

Ed. So. Lit. Messen.

Of battle; and a throng of savage men,
With naked arms, and faces stained like blood,
Fill the green wilderness; the long, bare arms
Are heaved aloft, bows twang, and arrows stream.
Each makes a tree his shield, and every tree
Sends forth its arrow. Fierce the fight, and short,
As is the whirlwind. Soon the conquerors
And conquered vanish, and the dead remain,
Gashed horribly with tomahawks. The woods
Are still again; the frightened bird comes back,
And plumes her wings; but thy sweet waters run
Crimson with blood. Then, as the sun goes down,
Amid the deepening twilight I descry
Figures of men that crouch and creep unheard,
And bear away the dead. The next day's shower
Shall wash the tokens of the fight away.

I look again:—a hunter's lodge is built,
With poles and boughs, beside thy crystal well;
While the meek Autumn stains the woods with gold,
And sheds his golden sunshine. To the door
The red-man slowly drags th' enormous bear,
Slain in the chestnut thicket, or flings down
The deer from his strong shoulders. Shaggy fells
Of wolf and cougar hang upon the walls;
And loud the black-eyed Indian maidens laugh,
That gather, from the rustling heaps of leaves,
The hickory's white nuts, and the dark fruit
That falls from the gray butternut's long boughs.

So centuries passed by; and still the woods
Blossomed in Spring, and reddened when the year
Grew chill, and glistened in the frozen rains
Of Winter, till the white-man swung the axe
Beside thee—signal of a mighty change.
Then all around was heard the crash of trees,
Trembling awhile, and rushing to the ground;
The low of ox, and shouts of men who fired
The brushwood, or who tore the earth with ploughs.
The grain sprang thick and tall, and hid in green
The blackened hill-side; ranks of spiky maize
Rose, like a host embattled; the buck-wheat
Whitened broad acres, sweetening with its flowers
The August wind. White cottages were seen,
With rose-trees at the windows; barns, from which
Swelled loud and shrill the cry of chantieer;
Pastures, where rolled and neighed the lordly horse,
And white flocks browsed and bleated. A rich turf
Of grasses brought from far o'ercrept thy bank,
Spotted with the white clover. Blue-eyed girls
Brought pails, and dipped them in thy crystal pool;
And children, ruddy-cheeked and flaxen-haired,
Gathered the glistening cowslip from thy edge.

Since then, what steps have trod thy border! Here,
On thy green bank, the woodman of the swamp
Has laid his axe—the reaper of the hill
His sickle, as they stooped to taste thy stream.
The sportsman, tired with wandering in the still
September noon, has bathed his heated brow
In thy cool current. Shouting boys, let loose
For a wild holyday, have quaintly shaped
Into a cup the folded linden leaf,
And dipped thy sliding crystal. From the wars
Returning, the plumed soldier by thy side
Has sat, and mused how pleasant 't were to dwell

In such a spot, and be as free as thou,
And move for no man's bidding more. At eve,
When thou wert crimson with the crimson sky,
Lovers have gazed upon thee, and have thought
Their mingled lives should flow as peacefully
And brightly as thy waters. Here the sage,
Gazing into thy self-replenished depth,
Has seen eternal order circumscribe
And bind the motions of eternal change,
And from the gushing of thy simple fount
Has reasoned to the mighty universe.

Is there no other change for thee, that lurks
Among the future ages? Will not man
Seek out strange arts to wither and deform
The pleasant landscape which thou makest green?
Or shall the veins that feed thy constant stream
Be choked in middle earth, and flow no more
For ever, that the water-plants along
Thy channel perish, and the bird in vain
Alight to drink? Haply shall these green hills
Sink, with the lapse of years, into the gulf
Of ocean waters, and thy source be lost
Amidst the bitter brine? Or shall they rise
Upheaved in broken cliffs and airy peaks,
Haunts of the eagle and the snake, and thou
Gush midway from the bare and barren steep?

THE MAGIC ROCK.

BY PARK BENJAMIN.

The glory of old Spain has not yet departed. A thousand associations of green and undecayed beauty still twine around the relics of her fallen grandeur, and every cloud-wrapt mountain and vine-nursing valley is enriched with oft-repeated legends of the olden time. The traveller, in the region of Cordova, when way-worn and wearied, he turns aside into the cottage of a *pobre aldeano*, is hospitably entertained, not only with an abundance of good cheer, but, if he be favorably disposed, with stories about accidents and disasters, terrible thunder-claps and supernatural visitations. It is also not unfrequent to hear some of these storytellers, with that love of the strange and wonderful for which the Spanish people are so remarkable, relate certain auto-adventures, which, while they stagger belief, cause the warm blood to recoil, and the current of feeling to rush back upon the heart, and stagnate, coldly and heavily, there.

I have a pleasant friend who has journeyed through the mountainous region of Cordova, and he has often lightened for me the burthen of a sombre evening by his vivid description of the wild and picturesque scenery, which lay every where spread before his path, and by his glowing recitals of the legendary tales which flow like fountains from the lips of the Spanish peasant.

There occurred one day a severe thunder storm, among the mountains. Near the close of a sultry afternoon, an enormous black cloud rose slowly from the verge of the horizon, and gradually unrolled its immense volumes over the western sky. Only a few rays of sunlight struggled through the gloom of the tempest,

and it seemed as if the firmament were about to be rent asunder like a scroll. There had been no rain for several days, and though thunder showers were the frequent precursors of the setting sun, yet the heavens had long worn the silvery veil of a summer mist, and no sound of the elements had been heard louder than the whisper of a gentle breeze. Storms, whose coming we should have regarded with terror, are gazed upon by the Spanish peasant with little apprehension; but when this immense cloud rolled upward, so fearfully dark, every eye quailed, and every form trembled, and men looked one upon another, as if expecting to hear, with the first crash of the thunder, the shrill blast of the archangel's trumpet.

The trees upon the mountains were dry and withered,—yet no drop fell! The sultriness was insupportable. The slightest shrub stood motionless; and the tall cedars lifted up their noble forms, unmoved and majestic, like proud victims awaiting the sentence of their destruction. Suddenly the lightning leaped gloriously from the firmament, and the dark cloud seemed a heaving mass of fire. A moment—and the live thunder burst from its prison house, and the echoes among the mountains sent it back, in a continuous roar, like the voices of a thousand unchained lions. Another burst succeeded, and another,—yet no rain fell. One more—and a noise was heard, like the crash of an unsphered planet. A large mass of rock was hurled from the side of a mountain into the ravine below. Then the flood rushed from the “windows of heaven” and the waters poured unremittingly down for the space of half an hour, accompanied with the gleams of the lightning and the constant reverberations of the thunder.

In ten minutes more “the sky seemed never to have borne a cloud,” and softly flowed in the beautiful drapery of its Eden hours. And upon these wild, gray rocks, which so lately seemed “altars burning with fire,” the richest incense of heaven descended. The cool breeze sprang up delightfully, and wafted a delicious fragrance, sweet as that which lingers amid

“The flowery gardens of enchanted Gul.”

The morning subsequent to this storm, news came to the village where my friend had remained during the night, that a huge fragment of rock, celebrated among the peasantry by the name of “The Magic Rock,” had been thrown down by a thunderbolt. My friend, (unlike our own travelling countrymen, who convert their pleasure into toil, and hurry onward, turning to neither the right hand nor to the left, as if the world should be passed over as rapidly as it was made,) hesitated not to delay his journey, for a season, if such delay gratified his curiosity with the sight of any extraordinary *lusus*, or wonderful passage in the great book of nature.

“If the Senor,” said Pedro de Ceballo, an old man, with silvery hairs, who was my friend's host, “if the Senor would like to go and see the work of the storm, and will take an old man for his guide, I shall be well pleased to lead the way,—for I am told the Magic Rock has been torn down.”

“Well, make ready, good host,” said my friend,—“and suffer this little curly-headed grandson to procure from my baggage some bottles of Tintilla; for a walk

of two hours this warm day will doubtless make them acceptable."

The mountain was at the distance of about five miles; and after making the necessary preparations, the trio set forth—the old man and his grandson leading the way and carrying the wine in a basket, and my friend following with a following-piece over his shoulder.

On arriving at the foot of the mountain, they halted to rest awhile, and to gaze on the effects of the last night's storm. In the bed of a torrent, which rushed along beneath their feet, lay the shattered masses of the fallen rock, and the torn and ragged appearance of the mountain's side displayed the path of the destructive fluid. The smaller rocks were rent and blackened,—and the tall trees of larch and cedar were thrown from their lofty heights, and lay scattered around, stripped of their foliage and blasted and scorched with fire.

"'Twas a fearful storm!" exclaimed the old man, with a visible shudder.

"Does the remembrance of it make you tremble, then, good host?" asked my friend.

"Indeed, Senor, yes. Five years ago, there was a tempest like last night's, and from that time till now, no storm has been heard half so terrible; and, Senor, in that dreadful night, this boy's father, my son, was standing on the rock which now lays beneath our feet, thrown from the wide gap yonder, up the mountain."

"How was it possible?" exclaimed my friend in a tone of evident surprise.

"It was truly so," replied Pedro; "and it was an awful thing for human feet to approach that rock after the shadows of night had fallen; for horrible tales are told about it,—and it is said a magician dwelt near it, and cursed it with his magic—and none of our peasants dared even to touch it. How does the hand of Providence overthrow every wicked thing! Heaven be praised! If the Senor will honor my poor house till to-morrow, he shall hear what befel my son when he stood upon that rock, in the night of that fearful storm."

"I will gladly wait and hear your story," replied my friend, "for I shall not willingly leave such game as I see rustling among the bushes yonder;" and the report of the fowling-piece echoed among the hills.

After a successful hunt of three hours, Pedro de Ceballo thought it expedient to broach the Tintilla. My friend was content with one bottle, while Pedro consumed the other three. They then replenished the basket with the excellent mountain game, (pheasants, *rari aves in terra* among us, but abounding in Cordova, though not less prized on that account,) and proceeded on their return homeward—my friend being particularly careful to pocket, as a memento, a bit of the "Magic Rock."

"We shall have a dinner fit for a prince, Senor," said Pedro de Ceballo, as they set out, "with the birds you have killed, and the Tintilla you have brought!" And Pedro said nothing more on the way, doubtless employed with delightful reflections on the delicacies of the forthcoming dinner;—for he was totally undisturbed by the occasional crack of the gun, and the consequent absence of the little boy in pursuit of the fallen prize.

Before my friend's departure, he was regaled with a

recital of the following adventure, which we shall take the liberty to relate in our own way.

Mariano de Ceballo, the son of Pedro de Ceballo, my friend's host, was, at the age of twenty, a wild youth, who could never brook opposition, and therefore, contrary to the wishes of his father, he fell in love with a beautiful girl, whose station in life was inferior to his own. He had two motives for doing this; the first was, that he was set upon thwarting "the old gentleman," who had betrothed him some sixteen years before to his neighbor's daughter; and the second was, that he delighted above all earthly blessings in Doloris d'Allende—in taking stolen walks with her, in writing verses to her, and in standing under her window with his guitar, and singing her to sleep of a moonlight night.

One delicious evening, as Mariano was strolling with Doloris, he said softly to her—"Dear Doloris, I love you better than life!"

"Well, Mariano," replied the sweet maiden, "is that any thing strange? and I love you with my whole soul!"—and she turned up her full, dark, swimming eyes, and gazed into his. Oh, that I were a poet, to describe that gaze of unutterable affection, that "look of speechless tenderness," when two foolish young persons drink up each others eyes, till their blended hearts melt in a delirium of transport and joy!

"And, Doloris," continued her lover, "how beautiful you are! You are more lovely than yonder star, which is alone and apart in the firmament."

"You have told me so a thousand times, dear Mariano; and every girl says you are the handsomest fellow in the province."

"Lovely Doloris, will you marry me?"

"Certainly; tell your father I am ready, any day."

"Alas! dearest—he will never consent; he has betrothed me to another."

"Oh, dear!" cried the affectionate girl—and she burst into tears at the thought of such an unexpected barrier to her happiness. "What shall we do, Mariano?"

"My best love, we must run away."

"Runaway! oh, well—very well—we will run away then; but when shall we go—whither shall we run?"

"To-morrow night, sweetest. I will come for you at this hour—be prepared!"

"Oh yes—certainly I will. Good night! dear Mariano!"

"Good night, my blessing!"

And he printed a kiss on her pretty lips, (pray do not be shocked, ladies, you know they were engaged,) and they parted. Runaway matches are got up with a wonderful facility in Spain;—you have only to escape to the house of some priest, three miles distant, and the business is ended.

Never did hours pass so sluggishly to Mariano de Ceballo and Doloris d'Allende, as those whose sands were running slowly out before the appointed time of their departure. The joyful period at length arrived—but, sorrowful to tell, the heavens gave sad presage of an approaching storm. The clouds lay along the sky, in darkened volumes, and the sun sank down among them with a lurid blaze. Yet did the lovers prefer to brave the danger of the tempest, than to endure the agony of a longer suspense.

Mariano had provided two tried and trusty steeds,

and as he was familiarly acquainted with every mountain defile which it was necessary for them to traverse, they set out under no great apprehension of danger from the storm, that every moment grew blacker and blacker before them. But away they bounded, and thoughts of fear were banished by the syren spells of hope and joy and love.

They soon came in safety to the base of a lofty mountain, which they proposed to pass over for the double purpose of avoiding pursuit on the morrow, and of arriving quicker at the residence of the *padre*, who was to bind them together in bands that earth may not sunder. They had ascended half way up the mountain, when the storm, whose nearer approach Mariano had for some time been regarding with emotions he dared not communicate to his companion, burst with unrestrained fury upon their heads. Their horses, though accustomed to travel through severe tempests, became restive and frightened at the incessant flashes of lightning and continued bursts of the thunder. At last, a tall tree, a short distance from them, was shivered to atoms.

Mariano, on perceiving that their steeds would soon become unmanageable, assisted Doloris to alight, and released the foaming animals, who very deliberately turned round and ran furiously down the mountain, in the direction of their own comfortable dwellings.

"Alas! dear Mariano, what will become of the beautiful ribbons you gave me?—and my new embroidered petticoat, too, *that* will be totally ruined!" exclaimed Doloris in an agony of grief.

Oh woman! woman! thy vanity is coeval with thy fortitude. Thou art like the cypress tree, which aways unbroken to the storm, and seems only to regret that it cannot behold its graceful figure in the perturbed streamlet gliding beneath its feet!

The first care of the lovers was to find shelter from the rain, which now began to pour down in torrents. It was almost certain death for them to remain among the trees, numbers of which were constantly falling beneath the lifted arm of the tempest—and, guided by the broad glare of the lightning, they attained shelter in the wide cleft of a protruding rock. Here they remained perched, like twin eagles, till the storm rolled away, and night walked forth, all lovely and serene, robed in sable majesty, with the crescent upon her brow, and heralded by all

"Her gorgeous blazonry of stars!"

"I will descend first, dear Doloris," said Mariano, "and then assist you to come down."

But Mariano could not descend! He attempted to raise his feet—but in vain. There he stood, fastened! yet his hands were free—his body was free—but his feet could not stir. He gazed around him with astonishment; but imagine his horror when he found that he was standing on the "Magic Rock." He expected every moment to see some terrible vision rise before him. He told Doloris that he was bewitched—that Heaven had inflicted this punishment upon him, because he had deserted his old father and had stolen money from him to provide for their flight. He counted his rosary—he signed the cross—he repeated the *Ave Maria*, the *Pater Noster*, and all the Latin prayers he had ever learned from boyhood—but to no purpose.

What increased his terror was, that Doloris descended with perfect ease, while he could not move an inch. At last, emboldened by the sight of his beloved, and encouraged by her entreaties, he made one more desperate attempt to extricate himself from the rock. The strife was effectual. He gave one mighty spring, and fell headlong, fifteen feet upon the green sward at the feet of Doloris—sustaining no injury save the loss of his boots, which still remained standing on the fatal spot!

"My own dear Doloris," said Mariano, when he had recovered from his trance of fear, "let us return home. I will go to my father and beg his forgiveness."

The disconsolate youth was confirmed in this praiseworthy resolution, by the reflection that he had no means of proceeding farther. The horses were gone, and with them the baggage. Their flight would soon be discovered, at any rate,—and, moreover, he did not relish the idea of walking barefoot over the mountain road—for there stood his boots as firmly as if they had become a part of the rock itself.

The pair, (of lovers, not of boots) forthwith descended the mountain, and plodded their uneasy way back to their native village. Doloris had read in novels how naughty lovers always threw themselves at their fathers' feet—and she suggested the expediency of doing so at the present juncture. Mariano acceded to this,—and they arrived at their father's house, just as the old man was in the midst of a violent burst of sorrow on learning that his son had eloped, and that his horses had returned without a rider, during the storm.

Pedro de Ceballo, heaving a deep sigh of resignation, raised his eyes to Heaven, and beheld—his lost son, with Doloris d'Allende hanging tenderly on his arm. This vision threw the father into an uncontrollable fit of passion.

"You reprobate scoundrel!" roared he—"Why did you steal my money and run away with your sweet-heart?"

The lovers then threw themselves (*à la Radcliffe*) at the feet of the enraged sire.

"Forgive us, dear father," said the repentant son; "your money is safe. I will never do the like again—and you would not punish me, if you knew how I had expiated my crime."

"Forgive you!" exclaimed the old man—his anger beginning to cool as he recollected his former grief—"to be sure I will forgive you,—and you shall marry Doloris;—kiss me, my daughter;—you scoundrel—that you shall; for know, to your sorrow, that your betrothed eloped this morning—to be revenged on you doubtless—with a young *cavaliero*, who has been two days in the village!"

What love-stricken maiden does not anticipate the catastrophe of our tale?

The story was told my friend by Mariano himself—while Pedro de Ceballo, Doloris—still beautiful in matronly garb—the little curly-headed boy, (he employed himself in rocking a cradle,) and two sweet girls, were attentive listeners.

When Mariano had concluded, the old man put in this moral for the benefit of my friend and his grandson. "This event teaches us in what inscrutable ways those who do wrong are punished; and likewise serves as a warning to young men never to run away with their sweethearts, without first informing their fathers."

Meanwhile my friend, being curious to see a specimen of this wonderful rock, drew forth the small fragment which he had brought—and found adhering thereunto, the blade of his penknife and certain bits of iron, that were contained in the same pocket. The truth burst upon him like an electric shock,—and he roared forth in a prodigious laugh, in the midst of his good host's moral; and it was with the greatest difficulty he could restrain his mirth, when he saw that the good people were getting angry—not being able to divine the cause of such repeated cachinnatory explosions.

It is the custom in Cordova, for the young men, like our own race of dandies, to wear iron heels to their boots, as well as a thin rim of the same metal extending round the soles. Our hero, on that memorable night, was invested with pedestrial ornaments of this description; and, dearly beloved reader, "the Magic Rock," whereon he stood enchained like Andromeda, possessed strong magnetic attraction, being, as *mon ami* was afterwards credibly informed by a celebrated mineralogist and a very Munchausen at travelling, neither more nor less than solid *bond fide* loadstone!

TO QUEEN VICTORIA;

Written immediately after her accession to the Throne.

Lady! the queen of favored isles,
Where, 'throned with wealth, fair science smiles—
With talents, youth, and beauty bless'd,
And in thy sex's softness dress'd—
Not robed in sternness, proud and cold,
Like England's maiden queen of old—
Young sovereign o'er a powerful land,
With all earth yields, at thy command—
Placed on a dazzling height in life,
Yet one with cares and dangers rife—
I feel for thee such interest deep,
As one who sees, on towering steep,
That rises far above him, stand
A fellow wanderer in the land—
For all of high or lowly birth,
Alike are pilgrims of the earth.
I wish that thou may'st have to do
With spirits loyal, firm and true;
Whose hearts are in their country's cause;
Who honor God's unchanging laws;
Who let no selfish interest wind
Its web of darkness thro' the mind;
And whose experience, calm and sage,
Shall give thy youth the strength of age!
That thou may'st, from thy station high,
Look with a woman's tearful eye
On all who suffer! May thy name
Be hallowed by recording Fame,
And grateful millions' blessings shed
A glorious halo round thy head!

'Tis said Love's purple wings have fanned
Not oft the torch in Hymen's hand,
When held for princes—and the rite
Which should fond hearts alone unite,

Is made a sacrifice to state—
A heartless pageant—by the great.
Not such thy nuptials, shouldst thou wed!
Not thine the bosom cold and dead
To the most sacred tie in life—
To the sweet, hallowed name of wife!
Amidst thy nobles may'st thou find,
In casket fair, some kindred mind,
Whose homage of the heart, alone
Shall rise to thee—not to thy throne!
And be thou blessed with sons, to claim,
Like thee, the highest meed from Fame;
And leave to history's pages fair,
Names bright with virtue's lustre rare!

Far o'er the blue waves of the sea,
Thy country lieth,—yet to thee,
From cottage walls, my thoughts ascend;—
Ee'n mine! altho' long trained to wend
In ruder channels, and to glide
In unobserved and silent tide.
I own my lyre unmeetly strung
For royal theme. The world hath hung
O'er its dull chords no wreath of praise—
No chaplet of undying bays—
Yet, kindly wishes may arise
From humble hearts, and reach the skies;
And lowly strains suffice to bear
To Heaven a blessing or a prayer!
And tho' I rather love to be
Where all can call themselves the free—
Where man awaits no sov'reign's nod,
And kneels to none, save to his God!
Fain would I know thy accepted hand
Had scattered blessings o'er thy land,
So that thro' life no cloud may roll
A darkening shadow o'er thy soul.

E. A. S.

LINES

TO ONE WHO WILL UNDERSTAND THEM.

Take her! her earliest love was thine,
And, all unchanged, still clings to thee—
Twining around thee like the vine
Around its chosen forest-tree.

Take her! a frail but lovely flow'r,
And next thy heart the bright thing wear;
Nor let her e'er regret the hour,
That placed her young hopes, blushing, there.

Take her! but while your morn of joy
The visioned future gilds with light,
Think not that bliss hath no alloy,
Or that Love's sky is always bright.

Take her! and when, in after years,
The storms of life blow loud and chill,
Be thine the hand to dry her tears,
And thine the voice to comfort still.

H. M. G., JR.

New Glasgow, Va.

THE BLIGHTED ONE.

"Man's love is of man's life, a thing apart,—
 'Tis woman's whole existence: Man may range
 The court, camp, church, the vessel, and the mart,
 Sword, gain, gown, glory,—offer in exchange
 Pride, fame, ambition, to fill up his heart,
 And few there are, whom these cannot estrange;
 Men have all these resources—we but one—
 To love again, and be again undone."

Reader, here is a story which makes no other pretension than that of being a simple sketch of real life. Ten years have elapsed since the last of those who were united, by relationship, to *Ella Harwood*, have been in their graves; and I know of none to whom the story can be known, or who can be much affected by its publication, save one being; and that one, if it should meet his eye, must feel deeply and bitterly. *Ella Harwood*, I said, was her name. She was the daughter of a respectable sea captain, who for twenty years had commanded one of those "floating palaces" which sail regularly between New York and Liverpool. He was lost at sea, when *Ella* was about fifteen years of age, leaving a lovely widow, with the charge of *Ella* and a younger sister. Mrs. Harwood, at the death of her husband, possessed but a few hundred dollars—a sum by no means sufficient to keep her in comfortable circumstances. Her health being delicate, it was impossible that she should be able to do any thing which would enable her to live genteelly. The intelligence of the loss of her husband came over her like the breath of the desert, and left her for awhile in ruins—desolate and forsaken. *Ella* too, wept in very sorrow—but it was only for a few days. The child shed tears; but the mother's sorrow was of a deep kind. There is a bitterness which dries up the very fountain of our tears—a grief which smothers itself in the heart until it bursts it. *Ella* wept, as we said, but she was too young to weep always. Almost the first thing she began to think of, after the first paroxysm of grief, was the destitution and loneliness of her mother and sister. She was a gay, sweet girl; but this, the first cloud of sorrow which passed over her soul, brought a change over her nature: the wild, gay girl, put on the woman, and one week of sorrow did that which years could not. She had just completed her education when the intelligence of her father's death reached them, and in one week after, her plans were laid. Nature had given her a voice surpassingly sweet, and an ear of most discriminating delicacy. After some persuasion she obtained the consent of her mother to spend a year more in making herself perfect in music; after which, she hoped by giving private lessons in vocal music and on the piano, to sustain their small family in the genteel way in which they had been accustomed to live.

The year passed away. No sooner were her qualifications known, than her pupils increased to as many as she could attend to. Two years passed in this manner, and *Ella* was happy, perfectly happy in her new employment, for she was passionately fond of it—and still more was she happy, for she saw that she was lightening the grief of a fond parent, and was able to support and educate her young sister. Yes, she was happy, and a more joyous family could not be found. Often when they were alone, after the duties of the day,

would the eyes of Mrs. Harwood fill with tears, as she clasped her daughter to her bosom, saying, "Oh! *Ella*! you are a dutiful child; but for you, and I should ere this have joined your father in a holier world:" and *Julia*, her sister, as she hung about her neck, now playing with her glossy ringlets, and now impressing a deep, long kiss upon her velvet lip, would say, "Dearest *Ella*! I am going to be like you when I grow up." Yes, she was happy—happy in the affections of a doating mother, a beautiful and adoring sister. Her bosom was peaceful as the summer lake, sleeping in the silent beams—it was the home of hallowed affections, and they had rendered it calm and holy. The passions had never been there, or if they had, they slumbered. And blessed had she been if the storm had ever been shut out.

It was an afternoon in early summer—the day had been hot and sultry,—an hour or two before its close, a heavy storm had blown up, and one of her pupils had remained on account of the rain. She and *Ella* were passing the time in conversation, and playing, alternately, on the piano. Her spirits were remarkably buoyant, and she could scarce tell why, for she had been dull all day until now. She was nearly eighteen, and in the fulness of her beauty. Her form was rather small and delicate, and this day she looked like a very sylph. Her hair was dark brown, almost black, and lay wrapt in rich and luxuriant tresses about a pearly neck and bosom, which a light summer dress showed to bewitching advantage—her forehead was large, and our phrenologists would have said, betokened uncommon richness of intellect. Her eyes were downcast, and curtained with long lashes,—but when turned up they were full and lustrous, and of a deep hazel. Her cheek was only gently tinted, and her small lips were of a rich damask red. But what was most attractive, was the innocence and purity written in every lineament; it seemed the index of a soul of surpassing loveliness, and then that pensive expression which bespeaks modesty, and checks at once every feeling of intrusion. Such was *Ella Harwood*.

It was still raining, and the broad, scattered drops of a summer shower came pattering against the window. But the bright sun was peering through the broken clouds—lighting up the room with his slanting rays. *Ella* was playing on the instrument before her, and pouring out one of her richest strains in all the joyousness of her light soul. The door was opened by a young female domestic, and a young gentleman of fashionable appearance and about the middle stature, stood within the room. *Ella* did not hear the door open, nor did she notice the entrance of the stranger, but went on with her song, with all the freedom and gaiety which her spirit could command.

The stranger, it was evident, was delighted—he listened, as if entranced. He had heard much of what is called singing, but he now thought that the burning Sappho held him spell-bound. The strain ended; *Ella* rose from the music stool with a laughing "Heigh ho," and immediately her eyes turned upon the stranger, while at the same moment her pupil spoke; "My brother, Miss Harwood." As may be imagined, *Ella* blushed deeply—her face was flushed with crimson, and from the transparency of her skin, you could see the color rise mantling to her temples,—and then when the embarrassment was over, it subsided as do the rosy

clouds of sunset, fainter and fainter, until they repose in their natural hues.

Alfred Lyston noticed the visible confusion; but it was not that affected embarrassment which fashionable ladies so often put on, when they would look innocent and lovely. Mr. Lyston, though young, had travelled much; he had mingled with the gentility of Europe—he had studied man, and as he thought, *women*; and he had almost adopted, as a part of his creed, that execrable and libertine sentiment of Pope:

“That every woman is at heart a rake.”

While at home he had seen but little to contradict it, as his mother was devoted to a giddy and fashionable life, and his sister, when he left home, was too young to exert any influence upon his mind. As was hinted, he had returned *from abroad*. His manners and his appearance were certainly improved, but the heart, *the heart* was dreadfully warped by the wild philosophy and skepticism of the French and German schools.

But we have forgotten ourselves. Young Lyston noticed Ella's embarrassment—he perceived it was unaffected, and in her face he thought he saw that which he had only dreamed of before—innocence with beauty. To him, she seemed an angel in human form. He had formed in his own mind, the *beau idéal* of the woman he could love—he thought, however, that such an one lived but in his dreams. It was too perfect to be embodied in human frailty. He had said, “If I find such, I will bow and worship; if not, never.” But in the beautiful form before him, he saw his bright dream shadowed forth. He felt it, and the feeling was *irresistible*! He was himself embarrassed, and apologised, as well as he was able, for his intrusion; stating that he had just dropped in for the purpose of taking his sister home. The rain continued, and Ella requested him to be seated. Never did Alfred Lyston feel in so much of what is quaintly called “a flutter,” in the presence of any lady. He tried to talk, but the more he tried, the greater his inability. His sister, however, relieved him, by asking Miss Harwood to favor them with a favorite piece of music, and as Mr. Lyston joined in the request, she was prevailed on to comply. When she had finished, he expressed unbounded pleasure, but did it so delicately, that she could not but feel a sort of pride. A few general remarks, and Mr. Lyston withdrew with his sister. Now Ella had never been in love, nor was she now in love. It would be foolish to suppose that she should fall in love with a young gentleman whom she had never seen before, and then in his company only half an hour or so. But she thought him handsome, pleasant and *very agreeable*; and now, almost for the first time in her life, thought she would like to have a brother, a brother too like Miss Lyston's. She did not know but that she *could* love him if he were her brother.

Oh! who can trace the workings of the heart divine? Who can tell where its rushing thoughts will bear us? Like the fixed stars, we see and feel their influence,—they warn us of our destiny—but are lodged so deeply, that they cannot be told—the *heart* is as unfathomable as the depths of ether! It was so with Ella! An idol had enthroned itself upon the altar of her heart, unacknowledged, though she felt it; but she knew not that it would remain there, until the shrine on which it rested was crumbled or *crushed*.

With a bounding step she entered the sitting room, where she found her mother. She flew towards her, and bending over her side, gave her the accustomed evening kiss.

“Let me have one more of those sweet kisses,” said Mrs. Harwood, as she raised her affectionate face. “Oh! Ella! you are so like the weather; when we parted after dinner, your face was long as Mrs. Mawbry's Madonna, and I thought that the dark clouds then coming up were casting their sombre shadows over your laughing eyes; but you are now as light and lovely as Iris herself, as she rambles about gathering a fresh bunch of field-flowers, yet dripping with the evening shower.”

“Now, mother,” said Ella; “since you are so classical, do complete the figure, and say that another Phœbus has dispersed the clouds, and revealed to you your lovely, laughing Iris. You don't know that I have had a visit from one, who, though not altogether an Apollo, may be as attractive.”

This she said in all the simplicity of her gentle nature. As she finished, tea was brought in, and while partaking of their light meal, Ella told of her accidental visitor, and described his person and manners with so much spirit, that her mother could perceive that the impression left upon her heart was not a light one; but supposed, as it was a mere accidental visit, they would scarcely meet again, and that a little time would set every thing right.

Alfred was not, as Ella hinted, a very Apollo in figure, for he was rather too short, but still his figure was dignified and commanding. A profusion of rich and bushy locks covered a large and handsome head—his eye brows were dark and heavy, under which beamed two full-orbed, piercing eyes, which told, when they met your own, that they pierced far down into the human heart. His physiognomy, to the generality of persons, would not be pleasing—its expression bordered on the severe, for he always seemed engaged in deep thought. This was what pleased Ella; she saw this, but marked also that he could relax that brow—that he could make himself the most agreeable of men—that when he did smile he was irresistible. She loved to see a thoughtful, a dignified man—and looked with sovereign contempt on your always smiling, ever simpering fops.

Days passed away—nay, almost two weeks passed, and yet the visit was not repeated. It was not, however, that he was insensible to the attractions of Ella. But he knew well how to wrap his snares about a woman's heart. He saw at the first visit that the charm had been laid, and he left time and absence to work up in her imaginings those feelings which he knew would secure her affections. He knew that woman does not always love the heart that's surrendered too readily: she would rather win a once unwilling heart; nay, she would rather conquer a proud and haughty soul, than accept a weak and willing lover. He knew this, and therefore did not wish to show his feelings. 'Tis true, he once sent her a rose, which he plucked with seeming carelessness, as he strolled down the garden walk with his sister, as she was on her way to Ella's, and told her to give it to Miss Harwood, with his compliments. His sister, simple hearted creature, carried the gift, without supposing that her brother had any definite object in sending it—but said, as she handed it to

Ella, that she guessed it was merely one of his odd whims.

This rose opened a world of thought to Ella. She had begun to think that she was forgotten; but, said she, he must at least give me a *passing thought*. Then she would conceive it was more than a passing thought. Was it not emblematic of something? Did it not betoken respect? The "Flora Dictionaries" were so different, that she could not determine what a damask rose meant; in her own it meant "I own thy charms," but she could not tell whether Alfred, as Eastern lovers do, talked with flowers—or, if he did, that she had divined his thoughts—or whether he meant any thing at all, and that it was, as his sister remarked, a mere whim. Be that as it may, although it withered in an hour, it was worn for two days in her belt, as near the heart as possible, and afterwards carefully preserved as the last legacy of a loved and absent one.

At length a visit was made, with a proper excuse, of course. We will not detain the reader with an account of it, or of the feelings of Ella. Lyston saw that the spell had already bound her—that she was chained—that she was his own. For some weeks his visits were at intervals. He would frequently send her pieces of the latest music, and, of course, go to hear them played; and often, often would he listen with the enthusiasm of a true lover, as her tapering fingers coursed over the notes before her, mingling their dulcet tones with her own sweet voice, which threw about him the witchery and minstrelsy of Heaven. At such times, he felt the influence of angelic purity, and his guilty and proud soul seemed ready to bow in true adoration before its spotless shrine.

It was the last week of August. It was the hour when the golden clouds were just brushed away, and the sprinkled stars were beginning, one by one, to look down on earth. The world seemed tranquillized. Bustle and hilarity broke not the silence of the holy hour. Even guilt seemed to have fled away, or at least to slumber—and the sacred hallowedness of earth's young, primeval enchantment impregnated the very air.

A noble looking youth sat in a retired garden, with one arm thrown about the waist of a beautiful girl. Both seemed absorbed in deep contemplation. The eyes of the young female were turned upward to the heavens, and seemed to imbibe its calm delight.

"Ella!" said the young man, "thou art a meditative creature. Where are thy chaste imaginings bearing thee? Hast thou been visiting thy companions, the airy messengers of Heaven? for thou dost in very truth look like one of them."

"No, Alfred!" said Ella, blushing—"I make no such romantic visits; but I was wondering whether, when we are disrobed of these frail bodies, we would not be permitted to visit, in our airy flight, those beautiful stars which now seem so pure and lustrous, that we cannot help believing that they are the abodes of sinless beings. Yes—and I was thinking that there friends might meet again. Oh! I almost think that the spirit of my beloved parent now dwells in that bright one *there*, and even now looks down upon his fatherless child. Do you not think it may be so, Alfred?"

It was hinted that Lyston was skeptical.

"Yes, Ella, I try to think so; but it is seldom that

such holy thoughts find entrance to this bosom. I would love to think so, if it were only for your sake. But darkness will throw its heavy drapery over the future. I do feel something *here*—a restlessness and reaching after an undefined and indefinable something. I sometimes think it is the immortality of our nature speaking within; but still it is dark. Oh! I would give worlds to possess thoughts, pure and holy as your own."

Ella seemed almost shocked at these expressions. These were the first doubts she had ever heard him express, with regard to any of the truths of the Bible. She turned towards him, with an almost tearful eye, which told the deep interest she felt in him, and said—

"Surely, Alfred, you cannot doubt of what the Bible teaches so plainly? You cannot doubt of what your own nature speaks? Oh! do not indulge such dark thoughts; they cannot be the suggestions of your own reflecting mind. Some evil power hath been at work. Say, Alfred, can you think that we shall not meet in purer worlds? Oh! if I thought so—I—I!"

She was going to say more, and for a moment a deep blush crimsoned her face, as though she feared she had said too much.

"My own Ella!" answered Alfred; "it must be so. I already feel a change upon my spirit. No; I cannot myself endure the thought, that when this earthly frame gives way—this wicker-work is destroyed, that the caged bird now struggling within me shall be annihilated—it will o'ersweep this decaying world. No, it must not, it cannot be annihilated. No—no. If—if we cannot!"

Here he paused—and his nerves trembled. He was about to reveal that which would have laid open his own buried thoughts—that which would have sounded to Ella as a death-knell. She perceived not his hesitancy, and he continued—

"Yes, Ella! I feel a flame now burning in my bosom, which my nature tells me is quenchless—it will blaze more intensely, and forever—it will outlast all that is earthly! Oh! Ella! our destiny is one, and we are immortal."

And he drew the object of these fond remarks still closer to his breast—pressing his burning lips to her marble forehead, whilst her own heart beat tumultuously under its heaving bosom. It was the first token of what she thought hallowed love: She thought it sealed her forever his.

Oh! woman thou art a charmed bird! thy unsuspecting nature destroys thee—thy affections are too deep for thy defencelessness—love to thee is thy very being! Man! oh! man! thou art a serpent; subtle, subtle as that which bewitched primeval woman! Thy affections are shallow as thy own shallow heart, and love to thee is but a toy—a plaything!

"The thought is withering!

Did he then win my love, to throw it by

As lightly as he did an unprized gift?

Peace! peace! my troubled heart, for thou shalt break

Ere I complain."

That night was to Ella the infancy of a fresh and joyous existence. He had said as much as that he loved her, and that their destiny should be one. After they parted, she retired to her chamber, and seated her-

self at the open window. The moon was riding at full zenith, flooding all below in its pale and mellow light. There she sat, gazing at the light clouds as they went flitting past night's lovely sovereign. It was a Sabbath night of nature, and she lay, resting like a dreaming infant, quiet and peaceful in its innocent slumbers! Ella felt the holy calm. Earth had never before looked so beautiful. She thought it could not be a cursed thing—it seemed so gentle and spotless! She thought she could even hear the music of the spheres, as they went hymning around the throne of the Omnipotent One, vibrating in sweetest harmony with her own holy musings. Here she sat, and she could have done so until morning; but a dark cloud arose, blackening the heavens. She shuddered—she felt it was still a *changing* world—that storm and tempest often wreck the most lovely of earth's sceneries. Aye, she felt more. She felt that a change might come over her fondest anticipations—that the spirit of the storm might lash with remorseless and overwhelming fury the quiet of her own retired bosom. She addressed herself to sleep—first pouring a heartfelt prayer to God, that Heaven's smiles might not change to frowns—or at least that she might have strength given her to bear all earthly vicissitudes, and that at last her spirit might repose beyond the reach of storms. And did she pray only for herself? No. From the intensity of her heart's love, she breathed a fervent aspiration for that one who now almost shared the devotions which should belong to God only, that Heaven would reclaim him from his dark and misty wanderings, and pour light from the fountain of all truth into the gloomy caverns of his mind.

Alfred Lyston has been seen yielding to the winning influence of female charms. He has been seen subdued by love—bowing at the altar, we were going to say, of pure affection—but no, he had not: he had felt its influence, he had struggled against its mastery—and it was with bitter pride, that he boasted he was not yet its slave. No; the God of his idolatry was AMBITION, and at times it raged through his veins, until it maddened every pulse, and he devoted upon its altar the tenderest ties of affection, and, if it were needful, his very life.

On the night Ella's breast was so peaceful, his was perturbed with the wildest passions—the whirlwind had been let loose. He felt that she was lovely—that she was all his heart could wish; but she was not rich; and, what was still worse, she was comparatively unknown. Her relatives were few and unimportant, and if he married her, it would be for her own charms. He had other prospects: other connexions might be formed, which would secure him an elevated station in society. Nay, more—he had been urged to seek the hand of a beauty, then moving in the highest circle of fashion—rich, influential, and nothing to prevent the success of his suit. But he had told Ella that he loved her, or he had told her as much. What could he do?

"No," said he, after musing deeply, "it will not do; Alfred Lyston must not live on a level with the common herd,—he was born for greater things; his name must not be buried with his ashes. No—ALFRED LYSTON must and shall stand inscribed on the highest niche of the temple—it shall—it shall,—nothing shall prevent. I'll overleap every barrier—I'll sacrifice the dearest joy. Aye, if it but interfere, I'll with my own

hands immolate every endearment. I'll tear it away, though it uproot every affection of my soul."

Thus did he rave, as he strode the room with hasty steps; and it was not until gray-eyed morning peeped into his window, that sleep lulled his fevered brow to rest.

For awhile his visits to the Harwood family were less frequent than formerly. Ella wondered at it, and once or twice thought he seemed to be chilled in his affections. In her presence he often seemed absent—his manners were frequently hurried and less tender, and he sometimes seemed to shun her tender approaches. But she concluded that it must be some deep subject of contemplation which was distracting his mind, and that in a little while it would again return him what he once was. Once or twice she was on the point of asking him the cause of his troubles, but no—

" 'Tis never woman's part,
Out of her fond minglings, to perplex
The fortunes of the man to whom she cleaves.
'Tis her's to weave, all that she has of fair
And bright, in the dark meshes of their web,
Inseparate from their windings."

She began to feel sensibly that he was at times cool and thoughtful, even to painfulness. She would now and then cheer him up by a tender look and word, and try by music, sweet as "that which soothed the mood of Saul," to bring him back to his former manners—and sometimes it seemed with real success.

Ella had never thought of the disparity of their ranks, and never dreamed that any thing of the kind would prove an obstacle to their union. Simple-hearted and disinterested, she had not yet learned that love had become a marketable thing, and that like every-day commodities it usually went off to the highest bidder. She had not yet been schooled in this branch of commerce. With her, love was a deep principle—she thought that people were loved for their own sakes. She had done this: she did not love Lyston because she hoped he would become great; it was *himself* she loved. It would have been the same in poverty or riches—in shame or honor. He had become a part of her existence. In her attachment to him, the fountains of her affections had been broken up, and came gushing from their deep caverns with a fulness and purity which only death itself could check.

Alfred did, by degrees, become more and more at home in her presence—he was also less sombre. His visits were now as frequent as they had been, before the evening in which he had given Ella to understand that he loved her. But still he had not again hinted at their attachments, much less had he talked of a union. Two months after that time they were walking alone; their steps led them towards the Battery. It was an autumnal evening; the stars were peeping forth, and shone with an almost wintry brightness. The trees were tinged with yellow and brown, and as they moved along, the scared leaves rustled to their slow tread. The wind was blowing fresh from the Sound, and had a piercing chilliness, and as Ella clung to the arm of her companion, she wrapt her shawl more closely about her. But Alfred did not mind it; another fit of moodiness had come over him, and consuming thought seemed to prey upon his mind. At last Ella turned her eyes upwards, and asked in a tender manner why he seemed so sad.

"People, you know," said she, "should have warm hearts and social feelings in this cold and chilly weather. Come, you must cheer up, or if you don't, you must tell me what is the matter. Tell me where the wound is, that I may be your tender surgeon—or, if it is some deep heart-sickness, I'll try and be your doctress, and you shall place yourself under my charge. You cannot know my skill, or I am sure you would have applied long ago. Come, will you have 'Heart Ease,' or 'Love Cordial,' or"——

Alfred turned his full eye, and looked upon her with a gaze unutterably melancholy.

"Heaven forbid, dear girl; that you should ever know sorrow as I know it. You do not, you cannot know this dark spirit. My years are few, but they are already paled with anguish. I feel like a blasted oak. My joys are withered—a very winter is iceing up the fountains of my heart—I am sick with disappointment. Though I mingle with men and the world, I loathe them both—from my soul I loathe them. Like another Marius, I feel as though I stood in the midst of ruins,—and, oh! these ruins are *within me*—they are the desolations of my own scathed soul. And you, you, dearest Ella! must not share them. Did I not say I was a struck tree? And shall the delicate ivy still wrap its tendrils round me? No; oh! no, you must not. You are yet free—do not twine your destiny with one fearful as mine."

Darkness by this time had increased so much, that the countenance of each was scarcely visible; but as he spoke, the delicate creature that hung upon his arm shuddered palpably. She threw her arms about him, saying—

"Alfred! oh, Alfred! do not talk so. Why should you feel so? Some one may have acted ungenerously—may have injured you. It has embittered your feelings. In an hour of misanthropy you have thought the whole world was against you. Your prospects will soon brighten—you will be all you wish—and me,—do you think that I could not love you through all? No, Alfred! Ella Harwood does not love so lightly. Oh! I could say your destiny shall be mine, be it joy or sorrow—*it is mine*. I too have felt misfortune. I too have been like some lone thing tossed upon life's rough ocean. I sometimes feel so still. You do not know how desolate I feel when I have thought that even you treated me coolly. You do not act as you used to—but I see it all; it is only your fond misgivings. Your prospects are not dark as you say. But then do you think I love you only as the fortunate, the successful aspirant after honor? No, it is yourself I love. Ella Harwood can be the same in adversity or prosperity—the one might make me more proud of you, but in the other I could *lose* you more."

These words were poured forth with all the pathos of a woman loving ardently, *absorbingly*—and who, having once poured out the riches of her affections at the altar where she worships, then lays open the deep recesses of its thoughts to the idol before it—gathering in words all that words can utter, heedless of all that the world calls prudence or propriety. As she poured them forth, he to whom they were addressed stood fixed with his eyes turned to the star-lit heavens. The beaded sweat stood on his forehead, though it was cold as marble, while his knees seemed too feeble to support his

agitated frame. As she paused, he turned his face towards her, and with the same awful expression as before, said—

"Look upon me, Ella! Do you know me? No, you do not, or you could not love me! There is a recess here, (and he laid his hand upon his breast,) known only to Omniscience, and my own dark self. I am a viper—did you know me, you would crush me. I feel like a guilty being in the presence of angel purity. Spurn me—spurn me—I shall breathe more freely. Ella! we must not be one; it would only embitter your being. Think not of me—you are yet pure—still live so—give your affections to some holier one. Say that you will forgive me—say you will forget me. I may then endure life. Your beauty and loveliness have over-mastered me, but I cannot sport with a being so pure. It has saved"——

He would have said more, but Ella was already senseless in his arms, though he had been unconscious of it. How long she remained in this state, he was perfectly unaware. She revived, though apparently insensible of what had passed. Mr. Lynton tried to calm her agitated feelings, and as soon as possible called a coach, which in a few moments hurried them to the home of Ella. Mrs. Harwood, on account of ill health, had retired to rest; Julia, her young sister, was still up. Alfred remained with her a few minutes, and after some private remarks, left the house, to make his way to his own room; there to muse over the occurrences of the evening.

We will not detain the reader with an account of his feelings. They had almost exhausted him. But as he paced his darkened room, you could see that, though fearfully agitated, firm resolve was flashing from his eye, and that fixedness of purpose wrinkled up his high forehead. The most of that night was spent in penning a letter to Ella.

Reader, have you ever seen one, whose nature seemed to have been formed for noble purposes and high distinction, fall from his high walk? Have you ever seen one, who seemed to have been born for pure affection and holy benevolence, warped into selfishness and made the slave of an inordinate ambition? Such was Alfred Lynton. By these was his lofty spirit enslaved. Honor and worldly distinction wooed him—and to these he sacrificed his own native tenderness, and the happiness of all who seemed obstructions to his purposes. *He was already affianced to another than Ella Harwood!*

His letter on the next day found Ella in bed. Her exposure, and the trial of her feelings on the preceding evening, had been too much for her. We will not, we could not, if we would, tell of the whirlwind which swept through her soul as she read it—but she *did* read it, and her eye was tearless to the end. But after she concluded it, she buried her face in the pillow, and sought relief in tears. But they came not; for her bitterness was too great—a few smothered sobs, or rather groans, was all. The letter did not inform her that Lynton had plighted his faith to another. It merely entreated her to forget the past—to be happy in the affections of a more deserving heart—that they could not be united.

Weeks passed away before she was able to leave her room. Her mother noticed that her sickness was more

of the heart than the body. She noticed the absence of Mr. Lyston—and, after repeated inquiries, Ella told her all. But she blamed him not. No. He was the only one she had ever loved, and she could not hate him. His image was still with her—it was enwrapt in the memory of past joys—it was the image of her first, her earliest love.

Three months passed away. Ella was one day glancing carelessly over one of the weekly papers, when her eyes fell upon the following:

"Married, on the 5th inst., by the Rt. Rev. Bishop M*****, Alfred Lyston, Esq., to Miss Cornelia, only daughter of Hon. Jno. Stanton."

She read it over, hurriedly, again and again. Could it be that three short months had obliterated all traces of her memory from his mind! Was it so! Or was it a bewildering dream. She had continued to think that he might still love her; and vainly indulged the hope that he might, when his prospects became brighter, and his reputation more secure, again return, with all the warmth of his early love. And she had nursed this hope with all the fondness of a young mother hanging over the infant couch of her first born. Her eyesswam—her head reeled—her brain became confused—her heart thrilled and heaved tumultuously—and she fell almost lifeless upon the sofa, where she was found a few moments afterwards. She was again carried to her sick bed. It was more than her young nature could bear.

"Health and bloom returned not; and the delicate chain Of thought now tangled, never cleared again."

She lived; but her mind was swung from its moorings. She soon moved about the house again, but the soul of the once sprightly Ella was gone. Melancholy, deeper and deeper, settled upon her. She talked not—she did not even weep. Sometimes, however, her mother would sit down by her side, and weep that her daughter would not answer her; then it would seem that a glimmering ray of intellect would lume up its long desolate home, and she would kiss away her mother's tears, and say, "Do not weep—he'll come back yet, mother! Oh, mother! do not weep." Whether she referred to her long lost father, or to Lyston, could never be ascertained.

One day she seemed to be possessed of a strange energy. She entered the room where her long deserted piano was standing, and uncovering it, flung her wasted fingers in masterly magic over its ivory notes, singing at the same time, with an almost bursting bosom, one of her long, long neglected pieces—it was the favorite piece of Alfred's! She then retired, no one knew whither.

The next day the evening papers contained the following notice:

"This morning a coroner's inquest was held over the body of a young female, found in the North River, at the foot of Washington street; supposed to have thrown herself in while in a state of mental aberration. Respect to the young lady's friends forbid us to mention either the name or the circumstances prompting the melancholy deed."*

* It may seem objectionable to have inserted the notice of the finding of the body; but, as it was published, so it is given, almost verbatim from the papers of that date.

Was it so? Yes, the lovely Ella Harwood had found a watery grave. Like the beautiful Sappho of other days, she had sung her last song to her unfaithful lover, and the trembling wave closed about her fairy form!

June 1st, 1839.

R. R., OF S. C.

PLEASANT RANGE.

BY MRS. MARIA G. MILWARD.

About ten miles distant from St. Mary's, a city of Georgia, situated on the river from which it derives its name, once stood a rough, though not incommensurable edifice, constructed of the trunks of trees and roofed with clap-boards, familiarly termed a log-house.

A little in the back ground, several smoky huts, thatched with palmetto, peeped from among the underbrush, that still held possession of the soil, unmolested by the ruthless axe of the destroyer. Indeed the hand of cultivation was nowhere visible, but in a corn, pea, and potato patch, rudely enclosed by a worm fence—all else around the premises was left to riot in the untutored wildness of nature.

The prospect, however, was not devoid of interest—it exhibited variety, and that too of a not unpleasant character. The front view presented a vast extent of pine barren, through which a long, straight road opened a vista, terminating in the clear, blue sky. On the right, a well timbered hammock of ancient oaks, rendered still more venerable in appearance by the long moss that swept from their branches and waved to every sigh of the wind, stretched along in the distance. And on the left was a large bay-gall, so thickly beset with cat-briers and undergrowth, as to be almost impervious to the foot of man—while it afforded "a local habitation" to snakes and frogs, and the various insect tribes with which the country abounds.

About thirty paces from the back of the dwelling, a steep, sandy bluff overlooked a broad bend of Crooked River, a fine, bold stream, whose sinuous wanderings through marsh and woodland, gave evidence of the plain matter-of-fact turn of mind of its nomenclator. On the opposite side was an immense body of salt marsh, through which the crane and curlew stalked in uninterrupted freedom, fearless of the gun of the fowler, (for, in that part of the state, the more useful and enduring turkey-tail fan had not given place to the delicate pink and white plumage of these aquatic birds,) while the alligator might be seen basking in luxurious indolence on its muddy margin—beyond this in the extreme distance, a ridge of woods, like a dark streak in the horizon, bounded the landscape.

The inmates of this dwelling was a family of the name of Elliot, consisting of an aged widow, two grown sons, (the youngest of whom was married,) a daughter of nineteen, and the daughter-in-law—the latter a quiet, simple looking girl, nicknamed by some wit of the neighborhood the *Salt Crab*. These people, although in the lowly walk of life, were not exactly what are facetiously denominated "*long toned crackers*," for their vicinity to St. Mary's gave them advantages not possessed by the inhabitants of the interior.

They were originally of Irish extraction, and occasional glimpses of the blarney stone were distinguishable, particularly in the old woman, which, when united with the shrewdness of the native, made her, in the language of the country, "a mighty *pearl* old body." Their only domestics were an old woman, "parched and dry as the Sybian deserts," an actress of all work, and a young fellow of the name of Will, who assisted his masters in working the patch. Will played all the popular tunes of the country on an old fiddle, and was the life and joy of all the adjacent plantations, where his musical talents and good natured laugh, always insured him a hearty welcome. Every one knew Will, and his loud whoop and merry whistle announced his approach long before his shining black face and white teeth were visible. The live stock of the place consisted of cows, hogs, poultry of all kinds, six or seven lean and hungry looking dogs, and a broken down black horse, with one eye, named Match, a living representation of an old hair trunk. Match received his name when a colt, in consequence of the extraordinary mettle he displayed when an attempt was made to cross his back; but he had now ate all his wild oats, and little of his youthful fire remained.

But to return to the family. The eldest son, Jimmy, was a man of very few words, with an ill, down-looking countenance. He was a keen, shrewd, designing fellow, famed for being able to drive a hard bargain, and always plotting and contriving some scheme of profit. He heeded not the tender glances from the large grey eyes of Jane King, the particular and cherished friend of his sister, Rachel; for his mind was bent on a more advantageous connexion with a distant cousin, who being the only child of an old father, "mighty well to do in the world," was considered by every one to be a "monstrous spec." The second son, Aleck, a handsome, frank, open-hearted youth, had married for love. Rachel, the daughter, was quite the blossom of those parts: she was a stout, well made girl, with keen black eyes, dark brown hair, and a complexion which could boast of variety, if nothing else—for the sun in its circuit had not been unmindful of her charms, but had darted his rays so ardently upon her, as to leave evidences of his power in many a small black freckle, that peeped pre-eminently through the blood, which mantled her cheeks. Miss Rachel was quite accomplished—at least in what were deemed accomplishments in that part of the world. She could spin, weave and knit—dance reels and jigs with untiring vigor—sing the "Silver Dagger," with several other pathetic ballads—and was unrivalled in baking a hoe cake. Numerous were the competitors for her favor; we shall, however, only take notice of two, as it was a matter of doubt and speculation which of these would be the happy possessor of Miss Rachel's charms. "Long Tommy King," as he was called, had a *smart settlement*, about a mile and a half from "Pleasant Range," such was the name of the Elliots' place—but as his sister Jane was in the practice of spending weeks at a time there, the object of *his* visits was not altogether clear. Tommy, without his shoes, was upwards of six feet high, had a long, thin face, which, as well as his hands, was covered with large pale freckles, and his hair was straight and red; but he possessed winning ways, which we know nothing about.

The other candidate was an overseer on the next

plantation, named Watson—better known as Master Billy. Mr. Watson was a spruce widower of forty-five, from the very back parts of North Carolina, where he had buried his first love and five children—after which, as he said, "he thought it high time to *amigrate*, and change his luck." The rivals frequently met, and the green-eyed monster was not idle in either of their bosoms—but it remained for time to disclose the secrets of Rachel's heart; for so skilfully were they veiled from observation, that neither of her suitors could determine which stood the better chance of success. Many were of opinion that the airs and graces of Master Billy were better calculated to captivate, than the plain, straightforward manners of Tommy King, "Love" is said "to rule the court, the camp, the grove," and as he is generally supposed to be omnipresent, does, it is presumed, exert his powers in the wilds of North Carolina and Georgia, as in the more favored regions of the earth—and although Watson was quite a veteran in his service, he now felt himself at a nonplus. One evening the lovers accidentally dropped in at "Pleasant Range," and Will's fiddle was instantly put in requisition. Mirth and hilarity prevailed, and all was harmony and peace, until in the midst of a jig that was going on with much spirit and glee, between Miss Rachel and Master Billy, who evinced the excitement of the moment, by cutting a great many shines, snapping his fingers, clapping his hands on his thighs, whirling, wheeling round and round, "stepping high and treading thick," when Jane King, who guessed the feelings of her brother, from the expression of his countenance as he looked on, suddenly darted forward, and placing herself directly in front of Master Billy, fairly "cut him out." Rachel laughed outright, but still continued dancing; and not until the two girls had completely tired each other down, did they observe that Watson had vanished. Rachel expressed the greatest astonishment—"wondered what had become of him, and hoped that he had not been suddenly taken ill." Old Mrs. Elliot, who had been a spectator of the whole scene, interrupted her conjectures with—

"Oh! I'll tell you what it is,—Miss Jane cut him out jiggling."

Tommy, who was secretly delighted, muttered "Fool," and was about to depart, when Jane stopped him, and glancing at Jimmy Elliot as she spoke, proposed that "they should all go the next day to hunt terrapin eggs." Rachel immediately seconded the motion, and Tommy, governed by her wishes, readily acquiesced.

"Will you go, Mr. Elliot?" said Jane, overcoming her diffidence by an effort.

"No," he replied—"I see no fun in it."

"My gracious!" cried Rachel, provoked by his disobliging manner—"I declare, brother Jim, you are the most contrary man I ever *seen*." While Jane turned aside to conceal her mortification and disappointment.

"Never mind," continued Rachel; "we'll ask Mr. Watson to go along—and I'll be bound he'll not say no."

"Yes," said Tommy King, "I reckon he'll be mighty glad of the chance to show out his broad cloth."

Jane, in her effort to disguise her feelings, only made them more apparent, as with eyes wandering towards Jimmy, she implored Aleck to accompany them, who, laughing, good humoredly said—

"Why, Miss Jane, I would go, but I am a going to jump mullet to-night, and Polly and me will have a plenty to do to-morrow to corn them down; and you know, as I am a married man, I'm no great shakes."

"O! as to that," said Jane, "that makes no great odds—I'd as leave have a married man as a single man, any day; and leaver, for they are better company."

"Well," replied Aleck, "I can't go this trip; but the next time you go a pleasuring, I'll go for *sartin*."

The next morning all the party assembled at Pleasant Range—each seemed to have forgotten the little *scrimmage* of the preceding night, and equipped for the excursion, they sallied forth. It was early in spring—the day was fair and bright—not a cloud was seen in the clear, blue vault of heaven. The sun poured down his refulgent beams with full power for the season, and a soft breeze played through the pine barren, stealing, as it sported, perfume from innumerable shrubs and flowers that "wasted their fragrance on the desert air." The bee hummed over the level ground, sipping sweets from the bosom of each lovely child of the forest. Not a sand fly had ventured forth to mar the comfort of the pedestrians. All nature was smiling, and every thing around spoke peace and tranquillity to the heart. The path leading along the bluff, beneath which they expected to discover the nests of the terrapin, whose eggs are sometimes found in large numbers, was so narrow as to oblige the party to walk in Indian file. The girls in front, with their baskets on their arms, chatted merrily as they walked along; next stepped Master Billy, with a long red cow-hide in his hand—the badge of his office—guily cropping the heads of flowers that strewed the way; while Tommy King, with his rifle across his shoulder, in case of starting a deer, followed by several lean, plantation dogs, brought up the rear. Numberless were the acts of gallantry performed by Master Billy that day. Tommy contented himself with the simple offering of the produce of a bee-tree, which he had discovered, and which he promised to take the next morning. Wearied with their search for eggs, they ascended the bluff, and sought repose under the sheltering boughs of some sweet gums by the side of a narrow branch of water, and taking from their baskets some homely fare, spread a rural repast upon the ground. Master Billy taking a piece of potato pone daintily between his fingers, and turning it round every which way, said—with what he intended to be a most engaging leer—

"This *patella poon* is exceeding fine. I presume, Miss Rachel, that it is some of your make. I have not eat any in a long time. It brings to my mind a mighty clever girl in North *Callina*—indeed she was the most beautifullest I ever seen, I think, excepting one"—cutting his eyes, as he spoke, at Rachel. "At that time I had a plenty of leisure—so one day says I to myself, I'll go a gunning, says I, and see if I can't git a chance at some of these bears that are using about in the corn-fields. Well, off I goes—and to be sure I did see a powerful sight of bear signs; so I kept a *foltering* the track till I got so fur from home that there was no fun in it—and, to make bad worse, it began to drap rain. It was about the shank of the evening, and may-be I didn't set up a high turkey trot, and peeled it like thunder. I never stopped to fetch breath till a high rail fence brought me up. I slipped over it in no time at all—

and was knocking at a fine house before I rightly knowed what I was about. A beautiful girl opened the door and asked me in, where a parcel of her friends had got together at a quilting frolic. They were just knocking off work and preparing for the fiddle.

"Excuse me, ladies," says I, making a very low bow; 'excuse the pickle I'm in.'

"By all means," says the old lady of the house. 'You look mighty well; come in and content yourself for the balance of the night.'

"I will, madam," says I, 'with all the pleasure in life, if you will let me have a bucket of water to wash myself, for I look as though I had been a wallering in the sand.'

"So after sousing my head in some cool spring water, I felt as *stuck* as a ribbon, and after brushing myself, I looked a pretty decent sort of a feller—for I always wore good clothes. When I joined the dancers, the young lady that had opened the door for me kept constant a looking at me, watching every step I put upon the floor.

"Gentlemen," says the old lady, 'hand out your partners for a Virginny reel.'

"Come, Mr. Watson," said the beautiful girl, seeing me hang back—"won't you join?"

"Miss," says I, 'I'm not acquainted with the dance, and it is against my principles to make displeasure upon the floor, but as for a jig, says I, I'll turn my back on no man.'

"And with that we fell to, and such steps she put down, I never seen—they took the shine off every one; while I danced so steady that not a rag about me shook. Some young fellers, who were a little jealous of me, I reckon, began to cut up some flirts to bolk me—but it was no use—for I knowed too well what I was arter. At supper I sat right facing my pardner. She cut a large slice of *patella poon*, and was handing it across the table to me on a knife, when some one, out of mischief, knocked her arm up, and away went the *poon* to the ceiling, and down again slap dash upon an old lady's head. Lord, how scared she was—she jumped and kicked and hollared like twenty,—and this, as I was a telling of you," holding up the potato pone as he spoke, "put me in mind of that beautiful girl."

Tommy King discovering that Master Billy was, as usual, the hero of his own tale, had left him in the midst of its recital, and plunged deeper into the woods. Watson was consequently despatched to hunt the delinquent, as it was growing late. Left alone, the girls seated themselves on the trunk of a fallen pine, and simultaneously burst into a loud fit of laughter. At length Jane found words and said—

"Rachel, Master Billy was giving you some monstrous sweet looks. I expect that you and him will come together at last."

"Me have Master Billy! I guess I won't though—why he's as gray as a badger. You had better take him yourself."

"Me—no, he doesn't want me,—and if he did, he couldn't get me. I'd as leif have an old rackoon."

They were interrupted in their discourse by the two heroes, and rising up, turned their steps homewards. When within a quarter of a mile of the house, their attention was arrested by the sound of voices issuing from the swamp, at of persons in distress. On repairing to the

spot, they found old mistress Elliot, Jimmy and Will, endeavoring to pull old Match out of the mud, in which he had bogged. Mrs. Elliot, "with desperation bold," held tight to his ears, to keep his nose above ground, in order to prevent suffocation; Jimmy was wrenching at his tail, while Will, with a fence rail, tried to prise him up.

"Cobe, cobe," cried the old woman, shaking a bunch of grass to stimulate him to greater exertion; but every effort the poor brute made only served to sink him deeper in the mire.

"Quit that, mammy," bawled Jimmy. "You see its no use—can't you stop your jawing."

"Dear hearts alive—oh! he's gone this time; nothing 'pon earth can save him."

"O! missus," cried Will, "you're too *frightful*. I'll be bound we'll get him out safe enough now, for there comes mass Tommy King, mass Billy Watson, and the young ladies, and they'll put us up to all they knows."

"O! poor old Match," screamed Rachel, as the party approached. "Do let us get some long poles and pry him out. Oh! do."

"Don't be alarmed, Miss Rachel," said Master Billy. "I'll ingage we'll get him out."

"Aisy, aisy there, boys," cried the old woman. "You'll punch his insides out, if you go on that way, and then he'll be of no account. I would not lose him for any money."

"Punch away," exclaimed Jimmy, "he's of no great account any how; and the longer he sticks here, the worse off he'll be."

"He's in a horrid bad fix, to be sure," said Tommy King—"he's a gone case, I reckon."

"O! don't say so, Tommy," cried Rachel, weeping; "but turn in and do for the poor creature."

"I'll not lave this spot, by St. Patrick," said the old lady, waxing warmer and warmer—"I'll not *lave* this spot," and she stuck her leg to the knee in the mud as she said it. "I'll get him out, or there's no snakes in Georgy. Get up, get up, sir—heave away there, boys, rouse him up—that's it, that's it."

And with the united efforts of the whole force, they succeeded in extricating old Match from the mud, and setting him on his legs again.

"Now," said the old woman, triumphantly, "see what people can do when they have a mind to."

"Well," said Will, pulling down his trowsers, which were rolled up to his thighs, "I *raly* am *es-sausted*—come old Match, let's we go home; I don't *expose* you'll try the swamp again in a hurry,"—and seizing him by the mane, Will led the way, *followed by the whole party* in procession.

Days, weeks and months passed on without any material incident in the lives of the personages of our story, except the marriage of Jane King, who, stung by the conduct of Jimmy Elliot—for nothing kills love so effectually as the cold frost of indifference—bestowed her heart and hand on a distant relative; while Jimmy in his turn, was doomed to suffer the keen pangs of disappointed avarice—for the girl on whose fortune he had so long set his affections, gave him what was politely called in those parts "a walking ticket." In these wilds "the sound of the church going bell," calling the faithful to their duty, was never heard; therefore Sunday,

instead of being a day of heavenly rest, was only distinguished by a cessation from bodily labor, or for visiting, and other amusements; unless, which was a rare occurrence, some itinerant preacher, whom chance or worldly business led that way, dispensed gratuitously the word of life.

Early one Sunday morning in the beginning of summer, Master Billy drew from the bottom of his chest his very best suit of black cloth, which had been procured for the purpose of showing respect to the memory of his departed wife. Its texture, it must be confessed, was neither of the softest nor finest, as the seams most clearly testified, for in defiance of the power of the goose, they showed rebelliously distinct. The fashion too was some years back—but where nothing but homespun was seen, it certainly created a great sensation, and excited no little ill will towards the wearer. After arraying himself with peculiar care, he mounted "old Jack," a high boned white horse, kept for plantation use—and rode over to see Tommy King, in order to find out how the land lay between him and Miss Rachel. He found Tommy stretched at full length on a bench in the piazza, gazing on vacancy, while at intervals he appeared to be trying to what distance he could spirt the tobacco juice from his mouth. Master Billy, without dismounting, immediately entered into conversation with him, respecting the appearance of their crops. Watson complained of "being very much in the *graze*," on account of the heavy rains that had lately fallen. Tommy, with a grin of satisfaction, remarked, "that they had been the making of him, for he had set out a smart chance of slips, which, if the season continued lucky, would make a fine show of potatoes in the fall." Having conversed some time on this topic, Master Billy adroitly shifted the subject to the one nearest his heart, and after taking many circuitous routes, without gaining any insight into the business—for Tommy was a knowing fellow—he determined to make a bolt straight forward, and assuming a careless air, remarked—

"Miss Rachel is a mighty clever girl. I expect, Tommy, you're a sparking that a way."

"That's just what you'd wish to know, I reckon," he replied, with a short laugh.

"Not at all, by no means—only I suppose you intend going the whole figure, as I see you pretty constant using that a way."

"I guess you're scared a little."

"Me!" replied Master Billy, whipping the dust from his pantaloons—"I guess I knows what I'm after. I knows how to please the girls as well as any man; I don't care who he is."

"O! as to that, Master Billy, I ask you no odds—the longest pole, you know, takes the simmon."

Master Billy threw himself into an elegant side-long attitude upon old Jack, and continued tapping his right leg with the chinquepin switch he held in his hand.

"I'll tell you what, King," he said, after a minute survey of his limb, which appeared to afford him infinite satisfaction—"I am the last man upon earth to brag of my luck with the girls, but if you knowed what I know, I expect you'd fly the track in no time."

"You mean to *insinuate*," said Tommy, reddening with scorn and anger, "that she's as good as told you that you may have her for the *azing*!"

This was rather a more liberal translation of Watson's words than he wished; and he replied quickly—

"I don't know *that what* I have said can be taken quite as *far as* that—but come, what say you to go to meeting this morning?"

"Why, I reckon I might as well go as not; but I must shirt myself first—for it is the *rise* of a week since I last shifted."

Watson withdrew his eyes from the soiled garments of the speaker, and cast them upon his own snow white cotton; the bosom of which, according to the fashion of the day, was ornamented with broad ruffles, neatly plaited. Whether or not Tommy apprehended that the superior habiliments of his competitor for the favor of Miss Rachel, would prove too great a snare for her—but when, after sundry ablutions, he at last re-appeared, it was evident that he had been unusually careful in the adornment of his "outward man." He was clad in a new suit of homespun of the latest pattern and cut—his fiery locks combed slickly down, and holding in his hand a bright spotted silk handkerchief, which bore his name in legible characters in one corner, which was carefully turned up to view. Tommy King had certainly never been "in better fix," and so thought Master Billy, as he eyed him from head to foot.

The rivals, however, set off in good fellowship, riding briskly forward, until arrived at the place where preaching was to be held. This was about four miles distant, at the house of one of the settlers, near the entrance to that part of the high road leading to St. Mary's, called the Dark Entry, from the gloomy shade thrown across it, for some distance, by towering and closely phalanxed pines, which lined the way on either hand. Here our equestrians dismounted, and having secured their "critters" to the branches of a tree, they adjusted their dresses and prepared to enter the house, simultaneously raising a hand to their heads as they removed their hats, to discover if all was as it should be on their upper stories. Their first impulse, on seating themselves, was to gaze around the little assemblage in search of the object of their mutual regard—but she was no where visible, and Master Billy began mentally to calculate the unprofitable wear and tear of his broad cloth, while Tommy King looked ruefully at his silk handkerchief and new homespun, regretting that they could not be seen by Miss Rachel before they had lost their first blush.

When the meeting broke up, Tommy King and Watson separated. As the latter was riding along, he fell into a train of musing, the subject of which, as may be readily imagined, was Rachel Elliot. But he was suddenly aroused from his meditation by the appearance of a noble buck, which bounded across his way. He followed the antlered monarch of the forest with his eyes until it was lost to his sight by the intervening woods, and at the same moment, emerging from a grove of young pines, the object of his most secret thoughts, in all her innocence and beauty, stood before him. She was alone, and not an eye save his beheld her, and not an ear but her's would hear the soft confession which trembled upon his tongue. The opportunity was too tempting to be lost. Dismounting from his horse, he drew the bridle on his arm, and joined her, determining that that hour should decide his fate. After walking beside her for some time without speaking, he at last began—

"You must find it quite lonesome, now Miss Jane is married and gone."

"Yes," she replied, "I do miss her mightily."

"Suppose you follow her example then."

"Well, may-be I may, some of these odd days."

"Well, remember, whenever you have a mind, I'm your man."

Totally unprepared for this speech, she did not reply—and Master Billy, bearing in mind the old saying, that "silence gives consent," gallantly seized both her hands. Confounded and provoked, she jerked them away, exclaiming—

"You must be crazy, I expect. Do you think I'm sich a dratted fool as to have you? You're old enough to be my daddy."

"Well," said Master Billy, with admirable nonchalance, preparing to mount his horse, "It's no sich great affront that you should lose your manners so. It's mighty well, Miss Rachel, but I'll take my particular oath that you may go further and fare worse. I wish you well, marm." And bowing, he rode off, snapping his fingers and singing,

"'Twas the nineteenth day of October, O,
I greased my wagon in order, O,
I greased my wagon in order, O,
To start for the head of Saluda, O,
With a long tum todily, &c."

A few weeks after he was seen on the road to North Carolina, leaving Tommy King master of the field, who in a very short time contrived to draw out the long cherished secret of Rachel's heart, and was united to her in the silken bands of matrimony, by a justice of the peace from the city of St. Mary's.

PENCILLED PASSAGES:

Chosen for the Messenger, from "Pericles and Aspasia," by Park Benjamin.

Names, that lie upon the ground, are not easily set on fire by the torch of envy, but those quickly catch it, which are raised up by fame, or wave to the breeze of prosperity. Every one that passes is ready to give them a shake and a rip; for, there are few either so busy or so idle as not to lend a hand at undoing.

The happiest of pillows is not that which Love first presses; it is that which Death has frowned on and passed over.

It has been wisely said, that Virtue hath only to be seen to be beloved: but unwisely, that Vice hath only to be seen to be hated. Certain it is that the more habituated we are to the contemplation of a pure and placid life, the more do we delight in it. I wish it were equally so that every glance at Vice loosened a feather from her plumage, and that on a nearer approach and more steadfast observation she grew hideous.

Until we have seen some one grow old, our existence seems stationary. When we feel certain of having seen it (which is not early,) the earth begins a little to loosen from us.

A beautiful mouth is always eloquent.

They who tell us that love and grief are without fancy and invention, never knew invention and fancy never felt grief and love.

The thorns that pierce most deep are prest
Only the closer to the breast:
To dwell on them is now relief,
And tears alone are balm to grief!

Happy are those who have retained throughout life their infantine simplicity, which nurses a tractable idol in an unsuspecting bosom, is assured it knows and heeds the voice addressing it, and shuts it up again with a throb of joy, and keeps it warm.

Discretion is the sure sign of that presence of mind without which valor strikes untimely and impotently.

The remembrance of past days that were happy, increases the gloominess of those that are not, and intercepts the benefits of those that would be.

To call idlers and stragglers to us, and to sit among them and regale on their wonder, is the selfishness of an indigent and ill-appointed mind.

The happy never say, and never hear said, "farewell."

HUMBUGS OF NEW YORK;

A Remonstrance against Popular Delusion, whether in Philosophy, Science, or Religion, by David M. Reese, M. D. 1 vol. 12mo. pp. 267: 1838. New York—John S. Taylor & Co: Boston—Weeks, Jordan & Co.

Seldom in this age of chimeras has it fallen to our lot to peruse a more clever production than this. It is entitled "Humbugs of New York," not because other cities are exempt from the thrall of imposture, but that being the emporium of the union, she naturally concentrates all forms of chicanery, and affords a tangible location to its Will-o'-Wispiness. In it the Doctor has explored every refuge of delusion, and with mighty power has he purged them. He grapples with animal magnetism, and overthrows its pretensions; strips phrenology of its ensnaring charms and develops its frailty; beards the monstrosities of all ultraism, and testing them by the infallibility of Holy Writ, they

Have melted like snow in the glance of the Lord.

In all this we laud him, and if the gratitude of the community is not due for an exposition at once so lucid and pungent, we know not when one may lay claim to the obligation. True, the auxiliary causes of the success of humbuggery receive but little notice, but much is done, and we patiently await a more philosophical investigation of these. Meanwhile, in our own turn, we would briefly notice some popular ultraisms.

The tendency of the age is after novelty. Our social union, essentially new in its principles, seems in its own success to have contaminated every participant with mischievous aspirations after novelties in all things else. In religion, we find men disdaining the worship of their fathers, and in search of new light re-

morselessly deserting tried paths of salvation. Some impiously reject Christ's mediatorial offices, and essay to scale the high wall of Heaven. Others, involving trivial points in controversy, arouse embittering strife with those pernicious distinctions so dissonant to the conciliatory inculcations of Jesus. Others yet, deposing Omnipotence for the God of Scripture, substitute some ideality of their own imagination. While amid all, Satan stands chuckling at his own prosperity. In science, we have seen the same principle delude the understanding of the wise to the belief of statements the most illusive. Witness the Royal Society's investigations to account for the fact of water accumulating no weight by the immersion of a fish. Or, more recently, the success of Sir John Herschel's telescope. But with what measure can we mete the triumphs of art? or how enumerate the labor-saving machines invented in futile effort to satisfy the cravings of an insatiable fashion? And has not one of those non-descript Germans a most ingenious apparatus, by the united simultaneous pressure and soporific influence of which a limb may be amputated without sensation of pain? In commerce too, we have seen the same principle, under the disguise of an enterprising spirit, reject tried models of safety, reckless of property and life—if so be a few moments of comparatively valueless time saved the result. And worse than all, in common intercourse, so fastidious is the age, "that filial piety must hide herself in a closet, if she be minded to dam her father's linen." To eat according to the requirements of nature—is no longer reputable; we must live and move and have our being in accordance with empiricism, for the efficient operation of whose laws health conventions assemble, and advocates of reform

Rave, madden, and recite throughout the land.

To gull and be gulled, is the prerogative of the age, and humbuggery the talisman of wealth and fame.

But secondary causes influence. All quackery originates in the passion of self aggrandizement, and is fostered by the irresistible propensity to try something new; but ultraism springs from the prevalent disposition to select some individual and exclusive object of benevolence. As the eye, becoming concave from the habitual contemplation of distant objects, and *vice versa*, is incapacitated for the proper discharge of its functions, so our reformers, accustoming themselves to contemplate some solitary evil, distort their judgments and are incapacitated to estimate relative proportions. Again, the unfortunate are alone miserable; the adversities of a neighbor are "as the small dust of the balance;" for by the continual brooding exercised over their calamities, they expand to an intolerable magnitude. Thus, to the varying forms of fanaticism incongruous aspects belong. To one, intemperance is the *primum mobile* of evil; to another, slavery looms up till its horrors fill immensity; to another, Catholicism is the prolific breeder of all mischief; while to some jaundiced-eyed divine, the adjudication of man's "ability or inability," partial or total, and innate depravity, is alone necessary. Each rides his own hobby—each against the *origo mali*.

Of the first, Massachusetts furnishes a lamentable example, when, instead of punishing overt acts, she legislates on tendencies, and enacts penal laws over

sumptuary matters; forgetful that while men may be drawn by the silken cord of persuasion whither you will, they do not now succumb to the rod of moral coercion; be it of adamant and swayed with force never so terrific. Let her abolish her "fifteen gallon law," levy penalties against drunkenness, and she may confidently entrust the triumph of temperance to the sound morality of her pilgrim soil.

Of the second, the impolicy of abolitionists affords melancholy proof. Yet, did propriety sanction the omission, the phosporic nature of the theme would deter from its discussion. So irritable indeed is the community on this subject, that he who has courage candidly to treat of it, incurs danger from the sensitiveness of one, and the rashness of the other party. If he side with the South, a storm of vituperation assails from the North. If he remain neutral, the South regards with jealousy, and the North upbraids with pusillanimity—so that the sense of espionage which haunts his mind, shackles its emotions, and render its operations pusillanimous indeed.

But if such be his emotions, and such his position, those of the philanthropic abolitionist are assimilated only to those of him who extends a flaming brand over a powder magazine, fearful lest stern necessity impel its application. Aware, however, of the general efficacy of milder, over vehement means, for the eradication of error, the designs of the American Colonization Society had, with ourselves, ever claimed preference over the short-sightedness of "present abolition" theories. By the designs of the American Colonization Society, we mean those intentions and transactions, which by the removal of the surplus black population, were paving the way for the ultimate complete emancipation of slaves, when their gentle flow of benevolence was dammed by the ultraism of "abolition." A theory going beyond the light of Holy Truth and asserting the theoretical fact, "that slavery is incompatible with our institutions," knows not of its practical falsity. Fools! and wise only in their own conceit! Is it not true, that the magnetic needle points ever to the poles? But if a bar of steel lie contiguous, how is it?

In colonization, then, we discern the operation of slow, but efficacious laws in the removal of evil. In the ultra notions of immediate emancipation lies a pregnant germ of mischief, and its bloom is to be dreaded more than the mountaineer dreads the projection of the avalanche which overhangs his cot. The operation of the one is like the operation of natural laws in the removal and different disposition of continents. The sudden relaxation of integral parts, would scatter far devastation and death; the gradual exchanges of particles precludes such fatality, and yet secures the accumulation of renovated land. The scheme, moreover, was suggested in the wisdom of these considerations, has been prosecuted with most laudable energy, and is still characterised by the beneficence of those principles which shed glory over its proposal. And allege not, that it is a temporising policy—that the fetters of slavery may be inseparably rivetted. It is a temporising policy, but because time must be granted to that which imperatively demands it. In a word, the one is the fierce blustering of the wind; the other, the potency of the sun, as exerted on the traveller's cloak. Besides, the plan of colonization was dictated in full reference to

the individual case, uninfluenced by those foreign and unanalogous. The wildness of "anti-slavery" had its origin in the enthusiasm of a disordered mind, inflamed by youthful perusal of the narrative of British legislation in dissimilar circumstances. Not pausing to weigh diversities, the notion entered his brain, thus fevered, that he could assist the prolongation of notes, which had only reached his across the distracting extent of intervening seas. The thought grew fixed, and with every diurnal revolution, more and more excited his throbbing pulses—till raising a feeble standard, with the shout of "liberty to the captive," he formed around him a motley throng of champions. Obligated to array these against the piety and talent of the land, the first encounter showed their impotency and compelled him to resort to another expedient—an appeal to the sympathies of our nature. And no sooner did the alarm of "persecution" resound from off the battlements, than recruits thronged from every nook. These took up the cry, and "persecution" summoned more from off high places—from off the plains. Disciplined by continual skirmishes and drill, they have made a stand against the better cause.

Nor is the success of the gathering word at all singular. In what emergency was it ever known to fail? It is a charm to conjure up saint or devil with, and is susceptible of familiar and apt illustration. The case we offer is that of a notable impostor, and a no less celebrated school-master, in Massachusetts. The former had talked many into large subscriptions to a proposed charity, when it was discovered that his leading motto was, "charity begins at home." Exposure followed. The latter had abused an orphan child entrusted to his care, and brought a suit against certain editors who exposed him, in which laying damages to the tune of ten thousand dollars, he recovered one-tenth—arguing a previous worthless character, or great criminality in the matter subsequent. Yet, no sooner did these worthies, as if they had held mutual condolence, certainly in tacit sympathy, unite on a tale of "persecution," than the one escaped unscathed, and the other flourished with the luxuriance of the bay-tree. How true a verification of the remark of a venerable clergyman, that the present may be a talking, but not a reflecting age, and any braggadocio may talk it into conceit of himself and his projects!

From these things, then, we clearly infer the causes which attracted the smiles of the community on the infatuation of abolitionism.

1. The enthusiasm of one, imparting itself to a people previously impregnated with its sense.
2. The apt use made of the lever of "persecution," adjusted and inclined to their hand, by those who clearly understanding the local fallacy of their ideas, were blind to the sure tendency of human sympathies.
3. To adopt their own style of crimination, it required not the professional eye of the traitor-peddler Judas, to perceive the expense of one plan and the comparative cheapness of the other.

Economy is an important item in the calculations of your ultra-reformer; and it matters not, if now the other plan is likely to prove the most costly, it was unforeseen, and they are involved. But we do not judge motives. Let it suffice to say, had they not proved recreant to their trust, we might now contemplate with

no ordinary satisfaction a gem, twin to that which adorns the coronet of ocean's queen, conspicuous in the diadem of our own renown, dark indeed, but resplendent with the dignity of virtue. Now the philanthropist trembles at the foreboding disasters to be apprehended from the unqualified release of thousands of the lawless and ignorant. Little less terrific indeed, does it appear, than did the irruption of the Khans, led by the very "scourge of God," to the defenceless Romans. And the alternatives may at last be the dissolution of the union, the retention of slavery, or the utter extermination of the Americo-African race, and then, even these magicians may be constrained to draw the sword against the monsters their own spells have raised.

But let us not expect an issue so awful. Prepared for any event, let us hope that "ultra-abolitionism" is merely a hobby-horse—accoutred, though it be with side-saddles, for the convenience of hobby-riders. Surely intelligent men will perceive their folly, ere it be too late. Meanwhile, let them be shown with all candor, from the truth of Scripture itself, and in the light of reason, that slavery is not the most atrocious evil under the sun. Teach them the folly of ostracising expediency, and the equal absurdity of regarding the calumnies of the English, the very engrafters of the obnoxious system. Show them the injustice of branding the Southron with opprobrious epithets. Inculcate the necessity of forbearance, of meekness, of charity. Kindly advise the ejection of the beam from the eye of the North, that they may skillfully extract the mote that dims the vision of the South; in short, to think more and talk less. Do this, and a restraint may be imposed on their recklessness—but attempt not to debar free discussion. For if you restrain liberty here, you establish a precedent dangerous to yourselves, and supply a dexterous enemy with a convenient weapon of defence. Truth is omnipotent against error.

Our limits forbid more detail. Instances of like disrespect, however, for whatever is venerable, exist, and might be cited, but the tendency is illustrated. To such an extent has it been carried that many prescient individuals have sighed for a return of the dark ages, that a season might be given for the repose of turbulence; that thought might be regenerated and re-directed; that the valueless might be lost in the grave of oblivion, and the valuable be rescued from the destruction that menaces it.

We turn now to an exhibition of ultraism, omitted by our shrewd author. Our reference is to peace societies. Some of their notions, it is true, are too ludicrous to be more than ephemeral, while others are more or less permanent, according to their plausibility. Singular they all are; for it is passing strange, that principles so fundamentally fallacious, should be so extensively professed. An example of their practical application is furnished in the instance of the quaker, who taking no part in action, yet loth to see a boarder on deck, coolly lifted him over the side into the sea, observing, "Friend! thee has no business here!" And as the Roman reticulated walls, contrary to every acknowledged law of architecture, were held together only by the goodness of cement, the beauty of design has hitherto supported these fallacies with power as strange. The statement of some dogmas is their refutation, though others are more dangerous. For, if

public sentiment unites in pronouncing war in no case justifiable, there is an end of our liberties. While if it is asserted that the injunction, "resist not evil," prohibits the establishment of an *alibi*, in criminal accusation, we need not fear the result. Interpret every thought of Scripture as literally, and the extreme convenience of one system of revenge obviates the necessity of "resisting evil;" to heap coals of fire on the head of an enemy is surely sufficient. The truth is, peace societies, however reluctant the confession, are and must be in advance of the age. It is indispensable for their success, that you substitute some equivalent to compel the respect our armies and navies now enforce—that you eradicate the spirit which prompts man "to seek the bubble, reputation, in the cannon's mouth." If so, it will at once be said, that peace societies are not to be enrolled, till the occasion for them has ceased. Just so, there is never need of a peace society; for when their object is attainable, they become mere nominal agents, and till that time their formation is preposterous.

The sound discrimination of Cicero decided long ago that self defence is a duty of our nature. *Est hæc, non scripta, sed nata, lex; quam non didicimus, accepimus, legimus, reurmem naturâ ipsâ arripuimus, hausimus, expressimus; ad quam non docti, sed facti, non instituti, sed imbuti sumus; ut, si vita nostra in aliquas insidias, si in vim, si in tela aut lationum aut inimicorum, incidisset, omnis honesta ratio esset expedienda salutis. Hoc et ratio doctis, et necessitas barbaris, et mos gentibus, et feris natura ipsa, præscripsit, ut omnem semper vim, quacumque ope possent, a corpore, a capite, a vitâ suâ propulsarent.* And the wisdom of successive ages confirms, while Scripture sanctions the verdict. The laws of nature are ever synonymous with her God's. Again, as we have demonstrated, the justice of defensive war has overthrown one column of the theory, so we are confident that these corporations legislate against the fore-ordinations of God, by proposing an unattainable end. "I will overturn—I will overturn, saith my God, till he whose right it is shall reign over the nations." And the attitude of nations assures us these revolutions are to be achieved in blood. God has not, in all probability, yet expended the "phials of his wrath," and war may be necessary to relieve the repletion of a guilty, overburdened earth. Offences must come, though woe is denounced against them by whom they come—and will come too, till the millennium, "foretold by prophets and by poets sung," shall expand its portals for the diffusion of "peace on earth, and good will to man," perfect and triumphant. Yet let us rely confidently on the Father of all Mercies for the continual peace of our own beloved country, as for every other kindness vouchsafed, as to Him shall seem good. And if war comes, let us not murmur at His dispensations, but seek the alleviation of its miseries, the exhibition of humanity.

Allowing this ultraism to be harmless, other forms of humbuggery, more pernicious, undoubtedly prevail. Dazzled by the reflected lustre of our past history, we see not the clouds which hover in the political skies, and are unmindful that our country, strong as are her foundations, may yet experience blasts to try the solidity of the superstructure. It is by no means certain, that improvement has advanced with the Amazonian strides of innovation in that amicable relation so indispensable. Nor can we be assured, that we may not transmit dis-

grace to futurity, which would cause a blush to suffuse the brow, had we ability to peruse the subsequent records of time. We now, indeed, possess an antidote in the eloquence of truth. If knowledge is power, it is only legislative—eloquence is its executive authority. Let us rightly exert its influences, and ever

One great clime, in full and free defiance
Shall rear her crest, unconquered and sublime,
Above the far Atlantic.

Or if, in the annihilating encroachments of time, America shall be compelled to abide the decline of her greatness, thus shall the Eagle of her prowess, that rose indeed stained with the carnage of revolution, alight not amid clouds and darkness, but fold an unsullied pinion, conscious of accomplished good, amid the effulgence of that bright bow of promise which shall gild the evening horizon of her glory. Thus too, securing the honor of our country, may we best promote that of our God.

* * *

CHARACTER OF MEDEA ;

(Drawn from the tragedy of "*Medea*," by Euripides, with remarks on this play.)

— Sweet love, changing his property,
Turns to the sourest and most deadly hate.
Shakespeare.

There is no more delightful occupation for the mind, than holding communion with the spirits of the dead, through their immortal works. At such times, the soul feels a glowing rapture, which kindles into the pure empyrean of poesy; the heart is affected and its emotions gush out in spontaneous flow. The productions of taste and genius never cease their peculiar effect on the character of thought; they weave themselves insensibly with our style of thinking; * give tone to our present and ensure dignity to our future conceptions. Nor is their influence on morals in any way inconsiderable. The higher capacities of our nature are charmed and gratified by such high and noble objects presented to their enjoyment; scorning the gross sensualities of vice, they seek a more congenial clime, where the flowers and fragrance of virtue for ever bloom and the divinity of the soul beams with never-fading lustre. In this point of view classical literature assumes the grand and important function of a teacher of ethics; the study of ancient authors becomes a subordinate agency in conforming the character to the christian standard of education; the moral influence of the sentiments of such writers, seconded by our reverence for venerable antiquity, and combined with all the fascinations of genius, in its most attractive coloring, operates in the youthful mind as an element of instruction of in-

* "Abundant studia in mores. Studies, have an influence and operation upon the manners of those that are conversant in them."—*Bacon.*

"Books give the same turn to our thoughts and way of reasoning, that good and ill company does to our behavior and conversation; without either loading our memories or making us even sensible of the change."

Swift's letter to a young clergyman.

calculable force. That this power works silently, as an undercurrent, lessens not its worth and vitality; its quiet progress but gives fuller scope to its operation, by disarming the perverse and froward of all suspicion of what bears so auspiciously on the tenor of their character.

It is surprising that the champions of their favorite classics have dwelt so little, if at all, on the powerful moral efficacy of the study of the master-spirits of the ancients; indeed, an unjust prejudice has long pervaded the public mind upon this subject.

English youth were long habituated to the indiscriminate perusal of the Latin authors; the licentious plays of Terence,* or the voluptuous songs of Catullus, and the seducing mellifluous odes of Anacreon, were the favorite themes which engaged the raw and undisciplined mind; as a consequence, a stream of moral pollution poured its pestilent tide over manners and enlightened taste. No wonder, then, that many good and well-meaning people should have imbibed a mistaken prejudice against classical literature in general—no wonder, that they should have anathematized all the learning of the ancients, as the offspring of the Evil One, and designed as "gins and snares" to entrap the unwary youth. Nor even as yet has the echo of such sentiments died away upon the public ear.

To expect that the productions of antiquity that have survived the waste of time, would be, each and all, unalloyed with the defilement of vice, is equally as reasonable, as the expectation of finding all the models of English literature wholly pure and unexceptionable. Yet such is not the case. Would we, therefore, sweep under one indiscriminate ban of proscription, the whole encyclopedia of English taste, genius and erudition? Shall we banish from our shelves the chaste lucubrations of an Addison or the ethical tomes of a Johnson, or the godlike poesy of a Milton, because, forsooth, some vile cotemporaries, by their writings or otherwise, have cast a stigma on the age in which they flourished? A judicious mind will discriminate, nor wantonly confound virtue with vice. We would treat the Latin and Greek classics precisely as we treat our own; the plea of antiquity never does consecrate immorality in our eyes; no, though recorded in the annals of inspiration. We are not of that class who bow implicitly at the footstool of custom or age. With Bacon, we hold,— "Antiquity deserveth that reverence, that men should make a stand thereupon, and discover the best way; but when the discovery is well taken, then to make progression." Again: "These times are the ancient times, when the world is ancient, and not those which we account ancient *ordine retrogrado*, by a computation backward from ourselves."

Let the student, then, spurn the licentious or immoral effusions of the ancients—no matter under what cover of authority they may be recommended—no matter what their attractions of taste or elegance, still let the caution of the poet ring in his ear:

Qui legis flores, et humi nascentia fragra
Frigidus, O Pueri, fugite hinc, latet anguis in herba.

* Whately's *Elements of Rhetoric*, p. 237.

Lord Bacon complains in his time, that "the modern looseness or negligence hath taken no due regard to the choice of school-masters and tutors."

But while we deprecate an indiscriminate perusal, we assert the moral bearing of the classics, peculiarly so called, to be of the most enlightened order. Who can read or hear the dulcet harmonies of Virgil, arrayed in all the graceful gorgeousness of sentiment and language, without feeling his soul elevated, and imbibing in its hidden depths, the fire, the majesty, the divinity of his godlike genius? What youth has not glowed with rapture over the magic and virtuous page of a Cicero or Seneca, and felt his admiration of patriotism, public spirit, and self-devotion, nourished and invigorated? Does the "blind old man of Scio's rocky isle" awaken no throb of divine energy, no latent vein of virtuous emotion, no godlike aspiration of fame, no ecstasy of thought in the human soul? Do the lyric odes of a Horace, that master of manners, fall passionless on the ear, or the stinging satire of a Juvenal lash triumphant vice in vain? Has Pindar's lyre swept from its strings no genial music for moralist or christian, when now, in symphonious strain, it sings of truth, and now bursts, in a stream of thoughtful melody, on the delighted ear?

Hail! ye mighty masters of the lay!
Nature's true sons, the friends of man and truth!
Whose song, sublimely sweet, serenely gay,
Amused my childhood and informed my youth:
O let your spirit still my bosom soothe—
Inspire my dreams, and my wild wand'rings guide.
Your voice each rugged path of life can smoothe;
For well I know, wherever ye reside,
There harmony and peace and innocence abide.

Beattie's Minstrel.

Having sufficiently vindicated the true classics from the base imputation of demoralizing the mind, we shall proceed more directly to consider the play of "Medea," as the best exemplification of our remarks, that we can present to the reader. The three great lights of the Grecian drama, Æschylus, Sophocles and Euripides, combine within the compass of their works a system of pure morality, which it would be difficult to equal in all the hundred tomes of scholastic theology. These ethical precepts are conveyed in language of the utmost dignity and simplicity—the genuine characteristic of majestic thought; they are produced without effort, and as naturally, they strike the mind with an air of graceful propriety and with all the force of impressive truth. The remarks of those celebrated masters are founded on the justest views of human nature; they carry their researches into the deepest fountains of the soul; they scrutinize with accuracy the caste and complexion of character, and by a single stroke, present to the imagination a finished portrait.

Nothing could be more noble than the design of the ancient theatre. There the people were taught more impressively the truths of morality and religion, than in the sanctuary of their gods; and so beneficial was reckoned the influence of the stage to good manners and conduct, that the sage Socrates, honored by his presence the representations of the tragic muse. But an Athenian audience, in the days of Socrates, attached quite a different notion to the object of histrionic exhibitions from what prevails among their modern admirers. At that time, the great facts of national history—the description of manners and customs, the high-wrought fictions of mythology, the life of heroes con-

secrated in their country's memory by acts of valor, patriotism, virtue, and wisdom; the affecting and virtuous incidents of female biography—these, and such as these, constituted the main subjects of the Grecian drama—while moral truths, robed in all the witchery of genius, and set off by the persuasive eloquence of style and argument, were the constant themes on which the muse Melpomene delighted to expatiate.

The stage, therefore, in its proper use, became a teacher of commanding authority.

The celebrated writers, before mentioned, carried the dramatic performance to its highest perfection, and consecrated their genius to the task of enriching its representations with their sublimest effusions. Not one pleaded the cause of vice or arrayed the "monster" in the fascinating charms that belong only to the brow of virtue. Amongst writers so equal in the highest endowments of intellect, it would be difficult to assign the palm of superiority. Æschylus excels in wild sublimity of thought and terrific imagery—Sophocles flows, like a honied stream, murmuring on the ear with seraphic harmony—Euripides is shrouded in grace and majesty, charming by the pathos of his sentiment, and unfolding at every step the moral grandeur of his muse.

The "Medea" of the latter author, is confessedly a wonderful production; it abounds in masterly strokes of genius—not general effusions of fancy or brilliant passages, solitary in the waste. On the contrary, the play is highly marked and characteristic—preserving an uniformly elevated caste of thought, set off, not unfrequently, by the most splendid drapery of imagination. The muse of Euripides seems to have indulged its widest scope of pathos; the poet colored his scenes with the sad hues of his own reflections. It was chiefly on this account, that Cicero admired the bard of Salamis most of all the tragedians; and he occupied the last moments of his life in perusing his favorite "Medea," as if no preparation was more suitable for the unknown realities of eternity.

The affecting sublimity of Medea's story was evidently adapted to the poet's singular caste of mind; and in the execution of the task, he awaked in his behalf the popular belief and tradition of the age. Hence there are many who have doubted of the existence of such a personage as Medea, and represent the current opinion as founded only on the fictions of poetry. They ground their belief on the strange and unaccountable reports of Medea's life—such as, her fiery chariot of dragons, [page 39,] her reputed skill in magic, and in short, the whole air of mystery which rests over her fate. That the history has been much embellished by the license of fancy—farther, that large additions may have been made to her eventful fortunes—cannot, in truth and reason, be denied—but the actual existence of the very person herself, appears to us unquestionable. For, no character is celebrated with more *eclat* in the ancient writers; none is so involved in a narrative of facts, whose truth it would be deemed folly to question. Nor was the popular belief of her powers of enchantment at all to be wondered at. In ages rude and ignorant, an uncommon knowledge of simples and medicinal herbs, (or what in modern times is termed chemistry,) excited universally the opinion of magic and divination; the secrets of nature were little explored, and therefore, when displayed to view, they were well calculated to

raise in the vulgar, the most servile admiration. Such has been the sway of science, in all barbarous climes—nor did men, so artful as the Druids and Egyptian priests, neglect so prime an agent for fastening on the minds of the people the blindest devotion to their horrid mysteries.

Medea's character was a strange compound of the extremes of human vice and virtue. With a soul touchingly alive to the finest sympathies of nature; and a fascinating carriage, in which grace and majesty were wildly blended, she won on all who approached her, by the ease of her manners, her insinuating address, and the radiant charms of her beauty. The high intelligence of her mind beamed in every look and word—nor would it be easy to match her endowments by those of the most celebrated females of antiquity. But it is her moral character that we intend to delineate—and its great defect, doubtless, was the unsettled basis on which it was grounded. She possessed no principle of such binding and incontrovertible authority, that by its decisions *alone* she was willing to test her actions. She searched for other standards—that of interest, or of pleasure or passion. Her penetration was unrivalled—and while, therefore, she could not but perceive the true moral grounds of human agency, she yet blindly pursued the compassing of her ends, by any means, fair or foul:

——Video meliora proboque
Sed deteriora sequor.

But it was not without the sharpest pangs of remorse, that she violated the dictates of nature and conscience. Her soul was not yet indurated by the bleak mercy of an unfeeling world. She was not yet an adept in the artifices and unblushing effrontery of crime. At the mercy of every gust of passion, she was hurried into wild excesses, of which her better judgment bitterly repented; and it was only after she had experienced a variety of injuries, that she rushed forward to that pitch of crime and infamy that defied law and scorned contrition. We imagine to ourselves that her dark, mysterious character, would have offered a fit subject of delineation to the scrutinizing genius of Byron.* His muse delighted in the wild turmoil of guilt—in the fearful desperation of Gulnare!† Nor do we hazard much in saying that he would have executed this task with a masterly felicity, unsurpassed by any effort of antiquity.

We now approach the most remarkable event in the life of Medea—the source of her woes—and which exhibits in the strongest light, the poetic and ungovernable bias of her mind. She was enamored of the Argonautic hero. Her love knew no bounds; it was

* The traits in Byron's character, alluded to above, are thus happily sketched by Pollok:

All passions of all men—
The wild and tame—the gentle and severe;
All that was hated, and all that was dear;
All that was hoped, all that was feared by man,
He tossed about, as tempest, withered leaves,
Then smiling looked upon the wreck he made.
With terror now he froze the cowering blood,
Yet would not tremble, would not weep himself;
Dark, sullen, proud.

† Vid. Corsair.

madness—the phrenzy of wild and resistless passion—it had engrossed every thought, every feeling, every wish—it swayed the whole current of her soul.

Vulnus alit venis et cæco carpitur igni.

For Jason's sake, she had plunged into a dread abyss, from which there seemed no escape. She had employed the superior powers of her intellect in devising means of successful villainy. For his sake, she had deserted her native country and royal family—had inflicted merciless pangs on her aged father, and robbed him of a darling son, by a cruel murder. She had endured the complicated hardships of a tedious voyage, without a sigh or murmur, and finally, wreaked the most signal vengeance on all the enemies of her husband. After this frightful career, she was living at Corinth in the bosom of her family—not in tranquil repose—for, what magical association of home could calm that wild and ruffled breast? what dreams of the past but haunted her with the ghost of murdered innocence and joy? and what firm reliance could she place on the inconstant affections of her husband? Hitherto she had been subservient to his interest and advanced his fortunes; but now, in his native land, surrounded by the flower of beauty and wealth, would he not seek another marriage? Would he not disown a foreigner—a barbarian? The very thought was madness. Thus Medea tormented her soul with sad bodings of her fate, and when, at length, her worst fears were realized, she abandoned herself wholly to the fierce ravings of passion and inconsolable anguish. It is at this point of our heroine's history, that the drama opens.

The nurse of Medea bewails in a pathetic strain the evils which had flowed from the voyage of Jason in quest of the golden fleece. She hints at the numberless favors the hero had received at the hands of her mistress, and the ancient ties of love which had united them so closely; but

——All is variance now
And sad distress.

The dearest objects of affection were spurned, that Jason might fill the nuptial couch of the princess of Corinth. She paints, in most affecting colors, the state of the forlorn Medea:

Didst Medea brook
This base dishonor; on his oaths she calls,—
Recalls their plighted hands, the firmest pledge
Of mutual faith; and calls the gods to witness
What a requital she from Jason finds.
Of food regardless, and in sorrow sunk,
She lies, and melts in tears each tedious hour
Since first she knew her lord had injured her;
Nor lifts her eye, nor lifts her face from the earth;
Deaf to her friends' entreaties as a rock,
Or billow of the sea; save when she turns
Her snowy neck, and to herself bewails
Her father and her country, and her house,
Which she betrayed to follow this base man.

She will not stop short of any crime. Her own innocent offspring, just in "the morn and liquid dew of life," shall fall victims to her wrath; or, perchance, in the dead of night, she will steal into the palace and imbrue her hands in the blood of Jason's bride.

Medea sat solitary in her apartment, brooding, like a dark spirit, over the series of her misfortunes. Her

breast heaved with conflicting passion. She conceived a horrid design—but maternal fondness arrested the hellish scheme. She was a mother—a devoted mother—yet she struggled to break from the endearing ties of nature. Her blighted hopes rise, like spectres, to her imagination.

O! that the ethereal lightning on this head
Would fall! Why longer should I wish to live?
Unhappy me! Death would be welcome now,
And kindly free me from this hated life.

Revenge! revenge! Might she but behold her inconstant husband, writhing in bitter anguish and remorse, she would mock her own sensibilities, and plunge into the deepest pit of guilt! Even then she would be content.

Ah, me! ah, me! what mighty wrongs I bear—
Wrongs that demand my tears and loud laments!
O might I one day see him and his bride
Rent piece-meal in their house, who, unprovok'd,
Have dared to wrong me thus!

The affectionate nurse, foreseeing the impending train of evils, hurries Medea's children from her presence.

The dark, enigmatical character of the enchantress, (for in this light, we are, henceforth, to view Medea,) is touched by the poet with consummate art. The melting fondness of woman is finely contrasted with the fiery outbursts of wrath. Medea has not yet appeared on the scene. Her doleful exclamations echo along the walls of the theatre—inspiring the audience with sympathy and terror—but the deep workings of passion on her countenance are hid behind the intervening canvass. Imagination beholds her—the poet disappears from our thought—the fiction of drama is forgotten—Medea alone, the wild, agonized, yet proud, vindictive Medea, rises to our view.

O all you gods of Heaven! O earth! What else?
And shall I couple hell? O fie! hold, hold my heart.

Remember thee?

Ay, thou wretch, while memory holds a seat
In this distracted globe. Remember thee?
Yea from the tablet of my memory
I'll wipe away all trivial fond records
That youth and observation copied there;
And my revenge—all alone shall live
Within the book and volume of my brain,
Unmixed with baser matter; yes, by Heaven,
O most pernicious wretch!
O villain, villain, smiling, cursed villain! *Shakespeare.*

Thus, inflexibly bent on revenging her wrongs, the enchantress plays her part with astonishing skill. She summons to her aid all the resources of sophistry and art; and in the deep solitude of her own bosom, she forms the most horrid purpose that ever entered into mortal conception. With a view to its execution, her address to the chorus is studiously framed in the most pathetic and insinuating terms. For the first time, now, she appears openly on the stage, with composed demeanor. She artfully begins her speech with a studied exordium, as if amid the storms which encompassed her happiness, she had sought refuge within the calm shades of philosophy. But soon quitting her disguised character, she breaks forth into mournful strains:

For me, I sink
Beneath this unexpected weight of ill
Which falls upon me; all the joys of life,
And all its glory have I lost, my friends,
And death is now my wish; for he, in whom
My heart had treasured all its boast and pride,
Proves faithless and the basest of mankind.

She enters from this hint into an ingenious enumeration of the "trials and wrongs of women;" and after inveighing indignantly against man's inconstancy, stops short, with the passionate exclamation:

But to thee, these words
Have not the force I feel in them; for thine
This country, thine a father's house, the wealth
That brightens life, the sweet society
Of friends is thine. I am an outcast wretch;
I have no mother, brother, kinsman here,
To shelter me from this calamity.

By her insidious eloquence, Medea wins over the chorus to her cause; without unfolding her purpose, she imposes silence on them, as to the means employed in crushing in one ruin, her husband, his bride, and bride's father, the king of Corinth.

A woman timid else,
When injured in her nuptial bed;
Feels her soul swell with rage that calls for blood.

The dialogue between Creon, the king, and Medea, is conducted with consummate hypocrisy on her part. The monarch imperiously orders her to leave the country; he enjoys no repose within the proximity of an enchantress,

So famed for knowledge, versed
In dangerous science.

Medea gives vent to an uncontrolled burst of anguish.

Ah, me! unhappy, me! now must I sink—
Lost, lost.

Assuming more composure, she deplores in pathetic language, the hard fortunes her skill in magic art had inflicted on her destiny. She reasons with Creon; shows the fallacy of his apprehensions; acknowledges the justice of his sway, and invokes the blessing of Heaven upon the match of his daughter. She implores leave to remain in the land, and promises to bury her plaints and sorrows in the silence of her own breast. Creon had grown gray-headed in cunning. His suspicions were not easily lulled. He surmises too well—"Smooth runs the water, where the brook is deep." He, therefore, iterates his command more peremptorily. Medea is in despair. She falls down upon her knees. The king still remains obstinately firm. The fair suppliant, seeing all her endeavors futile, artfully shifts her ground. She protests all due submission to his kingly fiat—as for her own fate, she was utterly reckless—but, her dearly beloved children, outcasts on the sea of life's troubles; and she burst into a flood of tears:

Have pity on them; thou hast children—thou
Be sure must feel a father's tenderness:
One day, indulge me this, one single day,
To recollect my thoughts, to plan my course,
And make some poor provision for my sons.

Creon was vanquished by this appeal.

One single day, if so thy needs require,
I will indulge thee; in that little space
Thou wilt not do the horrid deeds I dread.

Poor Creon! little was he dreaming of the deadly blight which was soon to fall upon the harvests of his hopes and loves. Little was dreaming the happy bride, the spouse of Jason, when decked in gorgeous plumes and all the pomp of Eastern attire, just stepping forth into life's most glowing scenes, her countless graces unfolding like the opening rose—that so soon the avenger's hand should pluck away her peace, and with the hues of death, overshadow her bloom!

Medea, on the king's departure, breaks out in a strain of fiendish exultation. She vows the direst vengeance:

Think'st thou I would cringe,
And fawn upon this man, but with some view
Of interest or design? I would not else
Have oped my lips to him, or touch'd his hand:

Like the wily serpent, when sure of its prey, her eyes sparkle with joy, as fancy feasts on the writhings of her victims. But how will she consummate her fell intent?

Shall I with flames destroy this bridal house?
Or in the dead of night, when all are laid
In deep repose, enter with silent step,
And plunge into their breasts the piercing sword?

No—she discards both suggestions. By her own magic arts and specious wiles, she will effect her deadly purpose:

Be it so—
And they are dead. What city will receive me?
What land will shelter me? What faithful house
Open its hospitable gates, my life
Protecting?

She paused for reflection. No asylum presents itself to her heated imagination. She feels alone in the world; yet, the tide of her wrongs rushing in floods of memory over her soul, Medea wildly invokes the gods of Hell, and swears at their shrine, implacable vengeance, though at the cost of her own life.

— Rouse thee, Medea! wake
Thy deepest science; meditate, devise,
Call forth thy terrible power: the contest now
Demands a daring spirit; dost thou feel
Thy sufferings? vindicate thy glorious birth.*

With what startling and picturesque effect the poet has represented his heroine, torn with fiercest passion, the reader of the original can only adequately conceive. Euripides has put forth all his powers, and carried his searching glance through the blackest shade of the enchantress' bosom; he sketched with a bold and daring pencil, and yet the delicate tints and shadows are blended harmoniously with the sterner features of his like-

* This imprecation is strikingly analogous, in spirit, to that of Lady Macbeth.

"Come, come you spirits
That tend on mortal thoughts, unsex me here;
And fill me from the crown to the toe top-full
Of direst cruelty! Make thick my blood,
Stop up the access and passage to remorse;
That no compunctious visitings of nature
Shake my fell purpose," &c.

ness. Medea stands out in bold relief, as a monster of darkest dye, yet by a certain ineffable charm of the poet's style, she still retains a wild, fearful majesty—a refined grace of feeling and conception—the passions—the aspect—the frailty of woman.

Medea, in the first interview with her faithless husband, sustains her composure, with wonderful self-control. To the flimsy sophistry,* by which Jason sought to justify his conduct, she returns a response, calm, for the most part, yet envenomed by the most cutting reproaches:

Not fortitude
Nor virtuous confidence is this, to look
On a friend's face after such injuries;
But shamelessness, the foulest, worst disease
That blackens in the breast.

She expresses a fierce joy at the opportunity offered her of casting into his teeth, the vileness of his ingratitude. With ingenious enumeration, she recounts the thousand favors of life and death, that she had bestowed, at her own peril, on his unworthy head. She recalls to his mind, with startling force, her fair and royal prospects, that she had blighted for his sake:

Ah me, how am I fallen from all my hopes!
Now which way shall I turn me? Shall I go
Back to my country and my father's house?
These I betrayed for thee.

The mother of his children—she had guided their infant steps, and watched with maternal solicitude, their budding promise—

And for all these bounties to thee,
O thou most vile of men, hast thou betrayed me,
And in new nuptials lightly placed thy joys.†

Jason's proffered wealth, Medea scouts with indignation;‡ her proud spirit disdains dependence.

Get thee gone; too long thy ling'ring here,
Enamor'd as thou art of thy new bride.
Wed her; but, be the gods propitious to me,
I tell thee thou wilt dearly rue these nuptials.

**** The enchantress now unravels her hellish plot of revenge. One of her train, shall entreat from

* Milton, who was an accomplished scholar, has evidently paraphrased the concluding sentiment of Jason's second speech, in those well-known lines:

"O why did God,
Creator wise, that peopled highest Heaven
With spirits masculine, create at last
This novelty on earth, this fair defect
Of nature," &c. &c. *Paradise Lost.*

† Poets, who copy from nature and truth, very often agree both in thought and imagery.

Medea exclaims:

"O Jove, why hast thou given us certain proof
To know adulterate gold, but stamp'd no mark,
Where it is needed most, on man's base metal?"

Shakespeare complains also:

"There is no art
To know the mind's construction by the face."

{ ——"Give not me; the gifts
Of a bad man can bring no good with them."

So Shakespeare:

"To the noble mind
Rich gifts wax poor; when givers prove unkind."

Jason, the favor of another interview. In his presence she will protest all obedience to his will, and with gentle and insinuating appeals calm his ruffled temper. She will make but one request, that her children may not rove with their mother into comfortless exile, but, in the smiles of their father's fortune, grow up to a brightening manhood.

—— I will send them
To this new bride with presents in their hands,
To win them leave to stay not exiled hence;
A fine-wrought robe, a gold-entwined wreath
To bind her tresses; in these ornaments
If she array her, instant shall she perish,
And all that touch her: with such potent spells
These presents will I charm.

And now Medea's soul is convulsed with agony. Her dark intent involves the death of her sons—and with all a mother's tenderness, her affections gush forth in frantic violence. How shall she bathe her hands in the blood of her darling babes? How behold their innocent forms racked with mortal pain? Will nature bear the deed? With desperate energy she pushes from her thoughts the insinuating suggestions of love and mercy.

Let me not be deemed
A poor, low-thoughted, tame and timid thing.

Yes—true, her own anguish shall be great—yet greater still the anguish of the false Jason,—his soul shall bleed with remorse—a healing balm to her own wounds!

There was my weakness, when my father's house
I left, persuaded by the soothing words
Of this false Grecian, who, with the just gods,
Shall feel my vengeance; he no more shall see
His sons by me alive.

On the re-entrance of Jason, Medea plays her part with all the beseeching fervor of the lowliest suppliant. She retracts her rash expressions, and entreats him, by the memory of their past love, to regard her with an eye of favor and forgiveness.

Calm reason hath resum'd
Its station in my heart; much have I blamed
And chid myself; why wayward as thou art,
Thus have I schooled me; why wilt thou give way
To madness? Why this anger?

She should have furthered his counsels and decked his nuptial couch with her own hands—

—— Rejoicing that thy royal bride
Regarded thee thus fondly.

She calls her children forth to share in the smiles and embrace of their father, and, darkly boding their fate, with impassioned eloquence gives utterance to the sad current of her feelings:

Ah me! the thought of some concealed ill
Comes o'er my heart. Will you, my sons, live long
To stretch your dear hands thus? Unhappy me,
These eyes have lately learnt to weep, this heart
To know what fear is; time hath soften'd me.

Jason assures Medea of his interest in her behalf, and, with paternal warmth, clasps his sons in his arms.

But why is this?

Why stands the moist tear trembling in thine eye?
Why is thy pale cheek turned aside, as if
Thou didst receive my words unwillingly?

With sugared sophistry, Medea palliates woman's frailty—she begs Jason to intercede with his bride, in favor of her children, at least—

Myself will send her
Presents, whose beauteous lustre far outshines
Whate'er of radiance human eyes have seen;
A fine-wrought robe, a gold-entwined crown
My sons shall bear. Of my attendant train,
Go one, and quickly bring these ornaments.
Not in one instance shall thy bride be blessed,
But in a thousand.

Go then, my sons, the royal house is nigh—
Entreat, beseech your father's new-won wife,
My mistress, that you may not from this land
Be forced to fly—present these ornaments;
And, mark me, give them to no hands but her's.

The children have executed the task assigned them, and Medea waits the result in an agony of doubt and impatience. At this interval, the ebbs and flows of the tides of her mysterious soul are depicted by the poet in the most harrowing expression. Her character glows into life. The awful pathos and sublimity of Medea's sentiments strike terror to the heart. The passionate gush of her feelings stir up the fountains of sympathy. We pity, while we condemn. We weep over the sad wreck of this noble mind, containing in itself the elements of so much moral greatness, and enriched with all the treasures of thought and imagination!

Medea fondly gazes upon her sons. She was a loving mother, and with a mother's bitter pang, she descants upon her blasted hopes:

To another land
I go a fugitive! delight in you
Ere I enjoy, ere I behold you blest,
Ere I prepare you wives, ere I adorn
Your bridal bed, and hold the nuptial torch.
In vain I nurtured you, my sons; in vain
I labor'd and consumed myself with cares;
In vain, I bore a mother's painful throes.

With touching address, she paints the bright scenes of happiness that had glenned afar to fancy's eye. Embosomed amid the shades of retirement, she had hoped to find repose in the eve of life—she had fondly deemed that her children's love would have soothed her cares, and their tears moistened the green sod that hallowed her grave!

Now that pleasing thought
Is vanished.

* Medea says:

—— Presents with the gods
Have power; and no persuasive words can charm
The hearts of men, like gold.

So Shakspeare:

Dumb jewels often in their silent kind
More than quick words do move a woman's mind.

† How like the pathos of Shakspeare:

Farewell!
I hop'd thou shouldst have been my Hamlet's wife;
I thought thy bride-bed to have deck'd, sweet maid,
And not have strew'd thy grave.

Conscious of her cruel plot, Medea rebukes the innocent wiles of her darling boys :

Alas, alas ! why are your eyes,
My sons, fix'd fondly on me ? Why that smile ?
'Tis your last smile. Ah me, what shall I do ?
My heart sinks in me. When I see my sons,
Ye females, when I view their cheerful looks,
I cannot. No. Ye former purposes,
Farewell !

Her pride, swelling with wrongs remembered, scorns
the soft suggestions of love :

Why this tenderness ?
Can I then wish to be their jest, their scorn,
Leaving my foes unpunished ? I must dare
The deed.

But a mother's bosom again relents. Affection pleads
with her revengeful soul :

Ah me ! ah me !
Do not, my soul, do not attempt this deed :
No, wretch ; forbear to touch them ; spare thy sons ;
There shall they live with me and be thy joy.

Desperate, at length, with conflicting passion, Medea
swears a dreadful oath :

By the powers of vengeance, in the realms
Beneath, this shall not be ; since they must die,
(For die they must) by me, who gave them life,
Death shall be given ; this is my fixed resolve,
Incapable of change.

Yet once more, before the fatal deed, the mother in-
dulges the native feelings of her heart :

Give me, my sons,
Give me your hands ; embrace me ! O that hand,
How dear to me, how very dear those lips,
That form, that noble aspect of my sons !
Blessed may you be ; but *there* ; your father *here*
Hath rest each blessing. O the sweet embrace !
How soft their touch, how fragrant is their breath !
Go, go, my sons.

During this time, a sad tragedy has been consummated
elsewhere. The hasty arrival of a messenger, bears
the tidings to the enchantress, and with malignant joy
she begs a minute description of the horrible scene. In
the recital which follows, the poet has combined every
circumstance of terror and sublimity. His language is
thrilling. His pathos overpowering. His imagery ter-
rific. His numbers, solemn as the grave. We are
awed—the blood runs cold in our veins. The bride of
Jason had joyfully received the poisoned robe and
crown.

The various-tinctured robe
She took and put it on ; then on her head
She placed the golden crown, and with nice care
Composed her tresses at the radiant mirror,
And smiled upon the lifeless image there ;
Then rising from her seat with dainty step
Travers'd the chamber, with the splendid gifts
Delighted, and full oft with head erect
Cast on the mirrors her admiring eyes.
A sight of horror follow'd ; from her cheeks
The roses fled ; her trembling limbs with pain
Support her staggering steps to reach her seat,
Ere on the floor she sunk.

The palace resounds with the piercing screams of the
tortured princess. Starting from her seat, she flies, all
on fire, tossing her burning locks, and struggling to tear
the envenomed crown from its fixed grasp.

No more the liquid lustre of those eyes ;
Those blooming cheeks no more retain'd their grace ;
But from her head, blood mixed with fire flow'd down,
And, like the tear that dews the pine, her flesh,
Melted in putrid drops, consumed beneath
The rankling venom ;—dreadful sight !

In the meantime, Creon, her aged father, had entered
the chamber—rushing forward with paternal eagerness,
he clasped the corpse of his daughter in his arms :

O my child !
O my unhappy child ! what cruel god
Hath thus destroyed thee ? Who my feeble age
Hath bow'd, deprived of thee, down to the tomb ?

Pausing in his sad laments, he tried to extricate him-
self from the tangles of the scorching robe :

His struggles now
Were dreadful—
If he essay'd his strength
With greater efforts, from his bones it rent
His aged flesh ; till faint and motionless
He lay and breathed out his unhappy life,
Worn out and wasted with his illa. In death
They lie—the daughter and the hoary father
Together stretch'd—a sight that calls for tears.

Medea listens to this tale of horror, with fiendish com-
placency. Thus far, she has tasted the sweetness of
revenge, and now, with desperate phrenzy, she girds
up her resolution for the final, fatal act.

For this short day, remember not thy sons !
Hereafter mourn at leisure.

With sword in hand, she seeks her sons—their feeble
voice is heard from within, in tones of affright.

1st Son. What shall I do ? How fly my mother's hands ?
2nd Son. I know not—dearest brother, we shall die.

The chorus, though Medea's party, melt in compassion.

Heard you the cry ? Heard you the children's voice ?
Thou wretch, art thou of iron or of rock,
That thou wilt kill thy sons, whom thou brought'st forth,
With thine own hands.

But the interference is too late—Medea, with blinded
fury, had wreaked her vengeance—her sons lay mur-
dered before her. Mounted in the air on a fiery car,
drawn by dragons,* the enchantress scoffs at the tears
of the agonized Jason.

Call me a tigress, then ; or, if thou wilt,
A Scylla, howling 'gainst the Tuscan shore ;
I, as is right, have taught thy heart to bleed.

Jason's infuriated curses, Medea reviles with bitter
sarcasm.

Medea.—What god will hear thee, or what fury,
Thou perjur'd, base betrayer of the rights
Of hospitality ?

Jason.—Away, away,
Thou pest abhorr'd ; thou murderer of thy sons.

Medea.—Go to thy house ! go, and entomb thy wife.

Jason.—I go, deprived, alas ! of both my sons.

Medea.—This grief be thine e'en to thy latest age.

Jason.—O ! my dear sons !

Medea.—Ay, to their mother dear,
But not to thee.

Jason.—And wherefore did'st thou kill them ?

Medea.—To rend thy heart.

* See Ovid's Medea. Delphin, p. 260.

Thus ends this noble drama. The outlines we have sketched, are necessarily imperfect; for, in the summary delineation of character, its nicer shades of feeling and sentiment, must, in part or altogether, disappear from view. Prominent characteristics alone, can be exhibited to advantage. It is a profound remark of Lord Bacon, "that for the expression of affections, passions, corruptions and customs, we are beholden to poets, more than to the philosopher's works; and for wit and eloquence, not much less than to orators' harangues." Whoever, therefore, would acquire a just notion of a poet's characters, must study them in the poet's language; by this means only, can the poet's vigor of thought be transfused into his own. An expression fully realized—the force of a compound epithet analyzed into its simples, will often impart a more thorough knowledge of character, than can be derived from the whole work of a translator, however felicitous its execution.* The contented reader of mere translations, knows not the feast of thought he neglects in the original. The philosophy of language, the progress of reason, the caste of national thought and religion†—all these topics, so interesting to the inquiring mind, can never be investigated to such advantage as in the phrases and usages of the ancient poets and orators. Nor is it difficult to assign the reason. Language, like every other science, is progressive. In rude society, speech is necessarily restricted to the expression of few objects of thought. As manners improve, language becomes more artificial; its foundations are enlarged; laws, morality, custom, ceremonies, civil or religious, exert a wonderful influence on its structure. Foreign conquests, and extended acquaintance with distant nations, contribute materially to the same result. Hence the history of language is essentially connected with the history of civilization and national refinement.‡ The antiquary, in his researches into the origin of words, throws light on the progress of the human mind. The complicated formation of language, with all its appendages of imagery and polish, is reduced to system, and observed to be the necessary result of the laws of thought.

* Sir James McIntosh has strikingly illustrated this observation, in his remarks on Cicero's definition of Fortitude—"virtus pugnans pro aquitate." The remains of the original sense of *virtus*, manhood, give a beauty and force to these expressions, which cannot be preserved in our language. The Greek *Αρετή* and the German *Tugend*, originally denoted strength, afterwards courage, and at last, virtue. But the happy derivation of *virtus* from *vir*, gives an energy to the phrase of Cicero, which illustrates the use of etymology in the hands of a skilful writer.

† The religious belief of the old Saxons may be derived, in part, from the meaning of their names of Deity. How few are aware of the force of those two words—Lord God. The word "God," is pure Anglo-Saxon, and means "good"—it was applied to the Supreme Being, as emphatically a "good Being." Lord is a contraction of the Anglo-Saxon—"heaf," bread; hence our word "loaf;" and "lord," to supply. The ancient English noblemen were accustomed to keep a continual open house, where all their vassals and all strangers had liberty to enter, and eat as much as they would—and hence those noblemen had the honorable title of "Lords," i. e. dispensers of bread. Thus, the words "Lord God," contain in themselves a body of sound divinity.

‡ But trace the progress of English language and civilization, to be convinced of this truth. Their improvements go hand in hand.

A comparison, too, of languages, is often the only evidence of the affinity of nations—the oriental tongues are perceived to bear a striking resemblance to each other—and hence, the inference is natural, that the people of the east are branches of the same family. The relationship of the eastern and western nations, is as necessarily concluded, from an inspection and collation of their several modes of speech. The deduction, therefore, of the common origin of mankind, may be drawn from the mere observation of language. The remark of Bacon, is extremely *à propos*—"Industrious persons, by an exact and scrupulous diligence and observation out of monuments, names, words, proverbs, tradition, &c., do save and recover somewhat from the deluge of time."

The Grecian language, the noblest legacy the ancients have bequeathed us, is peculiarly interwoven with the customs and institutions of the Greeks—that subtle people delighted in enlarging and refining their speech on the basis of their rites and ceremonies, civil or religious—they disdained to mix foreign allusions with so divine an invention—the *language of the gods*. The poets and orators recited their splendid productions before the assembled auditory of Greece. How natural, then, that they should make continual references to those venerable manners and institutions of their ancestors, which all held in religious veneration. What an ingenious topic of persuasion to descant on the usages, triumphs and glory of the past. The force and propriety of such allusions can be duly estimated by those only who are conversant with the original text. The essence or spirit of style and thought, like subtle gases, is of so volatile a nature, as to evaporate in the very act of transferring from language to language. Hence, the mere reader of translations will often be disappointed in his expectations of Grecian literature. He will read the most glowing passages of ancient poetry and eloquence, without emotion; he will merge the hidden and peculiar meaning of sentences and phrases into a general sense, corresponding to his own usage. Epithets of character, which, in the original, were pregnant with fulness will seem poor and meager;—and the reader, perhaps, discontented with classical taste and learning, will seek in the amusement of novels, histories and second rate productions of his own country, that delight and interest, which he sought, in vain, in communion with the master-spirits of antiquity.

Among the Grecian tragedians, Euripides is chiefly celebrated for that *naïveté* of expression, which it is impossible to transfuse into our own language. The simplicity of the poet's thoughts,* is remarkable; though there is nothing more elaborately curious than the structure of his words and the sweetness of his melody.† The admirer of ancient tragedy, will find in the "Medea" of this bard, that familiar and easy dignity of speech, which should characterise the stage. What

* Euripides abounds in much of what the ancient critics termed *λαλίας*, tenui oratione et scripturâ levi.

† Euripides was excessively slow in composing; on this account he was reproached by a malevolent poet, as stupid—observing at the same time that he had written one hundred verses in three days, while Euripides had written only three. True, says the poet, but there is this difference between your poetry and mine—yours will expire in three days, but mine shall live for ages to come.

Theophrastus is amongst prose writers, is Euripides among poets—chaste, natural, unaffected.

The songs of the chorus, are exceedingly beautiful—often sublime; take, for example, the following strophes and antistrophes, on the occasion of the poisoned vestments being sent to Jason's bride.

STRO. I.

Hope that thy sons shall live, is now
No more—e'en now to death they go.
This gorgeous prize
Shall she receive with pride;
But ruin to th' unhappy bride
In its refulgent circle lies.
Soon as her hands this crown shall place
Her golden-tressed brows to grace,
She goes, array'd for death,
To the dark shades beneath!

ANTIS. I.

The glittering robe's ambrosial ray,
Its tempting lustre shall display;
Her tresses bright
Bound with this radiant gold,
Her nuptial pomp the bride shall hold,
Solemniz'd in the realms of night.
Entangled in this net of fate,
Misery and ruin on her wait;
Nor hath she pow'r to fly
Her ruthless destiny.

STRO. II.

Where, hapless husband, are the joys
That crown thy nuptial state?
Thy wish to kings to be allied,
Blind as thou art to fate,
With dreadful deeds thy sons destroys,
And down the dreary road,
To Pluto's dark abode,
Conducts thy sorrow-wedded bride.

ANTIS. II.

Nor less for thee, unhappy dame,
My heart with pity bleeds;
By thee in gore thy sons shall roll,
Whilst prompt to horrid deeds,
Vindictive of the unhallow'd flame
Which to a foreign bed
Thy perjured husband led,
Wild passions swell thy stormy soul.

Before we bring these remarks to a close, it may not be amiss to inquire briefly into the causes which have tended to obscure the merits of ancient tragedy. These causes, generally, may be resolved into the following: The limited cultivation of the higher classics—the ignorance of Grecian fashions and domestic manners—the simplicity of the ancient drama—and, lastly, the difference of taste and genius prevailing among modern nations. In the ensuing remarks, we propose to show the operation of these several causes.

I. *The limited culture of classical literature.*

Lord Bacon observes, "the opinion of plenty is amongst the causes of want, and the great quantity of books maketh a show rather of superfluity than lack; which surcharge, nevertheless, is not to be remedied by making no more books, but by making more good books, which, as the serpent of Moses, might devour the serpents of the enchanters." And, truly, were we to judge of the attainments of smatterers by their dis-

play of classical learning, we should form the most unbounded estimate of the improvement of the age; but, unhappily, knowledge, in depth, has not equalled, in any due proportion, its wide diffusion of surface. Laborious inquiry is by no means a characteristic of this period of the world—the solid and century-earned stores of toiling master-spirits, are not at all relished amongst a people too ambitious to use the slow and sure means of climbing the summit of perfection. Our acquisitions of mind are made as fast as our fortunes. We travel over the storied pages of antiquity with all the velocity of a steam-car—all is life—all is bustle.

Instant ardent Tyril; pars ducere muros,
Molirique arcem, et manibus subvolvere saxa,
Pars optare locum tecto et concludere sulco.*

Some choice spirits, indeed, there are, who have consecrated their talents on the altar of ancient learning—who minister, with delight, at the inner shrines of the temple of antiquity, and like faithful priests, repair and renovate the ravages of time—amid shades and hallowed groves, they revolve the oracles of genius—they frequent, with more than pilgrim devotion, the venerable sepulchres of the poets, orators, and philosophers, and enjoy, in their own divine aspirations, the richest meed of fame. But how rare, such devoted masters! Few of our noble youth learn fully to appreciate the classic models of grace and beauty. The higher branches of ancient lore are almost wholly neglected; and if, by chance, a young man should imbibe a taste for these ennobling pursuits, during a collegiate term, he either loses the charm amid the whirl and vortex of business, or, poring over his law and medical books, neglects the classical study, as incompatible with his profession.

Grecian tragedies, therefore, the most elaborate productions of Grecian genius, have received but poor attention from such inconstant votaries of the ancient Muses. Those divine dramas are left to be cared for by learned professors in the solitude of their closets; their mysteries, in vulgar opinion, as incomprehensible as those of Ceres to the ancient world. All the strength, all the grace, all the pathos, all the sentiment, all the character, every thing, in short, valuable in style or thought, is sacrificed willingly at the shrine of interest, short-lived pleasure, narrow views, or superficial attainment.†

II. *The ignorance of Grecian fashions and domestic manners.*

"Tragedy," says Dr. Blair, "is a direct imitation of human manners and actions. For it does not, like the

* The Syracusans freed the unfortunate Greeks they had captured in war, on their repeating, each, a few verses of the tragedies of Euripides.

Query.—Would our bustling countrymen ever consent to liberate their prisoners of war, for such a ransom?

† A national university would prove a signal blessing to these United States, in which the whole cycle of ancient literature would be thoroughly explored. Let such an institution be founded with endowments befitting the splendor of our national resources, and who could estimate its potent influence on letters and the perpetuity of our government? Cambridge and Oxford, (the latter founded by Alfred the Great,) have been for centuries the guardians of English freedom. The centre of the union would be the most desirable location for such an university, and its students should be distributed equally from among the several states.

epic poem, exhibit characters by the narration and description of the poet—but the poet disappears, and the personages themselves are set before us, acting and speaking what is suitable to their characters.”

If, therefore, manners and customs shift in every age, we might expect *a priori* that dramatic writings would be often obscure, often unintelligible, after the lapse of centuries. What is thus presumable, has actually occurred. We have, in numerous passages, lost the proper key to the interpretation of the tragedians. Domestic and household manners are never the suitable subject of history, and hence they gradually fall into oblivion. The wave of conquest buries every vestige below its depths.

Owing to the continual fluctuation of manners and customs, the tragic poets are the least understood, of all the Grecian writers; the interest, therefore, which the reader, conversant with a different set of habits of life, would otherwise feel, is much impaired. Even the fashions of Shakspeare's time have altered to such a degree as to render difficult of comprehension some of his finest passages.

III. *The simplicity of the ancient drama.*

The plays of the Greeks, we have had occasion to observe, were designed to impart lessons of wisdom and morality to the people.* And, on this account, they received the approbation of the wisest philosophers. Whoever considers attentively the character of ancient mind, will remark, that it was peculiarly fond of the chaste and simple styles. All the classic models, though unadorned in expression, yet abound in all the majesty of genius—all the sublimest flights of fancy. This fondness for simplicity, the Attics carried to excess, in every department of literature. Tragedy, therefore, was modelled, in all its parts, according to the standard of popular taste; the lessons of wisdom and ethics, were clothed in the chastest attire; the plot of the drama itself was wonderfully destitute of incident. The primary end, to which all the action referred, was neither remote nor attained by artificial surprises or a labyrinth of turns; from beginning to end, you see the catastrophe; yet the magic wand of the poet, like the caduceus of Mercury, holds you spell-bound to his page. The incidents in the play of Medea, are consummated in the course of a few hours; nothing is more simple than the plot throughout; yet, the gifted mind of Euripides, has wrought up one of the noblest productions of the human intellect.

The striking peculiarity of Attic genius, alluded to, in connection with the revolution of modern taste, sufficiently account for the depreciation of the ancient drama. The question of the relative merits of the modern and ancient stage, we do not mean here to discuss:

Non nostrum inter vos tantas componere lites
Et vitula tu dignus et hic.—*Ecl. iii.*

But that public taste has undergone a decided change,

* Yet Solon held a contrary opinion as to their effect. He went to witness a new tragedy of Thespis; after the play was ended, Solon ran to the actor, and roughly asked, if he were not ashamed to speak so many lies before so great an auditory? Thespis answered, “It was no shame to act or say such things in jest.” Solon, striking the ground hard with his staff, replied, “But, in a short time, we who approve this kind of jest, shall use it in earnest, in our contracts and transactions.”

it would be vain to deny; a drama now on the ancient model, would not be tolerated by a theatrical audience. The sentiment of Euripides—the soft murmurings of the Attic Bee,* the wild melody of Æschylus, have no great charms for modern ears. There must be plots and underplots—uncertainty of catastrophe—novelty—surprises—bustle and love—shiftings of scenes and protracted periods of years. All these are constituents of the modern drama.

We have thus briefly noticed a few causes that have tended to obscure the intrinsic merits of the Grecian drama. The subject is full of interest, and might be pursued at length—but our limits forbid;—we have only to exhort our fellow-students to enter the rich fields of classical science, and reap the glorious harvests stretching out illimitably before them. The prize to be won is noble—in all ages, the emulation of choicest spirits. To fathom the depths of souls lit up by the purest ray of thought—to soar with them in their longings after immortality, to the calm Elysium of contemplation, is surely no mean employment of angelic minds.

And have not Grecian classics a special claim on the attention of American youth? Were not their authors freemen, and their thoughts beating high with the fervor of liberty? Were not Sophocles and Æschylus patriot soldiers in the battles of Greece against the proud invader? Was not their language that of the heroes of Marathon and Thermopylæ? Surely we should reverence and study so valuable a memorial of the past—embodying the breathing thoughts of heroes—the vehicle of indignant rebukes of tyranny—and connected, in its history, with the first dawns of liberty, and the proudest epochs of the ancient world.

Chapel Hill, May 31, 1839.

* Sophocles, so called from the honied sweetness of his Muse.

GEORGE WASHINGTON.

Mr. WHITE :

The character of Washington is only now beginning to be thoroughly appreciated by Europeans—or, at any rate, by Englishmen. In the last October number of the *Edinburgh Review*, a brilliant writer, said to be Lord Brougham, closes a series of masterly sketches of the prominent men of the reigns of the two last Georges, by a highly wrought, yet discriminating, eulogy, in which he styles him the “greatest man of our own, or of any age;—the only one upon whom an epithet so thoughtlessly lavished by men to foster the crimes of their worst enemies, may be innocently and justly bestowed!” In the fulness of patriotic pride and filial reverence, his countrymen have always entertained this opinion; but, we believe, Lord Brougham is the first distinguished Englishman who has come up to the American standard, in his estimate of the character of Washington.

The following tribute is from a different, but scarcely less distinguished, source. It is from the pen of the Rev. William Jay, of Bath, England. Mr. Jay is, perhaps, the most distinguished minister of the gospel, among the Dissenters in Great Britain. His writings

are read and appreciated by every denomination of Christians, and few men have ever been the honored instruments of more extensive good. The verses have never appeared in print on either side of the Atlantic.

B.

LINES,

Written impromptu, on seeing the picture of Washington's villa
at Mount Vernon.

BY REV. WM. JAY, BATH, ENGLAND.

There dwelt the Man, the flow'r of human kind,
Whose visage mild bespoke his nobler mind.
There dwelt the Soldier, who his sword ne'er drew,
But in a righteous cause to Freedom true.
There dwelt the Hero, who ne'er fought for fame,
Yet gained more glory than a Caesar's name—
There dwelt the Statesman, who, devoid of art,
Gave soundest counsels from an upright heart.
And O! Columbin, by thy sons caress'd,
There dwelt the Father of the realms he bless'd,
Who no wish felt to make his mighty praise,
Like other Chiefs, the means himself to raise.
But *there* retiring, breathed in pure renown,
And felt a grandeur that disdained a Crown.

SONNETS.

INDOLENCE.—(BY PARK BENJAMIN.)

I.

There is no type of indolence like this:—
A ship in harbor, not a signal flying,
The wave unstirr'd about her huge sides lying,
No breeze her drooping pennant-flag to kiss,
Or move the smallest rope that hangs aloft:
Sailors recumbent, listless, stretched around
Upon the polished deck or canvass—soft
To his tough limbs that scarce has ever found
A bed more tender, since his mother's knee
The stripling left to tempt the changeful sea.
Some are asleep, some whistle, try to sing,
Some gape, and wonder when the ship will sail,
Some "damn" the calm and wish it was a gale;
But every lubber there is lazy as a king.

II.

To see a fellow of a summer's morning,
With a large fox-hound of a slumberous eye,
And a slim gun go slowly lounging by—
About to give the feathered bipeds warning
That probably they may be shot hereafter—
Excites in me a quiet kind of laughter.
For, though I am no lover of the sport
Of harmless murder, yet it is to me
About the laziest sight on earth, to see
A corpulent person, breathing with a snort,
Go on a shooting-frolic all alone:
For well I know that when he's out of town,
He and his dog and gun will all lie down,
And undestructive sleep, till game and light are flown.

COMBE ON PHRENOLOGY.

[All our readers are probably not aware that the distinguished GEORGE COMBE, of *Edinburgh*, the first living Professor of Phrenology, is now on a visit to this country—and that his lectures on that interesting subject have attracted, and are still attracting brilliant crowds of admirers in New York. We are aware that there are hundreds of intelligent persons, in whose minds the very name of phrenology is associated with something like empiricism and imposture. The violent opposition, however, which it has already encountered, and is destined still to encounter, may, we think, be easily accounted for, without any disparagement of its claims to be ranked as a true science. All new systems and discoveries, even in those branches of human knowledge which do not concern the moral feelings or affect the passions,—such for example as the mathematics or mechanical philosophy,—are always slow in making their way to general favor and acceptance; and this doubtless arises in a great degree from the prejudices of education and attachment to old opinions. The material philosophy of Newton, it is said, had flourished for thirty years, before the learned doctors of the University of Cambridge condescended to embrace it; and, in our own country, it is well recollected, that the experiments of Fulton to illustrate the application of steam power to the purposes of navigation, were long regarded as the efforts of a crack-brained enthusiast. If in such instances, it has been found hard to beat down human prejudice and error, how much more difficult is it, when the discovery relates to moral, metaphysical or religious truth. A system which teaches that the feelings, propensities and capacities of our nature, may be inferred from cerebral development, or be determined by external and visible conformation, is at once revolting to all those who desire to appear better and wiser than they are—or who are conscious of some secret frailties, or lurking dispositions, which they would gladly conceal from mortal eye. In like manner, we know that there is a natural repugnance in the heart to the revealed truths of religion, because they present an humbling and mortifying view of man's nature, and exact from him a purity of thought and life beyond his unregenerate capacities; but as this innate aversion to the holy requirements of christianity, does not prove that christianity is false, neither does the common and natural dislike which is felt towards phrenology diminish its just claims to fair and candid inquiry as well as the fearless assent of the mind upon conviction. We know some excellent and pious persons, however, whose antipathies are so strong on the subject that they will not even examine it, and this, in most cases, arises from a vague conception that the science is some how or other allied to materialism. We have no doubt, ourselves, that this is a gross misapprehension of the nature and tendency of the system; and this opinion cannot need stronger confirmation than in the fact, that phrenology numbers among its disciples some of the firmest believers in the christian religion. Other persons there are, who, without supposing that any connexion exists with materialism, turn from the discoveries of Gall and Spurzheim with ridicule and con-

tempt; but ridicule and contempt are no longer relied upon as arguments in the investigation of truth. Systems must stand or fall by their own merits, after the tests of philosophy, reason, and truth are applied to them—and not till then. We acknowledge there is one stumbling block in the path of phrenology, which has hitherto obstructed its march to public favor, and that is the blundering ignorance and quackery of many of its professors. With a few weeks preparatory study only, these strolling lecturers, whose exclusive object is gain, have imposed upon the public by false representations of character, deduced from a superficial view of the external organs; whereas the chief excellence of the science consists in its beautiful classification of mental phenomena, surpassing in that respect all the metaphysical systems of preceding ages.

We have said thus much on the subject, by way of introducing to our readers the first lecture of Mr. Combe, which we propose to follow up by the remainder as soon as they reach us; and we feel fully persuaded that we cannot offer any thing more acceptable to the readers of the *Messenger*. Even if they fail to convince—of one thing there can be no doubt—that those who read them attentively will have their prejudices against the science greatly subdued, and will not hesitate to accord to Mr. Combe the possession of great powers of mind applied to the illustration of a new and most interesting branch of human knowledge. We take this occasion to say, that we transfer these lectures to our own pages from the "*New Yorker*," published in the city of New York, and conducted with distinguished ability by HORACE GREELY and PARK BENJAMIN, Esqrs.]

Ed. So. Lit. Messenger.

LECTURE I.

When a young man, I paid much attention to the prevailing theories of mental philosophy, frequently meeting a number of friends for the purpose of discussing the opinions of various metaphysical authors, hoping to obtain some practical views of human nature which would be serviceable in my intercourse with society and in the pursuit of my professional avocations. But all my study proved fruitless of beneficial results, and I ceased to pay attention to the metaphysicians. Hoping to obtain some more satisfactory notions of the mental functions from the physiologists, I attended the lectures of Dr. Barclay. All parts of the body were beautifully described, and their uses clearly explained, till he came to the brain; then was all dark and confused. He took that most important organ, cut it up in slices like a ham, confessing his ignorance of its functions and intimate structure. The physiologists satisfied me no better than the metaphysicians.

From the 49th No. of the *Edinburgh Review*, I received my first information concerning the doctrines of Phrenology. Led away by the boldness of that piece of criticism, I regarded its doctrines as absurd, and its founders as charlatans. For twelve months ensuing I paid no attention to the subject; indeed, such was the unfavorable impression made on my mind by the *Review*, that when Dr. Spurzheim came to Edinburgh, I neglected to attend his first course of lectures, and should probably not have attended him at all, but for a fortunate circumstance. Coming out of court one day,

my friend Mr. Brownlee invited me to attend a dissection of a brain, to be performed in his house by Dr. Spurzheim. I availed myself of this opportunity of comparing the method of Gall and Spurzheim with that I had seen practised by Dr. Barclay. Dr. Spurzheim did not slice it, but began at the *medulla oblongata*, and gradually unfolded the brain by following its structure. In ten minutes he demonstrated his anatomical views, and completely refuted the reviewer's assertions.

I immediately commenced to attend the lectures of Dr. Spurzheim; and, independently of his physiological views, I found the explanation he gave of mental manifestations to be greatly superior to any with which I was acquainted. This was a great point gained, and I determined to pursue the study by an appeal to nature. Accordingly I purchased books, and sent to London for a large quantity of casts. They arrived in three large puncheons; and when taken out, they covered nearly the whole of my sitting-room floor. But when I saw them there, seemingly all alike, my heart sank within me, and I would gladly have stuck them into some hole to get rid of them. However, my friends heard of my collection, and I soon had a great many to visit me—some to examine, and some to quiz. I took a couple of them up to examine them, and soon found that heads apparently alike were in reality very dissimilar. This encouraged me. I pursued my examinations, both of the casts and of the heads of living persons, and gradually became firmly convinced of the truth of the new science. The meetings at my room, to hear my explanations, became more and more numerous, and in 1819 I was prevailed on to take a room and give public lectures. Thus, without the slightest intention on my part, I became a lecturer on Phrenology three years after first attending to the subject.

Of this narrative I wish to make two applications: 1. I desire to show you, that in taking up the phrenological doctrines, I was not led away by enthusiasm. 2. I wish to impress on your minds that it is not by attending a course of lectures, that you can become fully acquainted with Phrenology. I deem it impossible to make you so acquainted in a hundred lectures. I come here, not to wage war upon your opinions, but to invite your attention to an important subject; not to convince you of the truth of all the details of Phrenology, but to show you how to study and observe for yourselves. I admire not the mental character of those who have too great facility of belief; and Phrenology asks nothing but fair play, and candid, scrutinizing investigation.

Phrenology means the philosophy of the human mind, as manifested through the medium of the brain. This philosophy, as you know, has been opposed with great violence; and the opposition has not yet ceased. In being so opposed, however, it merely shares the fate of all new truths. "In every society," says Professor Playfair, "there are some who think themselves interested to maintain things in the condition wherein they have found them. * * * Even in matters purely intellectual, and in which the abstract truths of arithmetic and geometry seem alone concerned, the prejudices, the selfishness, or the vanity of those who pursue them, not unfrequently combine to resist improvement, and often engage no inconsiderable degree of talent in drawing back instead of pushing forward the machine of science. The introduction of methods entirely new, must often

change the relative place of men engaged in scientific pursuits, and must oblige many, after descending from the stations they formerly occupied, to take a lower position in the scale of intellectual improvement. The enmity of such men, if they be not animated by a spirit of real candor and the love of truth, is likely to be directed against methods by which their vanity is mortified and their importance lessened." *Dissertation*, part II, p. 27.

It is well known that Harvey was treated with great contumely, and lost much of his practice, on account of his momentous discovery of the circulation of the blood. Professor Playfair, speaking of Newton's discovery of the composition of light, says: "Though the discovery had every thing to recommend it which can arise from what is great, new and singular; though it was not a theory or system of opinions, but the generalization of facts made known by experiments; and though it was brought forward in a most simple and unpretending form, a host of enemies appeared, each eager to obtain the unfortunate preëminence of being the first to attack conclusions which the unanimous voice of posterity was to confirm."

But the most striking instance, perhaps, of reckless and unprincipled opposition to newly discovered facts, was the opposition made to Galileo's discovery of the satellites of Jupiter. This discovery was made simply from Galileo's having invented a telescope, by which bodies invisible to the naked eye were brought into view. One who violently opposed him he invited to look through the telescope, and see for himself. "No," said his adversary; "should I look through the telescope, I might perhaps see them; and then how could I maintain the view I now maintain?" This well illustrates the course pursued by the opponents of Phrenology. The truths of our science are sufficiently obvious; but many fiercely vituperate, yet refuse to look through the telescope.

Formerly Phrenology was much opposed by the religious portion of the community. In this country I have not witnessed much of this. Wherever the religious man places himself in opposition to natural truth, it is deeply to be regretted. All truth is from the same eternal source, whether it be the truth of Philosophy or the truth of Revelation. It is impossible to destroy a fact—it remains forever; and in opposing it, religious men will always be ultimately found in the wrong position. That is, in God's name they will be found to have opposed God's truth, and to have set variance between His word and works.

I recollect that in my youth I was taught to repeat the catechism of Dr. Watts, in which is this question—"How do you know you have a soul?"—which is thus answered—"Because there is something in me that thinks and feels, which the body cannot do." We are not conscious of the operation of the brain; but numerous facts with which we become acquainted by means of observation, prove that without its agency we can neither think nor feel—that it is in short the organ of mind. In support of this proposition, I may remark:

1. If the brain be not the organ of mind, its uses are unknown;
2. It is better protected and better supplied with blood than any other part of the body;
3. The nerves of the senses are all connected with

the brain: it is the recipient of all their transmissions;

4. The nerves of motion and the nerves of sensation are all connected with the brain: it is indeed the fountain of impulse and the reservoir of sensation;

5. Certain substances, as opium or ardent spirits, disturb mental manifestations by operating on the brain;

6. Fainting is a temporary loss of consciousness, occasioned by recession of blood from the brain.

But we have still more direct evidence. Richerand attended a woman whose brain had been laid bare. One day he pressed upon it a little more forcibly than usual, and the patient became silent and unconscious in the midst of a sentence. On removing his hand, consciousness immediately returned. As no pain was felt, he repeated the experiment several times, and always with the same result. Similar cases are related by many other writers. Sir Astley Cooper relates one of a seaman who had his skull fractured and brain compressed by a fall. For thirteen months he remained totally unconscious. On Sir Astley raising the skull, consciousness immediately returned. The last thing the man recollected was the object of his attention at the time of his fall.

But it may be asked how pressure on one part suspends all mental manifestations, if, as Phrenologists say, the brain consists of numerous organs? Let it be recollected that the brain is composed of a pulpy mass, having numerous blood vessels ramifying in its substance, and is enclosed in membranous sacs, the pia mater and the dura mater. It may be likened to an India rubber bag filled with fluid. Now it is a law of hydrostatics, that pressure made on one part of a fluid affects all parts alike; consequently, when pressure is made on one part of the brain, all are equally affected.

"But," say objectors, "how is it that the brain does not manifest structural derangement after death, when the individual has been afflicted with insanity?" This question was more confidently asked some years ago than now, more accurate investigations have shown that in the great majority of cases such derangement is demonstrable; and if it be not always the case, this is not more remarkable than what takes place in other parts where there may be derangement or destruction of function without the anatomist being able to discover organic change. Thus some poisons destroy life, without any structural alteration being visible in any part of the body.

Again, to show that the mind is independent of the body, it is said that the mind often fully manifests its faculties to the last moment of life, even in lingering disease. This is not true. It is important to distinguish between functional and organic derangement and simple weakness. Suppose I cut the muscles of my arm across, there would be organic derangement, completely incapacitating me from using my limb. Suppose I should bandage my arm tightly and keep it motionless for six months; at the end of that time I should be able to move it in the usual manner, but not with the usual force; the structure would remain the same, but the size and power would be greatly diminished. So when the brain is but secondarily affected, the mode of manifestation may remain unchanged to the end of some fatal malady, but the energy will be greatly lessened.

Thus, in disease of the lungs, the brain merely suffers, like other parts, sympathetically and from badly exaggerated blood. At the commencement of the disease, the mind may act with its usual vigor. During the second month the patient thinks but little on subjects requiring mental energy; during the third month he chooses novels or light reading; during the fourth he prefers newspaper paragraphs, as requiring little continuous attention; and afterwards he ceases to read altogether, and does little more than answer simple questions; yet, because he answers these questions correctly, his mental manifestations are said to be unimpaired. No mistake can be greater.

Again, when a part is actively exercised, blood rushes to it with rapidity; and if the brain be the organ of mind, there should be to it a rush of blood during mental action; and this is found to be the fact, as many writers testify. Dr. Pierquin observed a patient in one of the hospitals of Montpellier, part of whose skull had been removed. In dreamless sleep the brain lay motionless within the cranium; when she was agitated by dreams, the brain was agitated and protruded; in dreams reported by herself to be vivid, the brain was more protruded, and still more so when she was awake and engaged in active thought or sprightly conversation.

Every act of the will, every flight of the imagination, every glow of affection, every effort of the understanding, is, in fact, manifested by means of the brain. And this proposition is acknowledged by the greatest anatomists. "We cannot doubt," says Dr. Cullen, "that the operations of our intellect *always* depend upon certain motions taking place in the brain." Dr. Gregory remarks that "although memory, imagination and judgment appear to be so purely mental as to have no connection with the body, yet certain diseases which obstruct them prove that a certain state of the brain is necessary to their proper exercise, and that the brain is the primary organ of the internal powers." Blumenbach, Magendie, Arnott, nay, even the Edinburgh Review, in the 94th number, as well as numerous other authorities, give like testimony.

It is worthy of observation, that the general notion of the mind's independence of the body is quite modern, the offspring in fact of philosophical theories sprung up chiefly since the days of Locke. Shakspeare and the older writers frequently speak of the brain as implying the mental functions; and, to the present day, the notions of the vulgar are more in accordance with nature than those of polite scholars of the old school. Thus a stupid person is called a numbscull, a thick head, or said to be addle-pated—badly furnished in the upper story: while a talented person is said to be strong-headed, long-headed—to have plenty of brains; a madman is said to be wrong in the head—touched in the noddle.

We find, then, that reason, fact, the testimony of the best physiologists, and vulgar notions, all testify that the brain is the organ of mind.

And what does this proposition imply? Clearly that the state of the brain must greatly influence the mental manifestations, and that the perfection of those manifestations will depend on the perfection of the organ. How important, then, does the study of the brain become!

I beg to state that in Edinburgh my Phrenological course occupied fifty lectures of one hour each. Your time will not permit this. I therefore limit my lectures to sixteen. As in sixteen hours, however, I should be unable to do justice to the subject, I must beg your attendance on two hours of each evening. But, inasmuch as two hours continuous attention would be fatiguing, I shall always pause for five minutes at the end of the first hour. And I hope you will stand up during that time and disengage your attention from the subject. In this way you will be greatly relieved, and be enabled to bear the two hours' exertion much better than would at first appear likely.

I hope you will attend faithfully to the observations which form the introduction to my course. You will hereafter find that they have a most important practical bearing on the subject of education.

We next come to the question—Does the mind in *every act* employ the whole brain, or are separate faculties of the mind connected with distinct portions of the brain as their respective organs? Is the brain single or multiplex?

That it is multiplex may be proved by a number of considerations. Analogy would lead us to this conclusion. Thus, in all ascertained instances, different functions are never performed by the same organ. We have, for instance, a distinct organ for each sense, and it appears to me clear, that to feel puffed up with pride, and to feel great deference for others, are manifestations of functions as distinct as those of smelling and hearing. Some parts appear to have several functions, but on analyzing them each function is found to be performed by its peculiar organ: thus, the tongue moves, feels and tastes; but then it contains a nerve of motion, a nerve of feeling and a nerve of taste; and it may be deprived of any one of those functions, without the other two being impaired. But the most interesting example of distinct functions being dependent on distinct organs, is furnished by the spinal marrow. This is composed of two double columns—the anterior being appropriated to motion, the posterior to sensation. This, Sir Charles Bell clearly proved in the following manner: he cut an anterior nerve at its root in an ass, and the parts through which it ramified lost the power of motion, though feeling remained unimpaired. He cut a posterior nerve in another, and the parts through which it ramified lost the power of feeling, but retained that of motion. Their distinctness is now universally acknowledged—and here I would make an important observation: it has been objected to Phrenology, that to the organs of the brain we cannot assign distinct boundaries; that we are unable to take a brain and isolate the organs with the dissecting-knife, showing precisely where one ends and another begins. But, mark, this objection holds equally against the distinct functions of the different parts of the spinal marrow: that one part is appropriated to nerves of sensation, and another to nerves of motion, no one doubts; and yet to point out the precise boundaries of the distinct nervous columns is absolutely impossible.

Different faculties of the mind appear in succession: thus, affection for the parents or nurse appears before veneration, or the sense of justice, and the power of perceiving color and form before the reasoning power.

I am told by mothers, that children manifest fear when two or three months old. If the brain be a single organ, these powers should be simultaneously developed; but this is not so, and the only true explanation seems to be, that the mind is composed of different organs, which come to maturity at different times. Dr. Johnson, indeed, remarked that the doctrine of a variety of organs was absurd, "for," said he, "the man who can walk east can certainly walk west." But it may be remarked, that walking east and walking west are but walking—the exercise of a single function; whereas perceiving color, and reasoning, are quite distinct operations.

Again, genius is always partial, which it ought not to be if the organs of the mind were single. I have seen it maintained, in one of your periodicals, that genius is always the result of an accidental exciting cause. Thus, Newton was made a philosopher by the fall of an apple, and Byron became a great poet because he was lashed by the reviewers and condemned as a poetaster. But like causes produce like effects, and how happens it that so many millions, before Newton, had seen apples fall without ever thinking of any thing but picking them up and eating them? And if a lashing be sufficient to produce a great poet, why are not great poets more numerous? Indeed, if critical flagellation had been sufficient, I should by this time have become a great poet myself.

Dreaming can be rationally explained by Phrenology alone. Were the brain a single organ, then would all its faculties be asleep or awake together, and consequently dreaming be impossible. But this is not so. Cautiousness alone is sometimes awake: then are conjured up all fearful thoughts, and the dreams are of "hydras and chimeras dire." On the other hand, a number of the intellectual faculties may be awake and the sentiments asleep: then we may have a vision of friends long dead, but totally free from that awe or fear which their presence would inspire were not the feelings dormant.

Were not the brain a congeries of organs, partial idiocy could not occur; yet, that it does occur we well know. Here is the cast of an idiot whose intellectual faculties were externally small, but whose self-esteem was large; and notwithstanding his utter imbecility, he had a very comfortable opinion of his own importance. I knew an idiot on the banks of the Clyde who could play on one or two musical instruments, yet in other respects he was so utterly imbecile that he had to be supported by the parish. Now if the brain were a single organ this would be the same as if a man had the power of walking east without having the power of walking west.

Indeed, that the brain must consist of a congeries of organs, is maintained by distinguished physiologists otherwise opposed to Phrenology; as Fodéré, and Sir Charles Bell. Such considerations as I have stated, have impressed men, in all ages, with belief in the brain's multiplex character; and particular portions of the head have been assigned to distinct faculties, from the time of Aristotle. This drawing represents a head published at Venice in 1552, by Ludovico Dolci. Now what is the difference between such an arrangement and the system of Gall? Simply this:—Gall discovered the seat of the various faculties. These older writers considered *modes* of activity as simple faculties, and lo-

cated them according to a fancied propriety. Here in the front they placed *common sense*, because it seemed the most appropriate place for receiving information from the eyes, nose, and taste. *Fancy* they placed on the sides of the head, because it has such great facility in flying off in a tangent. *Reflection* they placed at the back of the head, because, in reflecting, men throw the mind back on itself. *Memory* they placed in the cerebellum, because they thought it formed a nice little store-house for the safe and snug keeping of ideas till they were needed. This, you will observe, was making man, not observing him.

The brain, then, is not a single organ, but each particular function is manifested by a particular portion of the brain.

CURRENTE-CALAMOSITIES;

NO. VI.

BY THE AUTHOR OF THE "TREE ARTICLES."

May, "the delicate-footed May," has come in upon us once more. She is suggestive of beautiful associations, and hence, chiefly, is she delightful to us, in this Northern clime of ours. For to us her sunny smiles are few, while her cloudy skies and rainy days are many. Now you, my dear green-pea-eating editor, are enjoying, all this month, the most delicious and truly May-like weather; while our trees, in leaf as they are, it is true, have not, as I write, attained a tithe of that fulness and richness which yours have for weeks displayed. Oh! how beautiful are your Southern woods in May! Why are you not all poets or painters, under their inspiration? The green is so rich,—the tints so varied! The oaks put forth their new foliage of the same hue with that which fell a few months before, from their branches,—thus seemingly arraying themselves in their cast-off autumn garments: yet how softened is that sombre hue by the thick down which covers every folded leaf! And how slowly do they unroll themselves, as if they feared that the winds of heaven would breathe on them too roughly! and then with what dignity do the elder and larger of these noble trees stretch out their huge branches;—with what stateliness do they receive the warm greetings of the Spring, as she flies gaily to meet them, imprinting kisses on their tender leaves, and making, the while, the younger saplings dance, and tremble with joy, at the salutation! The chesnut oak,—that rare and curious tree; how light and fresh is the tint of its foliage,—and how saucily does it flaunt its new bravery in the presence of the fine old chesnuts, which are more slowly awakening into life! Is it not adding insult to injury,—after having stolen the shape of their leaves,—to boast of being in greater beauty, at an earlier period of the Spring, which gives beauty to all, in turn? Boast, as this imitative oak may boast, of being mistaken by the careless observer for the veritable chesnut, the ripening acorn soon dispels the illusion, and shows it for what it really is: for the true fruitage (emblem of modest worth,) hides itself, you know, in a thick and impenetrable coat, as it grows to maturity.

And see the silver birch; with every pointed leaf dancing gaily on its slender stem, before the approach of musical May! and the dogwood, so full of white flowers, tinged so delicately with pink,—and so profuse in their growth as quite to usurp the place of leaves, of which it has but few! And the tulip-tree, towering above all the rest like a giant,—its immense arms swaying about in the cool breeze, and seeming to be “coming the grand” over the whole green populace below! But the Fringe-tree! at this season, the very queen of all the wood! None of your Southern trees can compare with her, as I have seen her, in May, in the woods of old Fairfax! Yet, queenly as she is, she is withal most modest: (a rare trait in queens,—which I commend to the imitation of the fair Victoria!) How gracefully hangs that drooping drapery upon her faultless form,—presenting her to our eyes, as the beautiful bride of the forest,—the Rosalind of trees!

Yes,—your woods are more various, more beautiful, more fraught with delicate and tender associations than our Northern forests. Yet ours have rich beauty, too: many of your oaks grow abundantly with us,—and then there are our maples, our elms, and sycamores,—all of which we have communed upon in the pages of the Messenger, in years past;—but over them all there is a melancholy shade thrown by the pine,—whose deep and dark foliage, and whose tall straight trunks, give a solemn grandeur to the northern forest. The winds, as they play through the branches, send a thrill of awe to the heart of the listener, as he starts at the shrill treble, or the deep diapason of this magic music. For the woods are Nature’s organ, with its million stops;—the winds of heaven are the players, as they swell the deep bass among the mighty pines, or delicately touch the smaller trees in *soprano*; making such sweet music as melts the sternest heart into mute adoration. The thousand birds and the myriads of humming insects, which ever throng the woods’ deep shades, are the choir, and so the woodlands are ever vocal, ever tuneful.

But I am writing another “tree article,”—which is what I did not sit down to do. Return we to “May,” once more!

May is gardening-month. Every body of taste enough to love flowers, and who has a nook of ground big enough to display that taste, carefully cultivates it now. How much aristocracy one sees, at times, in a garden: for this weed may grow there as well as elsewhere; and one can judge of the character of a person, and often of his rank, by the standard presented by a flower-garden. Flowers, though not aristocrats, themselves, are at least, never vulgar: and a poor man may evince as delicate a taste as a rich one, in cultivating them; though the former, may not have the means of displaying it to the same extent. They take the wild flowers from the heath, the sides of the river-rocks, the depths of the woods, and the banks of the streams, because they are free to them and to all. Nature is profuse and indiscriminating in these rich gifts. She will make the modest violet bloom as sweetly in the poor man’s garden-nook, as in the midst of her own rich and wide domain; and the lily or the primrose outvies many a rare exotic in the hot-house or conservatory of the rich man, who values these because they are far-

fetched and his! But the simple flower smells sweeter, and its fragrance reaches farther; it is enjoyed, as the exotic is not, by the passer-by, and is better, because it is more natural, and does far more good!

I remember seeing a vulgar taste most strikingly and somewhat amusingly displayed, in the arrangement of a garden, in one of the beautiful country towns, from which I have dated some of my communications to you. On the brow of a gently sloping eminence, a well-to-do kind of person had set up the frame of an old barn, which he soon cobbled up into the shape of a very decent habitation, and which, as he viewed it, was the perfection of house-building. The lot of land he had chosen had the advantages of a rich soil, and a most favorable location. Along the front, or street side of it, there towered a line of gigantic sycamores, and wide, branching elms, and from these to the summit of the hill,—on the very apex of which the house was built, all was green meadow and arable. The view in front comprehended the wide sweep of one of our most lovely rivers, and, yet more distantly, the blue line of the ocean, which formed nearly one half of the horizon. In the rear, there were delightful prospects of deeply wooded hills, and sunny fields of rich and waving grain, or broad expanses of pasture land filled with browsing cattle. So much had nature done for the *locale*. See how the new-comer had improved upon all this!

First, he painted his house pea-green; a color contrasting oddly enough with that of the rich grass and beautiful trees, that grew luxuriantly around it. Then he made a straight gravel walk from the front-door to the main road, upon each side of which, all the way down that beautiful slope, he planted a row of—yellow sun-flowers! How their broad faces flamed at mid-day, while the fiery orb whose name they bore, was blazing in the midst of the summer solstice! “What a taste!” exclaimed every one who passed, as he involuntarily wiped from his brow the perspiration, which a single glance at this odd parterre had excited.

There certainly is no great sentiment in a “Sun-flower.” It is not this flaring weed, but the “Heliotrope,” which furnishes Moore with the beautiful simile;

“As the Sunflower turns on her goal, when he sets,
The same look which she turned, when he rose!”

The only relics of “May games,” once so popular, which we, in America, have preserved, are “Going a Maying,” on the first morning in the month, and, in some of our cities, “May-balls.” The weather is so precarious, generally, in this country, about that day, that the first of these amusements is more likely to fail than to succeed. It was so, in this part of the country, this year,—cold, easterly winds prevailing on that day, almost universally. Had it not been so, the school-children of Boston would have enjoyed a most rare and antique mode of welcoming in that morning. The great flag-staff on “The Common,” was converted the night before, into a real old-fashioned “May-pole,”—and the children were to have been carried thither to dance around it as their English ancestors were wont to do, years bygone, in the fatherland. But “May balls” are within-door amusements, and these, this year, were very joyously attended in certain places within our ken.

“May games,” used to be celebrated in England, very generally. The city of London clung to them

long, and with praiseworthy tenacity; but in vain. They have now become almost entirely obsolete in "the old country." That quaint chronicler, old Stowe, says,—*"On May day, in the morning, the citizens used to walk into the sweet meadows and green woods, there to rejoice their spirits with the beauty and savor of sweet flowers;"* and he gives an account of a ride of "bluff King Hal," with Queen Catharine, and many lords and ladies, from Greenwich to Shooter's Hill, on a Maying expedition; and so he goes on:—"Every parish, and sometimes two or three parishes, joining together, had their Mayings, and did fetch in May-poles with divers warlike shows, with good archers, morris-dancers, and other devices for pastime, all the day long; and, towards evening, they had stage-plays, and bon-fires in the streets." They used to elect a "King and Queen of May," whose duty it was to preside over the sports. They called the King, "Robin Hood," after the merry archer of Sherwood Forest, and the Queen was called "Maid Marian," after Robin's faithful mistress.

I shall close this number, as usual, with such appropriate poetical extracts, as may recur to my recollection: for the poets of all times and ages have ever found in May a fruitful source of inspiration.

Thomas Watson, (1581) a fine old poet, whose sonnets Steevens prefers to Shakspeare's! says, in one of them,—

"When May is in his prime, and youthful spring
Doth clothe the tree with leaves, and ground with flowers,
And time of year reviveth every thing,
And lovely nature smiles, and nothing lours," &c. &c.

And thus Shakspeare:—

"As it fell upon a day
In the merry month of May,
Sitting in a pleasant shade,
Which a bower of roses made,
Beasts did leap, and flowers did spring,
Streams did flow, and birds did sing,
Every thing did banish moan," &c. &c.

And Spenser:

"Fresh May, the herald of Love's mighty king,
In whose coat-armor richly are displayed,
All sorts of flowers, the which on earth do spring,
In goodly colors gorgeously arrayed," &c. &c.

And Drummond, apostrophising May, says,

"———thou 'turn'st' with all thy goodly train,
Thy head with flames, thy mantle bright with flowers!
Thy zephyrs curl the green locks of the plain,
The clouds for joy in pearls weep down their showers,"

And poor Bampfylde; (1778)—

"What time the young and flowery-kirtled May
Decks the green hedge, and dewy grass unshorn,
With cowslips pale, and many a whitening thorn."

And Charlotte Smith, (1784,) thus sweetly welcomes in this gentle month:

"Again the wood, and long-withdrawing vale,
In many a tint of tender green are dressed,
Where the young leaves, unfolding, scarce conceal
Beneath their early shade the half-formed nest

• Return'st.

Of finch or woodlark; and the primrose pale,
And lavish cowslip, wildly scattered round,
Give their sweet spirits to the sighing gale!
Ah! welcome! season of delight!" &c. &c.

Anna Seward treats the same subject in the same vein:—

"Now young-eyed May, on gentle breezes borne,
Mid the deep woodlands, hills, and vales, and bowers,
Unfolds her leaves, her blossoms, and her flowers,
Pouring their soft luxuriance on the morn;" &c.

Samuel Daniel, (1562,) thus celebrated the month of May:

"Now each creature joys the other,
Passing happy days and hours:
One bird reports unto another
In the fall of silver showers;
Whilst the earth, (our common mother,)
Hath her bosom deckt with flowers;
Whilst the greatest torch of Heaven
With bright rays warms Flora's lap,
Making nights and days both even,
Cheering plants with fresher sap," &c. &c.

Unmatchable Herrick, (1590,) gives "Virgins going a Maying" this invitation:

Get up, get up, for shame! The blooming morn
Upon her wings presents the God unshorn!
See, how Aurora throws her faire
Fresh quilted colors through the aire!
Get up! get up! and see
The dew bespangling herb and tree!
Each flower has crept, and bowed toward the east
Above an hour since.

* * * * *
"Rise! and put on your foliage! and be seen
To come forth like the spring-time, fresh and green,
And sweet as Flora! take no care
For jewels for your gowne or haire!
Fear not! The leaves will strew
Gems in abundance upon you!
Besides,—the childhood of the day has kept
Against you come, some orient pearls unceapt!
Come and receive them," &c. &c. &c.

I wish I could copy out the whole of this gem of gems for you; but I know my limits.

Warton foreshadowed our May when he said, so prettily,

"With dalliance rude young zephyr wooes
Coy May!" &c.

Cunningham, (1730,) sends

"To beds of state, sweet balmy sleep,
(Tis where thou'st seldom been!)
May's vigil, whilst the shepherds keep
With Kate of Aberdeen.

"Upon the green the virgins wait,
In rosy chaplets gay,
Till morn unbar her golden gate,
And give the promised May," &c. &c.

The "Shoemaker-poet," sweet Bloomfield, says—

"A promise, too, my Lucy made,
(And shall my heart its claim resign?)
That ere May-flowers again should fade,
Her heart and hand should both be mine.
Hark'ye, Lucy, this is May!
Love shall crown our holiday!"

Wordsworth, writing in Spring time, has the following :

" And all the earth is gay :
Land and sea
Give themselves up to jollity,
And, with the heart of May,
Doth every beast keep holiday !"

And John Keats, that fine souled boy, thus enumerates some of the choicest attendants of this charming month :

" Each sweet
Wherewith the seasonable month endows,
The grass, the thicket, and the fruit tree wild ;
White hawthorn, and the pastoral eglantine ;
Fast-fading violets, covered up in leaves ;
And mid-May's eldest child,
The coming musk-rose, full of dewy wine,
The murmurous haunt of flies on summer eves !"

" L. E. L." thus addresses the dawning of the month we are celebrating :

" 'Tis May again ! Another May !
Looking as if it meant to stay !
So many are its thousand flowers !
So glorious are its sunny hours !
So green its earth ! So blue its sky !
As made for Hope's eternity !"

But I have run to the end of my tether for this month, and shutting up my memory, and all my books, must even make an end, here, notwithstanding the abundance "more matter for a May-morning," (as Fabian says,) which is spread out before me. I will resume my pen in June, be sure.

J. F. O.

New York, May 31st, 1839.

TRANSLATION.

Mr. White,—Below is a translation of some French verses contained in your March number. The gentleman who sent the original, suggested, that this version should be made by some "competent hand." I have no pretensions to competency, but having made it for my own amusement, I send it, to be inserted in the Messenger, should you consider it worthy of an insertion.

D.

ON THE UNITED STATES OF AMERICA.

Translated from the French of Col. Vaublanc.

There is then on this earthly sphere,
One land from vain ambition free,
Whose rulers, with parental care,
Are proud the people's men to be.

In which no slave of grovelling heart
Crouches amidst a tyrant's train,
And hated is the treach'rous art
That rivets the usurper's chain.

Under a safeguard firm and true,
Those precious equal rights are found,
Which once the spring of nature knew,
When man was first in union bound.

And there's no ear of magistrate,
Corrupted by a flatt'rer's word :
Let but a subject touch the state,
The speaker's with attention heard.

Nations, that on victory base
Your best, your highest, only claim,
See here a purer source of praise,—
Behold this novel people's fame.

Its perfect freedom's early dawn,
By blood and license ne'er was stain'd ;
Without a sword 'gainst brother drawn,
Its simple grandeur it hath gain'd.

By honest means, an honest end
Its steady purpose still to seek,
Nor e'er its limits to extend
By trampling on its neighbors weak.

Devotion to their country's weal,
'Mongst us, alas ! forgotten long,
Can e'en 'gainst death their pure hearts steel,
In high, heroic feeling strong.

Than Athens or than Sparta brave,
More skill'd its citizens to bless ;
It breaks the fetters of the slave,
Nor of religious freedom less.

From suffrage free, yet fix'd by laws,
The magistrate his pow'r derives,
While by a wise, just equipoise,
Each in his special duty lives.

The son that would his father's fame
Enjoy, his worth must emulate ;
For if he lose his honest name,
He sinks at once to low estate.

Enlighten'd vigilance the soul
Is of unrelaxing virtues,
And temper'd by a wise control,
Those laws severe, that check abuse.

O'er that authority it gives,
It watches still with anxious care ;
The meanest citizen that lives,
Of harsh oppression has no fear.

Source of all pow'r legitimate,
O people ! that all others slight,
People oppress'd in ev'ry state,
Come, know thy dignity and right.

That right commencing with thy breath,
In spite of art to force allied,
Thou'lt yield but to the pow'r of death,
That ends alike all good beside.

O nation ! worthy highest fame,
Preserve those rights sublime—
Forever be thy bliss the same,
Nor cease thy laws except with time.

Hallow'd forever be the name,
Of that bold chief, that patriot sage—
Grave on thy heart their lasting fame,
As grav'd it is on hist'ry's page.

By courage, still by prudence, steer'd,
One did thy freedom's foes subdue;
Where'er the other's voice is heard,
The hearts of friends are knit to you.

The hand that chain'd the lightning's flash,
Secure amidst the thunder's roar,
Breaks of a king in anger rash,
The sparkling chain his country wore.

Lo! a repentance late and mean,
From fear, restor'd thy lost repose;
When on thy great and trying scene,
A host of dauntless heroes rose.

Away the policy that brings
Cabal and faction in its train!
Know, that from union only springs
A strength, that breaks with union's chain.

Then to corrupted Europe leave
Insidious treach'ry's art,
Nor let thy virtue e'er believe,
She'll thrive by acting vice's part.

Ambition's bold and grasping hand
Must reach at conquests ever new,
But thou, a people good and grand,
Hurt none but those who strike at you.

By dint of courage, high and bold,
Thou won'st thy priceless liberty,
Then let its use all ages hold,
The honor of humanity.

Let thy example us inflame
To emulate thy glorious deeds;
The world to thee should temples frame,
As onward freedom's march proceeds.

Americans! I can but feel
These sentiments within my heart,
Since age's frosts my blood congeal,
Else now with you I'd take my part.

FLATTERY.

If you wish to make use of a man, ascertain the measure of his susceptibility to flattery; for all that you can raise him in self-estimation will be at your disposal. Convince any man that you can teach him to play on two fiddles, equally well, at the same time, and he will promise that one shall be played mainly for your advantage.

Rev. W. Colton, U. S. Navy.

INTERESTING ACCOUNT OF VIRGINIA, IN 1617.

[We derive the subjoined interesting historical paper from so high a source, that we do not hesitate to vouch its authenticity. It appears that it was carefully transcribed from the Royal MSS. in the British Museum, and is entitled in Casley's catalogue of those MSS., "John Rolfe's Relation of the State of Virginia, 17th Century." The remark in the tract itself, "the estate of this colony, as it remained in *May last*, when Sir Thomas Dale left the same," proves that it must have been written within a year after May, 1616—as the governor left the colony and returned to England at that time; and the expression, "both *here* and in Virginia," establishes the fact that the paper was written in England. Rolfe, the narrator, had been married to the celebrated Pocahontas, daughter of Powhatan, a few years before. She and her husband accompanied Sir Thomas Dale on his return to England, and arrived in Plymouth on the 12th June, 1616. This interesting and extraordinary woman, it will be remembered, died at Gravesend, when on the eve of embarking for Virginia. The narrative itself, independent of the fact that it sustains and corroborates most of the accounts which have been preserved of the early state of the colony, will be read with interest, as the production of Mr. Rolfe, the chosen partner of her who has been emphatically styled the guardian angel of the colony, and the ancestor of some of the most respectable and distinguished families of Virginia. We give the tract *verbatim et literatim*.]

Ed. So. Lit. Messenger.

TO THE KING'S MOST SACRED MA'TIE. *May it please your Highness:*

There have been of late divulged many impressions, judicially and truly penned; partlie to take away the ignominie, scandalls and maledictions wherewith this action hath ben branded, and partlie to satisfie all, (especially the best) with the manner of the late proceedings and the prosperitie likely to ensue. How happily and plentifully the good blessings of God have fallen upon the people and colony since the last impression, faithfully written by a gent. of good merit, Mr. Ralph Hamor,* (some tyme an actuall member in the Plantation, even then departing when the foundacoun and ground worke was new laid of their now thrift and happines,) of the earthie and worldly man is scarcely believed, but of heaven-lie minds they are most easilie discerned, for they daily attend and marke how those blessings, (though sometimes restrayned for a tyme,) in the end, are poured upon the servants of the Lord. Shall your Ma'tie, with pietie and pittie—with pietie, being zealous for God's glory, and with pittie, (mourning the defects,) vouchsafe to reade thus much of the estate of this colony, as it remained in *May last*, when Sir Thomas Dale left the same, I shall deeme my selfe most happie in

* The work referred to, of which there is a copy in the Library of the British Museum, was published at London in 1613, and is entitled, "A True Discourse of the present Estate of Virginia, and the success of the affairs there till the 18th June, 1614; together with a relation of the several English towns and forts, the assured hopes of that country, and the peace concluded with the Indians; the christening of Powhatan's daughter, and her marriage with an Englishman. Written by Ralph Hamor, the younger, late Secretary in that Colony."

your gracious acceptance, and most readilie offer to your approved judgment, whether this cause, so much despised and disgraced, doe not wrongfully suffer many imputacions.

First, to meete with an objection commonly used amongst many men, who search truthe no farther then by common reports, namely, how is it possible Virginia can now be so good, so fertile a countrey, so plentifully stored with food and other commodities? Is it not the same still it was when men pined with famine? Can the earth now bring forth such a plentiful increase? Were there not governors, men and meanes to have wrought this heretofore? And can it now, on the suddaine, be so fruitfull? Surely, say they, these are rather bates to catch and intrapp more men into woe and miserie, then otherwise can be imagined. These, with many as frivolous, I have heard instigated, and even reproachfullie spoken against Virginia. To answere whom, (the most parte of them incredulous worldlings—such as believe not, unless they feele the goodnes of the Lord sensible to touch them,) though it be not much materiall, yet let them know, 'tis true, Virginia is the same it was, I meane for the goodnes of the seate, and fertileness of the land, and will no doubt so contynue to the world's end,—a countrey as worthy good report, as can be declared by the pen of the best writer. A countrey spacious and wide, capable of many hundred thousands of inhabitants. For the soil most fertile to plant in, for ayre fresh and temperate, somewhat hotter in summer, and not altogether so cold in winter as in England, yet so agreeable it is to our constitutions, that now 'tis more rare to heare of a man's death then in England amongst so many people as are there resident. For water, most wholesome and verie plentifull, and for sayre navigable rivers and good barbour, no countrey in christendom, in so small a circuite, is so well stored. For matter fit for buildings and fortifications, and for building of shipping, with everie thing thereto apperteyning, I may boldly avouch scarce anie or no countrey knowne to man is of itself more abundantly furnished. Theis things (may some say,) are of great consequence toward the settling of a plantation, but where are the beasts and cattle to feede and cloth the people? I confesse this is a mayne want; yet some there are already, as neate cattle, horses, mares and goates, which are carefullie preserved for increase. The number whereof, hereafter shalbe sett downe in a particular note by themselves. There are also great store of hoggs, both wild and tame, and poultrie great plentie, which every man, if they will, themselves may keepe. But the greatest want of all is least thought on, and that is good and sufficient men, as well of birth and qualitie, to command soldiers, to march, discover and defend the countrey from invasions, as also artificers, laborers, and husbandmen, with

whom, were the colony well provided, then might tryall be made what lyeth hidden in the wombe of the ground. The land might yearlie abound with corne and other provisions for man's sustentation—buildings, fortifications and shipping might be reared, wrought and framed—commodities of divers kinds might be yearly reaped and sought after, and many things (God's blessing contynuing,) might come with ease to establish a firme and perfect common weale. But to come again to the matter, from which I have a little strayed, and to give a more full answere to the objectors, may you please to take notice, that the beginning of this plantation was governed by a president and counsell, aristocratically. The president yearlie chosen out of the counsell, which consisted of twelve persons. This government lasted about two years, in which tyme such envie, dissensions and jarres were daily sowne amongst them, that they choaked the seed and blasted the fruits of all men's labors. If one were well disposed and gave good advisement to proceed in the business—others, out of the malice of their hearts, would contradict, interdict, withstand and dash all. Some rung out and sent home too loud praises of the riches and fertileness of the country, before they assayed to plant, to reape or search the same; others said nothing, nor did any thing thereunto; all would be *keisers*, none inferior to other. Some drew forward, more backward—the vulgar sort looked for supplie out of England—neglected husbandry—some wrote—some said there was want of food, yet sought for none—others that would have sought could not be suffered; in which confusion much confusion yearlie befell them, and in this government happened all the miserie. Afterward a more absolute government was graunted, monarchially, wherein it still contynueth, and although for some few years it stood at a stay, especially in the manuring and tilling of ground, yet men spent not their tyme idely nor unprofitably, for they were daily employed in palazadoing and building of townes, impaling grounds and other needful businesses, which is now both beneficiall to keepe the cattle from ranging, and preserve the corne safe from their spoile. Being thus fitted and prepared to sow corne, and to plant other seeds and fruits in all the places of our habitations,—one thing, notwithstanding, much troubled our governor, namely, enmitie with the Indians; for, however well we could defend ourselves, townes and seates from any assaulte of the natives, yet our cattle and corne lay too open to their courtesies, and too subject to their mercies: whereupon a peace was concluded, which still continueth so firme, that our people yearely plant and reape quietly, and travell in the woods a fowling and a hunting as freely and securely from feare of danger or treacheries as in England. The great blessings of God have followed this peace, and it, next under him, hath

bredd our plentie—everie man sitting under his fig tree in safety, gathering and reaping the fruits of their labors with much joy and comfort. But a question may be demanded what these fruits are—for such as the countrey affordeth naturally (for varietie and goodnes) are comparable to the best in christendom, (growing wild as they doe,)—I pass them over, other discourses having largely manifested them to the view of the world. But for the people's present labors they have Indian wheate, called maye in the West Indies, pease and beanes, English wheate, peas, barley, turnips, cabbages, pumpions, West Indian and others, carretts, pars-nips, and such like, besides hearbs and flowers, all of our English seede, both for pleasure and for the kitchen, so good, so fruitful, so pleasant and profitable, as the best made ground in England can yield. And that your Ma'tie may know what two men's labor, with spade and shalve only, can manure in one year, fiftie pounds in money was offered for their cropp, which they refused to take; for hempe and flax, none better in England or Holland—silkwormes, some of ther labors, and tast of other good and vendible commodities were now brought home. Likewise tobacco, (though an esteemed weed,) very commodious, which there thriveth so well, that no doubt but after a little more triall and expense in the curing thereof, it will compare with the best in the West Indies. For fish and fowle, deere and other beasts, reports and writings have rather been too sparing then prodigall. About two years since, Sir Thomas Dale, (whose worth and name, in concluding this peace, and managing the affairs of this colony, will out, last the standing of this plantation,) found out two seasons in the year to catch fish, namely, the spring and the fall. He himself tooke no small paines in the tryall, and at one hall with a scryne caught five thousand three hundred of them, as bigg as codd. The least of the residue or kind of salmon trout, two foote long; yet durst he not adventure on the mayne skull for breaking his nett. Likewise, two men with axes and such like weapons, have taken and kild neere the shoare and brought home fortie as great as codd in two or three howers space, so that now there is not so great plentie of victualls in anie one of the forenamed kind yearlie with small paines to be gotten in any part of England amongst so few people as are there resident. And, whereas, heretofore we were constrayned yearely to go to the Indians and intreate them to sell us corne, which made them esteeme verie basely of us—now the case is altered; they seeke to us—come to our townes, sell their skins from their shoulders, which is their best garments, to buy corne—yea, some of their pettie kings have this last yeare borrowed four or five hundred bushells of wheate, for payment whereof, this harvest they have mortgaged their whole countries, some of them not

much less in quantitie then a shire in England. By this meanes plentie and prosperitie dwelleth amongst them, and the feare and danger of famine is clean taken away, wherewith the action hath a long time suffered injurious defamations.

Now that your highnes may with the more ease understand in what condition the colony standeth, I have briefly sett downe the manner of all men's several employments, the number of them, and the several places of their aboad, which places or seates are all our owne ground, not so much by conquest, which the Indians hold a just and lawfull title, but purchased of them freely, and they verie willingly selling it.

The places which are now possessed and inhabited are sixe.

1. Henrico and the lymtus	} Members belonging to ym Bermuda Towne, a place so called there, by reason of the strength of the si- tuation, were it indiffer- ently fortified.
2. Bermuda Nether	
3. West and Sherley	
4. James Towne	
5. Requeshtan	
6. Dales-Gift	

The generall mayne body of the planters are divided into

1. Officers.
2. Laborers.
3. Farmors.

The officers have the charge and care as well over the farmors as laborers generallie—that they watch and ward for their preservacions; and that both the one and the other's busines may be daily followed to the performance of those employments, which from the one are required, and the other by covenant are bound unto. These officers are bound to maintayne themselves and families with food and rayment by their owne and their servants' industrie.

The laborers are of two sorts. Some employed onely in the generall works, who are fedd and clothed out of the store—others, specially artificers, as smiths, carpenters, shoemakers, taylors, tanners, &c., doe worke in their professions for the colony, and maintayne themselves with food and apparrell, having time lymitted them to till and manure their ground.

The farmors live at most ease—yet by their good endeavours bring yearlie much plentie to the plantation. They are bound by covenant, both for themselves and servants, to maintaine your Ma'tie's right and title in that kingdom, against all foreigne and domestique enemies. To watch and ward in the townes where they are resident. To do thirty-one dayes service for the colony, when they shalbe called thereunto—yet not at all tymes, but when their owne busines can best spare them. To maintayne themselves and families with food and rayment—and every farmor to pay yearlie into the magazine, for himself and every man servant, two barrells and a half a piece of their best Indian wheate, which amounteth to twelve bushells and a halfe of English measure.

Thus briefly have I sett downe every man's particular imployment and manner of living; albeit, lest the people—who generallie are bent to covett after gaine, especially having tasted of the sweete of their labors—should spend too much of their tyme and labor in planting tobacco, knowne to them to be verie vendible in England, and so neglect their tillage of corne, and fall into want thereof, it is provided for—by the providence and care of Sir Thomas Dale—that no farmor or other—who must maintayne themselves—shall plant any tobacco, unles he shall yearly manure, set and maintayne for himself and every man servant two acres of ground with corne, which doing they may plant as much tobacco as they will, els all their tobacco shalbe forfeite to the colony—by which meanes the magazin shall yearly be sure to receive their rent of corne; to maintayne those who are fedd thereout, being but a few, and manie others, if need be; they themselves will be well stored to keepe their families with overplus, and reape tobacco enough to buy clothes and such other necessities as are needeful for themselves and houshold. For an easie laborer will keepe and tend two acres of corne, and cure a good store of tobacco—being yet the principall commoditie the colony for the present yieldeth. For which, as for other commodities, the councell and company for Virginia have already sent a ship thither, furnished with all manner of clothing, houshold stuff and such necessities, to establish a magazin there, which the people shall buy at easie rates for their commodities—they selling them at such prices that the adventurers may be no losers. This magazin shalbe yearelie supplied to furnish them, if they will endeavor, by their labor, to maintayne it—which wilbe much beneficiall to the planters and adventurers, by interchanging their commodities, and will add much encouragement to them and others to persevere and follow the action with a constant resolution to uphold the same.

The people which inhabite the said six severall places are disposed as followeth:

At Henrico, and in the precincte, (which is seated on the north side of the river, ninety odd myles from the mouth thereof, and within fifteen or sixteen myles of the falls or head of that river, being our furthest habitation within the land,) are thirty-eight men and boyes, whereof twenty-two are farmors, the rest officers and others, all whom maintayne themselves with food and apparrell. Of this towne one capten Smaley hath the command in the absence of capten James Davis. Mr. Wm. Wickham minister there, who, in his life and doctrine, give good examples and godly instructions to the people.

At Bermuda Nether Hundred, (seated on the south side of the river, crossing it and going by land, five myles lower then Henrico by water,) are one hundred and nineteen—which seate con-

teyneth a good circuite of ground—the river running round, so that a pale running cross a neck of land from one parte of the river to the other, maketh it a peninsula. The houses and dwellings of the people are sett round about by the river, and all along the pale, so farr distant one from the other, that upon anie alarme, they can succor and second one the other. These people are injoynd by a charter, (being incorporated to the Bermuda towne, which is made a corporacoun,) to effect and performe such duties and services whereunto they are bound for a certain tyme, and then to have their freedome. This corporacoun admitt no farmors, unles they procure of the governor some of the colony men to be their servants, for whom (being no members of the corporacoun,) they are to pay rent corne as other farmors of this kind—these are about seventeen. Others also comprehended in the said number of one hundred and nineteen there, are resident, who labor generallie for the colonie; amongst whom some make pitch and tarr, potashes, charcole and other works, and are maintayned by the magazin—but are not of the corporacoun. At this place (for the most part) liveth capten Peacldley, deputy marshal and deputy governor. Mr. Alexander Whitaker, (sonne to the reverend and famous divine, Dr. Whitaker,) a good divine, hath the ministerial charge here.

At West and Sherley Hundred (seated on the north side of the river, lower then the Bermudas three or four myles,) are twenty-five, commanded by capten Maddeson—who are imployed onely in planting and curing tobacco,—with the profit thereof to clothe themselves and all those who labor about the generall business.

At James Towne (seated on the north side of the river, from West and Sherley Hundred lower down about thirty-seven myles,) are fifty, under the command of lieutenant Sharpe, in the absence of capten Francis West, Esq., brother to the right ho'ble the Lo. Lawarre,—whereof thirty-one are farmors; all theis maintayne themselves with food and rayment. Mr. Richard Burd minister there—a verie good preacher.

At Kekuoughtan (being not farr from the mouth of the river, thirty-seven miles below James Towne on the same side,) are twenty—whereof eleven are farmors; all those also maintayne themselves as the former. Capten George Webb commander. Mr. Wm. Mays minister there.

At Dales-Gift (being upon the sea, neere unto Cape Charles, about thirty myles from Kekuoughtan,) are seventeen, under the command of one lieutenant Cradock; all these are fedd and maintayned by the colony. Their labor is to make salt and catch fish at the two seasons aforementioned.

So the number of officers and laborers are two hundred and five. The farmors 81; besides woe-

men and children, in everie place some—which in all amounteth to three hundred and fifty-one persons—a small number to advance so great a worke.

Theis severall places are not thus weakly man'd, as capable of no greater number, (for they will maintayne many hundreds more,)—but because no one can be forsaken without losse and detriment to all. If then so few people, thus united, ordered and governed, doe live so happily, every one partaking of the others labor, can keepe in possession so much ground as will feed a far greater number in the same or better condition; and seeing too, too many poore farmore in England worke all the yeare, rising early and going to bed late, live penuriously, and much adoe to pay their landlord's rent, besides a daily karking and caring to feed themselves and families, what happiness might they enjoy in Virginia, were men sensible of theis things, where they may have ground for nothing, more than they can manure; reape more fruits and profits with half the labor, void of many cares and vexacions, and for their rent a matter of small or no moment, I leave to your singular judgment and consideracoun, nothing doubting, but He (who, by his infinite goodnes, with so small means, hath settled these poore and weake beginnings so happily,) will animate, stirr up and encourage manie others cheerefully to undertake this worke, and will assuredly add a daily strength to uphold and maintayne what he hath already begun.

Seeing then this languishing action is now brought to this forwardness and strength, no person but is provided for, either by their owne or others labors, to subsist themselves for food, and to be able to rayse commodities for clothing and other necessities, envy it selfe, poisoned with the venom of aspes, cannot wound it.

Now, to drawe to a conclusion of this my poore oblacon, I would crave your Highnes' patience a little longer—and that you would turne your heart to a more heavenly meditacoun, wherein much joy and comfort is to be reaped and found, of all such as shall truly, sincerely and unfeynedly seeke to advance the honor of God, and to propagate his gospell. There is no small hope by pietie, clemencie, curtesie and civill demeanor, (by which meanes some are wonne to us already,) to convert and bring to the knowledge and true worship of Jesus Christ thousands of poore, wretched and misbelieving people, on whose faces a good christian cannot looke without sorrow, pittie and compassion, seing they beare the image of our Heavnelie Creator, and we and they come from one and the same mould, especially we knowing that they, merely through ignorance of God and Christ, doe run headlong, yea, with joy, into destruction and perpetuall damnation,—for which knowledge we are the more bound and indebted to Almighty

God, (for what were we before the gospell of Christ shined amongst us?) and cannot better express our duties and thankfulness for so great mercies, then by using such meanes to them, as it pleased him to lend unto others to bring our forefathers and us into the waies of trueth,—it is much to be mourned and lamented how lightlie the workes of God are now a days generallie regarded, and less sought after; but the worke of the world, as though they were eternall, hungered for, and thirsted after with insatiable greedines. But should we well consider, examine and search into ourselves, what we were, and now are, there can be no heart, (if not hardened as the nether mill stone,) but would even break itself to pieces, and distribute to manie poore soules some parte thereof, to purge them from their lees of synne, and to sette them in the right pathes of holines and righteousness, to serve the King of Heaven; by which meanes and God's holy assistance, no doubt they will soone be brought to abandon their old superstitions and idolatries, wherein they have been nursed and trayned from their infancies, and our greatest adversaries shall not taunt us with this reproach, "Whom of you have you wonne to christianitie?" What a crowne of glorie shalbe sett upon their heads who shall faithfullie labor herein, I leave to the enjoying of them, who shall endeavour unfeynedly to meritt the same. Finallie, as Caleb and Joshua in the verie heate of grudgings, murmurings, and assemblies of the children of Israell, stood stoutlie for the Lord's cause, commending the goodnes of the land they discovered, to the faces of their oppressors, and the easines to obtain it even to the perill of their lives, so many right ho'ble and worthie personages, *both here and in Virginia*, (whom generallie the most parte withdrew themselves, that the action was almost sunck downe in forgetfulnes,) have mightilie upheld this christian cause—for God, even our owne God, did helpe them. For neither evill reports, nor slanders, nor murmurings, nor backbitings of others, nor any disaster, did once dismay or hinder them from upholding thereof with their good reports, encouragements, and meanes yearelie sent to the planters, to nourish life and being in this zealous worke. I beseech God to raise up many more such, so zealous for God's glory, to forward the same—we have tasted of some fruits thereof. There are no great nor strong castles, nor men like the sons of Anack, to hinder our quiet possession of that land. God's hand hath been mightie in the preservacoun thereof hitherto; what need we then to feare, but to goe up at once as a peculiar people, marked and chosen by the finger of God, to possess it, for undoubtedly he is with us. And as for murmurers, slanderers and backsliders, a due porcoun shalbe given them for their reward. So the blessings of Caleb and Joshua shall fall upon all those that constantly

persevere to the end. Thus, craving your gracious pardon for my rude boldness, beseeching God to send you the fulness of his blessings in this world and in the world to come, I rest,

Your highness' most faithful and loyal subject,
JOHN ROLF.

THE MOTHER'S FAREWELL.

BY GODFREY UNDERWOOD.

Thy vow is in Heaven! the words thou hast spoken,
Have sprung from thy heart to be never repealed;
But as tender a tie has forever been broken
As that which thy trusting devotion has sealed:
Though Fancy her gayest of colors is weaving,
To picture thy future with visions of bliss,—
I know thou dost think of the home thou art leaving,
And bright though another, thou sighest for this.

I would not o'ershadow thy pathway of roses;
And fain would I suffer and sorrow alone,
Lest the grief that the harp of my spirit discloses,
Should wake into sadness the chords of thine own:
But the heart cannot stifle its throbbings of anguish;
The floods of the spirit will gush from their cell;
In the shade of my brow thy bright flow'rs may languish,
But gloom it must wear, as I bid thee farewell.

I have watch'd the young bloom of thy beauties awaken,
As wakes the gay life of the clustering vine,
And thought, when the temple of home should be shaken
Thy graces would mantle its mouldering shrine;
But another has come—and the hours are winging
Their flight to the goal that must doom us to part,
Yet I know that thy tenderest fibres are clinging,
Still firmly and fond, to thy place in my heart.

My heart was a fountain—and 'neath it there flourished
A flower bedewed with its tenderest flow;
My heart was an altar—and on it was nourished
A flame, that no love but a daughter's can know:
But the flower and flame to another are given,
And in his horizon new glories may shine;
Yet, blind to the star that has dawned in his heaven,
I know but, a Pleiad has fallen from mine.

Farewell! and when joy is alive in thy bowers,
And pleasure is gilding thy cup to the brim;
When life's verdure is crowned with the sunniest flowers
Then, double thy rapture by sharing with him;
But, oh! should thy moments in sorrow be numbered,
And waters of bitterness over thee flow—
Remember the breast where thine infancy slumbered,
And turn to that bosom the tide of thy woe.

God's blessing go with thee—the hand of another
Is leading thee forth from the home of thy youth;
But time's teachings will show thee the love of a mother,
Is matchless in fervor—unrival'd in truth.
God grant that the tears from my heart's fountain well-
ing,
May freshen the bloom of life's pathway, to thee;
Another's! my heart is with agony swelling—
Be as faithful to him as thou hast been to me.

THE COPY-BOOK—NO. VII.

Letter from Col. John Banister, describing the entry of the British under Arnold and Phillips, into Petersburg—copied from the original; never before published.

Richmond, 16th May, 1781.

MY DEAR SIR:

Notwithstanding I have written four letters to you, since I have had the pleasure of one from you, I cannot forbear to acquaint you of the late very distressing scenes that have taken place, at and near Petersburg. We were not, as I wrote you, visited by Arnold, in his first expedition into the country, but General Phillips, coming to Portsmouth with a reinforcement, enabled them to come up the river, with about 2,500, at a time when the militia were all discharged to about 1000. On Wednesday, the 24th, they approached Petersburg, by the way of my White-Hall plantation, (a) where they halted in the heat of the day, and refreshed; then proceeded at about two o'clock, to advance in two columns—one by the old road, leading to the church, (b) the other along the lane and across the ravine at Miller's old mill; here they received a fire from Captain House of Bak. (c) county, at the head of forty militia, which was supposed to do execution, but only a Jauger (d) was known by us to have been killed. Capt. House continued to retreat and fire, until he came to Taylor's mill, where he joined Col. Dick, at the head of 300 picked militia, who kept up a constant fire, and prevented their taking the heights for upwards of half an hour, but attaining these, they, with cannon and three times the force, dislodged Dick from his ground, but, notwithstanding, he made a regular and steady retreat through Blandford, and formed behind a battalion posted at Bollingbrook warehouse, (e) their right extending to Mrs. Bolling's gate, (f) their left to the

warehouse, their front the morass, opposite to the warehouse, terminating at Blandford bridge, (g) which Dick had taken up as his infantry crossed. This was our last resistance. The enemy advanced in front, their infantry and German Riflemen; against these, our battalion kept up a steady and constant fire, until they were ordered to retreat, which was not until four pieces of cannon from the hill, between Dr. Black's and Mrs. Bolling's, flanked them effectually; they then retreated in order, along the causeway, by the river to Pocahontas bridge, which they took up; but ascending the hill to gain the Heights, by T. Shore's house, (h) the enemy played their cannon with such skill, that they killed and wounded ten of our men. All of the wounded are since dead. Our cannon was served well from Baker's, (i) but the enemy's extreme caution, has prevented our getting an account of their killed and wounded; the former though, it is clear, was not less than fourteen. The latter were sent down the river in their gun-boats. By the way, these gun-boats are of infinite use to the enemy; bringing them up in force to the shallowest landing. They carry from fifty to eighty men. After our militia had gained the hill, they retreated towards Chesterfield court house, where they halted the next day. This little affair shows plainly the militia will fight, and proves that if we had force to have occupied the Heights, they would not with that force have entered the town. In consequence of this action, I was obliged to abandon my house, leaving all to the mercy of the enemy. The enemy, the next day, ordered the inhabitants to move out the tobacco, or the warehouses should be consumed with it. By the exertions of the people, the tobacco was removed, and by the soldiery burnt, and the houses spared, except Cedar-Point, (j) which was put in flames by a soldier without order. The day after this business, the whole army crossed the Appomattox, and then after burning the bridge,* proceeded to Osborne's, (k) and having there destroyed the shipping to a great amount in value and number, and shipped off the tobacco, they marched on to Manchester, where, on Richmond-hill, we remained with a superior force, (I mean to the detachment sent for this purpose,) quiet spectators of the destruction of all the warehouses and tobacco, with several dwelling-houses adjoining. They marched that evening to Osborne's, and on Tuesday, the 31st, they embarked at the Hundred, (l) and sailed down the river, as far as Burwell's, (m) where upon the arrival of an advice-boat, they all stood up the river, and arrived in the night of last Thursday, again in Petersburg, and I was again obliged to retreat, leaving them in possession of all my estate. They have not as yet burned my mills, but have taken all the bread and flour, to the amount of £800, or £1000—eleven of my best negroes the first time, and now I expect they will get the rest. Your man I sent to Amelia. I believe he is yet safe. Your fa-

ther received the following protection from General Phillips:

"It is Major General Phillips' positive orders, that no part of the property of Col. Theodorick Bland, receive any injury from his Majesty's Troops.

J. W. NOBLE,

Aid de Camp, Major G. Phillips.

April 25th, 1781.

"Major General Phillips is very happy to show this favor, on account of Col. Bland Junior's many civilities to the troops of convention, (n) at Charlottesville."

The troops still continue at Petersburg, and expect Lord Cornwallis from Halifax, where the van of his army, under Tarleton, is arrived.

It is very clear, without naval aid the enemy will be possessed of the lower country, as the people are tired of the war, and come to the field most reluctantly. This added to our exhausted finances, and bad councils, with a powerful enemy in the country, are prognostics of no favorable complexion. In my last, I touched largely upon the conduct of our Eastern friends, in this day of peril, compared with our conduct to them, in their day of trial. Greene is in South Carolina, but how employed, we are not informed. Before you receive this, it is probable the enemy will have penetrated to Fredericksburg, and have destroyed all the tobacco in their route. I beg to hear if we are to expect any assistance from the eastern confederates, or our allies. If you write, Geo. Nickolson, who is in Philadelphia, will give a ready conveyance to the letter. Jack, who is the only one of my family with me, joins in affectionate regards to Mrs. Bland, and Bob, with your sincere friend,

J. BANISTER.

I begged you, in my last, to send the newspapers.

(n) Burgoyne's army captured at Saratoga.

SONG.

WRITTEN IMPROMPTU.

How cold are they who say that Love
Must first be planted in the heart,
And cultured by the hand of Time,
To make its leaves and blossoms start!
No! 'tis a plant that springs at once
Up to its full and perfect form;
Unlike the willow or the oak,
It bends not, breaks not in the storm.

How cold are they who say that Love
Must, like the diamond in the mine,
Be sought with care and polished well
Ere we can see its beauties shine!
No! in the soul's blue Heaven it springs,
With beams that Age can never mar,—
Complete, eternal, brilliant, pure,
As Evening's first, rejoicing star!

P. BENJAMIN.

A LEAF

FROM AN UNPUBLISHED MANUSCRIPT.

BY J. N. REYNOLDS.

Visit to the Volcano of Antuco, in 37° South latitude. Inexhaustible magazine of combustibles, contained in the Andes; Tremendous effects of volcanic action in that region; Return to Los Angeles.

On November 12th, having succeeded in procuring a guide, as well as fresh horses from the neighborhood of Antuco—one of the border villages of the province of Concepcion, Chili—and provisions for five days, we started for the volcano, which is situated among the Cordilleras, and from whence we were only twenty-five miles distant. The road, stony and irregular, wound for most of the way along the banks of the La Laja, sweeping chiefly through a narrow valley, which afforded few attractive spots for cultivation. The precipices on either side are high and frowning, and the traveller, at each step of his progress, beholds some new and picturesque feature of the volcano opening on his view. Within nine miles of Antuco, we passed an old castle, built in 1810, as an outpost for defence against the mountain Indians, but now in a state of utter dilapidation.

No pen can do justice to the scenery upon which we were now entering. Westward, the valley gradually sank into and was lost in the plain at the base of the mountain; while to the East, the eye grew weary of scaling the stupendous eminences towering one above another, until their summits were "swathed in the stooping clouds."

At five o'clock, P. M., we were within a league and a half of the base of the volcano. Here we found quarters for the night, in a little fortress, commanding an important pass on the road of Pinchera, the mountain robber, and occupied by thirty-six men. Such were the advantages combined in this post, that even with this handful of soldiers, we might, in case of attack, have set the mountaineers at defiance, however superior in point of numbers. The latter part of the evening was not very pleasant, and the higher parts of the mountain being obscured, our prospect was more circumscribed, though still interesting. In ascending the stream, we had observed for the space of several leagues, both on elevated positions and in the water, immense quantities of rounded stones of volcanic origin, which we knew could not have been projected from the active volcano of Antuco. We had therefore looked carefully, as we advanced, for the evidence of some extinguished crater. On reaching the fort just mentioned, we had discovered that the spot on which it was built, and the land for some distance around, constituted the site of a once glowing abyss, which had long ceased to burn.

The river La Laja, which bursts down from its source with astonishing rapidity, and rushes through a channel of decomposed lava, across the base of the present volcano, seems to divide the old volcanic ruins into two nearly equal parts. On either side of the river, the walls of the ancient chasm yet remain—they are of immense height, and still form auxiliary portions of the main elevation.

The hollows between these gigantic fragments, are covered to a considerable depth with cinders, ashes, and calcined rocks, the surface of which, is slowly crumbling into soil, and becoming capable of vegetation. From east to west the base of the volcano must have been at least fourteen miles in extent. The massive materials grouped within this interval, constitute what may be termed secondary mountains—smooth externally, and clothed with a coarse grass. The sides of the crater, have doubtless, at some remote period, fallen in and smothered the subterranean fire; while the river first making its way over, has afterward worn a deep channel through the wreck. We examined carefully the dismembered ruins, ascended all their elevations, penetrated their lowest depths, and found that from the bed of the stream to the loftiest pinnacle, all are composed of the various products of volcanic action tumbled together in the greatest imaginable confusion. While standing on a commanding point of the scorched and vitrified pile, we noticed, still farther in the recesses of the mountain, the mouth of an immense cave. Its position was near the base of the principal ridge and most elevated part of the Andes in Chili—save only the Peak of Descobozado. The opening seemed to be situated about one thousand feet above the source of a mountain stream, tributary to the La Laja, which it joined near the fort in a leap of at least two hundred feet over a perpendicular precipice. From the bottom of this steep, the white foam continually sprang, falling like a shower of snow on the dark foliage of a grove of cedars which overhung the banks of the river.

On the thirteenth of November, we had prepared for an ascent of the volcano; but, as it commenced raining, and thick clouds were veering about the summit, we were compelled to defer our expedition. Unwilling to lose the time, however, we set off for the base of the main ridge; determined, if possible, to reach and enter the cavern we had descried on the preceding day.

Our route lay eastward, along the margin of an impetuous torrent, which dashed downward at an angle of at least twenty-five degrees. Substances which had, like those already adverted to, manifestly been subjected to the action of fervent heat, strewed our path in the same singular disorder. Rocks, from one to a thousand tons in weight, lay piled in heaps, probably as they had alit after being ejected by the convulsive throes of the laboring mountain. In other places, immense hills of *Tufes* rose before us. All that we saw indicated the eruptions to have been of ancient date. In some spots considerable soil, vegetation, and even several species of trees of large growth, such as the roln, coyque meu, &c., had sprang up from the midst of desolation.

After toiling on for more than a league, we reached the base of the main ridge, when a scene was presented, on which a connoisseur in volcanoes would certainly have luxuriated. At the head of a stream, formed by the numerous little rivulets, which dash, mingling and foaming, down the sides of the acclivity, is an area of perhaps one hundred acres, perfectly level, without timber, destitute of shrubs or large stones, and covered with grass. Here, evidently, had once been the funnel of a crater. On three sides, the walls of the abyss were still standing, composed of hornblende rock: In many parts, they towered almost perpendicularly, to

the height of five thousand feet, and were partially calcined and cracked in all directions; the fissures, generally, however, running parallel with the sides. These openings, doubtless, had once been subsidiary outlets to the fire and steam generated below. Immense shelving pieces of the rocks and mountain, which have been detached since the falling of the volcano and filling up of the main crater, lie strewn in picturesque masses around. One of these we ascended, climbing from stone to stone, for about one thousand feet to the mouth of the cave. This we found was divided into two apertures, which had, probably, in other days, acted as safety-valves to the mighty engine below. They were smooth and black as the chimney of a furnace, and descended so suddenly to the northeast, that although we had provided ourselves with torches and every thing necessary for the purpose, we found it impossible to enter them. It was now late in the afternoon, and as the rain began to fall in torrents, we hurried back to the fort. The wind was from the north, which, it may be here mentioned, invariably brings foul weather in Chili, where the northern and southern are almost the only winds known to blow.

It has been matter of inquiry, whether volcanos are most active during storms, or if they be in any manner affected by them. As our position was at the foot of one, at this period, probably, the most active on the globe, we enjoyed a good opportunity of making observations in reference to this subject, and accordingly had watched nearly all the preceding night, in order to ascertain the truth. The weather at that time was unsettled. The wind was gentle, and we remarked that the clouds were darker and heavier around the summit of the mountain, than about other peaks of even greater altitude, forming a curious contrast to the stream of fire issuing from its crater. As night gathered, the wind began to blow powerfully from the north, and a scene occurred which can never be erased from our memory. A violent conflict of the elements, witnessed from an elevated position among the Andes, is terrific and even awful. Perhaps, in this instance, there was something in the loneliness of our situation, which added to the natural grandeur of the spectacle.

The wind swept with exceeding violence up the valley of Antuco, from the point where the eminences subside entirely, and the country expands into a vast plain. Below, the rain continued to rush down in sheeted floods, while upon the mountain, the tempest expended itself in drifting snow and hail. During the greater part of the night, lightning issued in one tireless flash, from a cloud that seemed to gather, concentrate, and repose, on the apex of the volcano. The peals of thunder were fierce and deafening, as they reverberated along those everlasting colonnades of rock—"the masonry of God"—whose spiral capitals were probably surrounded by the blue ether, far above the region of storms.

"The sky is changed—and such a change! Oh! night,
And storm, and darkness, ye are wond'rous strong,
Yet lovely in your strength, as is the light
Of a dark eye in woman! Far along,
From peak to peak, the rattling crags among,
Leaps the live thunder! Not from one lone cloud,
But every mountain now hath found a tongue."

At intervals, the flames of the volcano might be seen, though generally they were veiled by the drifting snow. Meanwhile, the falls of the descending torrents, which were swoln by the rains and rising every moment, bearded the mountain with foam, while the roar of their dashing waters served as an interlude at each pause in the loud sport of the elements.

On the morning of Sunday the 16th, the storm in the valley had in some degree abated. The thunder and lightning had ceased, but the snow still fell and drifted on the most lofty elevations. The day was unfavorable for our projected attempt, and from other considerations, we felt disposed to rest. In the night the water had run under and over us, nor were we able during the day, to accomplish the drying of our clothes. As may be supposed, the increased flood of water in the La Laja, pouring itself through a narrow channel, together with the falls near the fort which were doubled in volume, kept the valley in a continual foam.

Monday the 18th, brought us a clear sunrise, with a southerly wind. The smoke and fire from the volcano, seemed to rise from a mountain of snow, the recent heavy fall having completely enveloped it in a white and dazzling mantle, so that all we could hope to accomplish, was an excursion about its base to examine the escoria or lava, and visit the lake which forms the source of the river La Laja.

At the very moment we were ready to depart, the sentinel reported that he saw four of Pinchera's men, in the pass along which we intended to travel, evidently spies, reconnoitering to ascertain the practicability of passing the fort. They were seen but for an instant, according to the sentinel's account, and some doubts existed in our minds as to the reality of their appearance. The little fortress, however, was put in a condition for defence, and ammunition served out. As it stopped our proceedings, suspicion was with us equivalent to the actual knowledge of danger; and it was clear, that if it could not be removed, the object of our journey would be defeated. We, therefore, proposed to the officer, to take one soldier and proceed on horseback to reconnoitre.

Having arrived at the point proposed, about a league from the fort, we perceived the tracks of horses, and in one or two places among the bushes, the extinguished remains of small fires; but both bore evident marks of not being of very recent date. It seemed, therefore, certain that if persons had been seen in this direction during the morning, they must have been on foot, and if so, not very likely to hazard an attack alone and unsupported.

We passed the remainder of the day on the escoria, at the foot of the volcano. Here, all around us was new, curious, and interesting. The first eruptions from this summit, must have been of a vast and terrific character. The river passes between banks of decomposed lava and over a bed of escoria, which latter, making in upon the opposite mountain, has raised the stream far above its original channel. The lower lava is more solid and may be compared to massive pot metal. In some places it forms a wall sixty feet high, upon the banks of the river, and in a few instances along the shore, where it appears to have been cooled by the water, presents a side surface as smooth and regular as that of an artificial embankment.

So much has the La Laja been elevated in two places by these eruptions, as to form in each instance, a beautiful cascade, the spray of which is almost constantly spanned by the rainbow.

In the later overflowings of the vast caldron, the liquid lava appears to have made its way not only over but through the old formation, literally melting a passage through the solid mass. At one point it seems to have urged its course by an undercurrent from the crater to the very banks of the river, a distance of at least two leagues, where it appears to have emerged for the first time, and is piled up in shelving flakes, thin, but of immense superficial magnitude. The lava has descended in two currents, one on the north, the other on the northwest side of the mountain, and both passing into the river. One of these streams flowed along the windings of a valley, and the space between them is occupied by volcanic remains; but of so ancient and decayed a character that all traces of layers marking distinct eruptions are lost in one confused mass of burnt materials, belonging to some older volcano, from the ruins of which, the existing one has uplifted its burning crest. While engaged in making these observations and obtaining specimens for our collections, at the base of the mountain, we took the precaution to have our horses kept near us, and a servant so stationed as most effectively to guard against surprise. In the evening we returned to the fort.

On the 17th of November, we again started with the purpose of visiting the lake to the north of the volcano, the weather being still too inclement for our meditated ascent. We proceeded on our former track until we reached the farthest point attained on the previous day. Beyond this, the beds of lava were, in extent, more enormous than any we had before seen; and we felt how difficult it was to imagine, how impossible adequately to describe, the tremendous commotions that must have shaken and rent the solid walls of that gigantic furnace, when the fused volumes leapt in blazing cataracts from its summit.

As the river, as well as the range of mountains to the north, assumed a more easterly direction, the space between the mountain and the former was decreased, and the channel of lava became more narrow and massive in proportion. In one place, the river descended for almost half a mile upon an inclined plane of escoria, at an angle of more than thirty degrees. The stream, here, is most impetuous, flinging up as it flies a perpetual cloud of spray. On arriving on the northern side of the lake, at the head of the pass, our guide positively refused to accompany us farther. He said we had now passed the worst portion of the road—that within a short distance we should see the Pampas of Buenos Ayres—that the road was level and sandy—and that only one elevation, which was also a slight one, lay between us and the Pincheras. If we fell in with an advanced party, retreat would be out of the question, as we were already more than four leagues from the fort.

Having procured fresh horses from the neighborhood of Antuco—animals raised among the mountains, and which had given proof of their excellence in rough places the day before—we felt little apprehension, although alone, in journeying onward.

If we had before been deeply interested in examining the layers of lava, in drawing conclusions from their

position of the order of time in which they had been formed, and in contemplating the enormous power necessary for their production and ejection; here the imagination itself appeared unable to conceive the magnitude of the operations which had occasioned the ruin we beheld. To suppose one side of a mountain composed of solid rock, suddenly torn off by an explosion, would hardly account for the mass of heterogeneous material which lay around. The quantity of lava was not by any means so large as in the two channels already mentioned; but rocks of vast size, split asunder, and which had, apparently, been flung from their foundations like pebbles from a sling, were scattered thickly about us—some partly melted and partly calcined. We noticed one crag more than one hundred feet in length and twenty in diameter, which, from the depth to which it had indented the spot where it fell, must have been hurled high into the air from its original position. In the vicinity and upon the edge of the lake, the rocks also appear to have been affected by fire—in some parts, fragments having been blown off, and in others, the summits partially calcined. They presented as beautiful a structure of basaltic columns as can be imagined; being all perpendicular, five-sided, and generally about two feet in diameter. In the water, which was singularly transparent, the ends appeared as regular and well jointed as if they had been hewed and placed by the hand of the artist. Unquestionably, they are in their primitive position. The lake, which is exceedingly beautiful, spreads from northwest to southeast, round the base of the volcano, while an arm of its waters stretches away toward the north to a considerable distance.

To us, it seemed certain that this sheet of water had been accumulated in consequence of the lava running against the mountain on the other side, and choking the channel of the river; or, as it may be more appropriately termed here, the huge torrent of the hills. The arm or inlet which runs up to the north, and a similar one which branches out in a southeasterly direction, have probably been the beds of tributary streams. According to tradition, the lake has no bottom. We had no means of fathoming it, and could only estimate its depth by comparison. From the surface of the lake to the point where the river ceases to flow on lava, we found the distance to be one league and a half. In addition to the several perpendicular falls and angular descents already designated, the general current is very rapid in its downward course. By taking the mean declination of the stream, from the superficies of the lake to the place where the lava terminated, and then the side of the angle, with certain allowances, for the depth of the lake, we arrived at the conclusion that it could not be less than one hundred fathoms or six hundred feet in the deepest part. This may appear incredible, nevertheless we hazard the opinion, leaving it for future and better judges to correct or confirm it. While we speak of the lava as being six hundred feet in thickness, it is proper to remark that the volcano in the part referred to, is exceedingly steep, and that the fiery matter thrown from its summit has been forced down into a narrow channel, where the lake is formed.

In the afternoon we retraced our steps for more than two leagues to the point whence we proposed commencing our ascent of the volcano. The day was

again unpropitious, and the sky darkened by heavy masses of tumultuous clouds; but having finished our excursions about the base, we were resolved, if possible, to survey the wonders of the mountain itself. We saw no indication of a path, and continued to toil upward, from one eminence to another, without any settled route, as inclination or opinion suggested. It was our design to make our way about a league with horses, after which we knew we should be compelled to ascend on foot and without a guide, as no native had been known to venture beyond the point alluded to. At six o'clock in the evening, having passed places where a single false step of our horses would have precipitated them and us hundreds of feet below, we arrived at the spot where we intended to pass the night, and whence we were to start on our unassisted toil on the morrow. We had now gone too far to retreat, although the lowering aspect of the skies promised little for the coming morning, and still less for the comforts of the night. After securing our horses near us with lassos, and making a rude bed of our saddle gear, we retired to rest at an early hour, under such protection as was afforded by a large shelving rock. If a cloud be visible in this vicinity, it will invariably be seen hovering about the crown of the volcano. The immense volume of steam constantly ascending and rarifying the atmosphere, seems to be the cause of attraction. The rain soon began to gush down plentifully and fast. At midnight it was succeeded by a snow and hail storm, which continued till morning. The crater, as if it acknowledged a secret sympathy with the elements, was more active than it had been during the day, discharging, at short intervals, gushes of smoke and fire, with explosions like those of heavy artillery.

In the morning every thing about us was swathed in snow, and our prospect very limited. Indeed it was with great difficulty, and not a little apprehension, that we managed to descend; the wind being so powerful that we only kept our seat in the saddle by great exertion. We passed the greater part of the day at the fortress; but seeing no indication of fine weather, and the late snow being an effectual bar to the prosecution of our adventurous journey for the present, while, above all, we were totally destitute of provisions, we returned late the same evening to Antuco. We found the town restored to a state of comparative quiet; two or three families now venturing to remain in their own houses during the night. With one of these we took up our lodging.

Previous to our departure from Los Angeles, we had despatched a servant to Concepcion on business. On our arrival at Antuco, we found that he had arrived there the evening preceding. He was the bearer of two letters, forwarded by the British Consul, from the governor of Valparaiso—one written in his official capacity, and the other a friendly private communication, recommending us to the protection of General Prieto, in our southern excursion, under whatever circumstances we might be placed. In these letters it was announced that they were given at the solicitation of Mr. Hogan, the American consul general. The English consul sent us also a file of British papers—which, though a year old, were the latest received. They contained news for us, and served to enliven the few days we were necessitated to remain inactive at Antuco.

On the 19th, it rained during the entire day in the town, and snowed heavily on the Cordilleras. The 20th was still worse—and in the night the snow fell so as not only to cover the lofty summits, but also the low hills. Sunday, the 21st, brought us a clear morning. The wind blew from the south, and our hope of climbing the mountain once more revived, though we were aware the toil would be much increased by the accumulated masses of new fallen snow. During the last two days we had witnessed the performance of a funeral ceremony, which, so conducted, is a spectacle which must always appear singular, and even disgusting to a foreigner.

It is the custom of Chili, when a child dies, under the age of seven years, instead the sorrow usually and naturally felt at such times, to make the bereavement an occasion of merriment—in short, to give a feast and a dance. An infant, but a few months old, had died in one of the little mountain huts, and, for some reason, the house we occupied was selected for the performance of these, as it seemed to us, unnatural rites. Much preparation was made as the day advanced—one bringing bread, others a few chickens, and each guest contributing something throughout the circle of friends. In the afternoon the little corpse was brought in, dressed up more like a living subject for a May ball, than a tenant for the grave. It was seated erect in a chair, which was placed on a table at one end of the room. The hands were crossed, tied together with a ribbon—and held between them a little bunch of flowers. Over the head was suspended a piece of muslin, which extended from the chair to the ceiling, and being brought forward, fell in folds like a curtain. Around the brow was twined a wreath of flowers, and an arch of the same compassed the front of the table. Various other ornaments of a simple character were also distributed about the body. In the evening there had assembled, from rock and dell, not less than sixty persons, of all ages—and for at least one night and the following day they apparently forgot all sorrow, in their cheerful and favorite dance, with its accompaniments of the song and the guitar. With the conclusion of the feasting and dancing, they seemed to consider the last offices due to the dead were finished, for not a relative attended the deceased child to the place of interment, nor was there observed throughout, what would be considered in other countries the least show of decorum or solemnity.

On Tuesday, the 23d of November, the weather being fine, and our limited time precluding longer delay, we set forth on the second attempt to scale the mountain—and after taking dinner at the fort, arrived by four o'clock, P. M., at the place where we had slept a few nights previous. On this occasion we brought no guide, as we found them timid and useless—and only a single attendant to take charge of the horses. As the afternoon was favorable, we were enabled to ride a mile beyond the point where we had dismounted on our former excursion. Leaving our steeds to the care of the servant, we set out on foot to ascertain, if possible, what route it would be most judicious to pursue in the morning. The snow in some places was of great thickness, and as the day had been very warm, we sunk to a considerable depth in plunging through it.

At night we slept by our horses, on the W.S.W. side of the mountain. There was a constant discharge

of flame and smoke from the mouth of the crater, accompanied by occasional convulsions of the earth during the whole night.

By four o'clock the following morning we had commenced our difficult and fatiguing journey; now clambering over rough piles of lava, and floundering through the deep snow which had drifted between them. Our thermometer stood at 53° at starting. It soon fell to 49° ; the snow became more compact at 44° ; at 39° the whole surface of the lava was covered with it, and sufficiently hard to support our weight; while at 30° , the lowest point registered in our ascent, it became slippery. As the sun rose, without a vapor to dim his brightness, our view of the Pampas of Buenos Ayres to the east, became at once interesting and extended, until the horizon closed the view, as if resting in the distance on the bosom of a waveless sea. The range of mountains to the north and south, with the exception of a few towering points, now appeared below us. The lake, also, was in view eastward of the volcano, and seemed to encircle its base with a belt of azure; while the whole tract of country toward Concepcion lay spread out beneath us, girdled by its maritime ridge, which resembled a dark, narrow line, skirting the western horizon. The valley of Antuco, dwindled to an inconsiderable ravine, seemed immediately at our feet; while the river looked no larger than a meadow rivulet from the height at which we now surveyed it. The difficulties of the ascent multiplied at every step, and we were compelled frequently to cling with our hands to the projecting rocks, and thus draw ourselves up from point to point. The last three thousand feet of the acclivity must have formed an angle, varying from forty to sixty degrees, with the horizon. The volcano continued very active, "letting off its steam" at intervals of about five minutes, and discharging vast quantities of stones and ashes, which sometimes came rolling by us down the steep with great velocity. With cautious steps we at length climbed so near the summit as to be amid the suffocating vapors emitted from the fissures in the rock, and amongst the loose unstable fragments forming the apex and mouth of the principal crater. At each outburst of the volcano we were enveloped in smoke, and as we advanced still higher, the heat became insufferable. For the last fifteen hundred feet the surface was destitute of snow, and the stones, too hot to be touched by the hand, crisped the soles of our shoes as we pressed them. It may be believed, that we could have cooked our breakfast upon the crags near the fissures whence the heat escaped, when it is averred, that one end of a staff was charred, while the other was held in the hand. The frequent and evidently increasing discharges of flame, smoke, and ignited missiles from the burning abyss, together with the hoarse grumbling, which seemed to rise as from the bowels of the earth, forbade our remaining longer in our present position. Added to this, at the height we had attained, respiration was difficult from the rarity of the atmosphere, and this inconvenience was much increased by the heat and smoke; so that our cheeks grew pale and our lips blue, accompanied by faintness and sickness.

Having made such observations as we deemed interesting and important, we erected, at the highest point attained, very near the edge of the crater, a pole brought with us for the purpose, and planted the Ame-

rican colors, between the spot where the smoke issued from the rents in the rocks, and the main summit. At this place the thermometer, which had once fallen as low as 30° in our ascent, when held aloft in the hand rose to 115° ; while the stones discharged from the chief opening flew far over our heads, and were some of them picked up in our descent, still too hot to be touched with impunity. One of these we took with us as a memento. The exact width of the crater we had no means of ascertaining, as the mouth of it was constantly sending forth dense columns of bituminous vapor. We estimated the height of the volcano at ten thousand feet above the level of the river; and the distance we had climbed at least three leagues.

The sun shone with unshadowed splendor, and the day being comparatively calm, the snow wasted rapidly. Ere we had descended a mile, it became too soft to bear us, and we sank to our knees, often deeper, at every step. Owing to the steepness of the declivity, we sometimes fell, and were for a moment submerged in the drifts. Our route downward being somewhat more westerly than that by which we had mounted, we had an opportunity of examining a new crater which had burst out and emitted large quantities of lava from the side of the mountain—probably during the last considerable eruption, in the year 1820. This crater has discharged its current of lava into the circuitous channel already described as communicating with the river. As it was now fireless and cold, we entered and surveyed the chasm on all sides. It seemed to have been broken through an almost solid rock, and inclined toward the mouth of the great tunnel. The sluice through which the fused lava had been poured, looked as fresh, and nearly as smooth and regular as if formed by the chisel of the mason. The portion of scorching fluid forced from this crater must have been comparatively small, it having flowed only for the space of a mile over the anterior layer.

On reaching our horses, we resolved, although much fatigued, to hasten on to Antuco that night, our provisions, as well as the provender of our steeds, being exhausted. It was very late when we arrived. The little village was wrapped in the mournful quiet of desertion, scarcely an individual being found in the houses; so that, wearied and hungry though we were, it was impossible to obtain any refreshment until morning. We learned, next day, that the frequent explosions so much resembling the sound of artillery, which we had heard while ascending the volcano, had been mistaken by the affrighted villagers for the din of conflict. Imagining that Pinchera and his gang had attacked the little fortress, and knowing that, should it be taken, they must if found, be devoted to pillage and outrage, they had fled to the mountains for concealment. The accounts we brought restored confidence, and during the day many of the inhabitants returned to their homes and occupations.

During three days after our arrival at Antuco we were confined to our apartments. The dazzling whiteness of the snow, rendered still more intensely brilliant by the reflected sunbeams, had made us partially blind. Our eyes, much swollen, became excruciatingly painful. Our lips blistered, and the skin peeled from our faces, as though from the effect of scalding. On recovering from this attack, we returned to Los Angeles, where

General Prieto was about to hold a conference with some Arancanian chiefs, from whom we hoped for leave to cross the Bio Bio and visit their country.

Perhaps no country on the globe contains a larger quantity of nitrous, sulphurous, and bituminous substances than South America; and the number of active and partially extinguished volcanos in this portion of the Cordilleras, is probably not exceeded in any part of the southern hemisphere. Molina says there are fourteen, in a constant state of eruption; but this estimate is exaggerated; there not being, we think, more than seven in a state of activity within the range of mountains bounding Chili to the east. The expired volcanos are, however, almost innumerable, and there are many which are only active at distant intervals. From natural causes, the fiery element must ever abound in this region. The materials which feed it are, apparently, inexhaustible. Sulphur and sal ammoniac in vast quantities, are here found, and furnish a magazine of fuel, which it would take ages on ages to consume.

The greatest eruption of which there is any record, occurred in 1760. The volcano of Peteroa formed for itself a new crater, and so immense was the discharge of lava and ashes on this occasion, that the valleys for leagues around were filled up, and the whole country in the vicinity buried, as it were, beneath the boiling and burning masses. The waters of the river Zingoraca rose far above their level, and the channel of the Lontere was dammed by the fragments of a mountain, one side of which was blown off by a tremendous explosion. Volcanos, worthy to be called such, are only to be found in the Andes. There is only a single small one apart from the mountains; Molina says two, and calls the volcano of Villacauca one of them; but, as will be shown hereafter, this is a mistake. The latter may be seen from a great distance, perhaps one hundred and fifty miles, and is much more than fourteen miles in circumference. It rises out of the main side of the Andes to a great elevation, and the lake at its base is the source of several rivers.

MRS. SIGOURNEY.

Mr. White: I furnish, according to promise, the little gem for your "Messenger," for the present month, from the pen of that sweet writer, Mrs. L. H. Sigourney. It has never, I believe, appeared in print before, and was written by that lady, in my album in the summer of 1836. During a short tour "down east," on my return, I called upon Mrs. S. at her residence in Hartford and spent a most delightful morning in her company—the recollection of which can never pass away from my memory. The lines, it will be perceived, have reference to that romantic portion of Pennsylvania, whose beauties, and whose tragic recollections inspired the "Gertrude" of Campbell and the "Zin-sendorff" of Mrs. Sigourney.

Yours, very respectfully,

J. C. McC.

WYOMING.

Fair beauty, hast thou, classic dell!
Of winding stream, and mountain swell,—
And storied legend-stern and high,
Of ancient border chivalry,
And ashes of the brave that sleep,
In hallow'd urn 'mid foliage deep.

Wyoming!—oft the traveller's eye
Doth scan thy charms with ecstasy,
For the full tide of minstrel-song
Hath flowed thine echoing haunts along,
And martyr-courage, bold and free,
Bequeath'd its laurel crown to thee.

Hartford, Conn., August 8, 1836.

J. N. REYNOLDS.

[The readers of the Messenger have been furnished from time to time, for several years past, with notices of the preparation made for and the objects proposed to be attained by the South Sea Exploring Expedition. The vessels, composing the squadron, have long since sailed on their mission. As to the causes which separated Mr. Reynolds from an enterprise, called into existence by his own efforts, they are now pretty well understood, and need no comments at our hands. The present may not, however, be an unfitting occasion to give place to the following documents, so highly honorable to Mr. Reynolds, together with the comments made by the *New York* and *Ohio* press on the same. We give them a place, because they belong to the history of that enterprise, and as an act of justice to its author, without intending ourselves to depart from that strictly neutral ground in political controversy, which we have endeavored heretofore to maintain. We are not certain that the department did not do Mr. Reynolds a favor, under all circumstances, in withholding from him a position, which by common consent of the whole country, he had so nobly won. Without, however, saying more on our part, we give place to the paper alluded to, which has lain since August last, in our drawer.]

Ed. So. Lit. Messenger.

[From the New York Enquirer.]

THE EXPLORING EXPEDITION.

In publishing the following communication from the Western members of Congress to the President, touching the position of Mr. Reynolds in the *Exploring Expedition*, we cannot omit to say, that whatever may be the final course of the Department in regard to that gentleman, nothing can deprive him of the merit that attaches to the originator, the defender, and the successful advocate of this important measure. The miserable imbecility, the dogged and asinine obstinacy of Mr. Secretary Dickerson, and his inveterate hostility to the expedition, Mr. Reynolds has kept before the public—adhering with the most laudable perseverance to its original objects, and resolved that they should be duly consummated. *But the sailing of the Expedition is the triumph of Mr. Reynolds.* To him the people will ascribe all the credit; and if Mr. Reynolds should be deprived by the administration of the place which belongs to him in the expedition, the people will look to him as its author and successful champion, and to him all the glory of it will ultimately revert. Nothing can deprive Mr. Reynolds of this honor, or this consolation.

By refusing him any participation in its labors, the administration may weaken and cripple the enterprise, but they can neither crush nor injure Mr. Reynolds.

We annex the communication to which we have referred above:

[COPY.]

To His Excellency the President of the United States:

The undersigned, members of Congress from the West, beg leave once more, very respectfully, though earnestly, to call the attention of the administration to the claims of J. N. Reynolds, Esq. to a prominent place in the *Exploring Expedition*. This measure was early and warmly supported by the West. It was originated and first called to the attention of Congress by one of

her own sons. She still continues to feel an interest, and still indulges the hope that it may be so equipped as not to disappoint the just expectations of the country; she still hopes to see it depart in skilful and experienced hands, unshorn of its naval or scientific strength. Congress has made repeated appropriations, which leave no doubt of the hold the expedition has upon the science, the intelligence, and pride of the nation.

The whole Ohio delegation, as well as many other members of the House, immediately after the passage of the law authorizing the measure, addressed communications to the late Executive. After congratulating him on account of the interest he took in directing the Expedition to be fitted out in a manner worthy "our great republic," they proceeded to call his attention to the claims of one, who had done so much in calling public attention to the importance of the enterprise, and in urging its adoption by Congress. The friends of the measure knew the important part Mr. Reynolds had acted, and they were influenced not more by a sense of justice than a desire for the success of the enterprise, in asking for Mr. Reynolds a prominent position in it. The commercial interests of the United States in the seas to be visited, are well known to the Executive; they are immense, and still susceptible of great extension. In asking that Mr. Reynolds be placed at the head of the Civil Department attached to the Expedition, was only asking in other words that he should receive the appointment of Commercial Agent. Until recently, many of us had supposed that station had been assigned to him; that he ought to have it, and be authorized to write the official account of the Expedition, we have never doubted. That he is eminently qualified to perform these duties, under the sanction and regulations of the Department, cannot be doubted; that he has abundantly earned the distinction, which they would confer upon him, will admit of as little question.

Mr. Reynolds has uttered no complaints to his friends, and it has not been until since the passage of the last Bill of Appropriations, that they became aware of the actual position the Secretary of the Navy had assigned him; and not even then, till the discussions in the House seemed to leave some doubt whether he was to accompany the Expedition in any capacity, had led to direct inquiries upon the subject. Any officer conversant with the history of this Expedition, and knowing the relation Mr. Reynolds has maintained to it both in and out of Congress, who should object to his participating largely in its labors, would, from that fact, in the opinion of the undersigned, be himself unfit to command; and the interests of the Expedition, and the honor of the country would, in all probability, be best consulted by his dismissal, and the supplying of his place by one of more just, liberal, and enlarged views.

The undersigned have learned with deep regret, that Mr. Reynolds, the originator, the indomitable advocate, who has for so long a time persevered against every discouragement, whose knowledge upon the subject has been so fully appreciated by committees and members of Congress, and has enlisted so large a share of public feeling throughout the country—has received from the Department, the meager, unmeaning appointment of "Corresponding Secretary to the Commander,"—to perform such duty on the Expedition as the justice or caprice of the commander might direct; while the names and duties of all others composing the scientific corps, as well as juniors in command, were conspicuously named in the general instructions for the guidance of the Expedition, were thus recognized by the Department in a document to be preserved in all coming time: but in that list, and in that document, the name of J. N. Reynolds, we learn, is no where to be found; that no duties were assigned him by the Secretary; in a word, that the action of the Department, whether intended or not, would go to show that Mr. Reynolds was not recognized by government, or known in the enterprise except only so far as he had an order in the form of an

appointment from the Secretary, directing him to report to the commander for duty.

The undersigned forbear further comment upon this subject, and content themselves by protesting in the name of their constituents, the people of the West, as well as in their own names, against the continuance of such obvious injustice to their fellow-citizen, who has, in their opinion, earned far different treatment at the hands of the Government. They are aware that many difficulties have thus far attended the fitting out of the Expedition. Upon these difficulties they feel no disposition to dwell. It is enough for them to call the attention of the President to the subject in a spirit of frankness and kindness, feeling assured that their communication will be received in the same spirit—and that the President will at once give such directions as will be satisfactory to all the parties concerned.

Very respectfully, &c.

WASHINGTON, May 1, 1838.

This communication we copy from the *Cincinnati Republican*, an administration journal, which informs us that it was addressed to the President by nearly all the delegates in Congress from the North-western States, *without distinction of party*. This unusual unanimity of men, differing in political opinion, in urging the claims of Mr. REYNOLDS in this matter upon the Government is highly honorable to him—for it has been won by no truckling to power, and no sacrifice of principle. It is merely the testimony of his own fellow-citizens—of the men among whom he has been born and educated, and who know him best,—to his character, his capacity, and the claims which they justly consider him to possess in connection with this Expedition.

We copy from the *Cincinnati Republican*, (administration,) its comments on the above communication:

"This appeal or remonstrance, for it is a little of both, was sent to the President early in May last: but its publication has been withheld until the present moment, in the hope that justice would have been done Mr. Reynolds. But we learn that it is determined that Mr. Reynolds shall not accompany the Expedition, and the communication, though signed by a majority of the delegates in Congress from the West, who are friendly to the administration, has not received the courtesy of a notice from the President.

"When we take into consideration the uniform support the Expedition has always received from the West, and especially from the Ohio delegation, who took an interest in the enterprise, from the fact that it had been originated and successfully prosecuted, by a native of Ohio, the conduct of the Executive seems almost unaccountable. Here are the wishes of the almost entire delegation of the North-western States, strongly and manfully expressed. On what ground of petty jealousy are the demands of this letter denied? Was it to gratify a secretary notoriously opposed to the Expedition from the moment it was projected, and whose ground of hostility to Mr. Reynolds was mainly owing to the fact, that he had again and again defeated him before Congress? We can assign no other reason for the conduct of the President in this case.

"Of the arrangements which have given dissatisfaction, the appointment of Lieut. Wilkes to the command, over the heads of his seniors and superiors in every respect, is not the least reprehensible. Why was he selected? Was it because he was ready to do the bidding of an incompetent Secretary? This is no party measure. Strong men on both sides have been and are its supporters. The country at large bears the expense, and has a right to ask why matters have been thus managed? The people of Ohio have a voice in the matter, and a right to inquire if injustice has been done to one of her citizens—the author of the measure—who has by his researches and publications, fixed mile stones and guide boards for those to carry on the Expedition who have now got possession of it—without the magnanimity to

do justice to its projector. The conduct of the managers of this affair towards Mr. Reynolds, will find no response from honorable men. They may do him wrong, but cannot put him down; for, going or staying, his triumph has been complete. The spirit which his labors has awakened will not sleep, for whatever is done in this Expedition, or by others, which may, and no doubt will follow, for the extension and security of commerce and the acquisition of scientific knowledge, the country will not forget to whom it has been mainly owing."

WILLIS vs. PAULDING.

[Many of our readers having expressed a strong desire to see the piquant article from the pen of Mr. Willis on the works of Mr. Paulding transferred to our pages, we have determined to insert it. We do so, however, reluctantly, because we cannot approve the spirit in which the article appears to have been written,—nor can we subscribe to the justice of that criticism, which, on account of a few blemishes, would sentence all the labors of a popular and voluminous writer to condemnation. As an offset to Mr. Willis's caustic animadversions, we subjoin the brief but able reply of Mr. Webb of the N. Y. Courier & Enquirer in vindication of Mr. Paulding's writings.]—*Ed. Sou. Lit. Mess.*

[From the "Corsair."]

PAULDING THE AUTHOR DISINTERRED.

Paulding's works in twelve volumes. Harper & Brothers.

We sympathized with the very warmest of Mr. Paulding's friends in rejoicing at his promotion to the Secretaryship. We had long pitied, with the same sympathy, the position of an old man, who, with no time or energies left, to try a new career, had discovered, within sight of the grave, that he had mistaken his vocation—who, having been ticketed for immortality by a few officious and injudicious friends, had worn out his label and walked unrecognised at sixty—who, in short, was the subject of one of those long-lived literary humbugs, which sometimes die with a fortunate man, but which Mr. Paulding is so unfortunate as to have outlived. He has stepped, however, from this crumbling pedestal, and we rejoice that another was at hand—that he had no undignified descent—that his grey hairs still enjoy the *digito monstrari*—and that his long practised English, tho' poor "woof and web," for an author's style, does *very well indeed* for letters to refractory lieutenants and peccant commodores.

We consider Mr. Paulding, the author, as dead. If there were more than one event in his life, Mr. Secretary Paulding might himself write his posthumous memoirs. Quite dead and forgotten! We defy his fondest survivor to quote a line of him. We challenge proof of idea ever borrow'd of him—of phrase or sentence ever plagiarised or gone astray one inch from his twelve mortal volumes. We would almost wager that, (the Dutch vocabulary of christian names apart) Mr. Secretary Paulding himself could not, on sudden demand, tell the substance of any chapter in the works of Paulding the author. So complete a submersion in Lethe has never before occurred in America. He will have one line and one distinction in history—the *first forgotten*! He has not died without "his little peculiarity" after all.

Our object, of course, is not to review an obsolete and voluminous collection of "works." We have read them, however. We record it as a literary curiosity that we have read them. Some fifteen years ago (before and after) the defunct was a paraphrasiat for the city

papers, and the city papers in those days, blew the trumpet before him with a vengeance. We read his "works" to know "what the devil was in the wind." They had one merit—open them any where, novel or satire, travels or essays, the first sentence you fall upon let you completely into his style. There was no variation. One eternal canal of low humor dwelling on disgusting objects with disgusting words, ran through them all. He was what the English call "nasty" in every thing he undertook. His works lie by us at this moment, sent us for review. We will open the uppermost at random. *Salmagundi—Second Series!* Well, come! this is in his best style. Here is some of his cleaner humor.

"Dear Mr. Evergreen,—

"I have got my beau again, I tried the prescription only once, and sure enough as you predicted, he came back yesterday, and brought me a most beautiful nose-gay. Poor Miss Pipkins looks as if she had lost her sweetheart, and I am so happy, you can't think.

"Adieu, dear Mr. Evergreen,

"ETHELINDE.

"P. S. I intend to send you some bride-cake to dream upon."

"To Anthony Evergreen, present.

"Dear Tony,—Quiz my wig if I haven't done the business—popped the prescription—entirely without the blunt you know—dad wouldn't come down—troubled with the *shorts*—quite at sea—devil a harbor my boy—popped the prescription—bills paid—plenty of the real stuff—tailor be hanged—gig afloat—clear the streets—d—ee if I spare a single piggy in all Broadway. Off to pop the question to Ethelinde.

"Yours, Tony—exquisite Tony,

"RANDIE DANDY."

There's humor? That is what poor Paulding, dead and gone, called humor! It was his best vein. Humor with him was to talk of pigs. "Piggy" was the funniest diminutive, the wittiest thing in the world. We have looked through half a volume to find a page without pig in it. It is pig all over. "Pig," "egg," "gutter," "gander," "grab," "gouge,"—we take the words as they catch our eye in turning over. We shall not do justice to the *great forgotten*, however, without trying him on an elegant theme. In his novel of *Koningsmarke*, there occurs a dissertation on *gentlemanly manners*!

"And here we will observe that the best possible test of a gentleman is his behavior at a dinner, breakfast, or supper table, in a hotel or steamboat. It is there that his pretensions are put to the touchstone, and that fine clothes fail to hide from observation the clown that lurks beneath them. If we find him *snatching at every dish within his reach; filling his plate with fish, flesh, and fowl; eating as if his last, or rather his first meal, were come; and at the same time looking about with his eyes as wide open as his mouth, to see what next to devour—not velvet-cloth coat, dandy pantaloons, or corset dire*, will suffice to place him in the rank of a gentleman. Were we to express our idea of a well-bred man in one word, we would say, he was a gentleman, even in his eating; nor would we hesitate to place any man in that class, who, being *fond of soft eggs*, should be able to eat them *boiled hard*, without grumbling. We remember, for we delight to remember every thing connected with that gay, good-humored, sprightly old gentleman, Deidrich Knickerbocker, that he always superintended *his eggs* himself, by a stop watch, and more than once came near to *scalding his fingers* in his haste to rescue his favorites from the boiling element, ere the fatal crisis was passed.

"This diversity of taste extends to almost every enjoyment and luxury of life, more especially to books, in the composition of which, notwithstanding so many appearances to the contrary, we will venture to say, that almost as much reason is necessary, as in the *roasting or boiling of eggs*. Some readers like what are call-

ed hard studies, as some would like *hard eggs*; while others luxuriate in raw sentiment, and *melting, drivelling, ropy softness*."

Poor Paulding! He thought he had an idea of a gentleman!

Our object, as we said before, is not to review the works of the *dead-alive Secretary*, though they were sent us that we might do so. We have taken him up to speculate upon the curious subject of literary humbug. How in the name of wonder did these twelve volumes of flat, pointless, and essentially vulgar stuff ever find printer, publisher, puffer, and reader! Paulding's works were known in America from the time the author first wrote for the newspapers till he ceased writing for them—say from 1786 to 1830. At that period they suddenly dropped out of all recollection, and will be a "curiosity in literature" for the future D'Israeli of our country—but let us put down a fact or two for the basis of his speculations.

Every lion has his jackal. Paulding was Washington Irving's.

Those who have lived in "literary circles," so called, know very well, how, on the appearance of any man of genius, there gathers about him a knot of patronisers, who by dint of talking of his works, praising him to his face, giving him advice and ferreting out the origin of his play, poem, or tale, grow to fancy, at last, that he is their own production—found, fostered, moulded, and sustained entirely by their own penetration, skill, counsel, and generosity. Washington Irving grew up in such a circle. He was as modest as he was gifted, and after writing that which will live forever, it never occurred to his retiring mind that there could be any objection to his friends' taking as much of his merit to themselves as they pleased. They had suggested the idea. It was *their* family story. They had read it in manuscript. "He is our Washington Irving."

Having made one author, entirely by themselves, and he well on his way to immortality, this same creative circle undertook another. Mr. Paulding had furnished the alloy to Irving's gold in *Salmagundi*, and they fancied that if the fusion could be continued a while, he might *pass*, alone. He had one advantage, too, which Irving had not,—he could circulate himself,—in the newspapers. At it they went—hammer and trumpet.

The one rule was, *never separate their names*. Irving and Paulding! *Irving and Paulding!* IRVING AND PAULDING! Every old maid on the Hudson took the slogan like an echo. Every newspaper Siamesed the words. Every blow of the hammer and blast of the bellows at the blacksmith's shop on the Hudson, (which was the centre of this manufactory of authors,) rung out "Irving and Paulding!" Irving had consented to write in the same book with him. All the newspapers echoed the union. The public took it for granted they were linked for immortality. Who were the principal American authors? "Irving and Paulding!" Who wrote *Salmagundi*? "Irving and Paulding!" Who wrote the *Sketch-book*? "Irving and Paulding!" The words stuck together, from constant repetition, like the names of a mercantile firm. There was no separating them. As you say, "Day and Martin's" daughter or son, it was "Irving and Paulding's" new book. He hung on to good Geoffrey's skirts like a shadow. As well as he could, he imitated his style. He followed in the same vein of subjects. He was witty in Dutch names. He floundered after his gay humor in what he called satire. He thought it was Irving-like to say sly things on every page about "piggy," illustrate every thing by pigs—make his humor in short, consist of nothing but the transfer of the choice nomenclature of the sty and kitchen to polite novels. Oh, well-forgotten Paulding!

The echo, however, did not reach John Bull's ears. John Bull cried out for "Irving," but the jackal strained his ears in vain for the appendage. Hence the only original book Paulding ever wrote—"John Bull in America." He hates the English with an emphasis!

Secretary and all he hates John Bull. Original, did we call the book? It is the most faithful collection of jokes on foreigners, from the American newspapers, ever made. They are strung together with very original malice, very original misstatements, VERY original wholesale abuse, and that is all that *ever was* original in this most bilious author. Any file of Mississippi or Kentucky papers will give you the entire staple of the book.

We are glad that our great and beloved author, Washington Irving, has at last followed the example of Peter Schlemihl, and *sold his shadow*. We were well nigh sure at one time, that "P." would have been the initial on the foot-stone of his grave. The unlucky Schlemihl, however, could not have been more astonished when the devil rolled up his shadow to pocket it, than must have been the modest Geoffrey at the marvellous alacrity with which his dissextered twin sunk into oblivion. Out he went like a candle snuff—one day Paulding and Irving—the next, Paulding the ship-chandler. One day half an author at least—the next, a patient old gentleman cyphering his way to a secretaryship. There he sits—all honor to his new dignity! But it will be a mortifying remembrance to his fame *founders* on the Hudson, that, let him drag out the bilious remainder of his life how he will, they themselves must acknowledge that the "*Secretary* stood alone!"

WEBB vs. WILLIS.

[From the New-York "Courier & Enquirer."]

The Hon. James K. Paulding.—In glancing our eye cursorily, a day or two ago, over the pages of the various hebdominals which have of late become so numerous in this city, our attention was arrested by a leading article in "The Corsair," headed "Paulding the author disinterred." The title exciting our curiosity, and promising something more congenial to our taste, than the wonted compound of love-sick stories and lack-a-daisical remarks, we were led to read it, and were sorry to find it, a malignant attempt to wound the literary reputation of a gifted man, who most deservedly fills a high place among the successful authors of the country, and whose writings have besides the rare merit of being conspicuous for American feelings and attachment to American institutions.

It is for this reason only, that we deem it incumbent on us to notice the article in question; for we do not believe that Mr. Paulding himself, or any of his personal connexions—whom this writer has also thought it becoming to disparage—will treat it with aught but silent contempt. We do not believe that Mr. Paulding's literary reputation will suffer an iota in public estimation from an assault, made evidently, under vindictive feeling, and supported by assertions so unfounded, that they carry with them their own refutation.

Of the spirit, which predominates throughout this pretended criticism, we will give but a few proofs. The most extensive iron works in this part of the Union—and the proprietors of which are descendants of one of our oldest and most respectable families—are called "the blacksmith's shop on the Hudson." Mr. Paulding is sunk into a "ship chandler" whilst filling the office of Navy Agent at this port, and because in one of his novels, Mr. Paulding, in rebuking the scramble which takes place at meals on board our steamboats, says, it is the test of a gentleman to refrain from joining in it, his critic exclaims, "Poor Paulding! he thought he had an idea of a gentleman!" We have no doubt the ideas of the two materially differ on the true constituents of gentility, and as little, that Mr. Paulding, sternly aristocratic as he is in his feelings and habits of life—maugre all his republicanism, and bad as the company is into which he has now fallen—will laugh at the thought of receiving a lesson on gentility from "The Corsair."

In endeavoring to reconcile the great celebrity which

Mr. Paulding's works have attained, with the low estimate this critic would affix to them, he asserts that this celebrity is to be attributed to the friends of Mr. Paulding ever attaching his name to that of Mr. Irving. "Who wrote the sketch book?" it is asked, and the answer given is "Irving and Paulding." Such answer was never given, and the whole assumption is entirely gratuitous. The names of Mr. Irving and Mr. Paulding were never used in association as authors, except in regard to the *Salmagundi*, and then justly.

With the same view, the critic assumes that Mr. Paulding's works have none of them been republished in Europe, and with the same justice. We have ourselves seen his *Westward Ho!* translated into French, and his *Dutchman's Fireside*, into German; indeed we believe we are not going too far in asserting, that all his works that were susceptible of it, have been translated into most of the modern languages. We say susceptible, because some of them being solely calculated to awaken national feelings and national pride among his countrymen, could not be appreciated, if understood, by foreigners.

Lastly, it is asserted, that Mr. Paulding in everything he undertook, is what the English call "nasty." We do not exactly know what precise meaning the English attach to this word, other than that which it bears here, but we think we can divine the meaning the writer would affix to the word "nice," and thence infer that he would give to the opposite extreme. For instance he would apply the term "nice" to the author who could imagine such fanciful titles for his productions as

"Pencilings by the Road Side," and "A L'Abri, or the Tent Pitched," or one so full of meaning as "Lines from Under a Bridge," and so affecting as "The Heart Overtasked"—to one who interlards his language with ridiculous French, such as *apropos des bottles* (*Vide Corsair*), who never hopes to excite a patriotic throb, or aims to instruct—who seeks to rebuke no weakness, correct no vice, but who revels on the cut of a coat, or the ottomans of a lady's boudoir, and delights in the soft shade of a glen. That Mr. Paulding is the very reverse of all this, we willingly admit; and for that very reason believe, that his works will endure, among his countrymen, long after those of his pretended resurrectionist have served the purpose for which they seem most apt—the papillottes of ladies' chambermaids.

EDITORS.

Some editors cast themselves so far beyond those courtesies which obtain between well-bred men, that they find in their very position an exemption from responsibility. No man who has clean apparel himself, will return the mud-balls with which he may be assailed by one who has taken up his stand in the ditch.

Anon.

MECKLENBURG DECLARATION OF INDEPENDENCE.

THE QUESTION SETTLED.

When in the year 1819, it was first announced to the American public, by the editor of the *Raleigh Register*, that the people of Mecklenburg in North Carolina, had actually declared themselves independent of Great Britain, in May, 1775, the fact was deemed highly improbable by many, and among others by Mr. Jefferson, because, according to the best contemporary accounts, independence had not yet become the aim, or even the wish of the colonies; and because, also, it was thought that an act so much in advance of public opinion, would scarcely have escaped notice and honorable mention, when their early suggestion came to be subsequently adopted.

Mr. Jefferson, having in his correspondence with his friend Mr. Adams, expressed the opinion, that the paper published as the "Mecklenburg Declaration of Independence," was not genuine, the legislature of North Carolina, soon after the publication of that correspondence, authorized the governor of the State to collect and publish evidence to establish its authenticity. This was accordingly done; and it appeared by the document thus given to the public, that resolutions of the character alleged, had been adopted by the people of Mecklenburg, in May, 1775, that the copy which had been published had been found, in manuscript, among the papers of General Davie, and that their authenticity was confirmed by the recollections of several respectable contemporary witnesses.

Before the publication of this testimony, there had been a very prevalent tradition in North Carolina, that some resolutions had been adopted in Mecklenburg in 1775, of an unusually bold character, and the proclamation of the royal Governor, which had been preserved in Almon's *Remembrancer*, expressly referred to those resolutions, among various other "seditious and treasonable acts," in the Province of North Carolina. While the Governor's pamphlet proved the tradition to have been well founded, it did not entirely remove the difficulty. The close coincidence between some passages in the Mecklenburg paper and the declaration of national independence of the 4th of July, 1776, was too remarkable to be attributed to accident, and some were therefore inclined to doubt the genuineness of the particular resolutions, rather than believe that Mr. Jefferson had been guilty of a plagiarism from a paper, of such humble pretensions, or being guilty, should have escaped detection by his contemporaries. On the other hand, the latter alternative was eagerly seized by Mr. Jefferson's enemies, and their wishes, no doubt, contributed to bias their judgments, and inclined them to the belief that the paper was genuine, and that Mr. Jefferson had been its copyist. This question is now put to rest—thanks to the antiquarian researches of Mr. Peter Force of Washington. He has been fortunate enough to procure a newspaper, printed in 1775, which contains a copy of the Mecklenburg resolutions, and which have a claim to authenticity, that the written copy found among the papers of

General Davie cannot boast, however supported by the distant and fallible recollections of the best intentioned witnesses.

To enable the reader to see the disagreement between the two copies, they are here placed in juxtaposition. The printed copy is dated May 31, and is published in a paper dated July 12, 1775; and the written copy, May 20.

CHARLOTTE TOWN, MECKLENBURG COUNTY.

MECKLENBURG DECLARATION OF INDEPENDENCE.

May, 31, 1775.

20th of May, 1775.

This day the committee met, and passed the following resolves:

WHEREAS, by an address presented to his majesty, by both Houses of Parliament, in February last, the American colonies are declared to be in a state of actual rebellion, we conceive that all laws and commissions confirmed by, or derived from, the authority of the King or Parliament, are annulled and vacated, and the former civil constitution of these colonies, for the present, wholly suspended. To provide in some degree for the exigencies of this county, in the present alarming period, we deem it proper and necessary to pass the following resolves, viz:

1. That all commissions, civil and military, heretofore granted by the crown, to be exercised in these colonies, are null and void, and the constitution of each particular colony, wholly suspended.

2. That the provincial congress of each province, under the direction of the great continental congress, is invested with all the legislative and executive powers within their respective provinces; and that no other legislative and executive power does or can exist, at this time, in any of these colonies.

3. As all former laws are now wholly suspended in this province, and the congress have not yet provided others, we judge it necessary, for the better preservation of good order, to form certain rules and regulations for the internal government of this county, until laws shall be provided for us by congress.

4. That the inhabitants of this county do meet on a certain day appointed by this committee, and, having formed themselves into nine companies, viz. eight in the county and one in the town of Charlotte, do choose a colonel and other military officers, who shall hold and exercise their several powers by virtue of this choice, and independent of the crown of Great Britain and former constitution of this province.

That whosoever directly or indirectly abets, or in any way, form, or manner, countenances the unchartered and dangerous invasion of our rights, as claimed by Great Britain, is an enemy to this county, to America, and to the inherent and unalienable rights of man.

That we, the citizens of Mecklenburg county, do hereby dissolve the political bands which have connected us with the mother country, and hereby absolve ourselves from all allegiance to the British crown, and abjure all political connection, contract, or association with that nation, who have wantonly trampled on our rights and liberties, and inhumanly shed the blood of American patriots at Lexington.

That we do hereby declare ourselves, a free and independent people; are, and of right ought to be, a sovereign and self-governing association, under the control of no power other than that of our God and the general government of the Congress; to the maintenance of which independence, we solemnly pledge to each other, our mutual co-operation, our lives, our fortunes, and our most sacred honor.

That as we acknowledge the existence and control of no law nor legal officer, civil or military, within this county, we do hereby ordain and adopt as a rule of life, all, each, and every of our former laws; wherein, nevertheless, the crown of Great Britain never can be considered as holding rights, privileges, immunities, or authority therein.

That it is further decreed, that all, each, and every military officer in this county, is hereby reinstated in his former command and authority, he acting conformably to these regulations. And that every member present of this delegation shall henceforth be a civil officer, viz. a justice of the peace, in the character of a committee-man, to issue process, hear, and determine all matters of controversy, according to said adopted laws; and to preserve peace, union, and harmony in said county; and to use every exertion to spread the love of country and fire of freedom throughout America, until a more general and organized government be established in this province.

The production of a printed copy of these resolutions, in a paper published six weeks after they were passed, thus furnishing that highest testimony of their existence which the skeptical called for, and which has so well justified a part of their doubts, may be considered now to have established the following points, beyond room for cavil or doubt.

First. The people of the county of Mecklenburg in North Carolina, did, as early as May, 1775, pass patriotic resolutions, which showed then a determined spirit of resistance to oppression, and which procured for them the honor of being denounced as traitors by a royal governor.

Secondly. They were not so much in advance of their countrymen in the other provinces and in their own, as the resolutions previously published seemed to imply; for they do not speak of dis-

solving the political bands, which had connected them with the British government, but merely propose a temporary or provisional government so long as they were declared in a state of rebellion. Both in the preamble and in the three first resolutions, they regard the British authority as merely "suspended," not annihilated. The last resolution, is merely a consummation of their purpose previously declared.

Thirdly and lastly. This genuine copy completely acquits Mr. Jefferson of the improbable charge of plagiarism, which party-zealots first industriously propagated, and careless reasoners too readily admitted. It does not contain a single expression or phrase which is to be found in the declaration of independence, adopted by Congress. The spurious copy contained several, which are here printed in italics, and which from the first, led many to doubt its authenticity.

The questions to which these Mecklenburg resolutions have given rise, and which may be ascribed partly to the interest with which we view whatsoever is in any way connected with the revolution, and partly to the avidity with which party-vindictiveness finds aliment in every thing, may thus be considered to be permanently settled. *Requiescat in pace.*

INVESTIGATOR.

ADDRESS TO MY LYRE, IN REPROOF FOR ITS LONG SILENCE.

By the late Miss Margaret Davidson.*

Awake once more! inactive Lyre,
From this cold sleep of thine;
Behold! the weeds are twining round,
Where precious flowers should twine!

While thou art sleeping idly here,
Thy garland is unbound;
And thy sweet chords, so tuneful once,
Divested of their sound.

Unstrung is every golden wire,
Forgot each witching strain;
Could I but rouse thee now, my Lyre,
I'd wake those notes again.

Thou'st slept for many a weary day,
And many a weary night;
Perchance thy slitting dreams were gay,
And laden with delight.

* We have inserted, heretofore, several beautiful articles from the pen of this young lady and her talented sister. The above sweet lines were written by her at the age of thirteen—some three years before her death. Every new production of this child of song that comes before us, is well calculated to deepen our admiration of her wonderful and rich gifts, and our sorrow that her "Lyre" was so soon crushed forever, and that, with the voice of its music around her, she should have passed down so early to the grave.—[*Ed. S. Lit. Messen.*]

And thou hast only slept to gain
New themes for melody—
To pour them forth in one full strain
Of melting harmony.

I will not chide thee then, my Lyre,
Though broken and unstrung;
I will not chide thee, though thy strains
Have long been left unsung!

But I will bind thy loosen'd string,
And twine for thee a wreath
Whose balmy perfume shall arise
Like angels' fragrant breath.

And I will strike thy silent chords,
So wildly and so gay
That thou shalt lure a sorrowing heart
From all its cares away.

And thou shalt cheer the brow of grief,
And light the eye of woe,
And cause the frozen tide of joy
In rippling waves to flow.

And thou shalt warm a mother's heart,
With all a mother's fire,
And then thou wilt be blessed indeed—
Arouse thee, oh! my Lyre.

Remember, that I chide thee not,
For all thy past neglect;
Remember, that thy form shall be
With *freshest* garlands decked.

A wave from Lethe's silent stream,
O'er all the past shall flow;
And thou shalt pour thy sweetest strains
To nobler purpose now.

For thou shalt cheer a kindly heart,
Which sorrow oft hath wrung,
And thou shalt never, never more
Be broken and unstrung.

SONNET—TO MY SISTERS.

Sweet sisters—ye are far away, and night
Has closed around us—dark and chill and damp,
And sullen with dull clouds. All by my lamp
Alone I sit, and in its tapering light,
Feel a calm sympathy with common things,
Which in the sun-bright day I've seldom found.
A few small well-known books are scattered round,
Silent companions of my wanderings—
Silent, and yet how eloquent! Alone
I may not call myself, while these are near:
Still less, when thinking of my sisters dear,—
My fancy hears the sweet familiar tone
Of merry voices, as amid your glee,
Ye check the laugh sometimes, and talk awhile of me.

C. F. C.

May, 1839.

DR. BIRD'S NEW NOVEL.

The Adventures of Robin Day; by the author of "Calavar," "Nick of the Woods," &c. in two volumes. Philadelphia: Lea & Blanchard, 1830.

The advancement and perfection of our moral nature, is the great and ultimate object to be attained by science, art, philosophy, poetry, labor, recreation, or whatever principle has action and influence upon it. To him who is guided by this truth, the world and all its existences will assume a new and deeper interest. He does not view it only as a great mart for traffic, gain and secular labor, or a splendid arena, fitted up for one continual gala-day of empty pleasure—it is not only a theatre in which we are to weep and laugh and toil and die, with no thought going out beyond its local and temporal things. He is a pilgrim here, it is true, and the glory of this universe is gliding and passing away from his vision, and he gazes upon orbs of beauty that are to hold their festival above his grave as they now do above the sepulchres of ancient and peopled and forgotten generations. He soon passes through this sphere of earth—lit up with all its loveliness, and hung with varied hues, and breathing music from its bowers, it rolls swiftly on—and time weaves unceasingly his allotment of days; and, ere he is aware, the leaves are withering around him, and the great shadows of eternity fall upon his path. But, pilgrim as he is, it is for a high and important purpose that he is placed here, and every object that he sees, and every principle that stirs around and within him, has a lesson for his soul—an influence of good or of evil. He is a pupil here—he is in the vestibule of the temple, and may pause and learn its elementary and preparatory teachings, although curtains of light, and draperies of splendor, shut out the glory and the mysteries beyond.

We say, then, that to him who apprehends and bears about a living consciousness of this truth, the world and its objects assume a new and a deeper interest. He is awake to the true ends of life—to the dignity of his nature—and he throws off the fetters that bind down the soul of the wealth-seeker and the grovelling to earth and its low and perishing pursuits. The great waters and the lofty mountains are not only common and familiar objects—they have a connection with the soul—they are emblems of its inherent grandeur and of the fulness and depth of its aspirations; and the stars appear not as they do to the distant and indifferent, twinkling orbs set to beautify and adorn, but radiant suns which kindle where they shine, and enlighten and vivify worlds and systems of wonder and beauty inexpressible. If such an one be true to his convictions, he will look to it anxiously and closely, and seek out and cultivate those influences which tend to strengthen and purify the faculties that are to go with him beyond the tomb and live forever.

Among these influences, literature occupies a prominent and important station. For, it is the medium of communication for thought and passion—it gives the power of utterance to wisdom and truth—contains the maxims of philosophy and the sacred precepts of religion—embodies the beautiful, and unfolds the treasures of fact and imagination. In all ages its way has been acknowledged, and the soul of the universal humanity is

moved and thrilled by it. It has an innate charm and authority, which cause its impulses to be felt wherever it acts and in whatever form it lives. Go back as far as history will carry you, or to the limits within which the dim light of tradition falls, and you will find a literature—rude and marred with ignorance and error although it may be—lingering around the shrines of Isis, or chanted by the Scalds to the stern measures of the Runic rhyme. Look where you will, there is scarce a nation or a tribe without it, and although it may be held and wielded in the hands of the few, it pervades and controls the many. Its kindling spirit is all around you. The great memories of the past which you cherish so fondly, are all hallowed by it, and it dwells, like the vital principle, in the varied operations of the present. The earth is vocal with it, and the air filled with its breathings.

This great element of the moral and intellectual world may be employed as the means of much good or of deep and lasting evil. It may speak for virtue—it may speak for Heaven—and man will feel its appeals going down into his heart like angels' voices—or it may spread abroad the blight and pollution of vice and crime and every sin. It may strengthen the tottering dynasties of tyrants, and rivet fast the bands of old superstition—or it may peal out with a trumpet-tone from the altars of the free, and speak for the just and the true. It may soar aloft

"Above the Aonian mount—"

and bask in celestial light, with a Milton, or tarnish its wings and breathe out the obscene wit of a Rabelais or a Sterne. It may shed abroad the demonstrations of the Eternal Spirit, and uphold the ark of religion and virtue, with Paley and Locke, or give utterance to the impieties, sophistries, and sarcasms of a Voltaire. According as he who possesses the rich gift of talent employs the boon—according as its influences of good or evil are nourished and propagated—so will be its results.

That literature which does not exercise and rightly develop the intellectual and moral faculties, but which tends to enervate or pervert them, illy compensates, by the refinement which it bestows, for the injury it inflicts, and is worse, far worse, than primeval and uncultivated ignorance itself. "An application to any study," says Bolingbroke, using an expression of Tillotson, "that tends neither directly nor indirectly to make us better men or better citizens, is at best but a specious and ingenious sort of idleness." He who is striving to cultivate moral excellence in himself or to diffuse it abroad, will feel the truth of this remark, and will be disposed to ask of each production as it issues from the press—"cui bono?" He will anxiously scrutinize the tendencies of the literature of the age and nation, and behold in its good or evil influences—in its principles of virtue or its propensities to vice—the triumph or the defeat of his labors and his hopes.

But, we would remark further, that man is not confined to any one mode in his endeavors after moral excellence. His course must be upward—but he need not always take the steep and rugged way. He may gaze upon the glory and beauty of the landscape around him—refresh himself where the clear fountain gushes in the shade, or pause to pluck the flower that blooms and sheds its fragrance in the mossy clefts. As we

pause occasionally to unbrace the sinews and rest the weary muscles of the physical frame,—so we may, at times, relax the mind from its stern bent and rigorous study, and let it find recreation and delight in things of a lighter or gayer nature. The principle of literature need not always be employed in the more important modes of philosophy, reflection, and fact—music may come with its gentle harmonies, and poetry with its bright imaginings, and fiction with its charms and amusement. In the language of another—"Man was made for relaxation as truly as for labor; and by a law of his nature, which has not received the attention which it deserves, he finds perhaps no relaxation so restorative, as that in which he reverts to his childhood, seems to forget his wisdom, leaves the imagination to exultate itself by sportive inventions, talks of amusing incongruities in conduct and events, smiles at the innocent eccentricities and odd mistakes of those whom he most esteems, allows himself in arch allusions or kind-hearted satire, and transports himself into a world of ludicrous combinations. We have said, that on these occasions the mind seems to put off its wisdom; but the truth is, that in a pure mind, wisdom retreats, if we may so say, to its centre, and there unseen keeps guard over this transient folly, draws delicate lines which are never to be passed in the freest moments, and, like a judicious parent watching the sports of childhood, preserves a stainless innocence of soul in the very exuberance of gaiety."

We cannot hold with some, then, that the reading of novels is never justifiable, and that it is altogether a wrong and injurious practice. It may be so used as to have its indirect, if not direct influences, in making us "better men and better citizens." This it may do even when we view novel-reading only as a source of relaxation and amusement. But works of fiction may also prove means of instruction. They often contain faithful and powerful delineations of character, and hold up to the mind's eye a mirror reflecting the experience of the past. Many valuable morals may also be derived from their pages, and truth and wisdom may be imparted to us as well—perhaps much more vividly—in the incidents of a tale, as in the brevity of a maxim or the stern simplicity of an essay. In what form more familiar and attractive, will you convey such lessons to the hearts of the young and unreflecting? The novelist can touch the deep chords of human passion, and show us what follies and what virtues dwell in the hidden soul. He may call up the great events of history, in the garb of romance, and we behold the scenes and actors of the past time before us, with all the attendant circumstances of manners and customs, dress and character, and we gain a minute and lasting knowledge of that which otherwise we should never have learned, or only passed by in the ponderous and obsolete tomes of records and chronicles. You say that novel-reading has been and is the source of much evil, and that it has shed poisoning and blighting influences. This is true; but do you not see that you may bring the same objection, with equal force, against all literature? We grant that novel-reading has created evil and even melancholy effects, but so have all branches of literature, misemployed and perverted. It is the *abuse* not the *use* of novel-reading which we reprobate. It is calculated for our times of relaxation, and should not be allowed to

occupy those moments which we ought to devote to superior and more important affairs. When novel-reading becomes an all absorbing passion—when business is neglected and duty left unperformed—when the merchant forgets his desk and the clerk the counter—when the mistress leaves her household affairs to take care of themselves, and the maid follows her example in the kitchen—when the student throws by too long his Euclid and his Livy—in short, whenever we *abuse* this privilege, then it is that works of fiction become productive of many and grievous evils. But this is the fault of those who do thus, and not of the works themselves.

Again, because we find some authors devoting their time and their talents in diffusing erroneous and immoral teachings through this medium, are we to condemn all novels in the mass? Are we to say that every work of fiction shall share the fate of Don-Quixotte's books of chivalry, or go forth to the world with the seal of reprobation stamped upon them by the wise and the good? We ask, may not novels, as a means of relaxation and of instruction, fulfil a good office and exist as an important and beneficial branch of literature? If so, condemn not the *use* of these works because of the *abuse*. We believe that they may be the means of much instruction and good, and we repeat the idea which we have already expressed, that even viewed as sources of amusement only, they may indirectly, if not directly, have their share of influence in making us "better men and better citizens."

We have made these remarks not because they were particularly called for, nor because they are new, nor yet because they are more appropriate to our present subject than to any other; for the matter last named, they belong as much to any other column of the Messenger as to this. But we have a novel—an American novel—before us, and we deem what we have said by way of introduction, not inappropriate or useless, inasmuch as there are many who are, doubtless, anxious to see the literature of our country flourish and deepen in its growth, and who are cheered at the prospect which opens to us, and yet, who are opposed to the reading and writing of works of fiction. We respectfully ask all such to consider why they are thus opposed, and we trust that it may be that they will also discover the importance and the uses of this department of letters. We trust, moreover, that our native authors while they emulate the excellences, will avoid the evil ways of the old-world novelists. We hope that they will discard every kind of skepticism, transcendentalism, all clothing of vice by the aid of sophistry in the robes of virtue, and all sickly sentimentalism and fashionable affectation. There are themes enough without the aid of these—native and glorious themes. There are records that tell of our battles, and holy memories that linger by our stream-sides, and chronicles of mighty deeds; and there are scenes for the graphic pencil beneath all our blue, free skies, and in our dark and ancient forests. No—there is no lack of themes here—themes for the novelist, that will stir the heart and quicken the pulses and call out high thoughts of virtue. Let every branch that runs into the common stream of our literature, flow pure and blessed as the live fountains that gush from their thousand sources around us.

There was one who took this course, and gained a name that did honor to his country, and won green lau-

rels wherever he ventured—whether upon the blue ocean-wave, or among the red dwellers of the forest, or in the broad prairies of the west. But he has descended from the proud station which he occupied, and we fear that it will be long ere we shall look again upon the like of Cooper in his early and palmy days. But there are many who have sprung up, and from whom we may hope much; and among the foremost of these is the author of the volumes now before us. Dr. Bird has already obtained a brilliant reputation, and we presume that his name will give rapid currency and secure an extensive reading to the present work. How well he merits this reputation, we are, from circumstances, unable to judge, but we venture to say, that the decision of the public is a just one, and that his honors are well won and worn. We hope that his talents will be employed, as a novelist, not only in building up his own good fame by writing well, but in purifying and perfecting this department of our national literature. But we turn to the work before us.

This book is well-named "*Adventures of Robin Day*," and the motto chosen for the title-page most appropriate. It is, indeed, a record

"Of most disastrous chances;
Of moving accidents by flood and field;
Of hair-breadth 'scapes ' the imminent deadly breach;
Of being taken by the insolent foe,
And sold to slavery; of my redemption thence,
And portance in my travel's history."

These words will apply, almost literally, to the up-rising, down-falling, progress, &c. of the hero Sammy September, *alias* Robin Rusty, *alias* Sy Tough, *alias* Robin Day, *alias* Juan Aubrey. The grand feature of the work is *incident*—absorbing and exciting incident—from the beginning to the end. Scarcely does the hero emerge from one difficulty, before he is entangled in another, and when he escapes from the meshes of a second we find him struggling in the bogs of a third, and so on until the consummation. The plot is an interesting one; the origin of Robin being wrapped in mystery, which is, of itself, a prime ingredient of interest, and one calculated to lead him who sits down and commences a book, to continue reading until the plot is unravelled at the *dénouement*. The plot of this work will develop itself, and a general idea be formed of it in the following compendium.

Robin Day, who tells his own story, and considers himself as one of the race of *unlucky dogs*, came ashore with the wreck of a schooner, one wild night in the month of September, 1796, upon the coast of New Jersey, and was picked up "a puny little bantling of some twelve or fifteen months old, half famished and half drowned, the only living creature, save two ducks that were soaking in a coop, and a broken-backed cat in the fore-castle, that escaped." The disaster occurred in the neighborhood of Barnegat, and suspicions were entertained that it was less the effect of wave and tempest, than of the schemes of land-pirates or wreckers, who lived upon the coast, and were frequently accused of decoying vessels to destruction by setting up false lights. It was rumored, moreover, in this particular instance, that the crew of the schooner had met with foul play from the wreckers;—at any rate, they had all disappeared but our hero, who, from the fact that he was thrown ashore among a class of people whose interest it was

to keep transactions of this kind dark, never clearly ascertained all the minute circumstances of the case. Who were his parents was a mystery, as nobody cared or took the trouble to inquire.

The earliest recollections of Robin are of a miserable hut by the sea-side, an old hag clad in a sailor's hat and jacket—"a very Semiramis among land-pirates," and a life of famine, beating, and misery. Here he at first obtained the name of Sammy September, and afterwards that of Robin Rusty. After seven years of thralldom, under the barbarity of this bel-dam and her son Ikey, he was rescued from their clutches by the hand of a skipper named Duck, the owner of the shallop "*Jumping Jenny*," who interfered one day in his favor, and after resorting in vain to mild means, at length bore him off per force. But this change was from bad to worse, and, regarded by his deliverer as a portion of his goods and chattels, he now led a most degraded life of servitude and bondage. On board of the *Jumping Jenny*, the freight of which vessel was wood, oysters, fish, and sundries, and at times the plunder of the wreckers, carried to New York and other places, our hero, in the capacity of ship's cook, suffered, starved, and smarted under kicks and blows, and grew up in abject ignorance, until his thirteenth year, when, he tells us, that he "was a wretched little stunted thing, to appearance not more than nine year's old, a picture of raggedness, emaciation and misery, a creature with no more knowledge, intelligence or spirit than a ferryman's horse, or a sick ape; which latter animal, I have often been told, I much more resembled at that time than a human child. In fact, the brutality of my skipper had made me almost an idiot: it had killed my spirit and stupified my mind; and such was the gross darkness in which I had been suffered to grow up, that I was ignorant even of the existence of the Great Being, the refuge of the orphan, and the avenger of his wrongs. I had never even heard his name, except in the execrations, with which my tormentor coupled it a thousand times a day."

But a new era dawned upon the life of Robin. One summer's day, having cast anchor near a wharf of a large city in New Jersey, he was set to work at plucking the feathers from the back of a luckless and venerable gander, which had been murdered for the purpose of the skipper's dinner. While perched upon the bowsprit engaged in this operation, he attracted the attention of some frolicsome lads, assembled on the neighboring wharf, and in a batteau hard by, who presently saluted him with occasional volleys of pebbles and oyster-shells. In the course of this pleasant amusement, one of the urchins succeeded in cutting the forehead of Robin with a shell, but, in his effort to do so, lost his balance and was precipitated into the river. From this danger he was rescued by our generous hero, but at the expense of the gander, and a torn jacket, shirt and back. For thus losing his master's dinner, he was dragged, kicked and severely beaten with a rope's end; but was rescued in the midst of this brutality by the father of the boy whose life he had saved, who carried him to his house, dressed his wounds, and washed and clothed him. As to skipper Duck, he was first laid in a common jail, then mulcted in a heavy fine, imprisoned for a month, and finally keel-hauled, tarred and feathered, and sent out of town.

Robin's friend and deliverer was a Doctor Howard, whose humanity and zeal in his behalf were strongly exerted. Every effort was made by this amiable and philanthropic man to ascertain the particulars of the shipwreck and the parentage of the poor orphan, but they were of but little avail. As to master Day, being now ensconced in good quarters, he troubled his head but little about these matters, and, from his dullness and stupidity and grovelling desires, he bid fair to have dwelt in the kitchen all his days, for his patron having toiled in vain to awaken his dormant faculties, resigned him to the congenial office of scullion and turnspit. But from this state he was aroused, however, by the efforts of nature and the exertions of master Tommy, the lad whom he rescued from a watery grave, and the only son of Doctor Howard. This youth, who was, in reality, amiable and generous, although full of the boyish love of fun and mischief, contracted a strong affection for our young "ship's cook," and from being his playmate assumed the office of instructor, and taught him to read ere the doctor was aware that the first step had been taken upon the ladder of learning. From this, he was transferred to the doctor's study, and thence to the school, and by a melancholy event which soon after occurred, he acquired the place of a son in the affections of his patron. This event was the disappearance of Tommy, who was supposed to have been drowned while engaged in swimming, and whose body could not be recovered. Doctor Howard had but one other child, a weak and sickly daughter, and this blow, therefore, rendered him almost literally childless. In short, by the affection of his benefactor and his wife, our hero became a spoiled child, and while she lived, which was not long, "even Tommy himself had not been more effectually humored to the top of his bent." The name Rusty was now exchanged for that of Day, and Robin entered upon a school-boy career. Our hero's description of the youthful male portion of the last generation, is by no means a flattering, but we believe a perfectly just one. He tells us that "they were all sons of Ishmael, at war with themselves and every body else; and firmly persuaded, that, as courage was by far the highest and noblest of all human attributes, so strife and battle were the most delightful of human enjoyments." Robin Day's associates were remarkably pugnacious, and "fight," "flog," and "lick," were terms, and their practical definitions circumstances, of daily and hourly occurrence. Among these young heroes, on account of his callousness and indifference to blows—a quality acquired under the rough tuition of the skipper—our friend obtained the nickname of "Sy Tough," and finally becomes the Julius Caesar of the school. The only successful competitor with "Sy," was one master Richard or "Dick" Dare, quite an important and prominent character throughout the remainder of this adventurous history. This lad, the son of a revolutionary officer, was a hero from top to toe, whose heart delighted in nothing so much as a regular battle, and whose mind was filled with visions of drums, trumpets, banners and soldiery. Between the martial Dick and the tough Sy, a spirit of generous rivalry existed; for, although they were continually fighting, neither obtained the palm of victory.

Under two such renowned and valiant leaders, the school was converted into a perfect *Champs de Mars*—

the spirit of rebellion against the tyrant-rule of pedagogues broke forth, and, as master after master was "licked" and driven out, the sacred retreat of study and discipline, became, ere long, an abode of anarchy, and the theatre of a mimic French revolution. But, at length, the young desperadoes encountered their match, in the person of a gigantic Irishman by the name of M'Goggin, who professed to teach nothing but "reading, writing, 'rithmetic, and dacent manners," and who, therefore, our hero presumes, was obtained solely for the purpose of testing the efficacy of the *brutum fulmen*. The effect of the administration of professor M'Goggin was such, that he over-awed even the redoubtable Dicky Dare himself, chilled the hearts of the lesser rebels, and, to the great amazement of all the town, actually made his scholars to be, for five whole days, "the best behaved boys that were ever seen in a school-room." But an insurrection at length broke out against the government of the Kilkenny "tacher," which ripened into a Kilkenny row, and ended with a Kilkenny triumph. The rebels were routed, "horse, foot, and dragoons," and the reign of despotism established.

The prominent part which our hero assumed in these exploits, grieved and distressed his benefactor, and finally resulted in a promise of amendment, a withdrawal from school, a doffing of the school-boy garb, a donning of boots and neckcloth, and a commencement of the study of medicine. The influence of the doctor's daughter, Nanna, who had recovered her health, and now in her fifteenth year was fast blooming into beautiful womanhood, it would seem, had some effect in leading our hero to this determination. To this being, the affections of her father were fast knitting with increasing strength, and, as was natural, towards Robin they were becoming somewhat less warm. But, in spite of love and good resolutions, the spirit of mischief would move and break out. Our hero joined a conspiracy, plotted and carried on by the indefatigable Dicky, or, as he was termed, General Dare, against the strong-fisted tyrant M'Goggin. We will not enter into the details concerning this adventure. Suffice it to say, that the scheme was carried out in such a manner that professor M'G. was left for dead. This unfortunate result, as may well be conceived, produced terror and dismay in the bosoms of the young conspirators. In grief and agitation, Robin is informed by doctor Howard, that M'Goggin is fatally injured—is ordered to fly—and provided with a horse, a letter containing money directed to Philadelphia, a sum for his own use, and a string of beads taken from his neck by mother Moll at the time of the wreck of the schooner, he leaves his home, his patron, and Nanna, and with all the energy which horse, rein and spur can give, enters for the first time "upon the world." In the course of his swift flight, with the fear of constable and *posse comitatus* urging him on, he encounters his old comrade Dicky, flying also for dear life, and, provided with fifty dollars and a sorrel nag, going to fight the battles of our country, at that time engaged in the last war with Great Britain. Upon the road they fall into an encounter with a robber, the consequence of which is, that the desperado is conquered by the General, but their horses take flight and Dicky and Robin part company. In the next "scrape" in which master Day is involved, we find him accused by this very robber of

having aided in plundering him, and of having stolen from him the horse upon which he rode. From this trouble, Robin escapes by a window, wanders through the woods, in the rain, and finally arrives at the city of Philadelphia. Here, at the outset, his adventures are numerous and comical enough, and as he describes a nuisance, under which we think it quite probable our good brethren of Philadelphia and strangers visiting their city, suffer at the present day, we give the description of his entry in his own words.

"Having got over my first amazement at the sight of such a prodigious number of houses and people, and emerged from a species of dejection which held me for a moment at the thought of my insignificance and almost nonentity among such a multitude of men, I began to enjoy greater ease and contentment of mind than I had known for several days. My very insignificance, it appeared to me, was my best protection; for "sure," thought I, "among so many people, I shall be in little danger of my pursuers, the constables and deputy-sheriffs, who might hunt for me in such a city for weeks in vain."

With this encouraging reflection, my natural spirits returned at length, to such a degree, that instead of jumping into the gutter, to make room for every body that passed, as I had modestly done at first, I elbowed my way along like others, endeavoring to assume, as far as I could, the air of ease, and the step of busy haste, which seemed to characterize the citizens.

In this I succeeded to my wish, and had just begun to conceal myself almost a citizen, and to fancy that every body else so considered me, when my equanimity received a blow from the wheelbarrow of a black porter; who, coming up from behind, whistling Yankee Doodle with a vigor that drowned the creaking of his wheel, tumbled me into a lot of pottery arranged along the pavement; whereby, though I received no greater injury than a rent or two in my coat, great damage was done among the merchandise.

This accident, which might have moved the concern of any rational being, its cause, the negro, did not seem in the least to regard, but went on his way, whistling as before; which incensing me, I started up, intending to chastise him for his impudent assault, with a staff I had cut in the woods, and still retained. But here I was doomed to a disappointment, the dealer in washbowls and pattipans seizing me by the collar, and declaring I should not leave him until I had paid for the damage I had done, which he estimated at two or three dollars, though he afterwards abated his demand to one. I would have remonstrated upon the injustice of making me pay for a mischief evidently caused by the negro; but my merchant only grew angry, and declared he would carry me to the nearest justice; which was an alternative so frightful to me, who had such terror of, and such occasion to keep at a distance from, all limbs of the law, that I consented to satisfy his demand, and handed him a five-dollar bill accordingly. But this being a New Jersey note, which, he affirmed, was, like the bills of all New Jersey banks, at a discount, he refused to receive it, unless I allowed him an additional half-dollar by way of premium; and I was about yielding to his demand, when a decent looking man stepped forward, invelhed against the roguery of the fellow for endeavoring, as he said, to take advantage of my youth and ignorance, swore that New Jersey bank-bills were never at a discount, but always at a par, and ended by giving the fellow a dollar bill of some Philadelphia bank, and handing me four others as change; which being done, he clapped my Jersey note into his own pocket, and walked off, to escape the thanks with which I, charmed with his politeness and liberality, was disposed to overwhelm him.

This occurrence gave me a high idea of the generosity and kindness of Philadelphians to strangers; which was only abated by my discovering, as I did about five minutes afterwards, that the four bills given me by the good-natured stranger, were counterfeited, and my liberal gentleman a rascally swindler, who had rescued my youth and ignorance from the jaws of the pottery merchant, only to enjoy a huger bite of them himself.

Having accomplished this adventure, I proceeded onward, intending to hunt my way to some respectable hotel, without asking assistance of any one to direct me; a measure that I thought was needless, and which I had, besides, the greater

aversion to, as it would be to acknowledge myself a stranger; and I considered that the fewer who knew *that*, the less would be my danger of discovery.

I had not well got over the anger I had been thrown into by the assault of the porter, when it was my fate to encounter another blackamoor, a strapping catterdewallion, who had upon his shoulder an axe and beetle, with a brace of iron wedges suspended by a string, which he clinked together as he went, crying at intervals, "Wood! wood! split wood!" with a very nasal twang, and a melodious snap quite inimitable. This vagabond, who seemed as deeply engaged in the enjoyment of his music as the porter had been, I very naturally expected would get out of the way, as he passed me; instead of doing which, he stalked against me, as if entirely ignorant of my presence, or quite indifferent to it; and I was, in a twinkling, laid upon my back by his maul, which struck me on the head, while his two wedges, at the same time, beat such a tattoo on my breast, that I thought, during the instant of contact, they would have drummed my heart out. I leaped up, greatly exasperated, and snatched at my stick to beat the villain; who, perceiving my design, which was made the more manifest by some abusive epithet I let fly at him, paused a moment, and regarding me with extreme astonishment and contempt, exclaimed—"Guy! guess the younker's a fool! Git out of my way, will you?" And with these words, and the addition of his usual twanging note, "Wood! wood! split wood!" he passed on, leaving me covered with rage and mortification; which were the greater for my not having dared to beat him; for, in truth, while he spoke, he laid hold of his beetle as if resolved to requite any attack I should presume to attempt, by making a wedge of me, and driving me through the pavement.

In two minutes more, I encountered a similar accident; a third negro running against me with a violence that pitched me into a cellar; where was a cooper making cedar barrels or churns, one of which I had the satisfaction to demolish, just as he had completed his task of putting its different parts together. And here again I expected to be met with a claim for damages; but my cooper was a good-natured fellow; and having eyed me a moment with surprise, while I was dragging my leg from amid the ruins of his work, he said, as if giving me friendly counsel—"You've kicked the barrel to pieces this time, my fine fellow; take care, the next, you don't kick the bucket." Which piece of wit—for a piece of wit, I believe, he considered it—having passed his lips, he burst into a haw-haw of approbation at his own smartness; and I curing him in my heart for his insensibility to my pangs—for I had broken my shin by the accident—and mad with vexation and a vengeful desire to punish the author of my misfortunes, clambered up to the street again, but only to find the victorious rascal had vanished away.

These three several assaults led me to further observation of the deportment of the colored gentlemen of Philadelphia; and I was soon convinced that they were, next to the pigs, the true aristocracy of the town, or, at least, of the streets thereof. I perceived that all passers-by of white complexion and genteel appearance, of all ages and both sexes, gave the way to their wable brethren, stepping reverentially aside, to let them pass; and that, if they did not, the chance was that the sable brethren would revenge the slight by jostling them into the gutter or any open packing-box that lay convenient. I observed also, that there was nothing to be gained by the sufferer remonstrating, in such cases; except a deal of insolent and abusive language, which the lords of the *trottoir* had always ready at command, by way of convincing the complainant that they were as good as himself, if not a great deal better. The insolence of the black republicans was to me astonishing, though not more so than the general submissiveness with which I found it endured. I saw one fellow, a porter with a wheelbarrow, execute, upon a well dressed lady, the same feat that his comrade had lately performed upon me; that is, he knocked her down with his carriage, though not upon a pile of pottery; and the only apology the villain made was a great horse-laugh, and a giggling cry of "Couln't help it, Missus, 'pon wudder honor!" Nor did I find a single one of the many persons who witnessed the aggression, and helped the lady to her feet, who was disposed to resent it, further than by declaring, "the colored people were growing too insolent;" except, indeed, myself; who being, by this time, boiling over with indignation, saluted the grinning baboon with a thwack of my staff over the shins, which had the effect of surprising him into a very singular leap or dodge, that carried him

head-foremost into his own barrow; the back of which giving way under the blow, he went shooting over the wheel, like a ship at a launch, rushing down her rollers into the dock, ploughing his way with his nose over the bricks, in a manner that was astonishing to behold. For this salutation, it is highly probable, I should have received in return a furious drubbing from the incensed gentleman, had not a shopkeeper who stood at his door, surveying the spectacle, advised me to retreat before the negro had recovered his feet; assuring me that he (the blacky) would have me immediately taken up and carried before a magistrate; by whom I would be heavily fined for the liberty I had taken.

The name of magistrate was sufficient to put me on my best behavior; and I left the place, accordingly, without delay. But I was still so much enraged at the insolence of these black gentry, having never before been accustomed to see any that were not very polite and humble in their carriage, that I could not resist an impulse, which now seized me, to provide in advance a suitable punishment—that is, of a character that should not endanger myself—for the next one I should happen to meet. Perceiving a tobacconist's shop at my elbow, I entered it, and bought some Scotch snuff, and a box to hold it; and it was here that I made the discovery of my four bank-notes being counterfeit, the tobacconist refusing to receive them, and even showing some inclination to detain me and send for an officer to inquire how I had got them; until I appeased his distrust by producing one of my Jersey bills, and relating how I had been imposed upon. This man I found to be as facetious as the cooper. Upon my demanding if he had any very strong snuff, he replied, with a grin—"he had some so strong the box wouldn't hold it;" and when I told him of my mishap with the pottery, he declared that "that was the only way of taking pot-luck uninvited." He consoled me for the imposition practised upon me with the four notes, by saying that, "whatever we might think of them, they were undoubtedly counterfeit—which he supposed, in plain English, meant fit for the counter." In short, this happy personage astounded me by a multitude of quibbles, which he produced as a hen does her eggs, with a furious cackle after each; and then dismissed me with my box of snuff, which, its violence setting me sneezing as I left the door, he declared was, nevertheless, "not to be sneezed at."

I had not walked twenty steps, before I beheld a black fellow approaching, dressed like a dandy, though of the shabby genteel order, his hat cocked smartly on the side of his head, a rattan in his hand, with which he thwacked his boots at every second step, with a swaggering gait, and a look that said as plainly as if labelled in show-bill letters on his nose, which was the broadest part of his countenance, "Get out of my way, white man!"—an injunction very dutifully observed by every well dressed white man who met him.

As for me, who was not at all disposed to yield him such indulgence, but was, on the contrary, eager for the encounter, I loosened the cover of my snuff-box, as if to regale me with a pinch; and, pretending to look over my shoulder, as if ignorant of his approach, continued to advance in the middle of the walk, until the gentleman, scandalized at my presumption, and resolved to punish it, suddenly came in contact with me in such a way, and with such violence, as must have prostrated me, had I not prepared myself for the assault. I took advantage of the concussion to tap the bottom of my snuff-box, from which the contents immediately flew into the rascal's face, filling eyes, nose, mouth and lungs; from which last there presently issued a most terrific yell of surprise and anguish, that was followed by a volley of shrieks and execrations without number, the fellow dancing about, in the agony of pain and blindness, in a manner highly consolatory to my insulted feelings. I crowned my triumph by exclaiming, as if with rage and indignation at my loss, "Hang you, you rascal, you've spilled my snuff!" With which reproach, that served the purpose of both explanation, and apology for the accident, to the persons who came crowding round the negro, I immediately took my departure, turning into another street, and walking away with all the unconcern imaginable."

After meeting with several repulses in his endeavors to procure accommodations at some of the hotels, he finally obtains quarters at a chop-house, whence, having appeased his appetite, he sets out in order to find the dwelling of Mr. Bloodmoney; the gentleman to whom

his patron's letter, containing the remittance, was addressed, and from whom he expected to receive direction as to his future destination. Instead of Mr. Bloodmoney, he encounters a sharper, who passes himself off as Mr. B.—opens the letter—coolly pockets the hundred dollars enclosed—directs him to write to doctor Howard for five-hundred more—orders and eats a supper at his expense, and leaves him to return to his lodgings. Here he finds his wallet opened and robbed of his clothing, and, as an answer to his complaint, is obliged to treat to a gallon of gin and turned neck and heels out of doors. In this exigency, he again comes in contact with the pseudo Mr. Bloodmoney, whom Robin supposes all the while to be the veritable gentleman himself. He is invited by his friend, who, by the by, is quite maritime in his manners, into an elegantly furnished dwelling, where the scoundrel, under ingenious pretence, attempts a most audacious robbery. In the midst of feasting and revelry, they are surprised by the appearance of a young lady walking in her sleep, and whom the robber insults by a kiss. Awaking in alarm, she is defended from his assaults by Robin. At this juncture, they are interrupted by the entrance of the true Mr. Bloodmoney, in whose house they are, and three or four negroes, by whom they are knocked down and secured, and Robin ascertains that the real name of his companion, is Captain Brown, alias the redoubtable desperado Helicat. From this dilemma he is extricated by the gratitude of the young lady—a lovely Spaniard—and after plumping into a water-hogshead, dodging the watchmen, and running through the rain, he finds himself in the suburbs of the city—with the pleasant reflection, that, (although really innocent of the offence of the night,) added to his former trouble—the death of M'Goggin—his character is now marked with the stain of burglary.

Through mud and rain, cheerless, and a part of the time hatless, first in the boot of a coach from which he is pitched into a brook, and then inside of the coach itself, our hero at length arrives at Wilmington in Delaware. He has now formed the philosophical resolution, that since he was so egregiously duped by Captain Brown, he would never again be hoaxed by any man, and determines to act upon the principle of considering every man a rogue until he is proved to be honest. He found Wilmington in an uproar—filled with drumming and firing and the pomp of preparation, and excited by the tidings that the British had landed at the head of the Elk or some other water of the Chesapeake. He here resolves to join a band of volunteers or any other armed force that might offer; but his martial career is nearly crushed in the bud by another incident, which is nothing less than the arrival of Mr. John Dabs, a constable from the town in which doctor Howard resided, and who pounces upon him with an "I've got you, by jingo!" It appears, however, that John Dabs had not arrested him for the purpose of conveying him back to the clutches of the law—but to restore him to his patron. He informs him that M'Goggin had recovered from his injury, had been bought off by doctor Howard from making a complaint against him, and sent away by the trustees. Upon this result the good doctor had offered a reward for his recovery, and incited Mr. Dabs thereby to set out in pursuit. But cunning Robin, now grown worldly-wise

and philosophical, had no notion of being nabbed by this, as he conceived, artfully-contrived story to decoy him to the terrors of the prison or the gallows, and, therefore, by a stratagem, effects his escape once more. Alas for his philosophy!—Dabs' story was true.

On trudged Robin, in pursuit of war, glory and Dicky Dare, towards the scene of action; in the course of which journey he fell in with the following valiant troop, which might have marched well into the field side by side with Falstaff's ragged regiment, or the redoubtable forces of the renowned General Van Poffenburgh.

I was awakened by sounds the most agreeable, at that time, that could fall upon my ears; they were bursts of military music, the roll of a distant drum, that accompanied a fife, breathing out the spirit-stirring notes of Yankee Doodle.

"Bravo!" said I, kindling with joy and enthusiasm; "I shall now be a volunteer; and Mr. John Dabs, and cowardly villagers, and barking dogs, and their crazy masters, may all go to the ———" it is no matter to whom.

I followed the sounds; and by and by, I caught sight of the martial band from which they proceeded, consisting of no more than ten or twelve persons in all, whose odd appearance and equipments, struck me with amazement. Their dresses were by no means military, no two being decked precisely alike; some had long coats, some jackets, and some neither jacket nor coat; but most of them had scarfs, or what were meant for scarfs, of all imaginable hues, red, yellow, green, blue—tied about their loins, and a few had even additional ones wrapped round their hats. Their arms were as various as their accoutrements—each man having a hanger at his side, and a belt stuck full of pistols, besides guns; of which there seemed a plentiful variety, some marching with one on each shoulder, like so many Robinson Crusoes. As for their march I never saw any thing so disorderly, every man stalking along as best pleased himself, and all swearing, talking, whistling, singing in a manner wonderful to observe. Their officers—and I almost doubted, at first, whether they had any—seemed to be but two in number, and were distinguishable only by being more obstreperous than their followers; at least, the man who marched at their head swore with a louder voice and greater volubility than any one else; except a second worthy personage, who carried a banner of a very odd appearance, which, indeed, I afterwards found was an old red flannel petticoat, and seemed to aim at rivalry in profanity with the other.

I immediately saw, or thought I saw, that this, instead of being a band of regular soldiers, or disciplined volunteers, was a company of mere militiamen got together in a hurry, and stuffed with Dutch courage for the occasion, having quaffed, along with the gallantry that swims in the bottle, a deal of the folly and perverseness that lie at the bottom. This was a great disappointment to me, as I should have preferred to unite my fate with some company of soldiers in handsome uniform; but I thought it was not much matter with what corps I began my campaign, seeing I should soon, as I hoped, transfer my services to another—to that, whichever it might be, honored by the presence of my friend Dicky Dare.

And now I observed, as I drew nigh, that my redoubtable warriors, who were three-fourths of them, at least, in a very soldierly condition, and the other fourth hastening to become so by frequent and open application to sundry gourds, canteens, and black bottles, that were circulating among them, had taken as good care of the main chance in the second particular as the first, being quite as well provided with meat as with liquor. There was scarce a man of them that had not in his hand, or upon his back, something wherewithal to meet the exigencies of hunger; some bore fowls, some little pigs, some sheep, and one tall fellow was staggering under a hind quarter of beef, that looked like a gate of Gaza on his shoulders. Even the magnificent captain himself was as well burthened as any of his men, having a garland of young chickens hung round his neck, and a bundle of screaming guinea-fowls hanging from his sash—which sash, by the way, bore to my eyes a prodigious resemblance to a woman's shawl, or some other article of female apparel. And, indeed, the same might be said of the brilliant girdles and hatbands that adorned the persons of the others,

who seemed to me to have borrowed largely of their wives and daughters, to complete their equipments.

Into this warlike and respectable company Robin enters, and finds, after awhile, that it is a corps of foraging *British* sailors, and that he was actually in arms against his own countrymen! There is no relief, however, for poor Robin Day, and he continues with the enemy through the attack on Havre de Grace, and until the attempt on Craney island. In the meantime, in order that he may avoid the fate of a prisoner of war, and possess greater facilities for escape, he continues, as a choice of evils, in the capacity of a volunteer. During this service, an interesting incident occurs, which is no less than the discovery of doctor Howard's son, Tommy—supposed to have been drowned—employed in the same vile, menial office which himself had formerly filled, in the same "Jumping Jenny," and under the self-same skipper Duck. It appears, that Tommy, while swimming, had been stolen by the skipper, in revenge for the punishment which that worthy had received at the hands of his father. Tommy was now an ignorant and degraded being—Robin Rusty, "ship's cook" of the *Jumping Jenny*, *reditus*;—but he was still his old playmate, and the son of his benefactor, and Robin resolved to use his endeavors in rescuing him from his servile and cruel bondage. One attempt failing, he digested another, and in the meantime drew up a letter to his patron, which he designed to send by Tommy, containing an account of this discovery, and of his adventures since he had left his house. Tommy was not rescued at this time, however, and Robin escapes alone from the British in the attack on Craney island. Here he meets with Dicky Dare, beaming with all the glory of victory and regimentals. Dicky receives him as a traitor, but, from considerations of old friendship, liberates him and leaves him to take to his heels. Running from the peril of lead or hemp, our hero encounters another old acquaintance—no less a personage than his quondam friend, Captain Brown!

Repugnant to his feelings as an association with this individual was, circumstances obliged Robin to accept of his company, and together they hatched up a precious scheme of fraud and deception. The captain, who, it appears, was the self-same highwayman that attacked Robin and Dicky in their flight upon the supposed death of M'Goggin, proposed to our hero that he should disguise himself and turn Indian magian, and set up for a wonderful and mysterious physician. The articles of medicine to be used by the magian were only two, namely—some particles of tobacco rolled up in bits of clay in the shape of boluses, called "*Mermaid's Eggs*," and some road-side sand, y'cleped "*Holy sand of the Ganges*." Robin was not to use a word of English, and the gibberish substituted consisted of but two phrases, viz—"Holly-golly-wow," and "*Sammy-ram-ram*." Brown was to be the conductor, director and orator of the affair. To this arrangement Robin consented, and they carried on the plan with some success. Indeed, in one or two instances, from some fortunate juncture of circumstances, they really do good and effect a cure. Their adventures in this way are various and whimsical—but end rather seriously for "*Chowder Chow*," the assumed name of Mr. Robin Day, who, at the house of Mr. Feverage, a Virginia planter, finds

himself again trapped by the rascality of Brown—deserted, and actually sold for a slave. But, finally, he makes his escape once more.

The encounter this time, is with General Dicky Dare, to whose confidence and friendship Robin is restored, and, equipping himself with a horse, rifle, hunting frock, &c., he sets out with the valorous Dicky, to wage war against the Creeks. In the course of their journey, they stumble upon a company of men, banded and marching for the same purpose, and bearing the ferocious title of the "Bloody Volunteers." Over those who are not seared away by their approach, (among the fugitives was their captain,) Dicky is appointed commander, and at the head of his troop presses on for the scene of action. We will not pause to recount the conflicts, triumphs, defeats and adventures, through bush, brake and brier, in this Indian war. Robin Day is again brought in contact with captain Brown, who, acting in his behalf, is tied up with him by the Indians, for torture—is saved therefrom with him by the occurrence of a tornado, and is again, by an accident, separated from him. Emerging from this adventure, he once more meets the Bloody Volunteers, with Dicky still at their head, although thinned in numbers and worn by famine, fatigue and strife. Having ventured within the dominions of the king of Spain, they are surprised by a troop, declared prisoners of his majesty, and marched off to Pensacola.

Here we are introduced to the *Intendente*, or military governor of the town, colonel Aubrey; and Robin is surprised by meeting, in the person of the colonel's daughter, with Isabel, the young lady whom he had defended from the attack of Brown in the house of Mr. Bloodmoney. The address of Isabel, saves our hero from the disgrace of an exposure of the situation which he occupied on the night of the burglary. Robin Day and Dicky Dare are getting along very smoothly, when lo! who should enter upon the scene but Mr. Skipper Duck, and after him, captain Brown. The plot thickens. It appears that this captain Brown, according to his account of the matter, and also Duck, some years before, had been engaged in aiding the flight of a brother of Col. Aubrey, who was guilty of a conspiracy against the government. The vessel in which they sailed, the Sally-Ann, foundered; and Aubrey's brother, in endeavoring to save the life of the child, perished. Brown, after telling an ingenious story, is secured as a prisoner, and Robin, falling under the suspicions of Aubrey, is arrested also. Brown and the Skipper escape from the fort by night, together with a company of negroes, Spaniards, and the remnant of the Bloody Volunteers, who had been deluded by Brown—forcing off with them Robin Day, and embarking in the *Jumping Jenny*.

Brown now hoists the black flag, and appears in his true character of captain Helicat—a cruel, daring and blood-thirsty pirate. A course of murder and villainy is powerfully described, and the excesses and tender mercies of piracy on the high seas, darkly and terribly exposed. The latter part of the work is of absorbing interest, and displays the skill of the author in working up the materials of incident, and in giving to the whole the force of dramatic effect. In the course of events, the *Querida*, a vessel containing, among others, Isabel Aubrey, falls into the hands of Brown. Robin, who

had been employed as doctor to the robber-crew, madened to desperation by this circumstance, forms the almost hopeless scheme of rescuing her from the hands of the pirate-captain. He succeeds. Drugging the crew with a narcotic, as he did formerly the family of Mr. FEVERAGE when he eloped from slavery, they escape by means of the jolly-boat. They are rescued from the power of the savage Brown, but are alone on the wide, deep sea. As a very natural consequence, despite their situation, Robin discovers that he has fallen in love with Isabel, who evinces a reciprocity of feeling—but this love changes into a love of another nature, on account of the circumstance which is described below.

After these preliminary expressions, she gave me an account of the events that had followed, and some that preceded, my flight from Pensacola.

As soon (after the *Intendant* had sent me off to the fortress,) as his angry reproaches had allowed Isabel an opportunity to speak in my defence, she acquainted him with those particulars of my story which I had related to her, explaining the true nature of my connection with Helicat in the burglary; and by and by Captain Dicky, who presently made his appearance, and was called upon to speak on the subject, confirmed the account, by telling my whole story up to the point of my capture by the Indians, with which I had made him well acquainted: and, as he did me the honor to say, that "although he considered me a very big goose, and especially too big an one for a soldier, yet he would stand sponsor for my honor and integrity against the whole world," Colonel Aubrey was at last brought to believe his opinion had done me injustice; to repair which, he despatched a messenger to bring me from the fort to his house again. The messenger arrived just fifteen minutes too late; but he discovered the flight of the prisoners, and gave the alarm; the forts were ordered to fire upon us, to bring us to; which falling, the *Querida* was hastily despatched after us, and, as has been seen, to no other purpose than to witness at a distance the murderous attack upon the *Moro*, which she was not able to prevent.

My flight with Brown, (which none but the warm-hearted Isabel could believe involuntary,) and, worse than all, the act of piracy that so immediately succeeded it, had the natural effect of destroying every favorable impression in my behalf that had been made in Colonel Aubrey's mind; and the attempt of Isabel to advocate my cause only excited him to deeper indignation at the unworthy perversity of the maid, who could bestow her regard upon a wretch so degraded and abandoned as I. And in this feeling, a week after, he placed her in the *Querida*, now ready for her voyage to the Havana, under the care of the reverend padre, to be consigned to a convent, until sufficiently punished for, or cured of, her romantic fancy.

I expressed my surprise that Colonel Aubrey, with all his anger, should have been willing to expose her in a vessel so insufficiently armed, with the full knowledge that a pirate like Helicat was now raging the gulf; but she replied, that was an apprehension that had never entered his mind. No one doubted but that the desperado had hastened to join the outlaws at Barrataria Bay, and was, therefore, for the time at least, out of harm's way; and, besides, the *Querida* was considered very well armed and manned; and, being also a fast vessel, she might have beaten the corsair off, or escaped by superior sailing, had her crew been soon enough aware of the character of the *Viper*.

These explanations, with many a vow repeated over and over again, with a fervor and tenderness which our desolate situation both prompted and excused, occupied us through half the night; during which our little bark skimmed her way easily and safely along the sea; when, on a sudden, a gust swept over us, whipped the mast out of its step, and blew it with the sail entirely away; by which calamity we were doubtless saved from being instantly capsize, though we were left without any other assistance than the oars to help us along.

To the oars therefore I betook me, as soon as the gust had passed by; and I plied them diligently until morning; at which period I looked eagerly around, to see if the *Viper* was yet in sight; but she had vanished with her prize. I then looked as eagerly for the long-boat; but no long-boat was to be seen: the

little jolly-boat and ourselves were the only objects that broke the wide-spread monotony and solitude of the sea.

My heart sunk; but I concealed my fears from Isabel, and plied the oars again, although well nigh exhausted, until another gust swept the waves; by which I suffered the further misfortune of losing one of the oars, which was broken in my unskilful hands. Even the greatness of this calamity I disguised from Isabel, by assuring her I could use the remaining oar as a skull, and get along nearly as fast with it as with two. But my pride, or tender solicitude to keep Isabel from alarm, could hold me no longer against a discovery I now made; which was, that with all my pains to gather into the boat everything I could think of that could be serviceable to us on our voyage, I had forgotten the greatest necessary of all: bread and meat there were in abundance; but, ah me! not a single drop of water.

"But we shall soon find the long-boat," said Isabel, with equal simplicity and confidence in my nautical abilities; "and then we shall have water enough."

Alas! I had now given up all hope of finding the long-boat; my only trust was that Providence would direct some vessel in our way, that should pick us up. And with this forlorn expectation I was obliged to acquaint Isabel, when, long after mid-day, she began to express wonder at the non-appearance of the long-boat, asking me if I did not think we should find it.

Upon being made aware of our truly unhappy situation, she became greatly agitated and terrified; now throwing herself into my arms and telling me she would die with me, now dropping upon her knees and offering such wild and piteous supplications to Heaven as drew the tears from my eyes; and then springing to me again, and striving to comfort me with assurances that she was not afraid, that she was not thirsty, and would not be, and then again returning to her prayers. I did, and said, all I could to re-assure her; and, by and by, she recovered her composure somewhat; and to fortify her spirits still further, she drew from her bosom a rosary, which she began to tell, like a good Catholic; and doubtless would have continued to do so, until she had gone through the whole circle of beads, had I not been suddenly impelled to interrupt her.

I have already observed that I was struck, in the portrait of the Spanish gentleman, the brother of Colonel Aubrey, with a rosary worn round his neck, because of a resemblance which I saw, or fancied, in the beads to those which my patron Dr. Howard had obtained from Mother Moll, and preserved for me with great care, thinking they might, at some period, contribute to unravel the mystery of my birth and parentage. The beads which I now saw in the hands of Isabel, were identical with those in the portrait—and they were, as I could see, identical with my own; save that the great central bead, or cross, in Isabel's rosary, was richly studded with gold and gems, of which the cross in mine was destitute; although there were cavities on its surface in which such might have once existed.

The coincidence was remarkable, as the beads were of a singular kind of wood, and of strange fashion and carving; and it was to me so much the greater and more interesting, as to my awakened fancy it seemed to foreshadow a connection in reality between my fate and that of the beautiful being to whom I had just sworn eternal attachment. My brain teemed with sudden recollections of the foundered schooner and the mysterious fate of her exiled passengers; and moved by an irresistible impulse, I caught the rosary from Isabel's hands, exclaiming, as well as my great agitation would permit me—"These beads, Isabel!—they belonged to the original of the picture—your father's brother, who was lost in that schooner of which Brown was the mate—and of which Colonel Aubrey spoke with Brown?"

"Yes," replied Isabel, surprised out of both devotion and fear by the interruption, the question, and, above all, by my disturbed looks.

"And there was a fellow to it?" I cried—"another similar rosary, of the same strange wood, and fashioning?"

"Yes," said she, with a sigh; "it was on the neck of little Juan." How my heart leaped at the words! "They were holy beads from Jerusalem, consecrated on the Sepulchre of our Lord; and—but if you are not a Christian—that is, not a Catholic—you will smile at such things: but we held them as a kind of talismans, because of their being consecrated on the Tomb of the Redeemer. But, alas! they have proved no talismans to us yet!"

"And you will know that other, its fellow?" I cried, sumbling for the beads, which I had long since tied round my neck for safety, because my patron Dr. Howard had so earnestly charged me to preserve them; though I held them myself in so little estimation that it was seldom I ever thought of them: "You will know it!" I cried, loosening the string, and putting the beads into her hand: "the jewels are gone; but are not the beads the same?"

At the sight of them, Isabel's agitation became nearly as great as my own; she gave me a look full of wild inquiry, and then taking her own rosary into her hand, she faltered out, "There is a way to prove whether they are fellows;" and with that, twisting the cross of the latter between her fingers, she showed me, what I should never before have dreamed, that it consisted of two pieces that screwed together in the centre, so as to make a little box, and that each piece contained, within the box, a little miniature, the one a likeness of Colonel Aubrey's brother, as he was represented in the portrait, the other the semblance of a young and beautiful woman, somewhat resembling, as I thought, the dear Isabel herself.

"If this," said Isabel, placing my own between her trembling fingers, "if this be, indeed, the fellow, it must contain the same portraits."

As she spoke, the cross, which, from the ingenuity of its construction, neither I nor any one else had ever supposed to be any thing but solid wood, parted in twain, and disclosed the same pair of visages concealed in the little box.

"*Dies mio!*" cried Isabel, starting up wildly; "how came you by this rosary?"

I could scarcely articulate a reply: "Seventeen years ago, a vessel from the West Indies was wrecked on the coast of New Jersey; and I, a helpless infant, the only living thing on board, was taken from it by wreckers."

"And?" cried Isabel eagerly--

"And this rosary was upon my neck!--Oh, my dear Isabel, it must be so! Nature herself stirred up the affection that warms our bosoms. It must be so: that wreck--I can see it all now, and can almost prove it--that wreck could have been no other than the fatal schooner; and I, dearest Isabel, I am the little Juan you spoke of, and your cousin."

"My cousin? O my God!" cried Isabel, "if it be so, you are my own brother! We were twin-born together!"

"How?" I cried, confounded by her words, "and Colonel Aubrey, your father?"

"My father in name and affection only," said Isabel, "the father of my infancy and childhood, whom I have never called by any other name, who is, however, in reality, but my uncle, my father's brother. My father—and your father, if you be Juan—perished in that dreadful schooner, the Sally Ann."

"Yes!" I cried, struck by a sudden recollection: "here is the very name scratched upon the cross; though by whom scratched I know not. Dr. Howard always thought it must be the name of my mother. And now, too," I added, "I can understand the expressions of Duck, which I thought the mere ravings of delirium, that he could reward my humanity, and make my fortune by the same act that should obtain him vengeance on Brown; for it is certain—it was proved by Brown's own admissions before Colonel Aubrey, when ignorant that Duck was in Pensacola, and confirmed by his direct confession to me afterwards, in the fort—that Duck was actually on board the Sally Ann, and had been his accomplice in a deed of villainy hitherto unsuspected; for, Isabel, I know enough to convince me that our father, instead of being drowned by the foundering of the schooner, was murdered by her crew, and Brown at their head, for his money."

"Yes," said Isabel; "and so thought my father—my uncle I can scarce call him—and he was resolved, upon the arrival of a brig of war attached to the station, and therefore under his command, but then absent on a cruise, to despatch her to Barrataria in pursuit of Brown, with orders to spare no means to ensure his capture, that his brother's death might be fully avenged. But how is this, my brother—my heart tells me I must call you so!" said Isabel, anxiously: "how is it the schooner could have come ashore, and you in it, and yet my uncle who had instituted inquiries in America, should hear nothing of it?"

That, I said, was easily accounted for; and informed her that the knowledge of the wreck was for a period of eleven or twelve years confined to the wreckers themselves; and that,

at the end of that time, Dr. Howard had in vain labored among my jealous preservers to learn even so much as her name, or the period of the wreck; which latter he could only guess at by forming his own conclusions as to my age, and coupling with them the fact he had learned, that I was an infant too young to speak, when I came ashore.

In short, strange and wondrous as the circumstances all seemed, and imperfect as they were in the chain of connection, they bore with them such convincing evidence of my identity, that neither Isabel nor I could longer doubt we were brother and sister, the twin-born offspring of parents long since passed away to the world of death. We wept and embraced, and exchanged, by a natural transition, the fervor of lovers for the affection of brother and sister, which a romantic casuistry has pronounced to be the purest and heavenliest of all the bonds that connect the hearts of man and woman.

I learned from Isabel, what I had in part been informed of—that my father, with his younger brother, the present Intendant, had emigrated from South Carolina in the war of the Revolution, being loyalists, whom the fall of British power, in the colonies reduced to ruin. They had entered the Spanish service in Cuba; where the elder brother acquired rank in the army, and rose to wealth by espousing a Spanish heiress, my mother and Isabel's; but, in an unfortunate moment, was drawn into some treasonable project or conspiracy to subvert the Spanish power in the island. The conspiracy was discovered, and my father escaped from the officers appointed to arrest him, only through the instrumentality of the younger brother; who, faithful throughout to the government he served, yet ardently attached to my father, procured him the means of flight in the fatal schooner. One boat carried to her my father and little Juan—myself—with a single attendant, and such valuables as he had time to collect; another following with my mother and sister, was intercepted, and my father was compelled by extreme peril to set sail alone. Neither my father, nor the schooner, nor any of her crew were ever heard of afterwards, until Brown's sudden appearance in Pensacola. Grief for her husband's fate, which had been followed by the confiscation of his estates, drove my mother to the tomb. Isabel, a portionless orphan, was adopted by her uncle; whose own wife (for he also had married in the island,) died in a few years, leaving him childless; and who, partly by purchase, and partly through the bounty of the government which could thus reward his own long and faithful services, had effected the recovery of a great part of his brother's estates; which, with his own, were destined to swell the dowry, or inheritance, of his adopted daughter.

This discovery, brought about by a means so simple, and at a time so perilous, had the happiest effect on the spirits of Isabel, who declared, with pious fervor, that the Providence which had in so extraordinary a manner brought us together and revealed the secret of our relationship, could not have done so only to let us perish in each other's arms on the broad deep; and her confidence restored me in part to mine.

Isabel and Day are rescued from the jolly-boat by an American schooner, which is taken by the pirates; but not until Isabel and the captain's wife are concealed among the ballast of the crippled and burning vessel. The pirates are pursued by the armed brig Vengador, and in the midst of a storm both vessels are driven upon a reef of rocks. From this situation the two parties escape to the land, where, after a conflict in which colonel Aubrey and Dicky Dare are engaged among the forces against them, the pirates are defeated. In this struggle Brown is wounded, as also, Robin Day.

Our hero wakes to sense, to behold around him his kind patron, doctor Howard, colonel Aubrey, Isabel, Nanna, Dicky Dare and master Tommy. It appears that the Vengador had set out in pursuit of the pirate ship, taking with her Aubrey, Dicky Dare and Tommy. The reports of the pirate's guns, engaged with the American schooner, drew her to the scene of conflict. Isabel and the captain's wife were rescued by the Vengador's boat from the vessel, and the result of the pur-

suit of Brown and his crew has been seen. After the conflict, the wounded were put into the hands of an American physician, doctor Howard, who had visited the island for the benefit of his sick daughter, Nanna. Brown and Skipper Duck firmly established the identity of Robin Day with little Juan Aubrey. Brown survived his wounds but three days, and confessed before he died, the truth concerning the father of our hero. Tempted by Aubrey's wealth, and obtaining the aid of the crew of the Sally Ann, they murdered him and his attendants in the night, scuttled the vessel, took boat and reached the land. Although Brown wished to save Juan, the scheme was objected to by the others, and the utmost favor granted the infant, was to be left to the mercy of the waters. The schooner was bored, yet did not go down, but went ashore with the child in the manner mentioned in the commencement of the story.

Skipper Duck, who was captured on board the Viper, corroborated nearly all of Brown's story, and died in consequence of a gangrene received from a scourging given him by Brown.

Tommy's claims were also settled, and he was clasped once more to the fond and hoping hearts of a father and a sister. The letter which, it will be remembered, our hero wrote while among the British, and which he had deposited in a post-office during his adventures as Chowder Chow, cleared up his character to his patron; although the health of his beloved Nanna was so much affected, that it was found necessary to take a voyage to the island of Cuba.

In conclusion;—Robin marries Nanna, Dicky is wedded to glory and cut to pieces in Mexico; Tommy, recovering from his mental torpor, becomes a midshipman, and the adventures of Robin Day wind up with the peace and felicity of Juan Aubrey.

Our readers, we repeat, will form a general idea of the work from this compendium. We do not discover from it any particular power which the author possesses in nice delineations of character—there is no great depth of thought evinced, no peculiar beauty of language, or remarkable degree of taste. We do not say that doctor Bird is not capable of these things; it is very probable that he purposely discards and sacrifices them for some prime object; we are speaking now only of the book before us. We cannot think, moreover, that it is filled with the most profitable food which a novel is capable of affording. But, whatever may be its errors of omission and commission, it is, nevertheless, an interesting, and a well conducted tale. It is full, as we have before said, of absorbing incident, and, on the whole, will at least preserve, if not add to, the laurels already brightening around the name of its popular and deserving author.

VIRTUE.

Virtue may be misrepresented, persecuted, consigned to the grave—but the righteous wake not more assuredly to the reality of their hopes than this to an immortal remembrance.—[anon.

THE BIRDS IN AUTUMN.

BY MRS. SIGOURNEY.

November came on, with an eye severe,
And his stormy language was hoarse to hear—
And the glittering garland of brown and red,
Which he wreath'd for awhile round the forest's head,
With sudden anger he rent away,
And all was cheerless, and bare, and gray.

Then the houseless grasshopper told his woes,
And the humming bird sent forth a wail for the rose;
And the spider, that weaver of cunning so deep,
Roll'd himself up, like a ball, to sleep;
And the cricket, his merry horn laid by,
On the shelf, with the pipe of the dragon-fly.

Soon, voices were heard at the morning prime,
Consulting of flight to a warmer clime:
"Let us go! let us go!" said the bright-winged jay—
And his gay spouse sang from a rocking spray,
"I am tired to death of this hum-drum tree;
I'll go—if 'tis only the world to see."

"Will you go?" ask'd the robin, "my only love?"
And a tender strain, from the leafless grove,
Responded—"Wherever your lot is cast,
'Mid summer-skies, or the northern blast,
I am still at your side, your heart to cheer,
Though dear is our nest, in this thicket here."

The oriole told, with a flashing eye,
How his little ones shrank from the frosty sky,—
How his mate, with an ague, had shaken the bed,
And lost her fine voice by a cold in her head,—
And their oldest daughter, an invalid grown,
No health in this terrible climate had known.

"I am ready to go," said the plump young wren,
From the hateful homes of these northern men;
My throat is sore, and my feet are blue—
I'm afraid I have caught the consumption too;
And then I've no confidence left, I own,
In the doctors out of the southern zone."

Then up went the thrush, with a trumpet call;
And the martens came forth from their box on the wall,
And the owl peep'd from his secret bower,
And the swallows conven'd on the old church-tower;
And the council of blackbirds was long and loud—
Chattering and flying, from tree to cloud.

"The dahlia is dead on her throne," said they;
"And we saw the butterfly cold as clay;—
Not a berry is found on the russet plains—
Not a kernel of ripen'd maize remains—
Every worm has hid,—shall we longer stay,
To be wasted with famine? Away!—away!"

But what a strange clamor on elm and oak,
From a bevy of brown-coated mocking-birds broke!
The theme of each separate speaker they told,
In a shrill report, with such mimicry bold,
That the eloquent orators started to hear
Their own true echo, so wild and clear.

Then tribe after tribe, with its leader fair,
Swept off, thro' the fathomless depths of air,—
Who marketh their course to the tropics bright?
Who nerveth their wing for its weary flight?
Who guideth their caravan's trackless way,
By the star at night, and the cloud by day?

Some spread o'er the waters a daring wing,
In the isles of the southern sea to sing;
Or where the minaret towering high,
Pierces the gold of the western sky;
Or amid the harem's haunts of fear,
Their lodges to build, and their nurslings rear.

The Indian fig, with its arching screen,
Welcomes them in, to its vistas green;
And the breathing buds of the spicy tree,
Thrill at the burst of their revelry;
And the bulbul starts 'mid his carol clear,
Such a rushing of stranger-wings to hear.

O wild-wood wanderers! how far away
From your rural homes in our vales ye stray!
But when they are wak'd by the touch of Spring,
We shall see you again, with your glancing wing,—
Your nests 'mid our household trees to raise,
And stir our hearts in our Maker's praise.

Hartford, Conn., May, 1839.

UNCLE PETE AND THE BEAR.

By the author of the original "Jack Downing" Letters.

Among the different sections of this widely extended and variegated country, I question whether any portion of equal extent can exhibit more richness of landscape, or more wildness, beauty and grandeur of scenery, than the state of Maine. The western prairies are beautiful and grand; but their beauty and grandeur are like the ocean in a calm summer's day, with its smooth, unruffled bosom, and its long rolling swell; while much of the scenery of Maine resembles the same ocean when lashed into fury by the raging storm, and dashing and breaking its foamy waves into rugged hills and mountains.

Go with me to a somewhat central spot in Maine, inland from the ocean near a hundred miles. Here we stand upon the broad, bare back of a rough granite mountain. It extends north and west of us in broken ridges for several miles. Now and then you behold the trunk of a dry pine, which has been felled by the fire, and stretched upon the gray rock, like the straggling hairs upon the bald head of an old man. And here and there you see patches of low shrubbery bending beneath the weight of thick clusters of the blue whortleberry. Look away to the north, and your eye rests for half a dozen miles on a level tract of rich forest. Then rises abruptly a cone-like mountain, throwing its peaked summit far into the clouds, and standing, like a sentinel on duty, to overlook the country for many miles round. In the distance beyond, both to the right hand and the left, you see mountain after mountain, with their round shaggy tops, swelling and rolling, height above height, till they are lost among the misty clouds, or rest in

softened lines against the clear blue sky. Now turn your eye to the eastward; look down almost beneath our feet, and behold one of the most beautiful sheets of water to be found in the world. It washes the base of the rough granite mountain on which we stand, spreading out in a circular basin of three or four miles in diameter, then passing a narrow frith on the eastern side, of less than a quarter of a mile, it widens again and stretches away between ridges of highlands, some six or seven miles farther to the eastward. It is now a calm summer's day, and the bright basin on which we are looking is reflecting from its smooth glassy surface the dark forest trees on the swelling shore, the huge cliff on the promontory's height, and the broad sides of the mountains that fill up the back ground. So calm and still is the beautiful lake, that a fairy might float on its bosom in the half shell of a humming-bird's egg, without danger of foundering at sea or wetting her wings. But let the edying winds begin to move round these old hills and mountains, and they brush down upon the lake with such power that in a half hour's time its white capped waves are rolling and dashing like a mimic ocean; and the hardy lumberman, in his light batteau, pulls for the nearest shore, to avoid being drenched or drowned in the foaming surge.

The name of this beautiful collection of water is Sebec Pond, and the spot where we are now standing, at the head of this pond, is about fifteen miles from Moosehead Lake. Turn and look away a little to the left, and you will see the Wilson stream, a lovely little river, winding its bright way among the trees near the base of the opposite ledgy hills, gliding gently across the interval, and carrying its silent waters into the deep basin before us. Deep it truly is, corresponding with the high and broken hills around it; for I have been told that in some parts of this pond the bottom has never been reached, although lines have been let down to the distance of several hundred feet.

You observe a few acres of cultivated land on the interval between the Wilson stream and the base of the granite mountain on which we are standing; and there, close by the margin of the river, you see a small, low house. In that house there lives, and has lived for some ten years past, an old man by the name of Peter Brawn. He is often designated in that vicinity by the familiar appellation of Uncle Pete. Nothing, however, could be more appropriate than his true name, so accurately and forcibly does the sign represent the thing signified; for a more vigorous, athletic, and *bravory* old man, you will not find one in a thousand. He must be over seventy years of age, for his long thin locks are silvery white, and though he has one or two children in their minority still with him, he has numerous sons and daughters who have reached the middle age of life, and gone abroad into the world with families of their own. The old man is full six feet in height, and stands as straight as an arrow. He is neither decidedly fleshy, nor lean; but stout, bony and muscular. From his natural constitution and habits of life he evidently possesses great strength, and is capable of enduring great hardships. He has for many years been a sort of pioneer to the frontier settlers in the interior of Maine, always keeping a little in advance of them, preferring to live alone in the woods, where, unshackled by the restraints of society or the statute, he can feel that he is

—'monarch of all he surveys,'
And—'lord of the fowl and the brute.'

I am told, that before taking up his residence in this wild spot, he had several times pitched his tent in the wilderness, and tarried for a few years, till civilization and settlements overtook him, and thickened around him, to such a degree as to become inconvenient and troublesome, when he would 'pull up stakes' and push farther into the woods. The place where he now resides is an unincorporated township of wild land, and being somewhat difficult of access, except by coming up the pond from Sebec, a distance of about a dozen miles, uncle Pete has lived for something like ten years in a condition of tolerably satisfactory independence. He raises some provisions on his cultivated acres, and procures some game from the woods; and when these sources fail, he takes his hook and line and goes out to some of the ponds or streams in the neighborhood, and returns with a load of trout and other varieties of the finny tribe. For calico, tea, and tobacco, and other 'boughten' articles of use or luxury, he goes now and then to Sebec with a canoe load of singles and clapboards, which are his regular articles of export. But civilized life is again treading upon the heels of uncle Pete. The towns around him are becoming thickly settled, and though there is but one other family on the township with him, yet the visits of proprietors and proprietors' agents are becoming so frequent, and they cast such scrutinizing glances upon sundry pine stumps which they occasionally find on the premises, that uncle Pete grows restless and uneasy. He feels that he is rather crowded upon, and sometimes talks of 'selling out.'

It was in the autumn of 1836, that I first visited this wild spot, and first saw or heard any thing of uncle Pete. Stopping at the house of an old man, another pioneer of the frontier settlers, some six or eight miles from this spot, I heard the old man remark, while conversing with another, "Well, uncle Pete's had a squabble with a bear lately, haint he?" I at once felt a curiosity to learn the history of this 'squabble,' and accordingly made some inquiries, in answer to which I learnt the general outline of the story, and subsequently obtained the details and the filling up from uncle Pete himself.

It was a bright and a calm summer's morning; the quiet pond was sleeping in the sunshine, harmless and beautiful; and every surrounding object in nature looked lovely and inviting. There is something in the effect of a fine landscape, viewed under favorable circumstances, which may be compared to music—it 'hath charms to soothe the savage breast.' Even uncle Pete felt its influence, as he sat on a little bench by the side of his cottage, yawning and looking listlessly across the still waters, and following the outline of forest tree, and hill top, and mountain, that hung below the watery horizon, as well defined, as clear and distinct, and even with more softness than those which were towering above. While he gazed, he was seized with a desire for an aquatic excursion. He called his youngest boy, a lad about a dozen years old, and told him to get the hooks and lines, and they would go round the point to the mouth of Ship-pond stream, and try for trout. The apparatus was soon in readiness, and they jumped into his little log canoe and paddled off upon the lake.

"We had n't got but a little ways round the pint,"

said uncle Pete, "and I was setting in the stern, paddling along at a moderate jog, and little Pete was setting in the bow; and by and by he called out to me, and says he, 'O, father, what great black critter is that swimming off here towards us?' I looked round towards the shore, and there was the tarnaest great overgrown bear that ever I seed in all my life, swimming right towards us. If he had been weighed, I believe he would a weighed every pound of four hundred."

I never examined uncle Pete's head phrenologically, and cannot say whether his organ of marvellousness was of extra size or not. The reader must, therefore, be content with such evidence as we have with regard to the weight of the bear; and that rests solely on uncle Pete's word and judgment. He always stood to it the bear would weigh four hundred pounds.

"And the tarnal critter," said uncle Pete, "was pulling right towards us as fast as he could swim. I'd been so careless in coming away, that I only took one small paddle with me, and that was n't a very good one, and the old canoe was rather heavy; so I found, do the best I could, the bear would swim faster than I could paddle. But I thought I could keep him off well enough if he should set out to meddle with us, so I turned the boat and paddled a little towards him. I thought that would make him turn and go off. But the old savage kept swimming right towards us, and come up close to the side of the canoe, and begun to open his mouth, and show a great ugly set of teeth as ever you see. He come up so near that I hit him a lick over the head with the paddle and split it in two. At that he come right at the boat fairer than ever, and put his paw right up on to one side of it. I sprung into the middle of the boat, and bore on 'tother side of it, for I knew if I did n't, he would upset us in a minute; and I thought I should n't like very well to have a grapple with him in the water. So while I was keeping the balance of the boat, the rascally old varmin pokes up 'tother paw and begins to crawl up. I could n't go to fight him off, for then we should all go into the water together. So I had to hold still and see the great black nigger crawl clear up into the boat. He got in pretty near the stern, and I stood about in the middle. As soon as he got fairly in, he looked round to me, and then he rared right up on to his hind legs and walked towards me as straight as a man. He was as tall as I was, and looked as big as a clever young ox. I stood facing of him, and while I was thinking how it was best to give battle to him, he marched straight up to me, and put one paw on my right shoulder, and 'tother on my left. Thinks I, this is bein' a leetle bit too sociable for a stranger; and I was jest agoin to tell him, hands off, when his weight pressing against me made me step back a little, and my heel ketched against something in the boat, and I fell flat on my back in the bottom of the boat, and the old bear on top of me. By this time I begun to think matters was getting worse and worse, and it was time for me to begin to look about myself. I twisted one way and 'tother, and we begun to have considerable of a squabble; but the old bear had altogether the advantage of me, and I could n't seem to do much. I tried to get hold of my jack-knife, but I could n't get it out of my pocket, all I could do. The old bear did n't seem to be willing to wait to give me fair play at all; for in a minute I felt him trying to stick his huge tusks into

my forehead, jest as a boy digs his teeth into the side of a great apple. Thinks I, this 'll never do; something must be done pretty quick. I made a terrible twist, and drawed my legs up under him, and got so I could give a push with my feet, and my knees and hands, then all to once I fetched an everlasting spring, and how I did it I do n't know, but somehow or other the old bear went overboard, and plunged headforemost into the water. I was on my feet as quick as a steel trap. The old bear come up to the top of the water and snorted, and looked up at me a minute; but I believe I had fairly skeered him out of it. He turned about and swum for the shore, and I paddled for home. When I got to the house, I told my wife we'd have some potatoes for dinner, and let the fish go."

"I WENT TO GATHER FLOWERS."

Suggested by an engraving with the above motto, representing a female who had been gathering flowers, as coming unexpectedly upon old tombstones in a wood.

I.

"I went to gather flowers,"
So spake a lovely maid—
But why, amid those bowers,
Hangs down her drooping head?

II.

Swift flew the laughing hours,
As tripp'd that gladsome maid;
Why hath she dropped her flowers?
Why covers she her head?

III.

I mark what 'tis that causes
Her heart that sudden thrill;
I see why 'tis she pauses—
What thoughts her bosom fill:

IV.

Old graves are yawning on her
Beneath the flow'ry sward;
Green tombstones stare upon her
From out an old churchyard.

V.

A tale of dread they've told her,
Of beauty and its charms;
They've whisper'd Death would hold her
Within his mould'ring arms;

VI.

That after some bright hours—
And fast bright hours fly—
Some one might gather flowers
Where she in dust might lie.

VII.

Oh, how her teeth did chatter,
Oh how her frame was shook;
The tott'ring stones nod at her;
Look, gentle maidens, look!

VIII.

Go—gather not all flowers,
Though they should gaily bloom;
The sweetest breathe in bowers,
Too near, too near the tomb.

SOUTHERN LITERARY MESSENGER.

VOL. V.

RICHMOND, JULY, 1839.

NO. VII.

SONNET.

BY PARK BENJAMIN.

Lady, farewell! my heart no more to thee
Bends like the Parsee to the dawning Sun;
No more thy beauty lights the world for me,
Or tints with gold the moments as they run.
A cloud is on the landscape, and the beams
That made the valleys so divinely fair,
And scattered diamonds on the gliding streams,
And crowned the mountains in their azure air—
Are veiled forever!—Lady, fare thee well!
Sadly as one who longeth for a sound
To break the stillness of a deep profound,
I turn and strike my frail, poetic shell:—
Listen! it is the last; for thee alone
My heart no more shall wake its sorrowing tone.

CATALEPSY.*

"There are more things in Heaven and earth, Horatio,
Than are dreamt of in your philosophy."

To the Editor of the Southern Literary Messenger:

Sir,—In reading, in a late number of your periodical, the interesting tale of "The Transfigured," I was reminded of a case which occurred in my practice some years since. In looking over some old papers, I have this day found my notes of the case, which I will attempt to write out; and though better suited to a medical journal than yours, I will send them to you, to dispose of as you think proper. I know that many of the facts will be disbelieved, but I pledge myself for their correctness, and the most improbable of them can be attested by a dozen living witnesses.

On the 12th of April, 1828, I was sent for in great haste, to visit Miss ****, about fourteen or fifteen years of age, whom I had seen the day before, in the town of my residence, quite well and very gay, having been at a party on the preceding night, as she probably had been on several successive nights before that. I found her in a state of entire insensibility, from which she could

* Some of our readers may suppose that this deeply interesting narrative is an ingenious fiction, contrived for their amusement; but we are happy to have it in our power to assure them, that its author is a gentleman of unimpeachable honor and veracity, and of high standing as a member of the medical profession. In a private letter received from him, he repeats the pledge contained in the narrative itself, that, if his statements are controverted, he is prepared to substantiate them by testimony of as high character as can be adduced in this country. Our readers, therefore, may fully rely upon the verity of the story, however curious and incomprehensible its details may appear to them. How little, indeed, after all the researches of philosophy, do we still know of the laws which regulate mind and its mysterious connection with matter.—[Ed. So. Lit. Mess.]

not be aroused by talking, shaking, or even pinching. The account which her intelligent parents gave of the attack was, that she arose in the morning apparently well, and while sitting in the window and employed in knitting, she became suddenly speechless and insensible.

Notwithstanding the use of active remedies, such as dividing the temporal artery, a cathartic, valerian, synapisms, &c., she remained in this state for twenty-four hours. When she revived, she talked incessantly of the parties to which she had been, and of the company. I left her in this state of vivacity; but on the next night I was sent for, with the information that another paroxysm was upon her. I remained with her during the night, attentively watching the symptoms, and using such remedies as they indicated. I soon discovered that she was affected with catalepsy, a disease, which, though not of frequent occurrence, I had before seen.

In spite of medicine and consultations, the disease continued in various forms, the paroxysms returning at various intervals, till the middle of May. Arteriotomy, cupping, blistering the head and spine, tartar emetic ointment, and all the most active internal remedies were employed, sometimes with apparent advantage, and often without any beneficial result. A physician, who was present during one of the paroxysms, divided the temporal artery with a lancet that he had used in vaccinating. It was the belief of the family that she had been vaccinated; but now a large vaccine pustule formed on the temple, from which we augured beneficial results. But in this we were disappointed, for the paroxysms became longer, more frequent and more violent. I recollected that she had suffered very much and was delirious, about twelve months before, from a diseased tooth, which a neighboring physician attempted to extract. I now proposed its extraction, which she resisted, and the family would not consent to coercion.

The form and duration of the paroxysms were constantly varying. Sometimes she would be taken with spasms and fall into a comatose state, which would continue from one to twelve hours. Sometimes her head would be drawn back upon the shoulders. I have often seen the body curved backwards, with the head and feet in contact, in the form of a hoop, in which state she would continue perfectly rigid and immoveable for more than an hour, without any appearance of respiration; yet arterial action continued. I have seen her, at other times, lie with her eyes open, and immoveably fixed upon the ceiling for several hours, with a countenance the most placid and serene, yet luminous, that I have ever beheld, and which many of her visitors pronounced unearthly and angelic; during all this time there was no apparent respiration. When the paroxysms were off, she would converse in the most volatile, sprightly and amusing style. Before this attack she had been considered rather taciturn, when compared with her sprightly, voluble and talented sisters. From the commencement of the disease she talked incessantly

during the intermission: at first her conversation ran upon light and common-place subjects, but as the disease advanced, her mind seemed to expand, and her conversation became not only interesting, but often eloquent and learned, on subjects which she had never been known to study. She had not even had access to books relating to them. Though I knew that I enjoyed the implicit confidence of this family, as a physician and friend, my mind was constantly kept in a state of tension: first, to find suitable remedies for the varying symptoms of the disease; next, to quiet the apprehensions of her anxious friends, whose intelligence and sagacity were not to be eluded by the ordinary and justifiable artifices, which the best and most pious physicians sometimes resort to for the benefit of their patients; but, above all, by the extraordinary shrewdness and discernment of my patient. I had not only to chime in with her notions in regard to the medical treatment of the disease, but had to accommodate myself to her various opinions on a variety of subjects—amatory, social, religious and political,—and often to discuss them with her. A bare assent to her opinions would not satisfy—a reason, and a plausible one, must be given. Had I betrayed gross ignorance on some of her favorite subjects, I should have lost, forever, the chance of discharging my duty to her as a physician. She would, probably, never have suffered me to approach her sick chamber. These discussions sometimes took place in the presence of intelligent persons. She would sometimes overwhelm me with confusion by her extravagant compliments for some opinion advanced, or some gallant expression uttered; at another time, she would keep me smarting and writhing under her keen invective and biting satire—and, suddenly, she would almost draw tears from myself and all present by her eloquent appeals—which were as suddenly removed by her corruscations of wit. All this occurring in the midst of a great variety of other professional engagements, which forbade my remaining at home for an hour in the twenty-four, kept me in a state of nervous excitability, which has not, to this day, worn off.

In about a fortnight after her first attack, while resting myself, after a most fatiguing ride, I received a note, written in a strange, mysterious and incoherent style, signed "Roberta Bruce." Not knowing a person of that name, nor the subject alluded to, I supposed it was a quiz, and threw it away or burnt it. Afterwards I learned that a messenger had come for me to visit Mr. —'s family; and it immediately occurred to me that the note was from my eccentric patient. I sent a prescription, and my suspicions were soon confirmed. The messenger brought me a note, of which the following is a copy, verbatim:

"We were all much delighted at the reception of your kind, interesting and affectionate letter. You spoke of the absence of Alecto, with joy inexpressible. I suppose you know to whom I allude. I might well say, as the sun softens and dissolves an icy rock upon the summit of the Appenines, so the impetuous passions of a married man are subdued by the voice of her he loves. Do write me how our interesting grasshoppers are, as report says I am enamored of one or all of them; but it must be a *lapsus linguae*. The heart, however, is in the right place. I expect this to be

viewed with the eye of affection, not that of a critic. When is Henry Clay to deliver his address at our sub-lunary village? You must excuse inaccuracies and bad writing, as I am blind, and cannot steady my hand. This horrible disease continues.

(Signed,)

ROBERTA BRUCE.

"P. S. Oh! that I was in Lapland, standing upon some immense iceberg, overhanging the Aurora Borealis, not a thought would then extend to the convent. Do ride down and bring me one mouthful of cheer. Did you ever hear of, read of, or see so horrible a disease?"

Being urged by the family to visit her, I did so forthwith. Her conversation soon explained the purport of this incoherent letter. I remained in attendance during the day and night—and soon after returning home, received from her the following rhapsody:

"Oh! my sweet friend, he exclaimed, since now I feel myself entitled thus to call you, well indeed might your nation have hailed you as sacred; and while the heart which now throbs with emotion, to which it has hitherto been a stranger, beats with the pulse of life, on the return of this day will make its offering to that glorious orb, to whose genial, nutritive beams this precious rose owes its existence. I would rather possess one beam of that genius which elevates your mind above all earthly distinctions, and those principles of integrity which breathe in your sentiments, and ennoble your soul, than all the honors ever conferred on man. Our meeting was attended with a new and touching interest—the sweet result of that perfect intelligence which now, for the first time, existed between us, and which stole its birth from that tender and delicious glance, which love first bestowed on me, reclining near the cypress cemetery. While my very soul followed this brilliant comet to her perihelion of sentiment and imagination, I had my eye on her mind-illuminated face, and said: Is expression then necessary for the conveyance of such profound, such exquisite feelings? May not a similarity of refined organization exist between souls, and produce that mutual intelligence which sets the necessity of cold verbal expressions at defiance? May not the sympathy of a kindred sensibility in the bosom of another, meet and enjoy those delicious feelings by which yours is warmed; and sinking beneath the inadequacy of language to give them birth, feel like you in silent and sacred emotion? Whether the tie which binds me at once to moral and physical good, is of a fragile texture and of transient existence, or whether it will become closely twined with the fibres of the heart, and, breaking, break it, time only can determine. To mine, therefore, I commit my fate: but while thus led by the hand of virtue, I inebriate at the living spring of bliss, while reeling through a wilderness of joy—all the life-giving spirit of spring, mellowed by the genial glow of summer, sheds its choicest treasure on the smiling hours which yesterday ushered in the most delightful of the season. The gray vapors of twilight were already stealing amidst the illumined clouds that floated in the atmosphere, the sun's golden beams no longer scattered around their rich refulgence, and the glow of retreating day was fading even from the horizon, where its parting glories faintly lingered—I arose earlier than usual; the disturbance of mind would not suffer me to

rest; I walked as though I scarcely touched the earth, and my spirit seemed to ascend with the lark, which soared over my head, to hail the splendor of the dewy dawn."

After my next visit I received from her the following note:

"FROM THE CONVENT.

"Roberta Bruce, Queen of Scotland, is again compelled to address the mimic of *****. She really feels it a condescension for the royal queen to stoop thus low; but confined as she is in a cloister, it is not to be wondered at. She commands you to send the letter last received, as convoys are coming from every quarter of the globe for the rare and sublime production, particularly from M. and K., who say they will stir Heaven and earth to obtain it. She frequently visits M. On the last visit, he emphatically said: 'What affectionate hand will spread flowers over my solitary grave; for haply, ere that period arrive, this trembling hand shall have placed the cypress over the tomb of her who loved me living, and would lament me dead.' She never will forget the day on which he first saw her in Scotland, delivering her farewell address to her sires and countrymen. He walked up and repeated thus—'May the eye that sees thee for the first time, wish that it may not be the last, and the ear that drinks thy languishing words grow thirsty as it quaffs them. I now crown my golden hours of bliss, and whatever may be my future destiny, I will at least rescue one beam of unalloyed felicity from its impending cloud; for, oh! royal queen, there is a prophetic something which incessantly whispers me, that in clouds and storms will the evening of my existence expire.' As she was walking from the castle she again hurried to look back, and caught a last view of the mountain of Innismon: it seemed to float like a vapor on the horizon. She took a long farewell of this much loved spot. Once it had risen to her gaze like the Pharos to her haven of enjoyment; for never until this sad moment had she beheld it but with transport. She has again visited the Adonis of Virginia. He adverted to his admiration of the fair queen, and observed, that 'Sweet was the memory of distant friends—like the mellow ray of the departing sun, it fell tenderly, yet sadly, on the heart.' She rises in the morning with the orient sunbeam of brightness, and slumbers with the western gale. You shall soon behold her absorbed amidst the monuments of past ages, deep in the study of languages, history and antiquities. I have just visited M., and will give you his own words: 'How delightful,' he exclaimed, 'to form this young and ductile mind, to mould it to your desires, to breathe inspiration into this lovely image of primeval innocence; to give soul to beauty, intelligence and simplicity; to watch the rising progress of your grateful efforts, and firmly clasp to your heart that perfection you have yourself created.' This was spoken with an energy and enthusiasm, as though he had himself experienced all the pleasures he now painted for her.

"With a glance of indescribable supplication, she released herself from that glowing fold which would have pressed her forever to a heart where she must inevitably have ruled unrivalled."

I shortly after received from her the following letter:

"FROM THE CONVENT.

"Roberta Bruce, Queen of Scotland, will now sit down to address the mimic of *****; but it is the last letter that he ever will receive from her hand, as she will so soon return to the land of her sires. She does not pretend to censure the quacks of Virginia for not affording relief, as they are ignorant of the constitution of a queen. She will now proceed to give him some of his own glowing words. 'Her fancy is sometimes dazzled by the brilliant flashes of native genius. Her heart is touched by the strokes of nature, or her soul elevated by sublimity of sentiment from a vivid fancy, susceptible feelings, and a cultivated mind, which are never so fully tasted as in the sweet sunset of the day; then the influence of sentiment is buoyant over passion—the soul, alive to the sublimest impression, expands in the region of pure and elevated meditation—the passions, slumbering in the soft repose of nature, leave the heart free to the reception of the purest, warmest, tenderest sentiment, when all is delicious melancholy, or pensive softness, when every vulgar wish is hushed, and a refined and indefinable rapture thrills with sweet vibration on every nerve. But, O! royal queen! I was led to believe, (fatal conviction,) that the virgin rose of the fair queen's affection, had already shed its sweetness on a former, happier lover; that the partiality I had flattered myself in having awakened, was either the result of intuitive coquetry, or, in the long absence of her heart's first object, a transient beam of that fire, which, once illumined, is so difficult to extinguish, and which was nourished by my resemblance to him who had first won her heart. What! I receive to my heart the faded spark, while another has basked in the vital flame. I, contentedly gather this after-bloom of tenderness, when another has inhaled the very essence of the nectarious blossom. I will, with a single effort, tear this late adored image from my heart, though that heart break with the effort, rather than feed on the remnant of those favors on which another has already feasted. Since human happiness, like every other feeling of the heart, loses its poignancy by reiteration, its fragrance with its bloom, let me not, while the first fallen dew of pleasure hangs fresh upon the flower of your existence, seize on the precious moments which hope rescued from the fangs of despondence. When I heard the fatal news, I felt like a being of some other sphere newly alighted on a distant orb.' She is like the rising of the golden morn when night departeth, and when the winter is over and gone. She resembleth the cypress in the garden. She may well say now, she rises in the morning with the orient sunbeam of brightness, and slumbers with the western gale."

She was true to her promise of not writing me another letter; but she continued to write on various subjects, and had her manuscripts locked up in her bureau. She would sometimes read them to me,—at other times she could not be prevailed on to do so. Towards the close of her disease they assumed a more literary character. I regret very much that I did not procure some of them, as they would have discovered the astonishing powers of her mind. The style of her last compositions, though somewhat turgid and occasionally too quaint, was considered very fine. She sometimes made me read them

to her. If, in doing so, I made the smallest mistake in a word, or in the pronunciation, or even emphasis, she would correct me, and would often discover the shrewdest critical acumen that I have ever witnessed. I frequently thought I discovered misapplication of words, or bad spelling, and would refer to the dictionary and other authorities on the subject, and invariably found her correct. If there was an unusual word, or one which could be spelt in different ways, she generally used it or spelt it in the obsolete way, as if to entrap persons disposed to criticise, and to enjoy the pleasure of confounding them. In a girl, who had scarcely left school, this critical accuracy would appear astonishing—but it is not half so much so as many other things connected with her disease, by which she gained an ascendancy not only over the servants, but over her brothers and sisters and parents, and even the neighbors, many of whom were impressed with a belief that she could divine events, and knew the secrets of their hearts. A few instances will suffice to show her gifts in this way. The family were always very cautious about imparting to her any unpleasant news, and I had particularly enjoined it upon them not to hold conversations on any such subject in her presence. During one of her long paroxysms of catalepsy, in which she was curved like a hoop, and apparently entirely insensible to every thing around her, news of the death of an aunt was received by letter: the family, I believe, were not apprised of her previous illness, as she resided far from them. Of course great care was taken to keep her from a knowledge of so distressing an event—and all who could not appear composed, were enjoined to keep from the room. So soon as the spasm left her, she called for her sister, and asked her if she knew that aunt H. was dead—and who had informed her. Her sister used the pious fraud of denying that such a calamity had occurred. She told her that it was useless to deny it, that she had seen her distinctly, and told them the very day of her death, &c.

There is, perhaps, no person who believed more firmly than myself in the aphorism, "*nil est in intellectu quod non prius fuit in sensu.*" I therefore instituted the strictest inquiry to discover whether there had been conversation in the room on that subject, while she appeared insensible, so that the sense of hearing might have conveyed the impression to the sensorium, while the other senses were locked up. I could by no means discover that this had been the case; yet my theory (but nothing else,) leads me to the belief that such must have been the case.

During her illness I was sent for, in consultation, in the case of a young gentleman, who had been long laboring under a diseased liver. My cataleptic patient took great interest in the case, and made daily inquiries about him. When I was sent for, she observed that it was too late: if I had been sent for at an earlier period of the disease, she could have instructed me how to cure it. But now, she said, she had taken a view of the hepatic system, and found it entirely disorganized, and he would inevitably die. Her prediction was soon verified. Immediately after the death of the young man, I went to see her, and was the first to communicate information of his death to the family. They, as usual, were cautious about saying any thing concerning it in her presence, and I know that I did not speak

of it in her room. Yet, soon after I went into her room, on reviving from one of her swoons, she told the family that Mr. J. was dead. Some of them denied it; but she repeated the assertion most emphatically, and, I think, shed tears. I know not how she could have come to this knowledge, unless the sense of hearing, as conjectured in the other case, was so acute, as to enable her, while the catalepsy was on her, to hear whispering in the passage, or in the opposite room. I do not believe that any person in existence, with the ordinary auditory faculties, could have heard it; yet, sooner than surrender the doctrine that all information is communicated by the senses, I must believe that the information was thus obtained.

About this time, while returning from a visit to a patient, I was invited to partake of a feast on the road side. While waiting for it to be served up, a most severe thundergust came on, and the rain fell so hastily, that it was impossible, though I rode at the top of my horse's speed, that I could reach a house about a quarter of a mile distant without getting wet; many of the company were completely drenched. So soon as I had dined, I visited my patient, and was informed by the family that she had been extremely ill, and that the paroxysms had been more violent than they had ever witnessed; that when the storm came on, she became greatly agitated, shrieked and hallooed, clapped her hands, and shouted, "Wallace! Wallace! see how he goes"—with various other exclamations, manifesting her alarm at the danger to which the person mentioned was exposed from the storm. She swooned away, and remained insensible for some time. When she spoke, she reverted to the subject of the storm which had then passed over, and declared that she had seen me exposed to it, and in great danger. The family tried to convince her that it was probably not the case, as I expected to remain at home to repose, after sitting up the previous night. She persisted in her opinion, and spoke of nothing else, when free from the spasms, which came on in rapid and alarming succession. So soon as I came into the room she seemed delighted to see me, and described the excruciating agony which she had suffered while Wallace was exposed to the storm. It may be well to remark here, that soon after she assumed the name of Roberta Bruce, she conferred on me that of Wallace. The accuracy of her accounts of the events of this day, her precision as to the time, shook my faith in the doctrine of the senses being the *sine qua non* to intelligence. But I ultimately accounted for it as I have done for similar things connected with dreams. As great dreamers are always dreaming, it is not strange that they should sometimes dream of actual occurrences. As she, about that time, was always apprehensive for me when absent, it is not strange that the terrors of a storm should have excited her vivid imagination to a perception of occurrences which in themselves were highly probable. As I had many patients, it was quite likely that I should be riding, and might be exposed to the storm; from which I should, of course, endeavor to escape by hard riding. As the distance was not more than five or six miles, and the storm extended to both places, it is not so remarkable that her agitation should have commenced at the precise time of my exposure.

I have selected these from a great variety of other

strange things, which were witnessed in the progress of this incomprehensible disease. If my solutions be not correct, let others find better. The facts are irrefragable, and can be established by the best testimony under oath.

Towards the middle of May, all the symptoms of the disease became milder; and some time in that month she came on a visit to my house, where I had for many days an opportunity of watching the changing phases of the disease. There was still an unnatural vivacity about her. She seemed, as she expressed it, "inebriating at the living spring of bliss, while reeling through a wilderness of joy." The case had excited great interest in the country, and visitors of all descriptions daily called to see her. Most of the physicians of the country, and some from a distance, saw her. Clergymen, lawyers, and judges were often with her, and were sometimes instructed, and always amused, unless something was said to draw from her that keen, biting sarcasm, which none who have felt can forget. I have seen her in conversation with many talented men of the various professions of this country, and her colloquial powers were such that she never for a moment hesitated for a word or an idea on any topic that was started; and I have never known her, in a single instance, defeated in discussing any subject. If she did not by her ingenuity turn the argument against her opponent, she would by her vivid flashes of wit, cast such ridicule upon him that he was soon discomfited. I have seen persons, who have smarted under her keen satire, on account of some peculiarity or some foible, hide their heads, or slip out of the way, to avoid her observation; she was certain to perceive it, and to subject them to the severest chastisement that tongue could inflict.

Unfortunately, during this period of high mental excitement, a ball was given, and she of course invited; for, what beau who hoped for future ease in society, would dare to withhold an invitation from one who could wither him into nihility by her sarcasm and wit, which she would not have hesitated to publish in the paper of the town? nor would the editor have dared to refuse publication. I used every argument, and worked every kind of traverse to counteract her intentions of attending the ball, but all in vain. She dressed herself in the gayest and most fantastic attire that she could procure, and in all the dignity and state of a queen,* went to the ball. She was an object of admiration, not only on account of the great notoriety which she had acquired, but the vivid scintillations of her wit, which seemed to enliven the whole assembly, and the ludicrous attitudes in which she placed some of the dandies and coquettes who were present. She indulged not only in dancing, but in the rich and savory viands that were offered—and on her return to my house she soon relapsed into her cataleptic state. Night after night have I watched by her bedside—often without sleeping a wink. Sometimes I would fear, much as I had become accustomed to the various changes of her disease, that life was almost extinct; and just as I thought my fears were about to be realized, she would revive, and entering into the most lively conversation, would keep me and the attendants convulsed with laughter.

* The excitement of preparing, dressing, &c. for the ball, had induced a return of this hallucination.

After spending a night in this way, she would sometimes rise in the morning, dress herself, and go into company as if well. Sometimes, in the midst of conversation, she would be seized with a cataleptic fit, and whether standing, sitting or reclining, she remained in the position which she occupied at the moment of attack. Her eyes were generally fixed immovably, with that peculiar expression which I have attempted to describe in the preceding part of the protracted history of this case—her respiration suspended, and her muscles rigid. The peculiar characteristics of catalepsy were strikingly manifested at this period of the disease: the limbs, though rigid, were moveable—you might bend the arm, extend it, place the hand to the chin, forehead, or any other part of the body, and there it would remain during the paroxysm—the whole body could be made to assume the appearance of statuary, of which it was the finest model I have ever seen.

These attacks were alternated with others which were convulsive, in which the body was contorted into a variety of shapes. The trains of ideas succeeding these two forms of the disease, were as separate and distinct as those of two different persons. For instance,—after recovering from a cataleptic fit, she would resume the discourse which she had been engaged in after a former attack, without seeming to perceive that there had been any interruption to it. Sometimes she would be seized in the midst of a sentence, which she would, after the attack, complete with grammatical accuracy. After the attack of convulsion, she would, in like manner, resume the train of conversation peculiar to that attack. And what is remarkable, you never could bring her in one frame of mind to a consciousness of what passed in the other. I have often heard her criticise with severity, and ridicule the ideas and expressions attributed to her under such circumstances.

After some abatement of the symptoms she was moved home, a distance of three or four miles. Here the disease returned very much as it had been at my house, and continued, in spite of all the remedies prescribed by myself and various other physicians, until the 22d of July. About a fortnight before that day she observed to me, that I had frequently proposed to extract a carious tooth of her's: that it had been revealed to her that if she would have it drawn on the 22d day of July, precisely at three o'clock, (I think that was the hour,) it would instantly relieve her; but that it would be dangerous to draw it at any other time. I could not possibly prevail on her to consent to an earlier period, and she often seemed alarmed lest I should attempt it forcibly, declaring that it would kill her. Before the arrival of the day, we determined to muffle the clock, the ticking of which, though in the room below her chamber, often alarmed her; and I directed the family to set it back, if any accident should prevent my arrival before the appointed hour. I, however, arrived before that hour; when I went into the room, she seemed agitated, but resolved to submit to the operation. When the hour arrived, she permitted me to examine the tooth, &c. When all was ready for the operation, she swooned off, and I extracted the tooth without difficulty. She laid a short time in the swoon, which terminated in a convulsion. So soon as she opened her eyes, she expressed great relief; looked more composed than I had before seen her—in

the course of an hour she called for her work, and from that time forward attended to it and her studies, as if they had never been disturbed. She never had any return of the disease that I heard of. She married a worthy gentleman four or five years since, and is the mother of one or two children.

I will only add one other remarkable circumstance to this extraordinary case, that physiologists, phrenologists, the disciples of animal magnetism, and others, may be better able to reconcile it to their various theories. Soon after she had resumed her usual occupations, she found the manuscripts which had been locked up in her bureau. She happened to take up first, one of the lighter production: after glancing at it, she ran off to her older sister, and told her that she had found some love letters of another sister, which were the rarest productions she had ever seen—and urged her to read and enjoy them with her. Of course she never was undeceived, and is to this day, no doubt, unconscious of having written them, as she is of every thing else that transpired in her cataleptic state.

M.

A STRAY LEAF

FROM A BACHELOR'S NOTE-BOOK.*

"I was only eighteen, Katrinah was one year my junior, and never had I met with such a laughing, romping, mischievous she-devil as that Dutchified English girl. Her father was an Englishman, as poor and as proud as a Spanish Don; but the business qualities of her German mother were of such a character as kept pinching Want at arm's length, though Poverty was a constant inmate of her dwelling. Katrinah had a superabundance of vivacity, but how she came by it, I never could guess; for her father was grave, and her mother was German. So it was, however. Nature is a little capricious sometimes, and occasionally plays as strange pranks as Dame Fortune herself.

I have been thinking, that at eighteen the imagination is apt to overbalance the judgment, and unless checked by chance or circumstance, plays the devil with one's wits. It was so in my case. I very foolishly fell in love. Katrinah's clear, musical voice, with melody in its every modulation, whether it were mocking the birds in the spring time, or ringing with wild laughter, became to me a joy,—and its tone haunted alike my sleeping and my waking moments. Without flattery, she might have been called a very pretty girl. I shall not describe her—for her sunshiny face, her dazzling blue eyes, and her rich red lips,—these can never be

put on paper. I told her one day that she was an angel, and she laughed at me for my folly. I deserved it. But whether she laughed with me or at me, it was the same music to me. I was infatuated, just as a great many striplings of eighteen are, when they dream every night of pretty faces and bright eyes. We grow older, and perhaps wiser—but the wisdom that comes with years is not happiness.

I must not moralize,—unless I want to be sad. I told Katrinah I loved her. She blushed a little, and turned away with a laugh. What thoughts passed in her mind I cannot tell. The next moment, I saw her in the topmost boughs of a cherry tree, plucking the blushing fruit and throwing it in the apron of a younger sister, who stood beneath her. She never looked lovelier. "I must win her or die," said I to myself, as I walked meditatively towards my home.

Poetry and love are Siamese twins. My passion betrayed me into rhyme. That night I paced my room till long after the ghostly hour of twelve, while my thoughts were as busy as a bee in selecting loving words, and arranging them in forms poetical. The result of my toil was some half dozen amatory stanzas, written in a stiff, positive copy hand, upon doubtful pink paper, folded in a love-letter style, and addressed to Katrinah. I felt very solemn as I impressed the seal with the image of a heart, stuck through with an arrow from the quiver of Dan Cupid,—for thus, thought I, thus, oh cruel Katrinah! have you impaled my heart; and no hand but yours can heal the wound. But the madrigal—here it is:

Unkind art thou, Katrinah!—yet
My love is still the same,
As fervent as when late we met—
For time may never tame
The flame that glows within my breast,
Nor hush this throbbing heart to rest,
While I can breathe thy name.
Thy name!—it is a magic word
By which the founts of love are stirred.

Thine image, dearest! is enshrined
Within my youthful heart,
And stamped so deeply on my mind
It never can depart!
I might, perchance, have loved thee less
But for that winning gentleness
So purely free from art—
'Twas that which won the heart that ne'er
Had worshipped aught that grovels here.

No image upon earth but thine
Had tempted me to kneel,
A worshipper at Beauty's shrine,
To breathe of what I feel.
I might have mingled in the dance,
And coldly met the warmest glance
That woman's eyes reveal,
For never could I bend the knee
To less than I behold in thee!

Thine is the beauty of the soul,
A something undefined,—
A loveliness which might control,
Or tame the sternest mind!
And what thou art, Katrinah! be—
From passion's taint and folly free—
Still gentle, artless, kind—
Seeming like one of heavenly birth,
Too brightly beautiful for earth.

* We select this sprightly article from the "Pittsburg Saturday Evening Visitor," with the charitable intent of putting our readers into a good humor, if perchance any thing in our pages should have inclined them to sadness. If they do not smile at the Bachelor-poet's Courtship, we have conceived altogether erroneously of our own organ of mirthfulness. By the way, the Visitor, from the taste and ability with which it is conducted, affords gratifying proof that the Muses are not without a pleasant dwelling place even amidst the din and smoke of the American Birmingham.—[Ed. Soc. Lit. Mess.]

The wing of Thought that broods o'er thee,
 Dear girl! may never fold;
 And though Life's path to me should be
 All desolate and cold,
 'Twill still be cheered by memory's light,
 For ever, with the spirit's sight,
 Thy form shall I behold
 Flit dim before me in the hush
 Of twilight, till sweet tears shall gush.

And though my love should be in vain,
 I cannot love thee less—
 Nor break in twain the silken chain
 Which thine own gentleness
 Hath woven round my youthful heart;
 Its links alone with life will part—
 Oh, dearest!—might I press
 My burning lip to thine, and tell
 My quenchless love!—'tis vain!—farewell!

"This," thought I as I passed along in the cool night air, and beneath the still and holy stars, to deposit my letter in the post-office, "this must reach her heart. It is not made of iron, nor of stone, nor of wood. It is flesh and blood; it can feel; it can throb; it can melt; and it will when she reads my poetry." Happy in this belief I turned homeward, and with a mind in some degree tranquillized, soon sought and found the land of dreams.

Two days had looked out upon the world, traced their eventful history upon the page of time, and gone down to the ocean of the past. I stood with a flushed brow and a beating heart in the presence of Katrinah. She was alone, and laughing yet. "Oh," she exclaimed as her roguish blue eyes looked laughingly into my face, "I thought you were dead. I received a copy of your will yester-mornin', for which papa had to pay a cent. How he did swear!—the naughty man! How could you forget to pay the postage? But then the joke was worth a flip."

"The joke," stammered I, coloring still more redly than before—"the joke, Katrinah,—I don't know what you mean."

"Oh, don't you?" replied she, half interrogatingly, half affirmatively. "Why isn't it a capital joke that you should think you are a poet, and isn't it a better one yet that you should fancy yourself in love?" and her clear laugh rang wildly out upon the air, startling the birds from their nests for half a mile round, and giving dame Echo a silvery tone which she repeated again and again as if reluctant to yield the gladsome melody. I was abashed. Can it be possible, thought I, that my poetry has not touched her heart. Oh dear! and I sighed audibly. "You didn't like my poetry, then?" at length I inquired, as soon as I could recover my wits sufficiently to speak.

"Like it!" echoed she, "certainly—it's capital for curl papers!"

I looked up. There was my poem sure enough—torn into strips, around which were twisted Katrinah's beautiful auburn locks. Just over her forehead I read, "desolate and cold;" while on her dexter temple, where the blue veins showed distinctly through the transparent skin, rested a fragment of my epistle, on which I could see nothing but the words "in vain." They are ominous, thought I, of my love.

"Katrinah," said I at length, with a hesitating voice. She has gone—but her laugh was flung back upon my

ear, mocking my hopes, and sounding, despite its merry tones, like the death dirge of my expectations.

I went home. Gradually as I walked I nursed my wrath, till I had brought it to a proper vigor. I thought of my crushed hopes—but such, said I, are the lot of humanity. I thought of my slighted love. This, philosophy, I deemed, might enable me to bear. I thought of my despised, tattered and twisted poem—and my anger grew apace. I reached my chamber, and with an energy that would have startled me an hour before, I threw my coat upon the bed, tore off my neckcloth, opened my shirt bosom, drank a glass of gin and water, and seized my pen. "I will be revenged," cried I. "The trollope!—the vixen!—the slut!—the—the—baggage!"—and I rattled off a round volley of titles, none of which could be considered complimentary; while some of them, which I write not here, were equivalent to an impeachment of her maidenly integrity. "I'll write a satire upon her"—and my hand was laid vindictively upon a quire of foolscap. I spoiled two sheets of it in scribbling the following execrable doggerel, which I considered at the time an amazing fine specimen of poetry. I was only eighteen, then—nor did I furnish the only instance in which authors have vastly over-rated their own productions.

Beware!—and never trust the smile
 That plays around Katrinah's lips;
 Its fascination may beguile,
 But he whose gaze doth linger, sips
 A fiery poison that will burn
 His soul to cinder!—foul deceit
 Lurks in Katrinah's smile—then turn,
 Or perish by the glance you meet!

Oh, never trust Katrinah's word!—
 The witching music of her voice,
 Sweet as the song of Eden's bird,
 With its beguiling note decoys
 From peace, and hope, and happiness,
 Till quiet is a thing forgot,—
 To wo, and want, and deep distress,
 To death, to hell,—oh trust it not!—

Oh never trust Katrinah's love!
 A deadly serpent lurks beneath
 Its shining veil—let that remove.
 And it will sting you to the death!
 Oh trust it not!—'twill turn to hate—
 'Twill shroud your soul with dark despair—
 Fly from it—ere it be too late—
 The fair coquette!—"as false as fair!"

Be free—nor bend your soul to her—
 Let not her spells be round you thrown;
 I'd rather meet the sepulchre,
 Than trust her love, her smile, her tone.
 Be free—and let thy spirit dare
 To rise above her winning arts,
 To break away from every snare
 She spreads to capture human hearts!

Anthony Thompson did not take the advice that I gave to myself in particular, and every body in general, in the above lines. He fell in love with Katrinah—and wooed and won the girl from whom I could obtain nothing more serious than a laugh. Katrinah did not poison him. She used my last poem as she did my first, only she kept it for her wedding day, as if reserving it for that very purpose. When I last saw her she laughed about it, and I had the good sense to laugh

with her. Why not? She was the mother of twelve interesting children, and I was a bachelor of forty-five. Circumstances alter cases. I was only eighteen when I wrote the doggrell, and Katrinah was but seventeen when she ridiculed my declaration of love. She was right, and I was a fool. I feel better now.

TO MISS ———

WRITTEN IN HER ALBUM.

Sing, lady, sing—
At morning and at noon—
Who would not listen long
To sweetest "Bonny Doon?"
Its soothing words do fling
Around the heart a spell,
Which all must feel who hear,
Although they may not tell.

Weep, lady, weep—
There's often bliss in tears,
Although the past be stored
With many weary years.
But joy may come at last,
When days have fled away:
The sun gleams sometimes bright,
E'en with its closing ray.

Pray, lady, pray—
There's virtue in thy prayer;
Each wish of thine to Heaven
The list'ning seraphs bear.
And as thy words are flowing
In sweetest accents free,
The sounds may rise above,
But keep thy *thoughts* for me.

Sunday, 26th May.

R. W. H.

CHRISTOPHER MARSHALL'S REMEMBRANCER.

We had intended before this to notice the Revolutionary diary of Christopher Marshall, edited by William Duane, jr., of Philadelphia, having experienced much pleasure in reading it. The following notice from the Knickerbocker, expresses so justly and appropriately our own views of the merits of the work, that we are saved the task of attempting, what has been already done, and well done, by another pen.

"CHRISTOPHER MARSHALL'S REMEMBRANCER.—Mr. CHRISTOPHER MARSHALL, whose ancestors came to America with WILLIAM PENN, resided in Philadelphia, from the age of thirty until his death, in 1797, at the age of eighty-seven. He was a member of the Society of Friends, but his devotion to the liberties and rights of the colonies procured his excommunication from a body which denied the lawfulness of defensive warfare. In his sixty-fourth year, he commenced a diary; and from five volumes of this "Remembrancer,"

covering the period from January, 1774, to September, 1781, the compiler of the work under notice, Mr. WILLIAM DUANE, Jr., has selected many new facts in relation to public affairs, and the progress of the revolution, with so much of the private history of the author as throws light upon the manners of the times.

"It is pleasant to trace the brief and fresh records of such eventful occurrences as the Battle of Bunker's Hill, Washington's passage of the Delaware, the burning, by the provincials, of the light-house at the entrance of Boston harbor, and the pulling up of the piles that were the marks of the shipping, etc. Here, an account from Boston informs us, that 'BURGOYNE is in a deep, settled melancholy, walking the streets frequently, with his arms folded across his breast, and talking to himself;' and again, that 'General GAGE is often out of his head, and that he and Admiral GREAVES have publicly quarrelled, so that he told Gage it was a cowardly action to burn Charlestown.' Then we have accounts of certain public rebukes, administered by the committee of safety at Philadelphia, to sundry citizens, for refusing to take continental money; with advertisements, calling upon 'the ladies' to come to the American manufactory, at the corner of Market and Ninth streets, and get cotton, wool, or flax, 'thus casting their mite into the treasury of the public good,' and exhibiting that distinguishing characteristic of an excellent woman, as given by the wisest of men: 'She seeketh wool and flax, and worketh diligently with her hands. She layeth her hands to the spindle, and her hand holdeth the distaff.' There is a quiet, dry humor in some of our journalist's entries; such, for example, as the annexed, which sounds oddly enough, as recorded of a sober Friend: 'Took a walk down town, to see BENJ. BERTERON, who, last First Day, in a jovial humor, jumped over a man's shoulder, and broke his leg about the small.' What would our present neighbors of the drab city say, to see Friends jumping over one another's shoulders, and breaking their legs, 'in a jovial humor,' on Sunday! Another amusing incident is thus pithily recorded: 'Account came, that while Parson Stringer, with his eyes shut, was at prayer with Andrew Steward, in the dungeon of our prison, the said Steward took that opportunity to walk up stairs, go out at the several prison doors into the street, and without any ceremony, walked off with himself, without bidding Robinson, the prison-keeper, farewell, although he was sitting at the front door, on the step, when he passed him!' This looking out for his temporal safety while the worthy clergyman was attending to his spiritual welfare, is a striking proof of the condemned criminal's forecaste and presence of mind. Aside from the interest of many of its details, the little volume in question must prove valuable as a historical record, of convenient reference."

APHORISM BY HEINSE.

All constitutions are bad, if the government is not in the hands of the wisest; all the difference between a democracy and a monarchy is this—that in the former 500,000 and some odd fools may decide against 400,999 sensible people, and in the latter, one fool may ruin 999,999 philosophers, if they will let him.

EDUCATION.

BY A NATIVE VIRGINIAN.

To make a successful prosecution of an inquiry into the right method of education, we shall be compelled to enter upon a field of investigation entirely new to most of our readers; and on that account, it will require a considerable effort of attention to follow through, and to comprehend fully, all the arguments which may be advanced. But we hope this effort of attention will be exerted—because the subject we are about to enter upon, is one of vital importance, not only to the teacher and his pupil, but to the parent, and to all those who are endeavoring to improve themselves.

Education is not a thing of chance, to be conducted according to the crude notions of each individual. It is a science, based on philosophical principles, deduced from a consideration of the human mind, the subject of education.

Instead of amusing, therefore, with a few trite and general remarks on this hacknied theme, we have determined to go to the very bottom, and unfold the principles which should govern every one, both in the education of himself, (the most important,) and in the education of youth.

The main object of education is to develop, and to strengthen all the faculties of the mind.

The first question, then, which we have to determine is, *What are the faculties of the mind?* The second, *What are the best means of improving, or, (in words already used,) of unfolding and strengthening these faculties.*

Writers on the philosophy of the human mind have divided what they call the faculties into two divisions—the *intellectual* and the *moral faculties*. To this division we have no objection. The intellectual faculties, they say, are Perception, Attention, Conception, Memory, &c.

On this philosophy have been based all our systems of education. The elementary books of instruction—the course of studies projected in our schools and colleges, have been in reference to this subdivision of the mind into faculties. Such a study, we are told, is intended to improve the memory—such another, to improve the attention—and so on through all the faculties, as they understand them:—for it is a well known fact that education, in every country, is conducted in exact accordance to the opinions entertained as to the nature of the mind and the number of its faculties. Not only is education influenced by the speculations of the metaphysician, but *morality* also derives her practical lessons from the same source. Hence, an unsound philosophy makes an unsound scholar and an unsound man.

Now, we say, that the system of philosophy, which we have received into this country—taught in our colleges—held as infallible—as based on a correct idea of the constitution of the mind, and necessarily true in the nature of things; we say that this philosophy, this Scotch metaphysics, is entirely erroneous, founded on a limited view of the human mind—a mistaken idea as to what constitutes the original faculties; and has, consequently, been the cause of many errors in education, and the cause of much disastrous evil to the morals of our country.

Before we give the arguments which have led us to the conclusion just announced, we will point out the source whence those arguments have been drawn. When we deserted the philosophy of the schools, from a consciousness that it was unsound and pernicious, we were compelled to look at facts alone as our last resort in the search after truth. We were compelled to observe men as we saw them living and acting around us. We collected our materials from actual observation, and studied them. We consulted our own experience—and from these sources alone—observation and experience—we have endeavored to draw all our conclusions. We have carefully avoided, so far as it was possible, all *a priori* deductions from abstract theories—they are as unsafe in morals as in physical science. It is by a collection and observation of facts alone, that we can hope to arrive at truth. By following this humble way, the student of natural science is making most rapid and unparalleled advances—by neglecting it, the student of our moral and intellectual nature stands where he was more than two thousand years ago—involved in mystery, and bewildered in the mazes of abstract speculation.

As we proceed with this subject, we shall advance no opinion which cannot be illustrated by a living example, and the soundness of which cannot be attested by the experience and common sense of all.

Attention, Memory, Conception, &c., so far from being *primitive, innate* faculties of the mind, are nothing more than the different *modes* by which the capabilities manifest their activity. We can form no idea of the mind, except through its capabilities—just as we have an idea of the Deity by his attributes. All we know about the Almighty is, that he is an invisible being, possessed of infinite power, infinite wisdom, and infinite goodness—separate from these attributes we have no idea of a God—they are, in truth, God with us. So with the mind—it is an invisible, immaterial thing, possessed of certain faculties or capabilities—which capabilities manifest greater or less activity by a greater or less degree of memory, attention, conception, &c. If the mind of any individual possesses an original faculty, strongly developed, it will manifest that superior strength or development by an *accurate perception*, a *retentive memory*, and a *distinct conception* of all the subjects which come within the scope of that faculty.

It is a common observation, that when a man possesses a strong and unconquerable propensity to any one pursuit in preference of all others, he has a *natural bent* for that pursuit, or, that he has a *genius* for that kind of occupation.

When this inclination is very strong, the mind manifests extraordinary *capability* on all those subjects which nourish and gratify that inclination. The man learns with astonishing rapidity every thing that has any connection with the natural inclination of his mind—he retains them longer—has a clearer insight into their nature—he even goes beyond the present acquired knowledge on the subject, and makes new discoveries of his own. All this too, without any previous education whatsoever. Take an example.

When James Ferguson, the celebrated astronomer, was about seven or eight years of age, he discovered an extraordinary talent for mechanical pursuits. The roof of the cottage having partly fallen in, his father, in order to raise it again, applied to it a beam, resting on

a prop in manner of a lever, and was thus enabled, with comparative ease, to produce what seemed to his son quite a stupendous effect. The circumstance set our young philosopher thinking; and, after awhile, it struck him that his father in using the beam, had applied his strength to its extremity, and this, he immediately concluded, was probably an important circumstance in the matter. He proceeded to verify his notion by experiment; and having made several levers, which he called bars, soon not only found that he was right in his conjecture, as to the importance of applying the moving force at the point most distant from the fulcrum, but discovered the rule or law of the machine, namely, that the effect of any weight made to bear upon it is exactly proportional to the distance of the point on which it rests from the fulcrum. From this he went on reasoning, until he discovered the principle of the pulley. The child had thus actually discovered two of the most important elementary truths in mechanics—the lever, and the wheel and axle; he afterwards hit upon others; and all the while, he had not only possessed neither book nor teacher to assist him, but was without any other tools than a turning lathe of his father's, and a little knife wherewith to fashion his blocks and wheels.

After the labors of the day, young Ferguson used to go at night to the fields, with a blanket about him, and a lighted candle; and there, laying himself down on his back, pursued for long hours his observations on the heavenly bodies.

A book was once given him, containing a description of a globe, without illustration by any figure—nevertheless, says Ferguson, I made a globe in three weeks, at my father's, having turned the ball thereof out of a piece of wood; which ball I covered with paper, and delineated a map of the world upon it; made the meridian ring and horizon of wood, covered them with paper, and graduated them; and was happy to find that by my globe, (which was the first I ever saw,) I could solve the problems.

He was confined to his bed for several months in consequence of the cruel treatment of his master. In order, says he, to amuse myself in this state, I made a wooden clock, the frame of which was also of wood, and it kept time pretty well. The bell on which the hammer struck the hours was the neck of a broken bottle.

A short time after this, he actually constructed a time-piece, or a watch moved by a string. His own account is very amusing. He accidentally saw the outside of an orrery, but had no opportunity of inspecting the machinery—he had, however, seen enough to set his ingenuity and contriving mind to work; and in a short time he succeeded in finishing an orrery of his own. In the course of his life he constructed, he tells us, six more, all unlike each other.

Here we have an individual, quite a child, without education, without experience, fixing his mind in the deepest attention on mechanical operations, making contrivances to repeat those operations, and so meditating on them as to discover the laws by which they are governed—and finally going on from one step of induction to another, until he discovered two of the most important laws of mechanical philosophy. All this too while a child of eight years old, without the help of book or teacher; and without knowing even that there was such a thing as mechanical philosophy.

Follow him in after life, you find his mind, under all circumstances, whether adverse or prosperous, ever bent on pursuits of a kindred nature to those above mentioned. Neither sickness nor poverty could divert his mind, for a moment, from its favorite occupations. When a poor shepherd in the fields, the stars and their mechanical operation were his themes of meditation. When laid on a bed of sickness by the cruelty of a master, his mind was busied on the complicated mechanism of a clock. Wherever he went, curious and complicated machinery seemed to be the only things that attracted his attention, or that afforded him any gratification.

He needed no detailed explanation—his mind perceived at once all the parts—and retained long afterwards, an accurate conception of the most complicated operations.

Now, we would ask, how can this extraordinary mental phenomenon be explained? Will any one pretend to say that it was mere accident that gave to Ferguson's mind the bent which it took, and produced the extraordinary development which it so early manifested? Such an explanation would be totally unsatisfactory to a reflecting mind. Does not sound philosophy teach us that there can be no *vera causa*, no *true cause*, unless it be adequate to the whole effect? Now, is the mere accidental circumstance of raising a falling house with a beam, a *true and adequate cause* for the peculiar character of Ferguson's mind? Would it not be more philosophical to say that the circumstance only discovered the previous existing state of mind, and was not the cause of that existing state?

Would any one say that the riots at Boston and the destruction of tea in Boston harbor was the *true cause* of the American Revolution? Would it not be a shameful discovery of ignorance even of the first principles of reasoning, to say that so trifling an accident was the cause of such tremendous effects? The riots at Boston and the destruction of tea in Boston harbor, only discovered the rebellious spirit already kindled up in the minds of the people by the oppressions of the mother country, and their determination no longer to submit to foreign tyranny. On no other principle can we explain the mental phenomenon now before us. Ferguson's mind had a strong bent or inclination to mechanical operations, or, (in other words) his mind possessed an extraordinary *capability* for mechanical investigations. We know nothing of the mind except through its *capabilities* for certain pursuits. And when we have discovered all the different capabilities of the mind, we have discovered the true nature of the mind itself.

Now, in the case of Ferguson. His capability, and consequently his inclination for mechanical philosophy, was so much greater than the rest, as, like Aaron's rod, to swallow them up and give a peculiar character to the whole mind.

Many other cases similar to that of Ferguson might be brought up to prove that there is such a thing as mechanical genius, or, in more philosophical language, that there is such a thing as a development of the mind, which leads the possessor irresistibly to the pursuit of the mechanic arts; and, where this development or capability is very great, even to original investigations and discoveries in mechanical philosophy.

By studying the characters of men remarkable for their great genius in one thing, and a deficiency in every

thing else, we may easily discover all the original innate capabilities of the mind.

Take an example of that great mathematical genius, Edmund Stone. His father was gardener to the Duke of Argyle, who, walking one day in his garden, observed a Latin copy of Newton's *Principia* lying on the grass, and thinking it had been brought from his own library, called some one to carry it back to its place. Upon this, Stone, who was then in his eighteenth year, claimed the book as his own. "Your's?" replied the Duke. "Do you understand Geometry, Latin, and Newton?" "I know a little of them," replied the young man. The Duke was surprised; and having a taste for the sciences, he entered into conversation with the young man. "But how," said the Duke, "came you by the knowledge of all these things?" Stone replied, "A servant taught me ten years since to read. Does one need to know more than the twenty-four letters in order to learn every thing else that one wishes?" The Duke's curiosity redoubled; he sat down on a bank, and requested a detail of the whole process by which he became so learned. "I first learned to read," said Stone: "the masons were then at work on your house. I approached them one day, and observed that the architect used a rule and compass, and that he made calculations. I inquired what might be the meaning and use of these things, and I was informed that there was a science called arithmetic. I purchased a book of arithmetic, and I learnt it. I was told there was another science called geometry; I bought the necessary books, and I learnt geometry. By reading, I found that there were good books in these two sciences in Latin; I bought a dictionary and learnt Latin. I understood, also, that there were good books of the same kind in French; I bought a dictionary, and I learned French. And this, my Lord, is what I have done: it seems to me that we may learn every thing when we know the twenty-four letters of the alphabet."

Here we see the capability of mathematical investigations so strongly developed as to give the possessor most remarkable success in their pursuit. He seems to have needed no assistance, no instruction, but marched through the most difficult and abstruse science with the strides of a giant. No delay cooled his ardor; no obstacle baffled him in his purpose. Was there a branch of mathematics he wished to know, he bought the book and learnt it. Was there a valuable mathematical work in a foreign language—he learnt the language. How like the *fiats* of Almighty, are the rapid and gigantic efforts of genius. "Let there be light, and there was light."

Take an example of genius in Painting. Benjamin West, when only six years old, was placed by his mother to take care of an infant while she was absent. After some time the child happened to smile in its sleep, and its beauty attracted his attention. He looked at it with a pleasure he had never before experienced, and observing some paper on the table, together with some pens and red and black ink, he seized them with agitation and endeavored to delineate a portrait—although at this period he had never seen a picture nor an engraving. So soon as young West had an opportunity of indulging the natural bent of his mind, he was so enchanted as to forget his school hours. For several days he withdrew to a little garret, and devoted himself to painting,

without letting the family know what had become of him.

Is this accident? Is it the result of education? What education could there have been in this case? The boy had never seen a portrait in his life—not even an engraving. But, yet, with what enthusiasm did he behold the smiling countenance of the sleeping infant? What agitation seized his nerves? He snatched the first thing that came in his way, and, as if by inspiration, struck off a perfect likeness of the sleeping child. Was this the result of accident? Had not ten thousand nurses before, beheld the smiles that play over the illumined face of a beautiful infant, but did it ever create a genius for the *graphic art* in any other mind, save that of Benjamin West? The same cause must always, under similar circumstances, produce the same effects. It is utterly impossible to account for this remarkable development of mind, except on the principle which we have already mentioned. The mind of West possessed a strong, innate capability of delineating the forms of nature, and of relishing the beauty and harmony of symmetrical forms. The accident of nursing the child only served to show the previously existing capacity, and to waken it up to activity by the gratification which it afforded.

We might thus go on and bring numerous examples to prove to the satisfaction of any reflecting man, that the mind consists of certain original, innate capabilities or faculties—that these faculties are definite in their number and distinct in their character. We might prove that there is an original capability of mind which befits the possessor in an eminent degree for physical science, for music, for sculpture, poetry, and for abstract speculation. But the examples already adduced must suffice—time will not permit a further investigation.

Now we have discovered this great peculiarity in men who possess one or another of the *faculties* strongly marked—they have no need of instruction nor assistance from men or books—they seem to learn, as by inspiration, every thing that affords gratification to the peculiar propensity of their mind. If all men, therefore, were possessed of some faculty developed above all the rest, or if they possessed all the faculties strongly developed, they would have no need of assistance or instruction from others. But all men are not so gifted. It is but here and there that we find one who manifests an extraordinary talent for any pursuit. Men generally possess the faculties or capabilities of mind in an even degree, and slightly developed.

It is a wise provision of nature that it is so. Men who are endowed in an extraordinary manner with *one talent*, are generally unfit for any other pursuit in life. They take no interest in the ordinary affairs of society—are lost to all motives of prudence, or considerations of the useful—every thing is sacrificed to the indulgence of the one ruling passion. It is well, we say, that society is not made up of such men—but that it consists of those who have no very great capacity for one pursuit more than another—and who possess all the faculties in a moderate degree. For it is this even balance of the *faculties*, moderately developed, which constitutes the best state of mind for a prudent course and a sound judgment.

The investigation which we have just concluded, offers

many important hints in the management of education. We have seen, that a man who possesses a talent strongly developed, has a most extraordinary memory in every thing connected with that faculty—is capable of fixing his mind in the deepest attention upon subjects of his inquiry—in a word, possesses all those things which have been generally called faculties of the mind—perception, memory, attention, conception, &c. His thoughts, too, are more numerous, more profound and original.

When, therefore, we observe that the mere possession of a faculty without instruction, without help—nay, in spite of all opposition, gives such a decided advantage, is it not obvious that our main object should be to find out what are the faculties of the mind—and then by all judicious means to unfold and strengthen those faculties or capabilities?

If we can be successful in these two objects—the discovery and development of the capabilities of the mind—we shall have accomplished our purpose. Education, so far as the assistance of the instructor may be required, is complete. We care not whether three ideas have been communicated to the pupil during the process of his education, we have already seen, that if he is turned out with a mind waked up to inquiry, and with invigorated powers, he needs nothing more to secure eminent success in every department of knowledge. The mind will, afterwards, go on of its own accord, unabated in its ardor, with ever increasing powers—gathering wisdom from every source, and pleasure from every object—no subject so barren as not to yield instruction—no situation so dull as not to afford pleasure.

What has just been said, we have no doubt, will appear self-evident to reflecting men, whose minds are not trammelled by the systems of modern philosophy. But such men have no idea of the error which exists on this subject, and which is the cause of so many failures in education.

Is it not a matter of common remark, that men who have most pains bestowed upon their education, seldom come up to expectation; and that self-educated men are always the best scholars, the wisest men, and the ablest statesmen? What is the cause of this? Is there not an error somewhere? Can education be an evil rather than a good?

The truth is, that the object of education is entirely misunderstood. Even when it is well known, there is not one in five hundred who can accomplish it. An instructor may know, that to unfold the powers of the mind ought to be the object of his efforts, but he may not have the ability nor the skill to accomplish it. It is a much easier task to convey knowledge than to waken up and develop the sleeping, infant powers of the mind. Such a task requires more than ordinary patience and gentleness of temper—more than ordinary skill in the management of wayward youth—more than ordinary knowledge of all the workings and combinations of the mind, both intellectual and moral. Many a teacher is capable of giving valuable instruction on every science—who utterly fails in the more important part of his undertaking—the development of the powers or capabilities of the mind. Hence, whatever may be their theory, they all act as if they considered the mind a mere passive receiver, and that their business was to pour into it as much *matter-of-fact* information as possible.

The consequences have been ruinous. Young people go to school, to the colleges—aye, to the universities, too, and after a few years sojourn they come home finished scholars—have studied this science and that science—in fact, have glanced at all the sciences—but, in the meanwhile, the mind itself was never thought of. Its powers were never wakened up to inquiry, nor imbued with a love of knowledge. It was never taught to reduce its acquisitions to their original elements and make them a part of its own constitution—like the worm which feeds upon a plant, until it acquires the same color, and almost the same consistency of the plant itself. Oh! that this were the process of education—but far otherwise is the truth. What they learn is by the aid of the teacher *alone*, with but slight mental effort on their part. The pupil becomes a mere *intellectual baby*, carried along in the arms of his kind instructor. And, like all other babies, spoiled by too much nursing, he can do nothing, or will do nothing, without help. Who has not seen a great chubby boy drop down in the road and begin to bellow, whenever the nurse tries to make him walk for himself? Just so with the intellectual baby—so soon as he leaves the school and the teacher, his mind sinks down into inactivity; the knowledge he has acquired passes away; and finally the youth comes into life a sorry scholar, and a useless man. Such is the education acquired at most of our colleges—often have we seen a noble mind utterly rumbed by its process. If a youth makes himself a scholar, it is not by the aid of his education, but in spite of it. College education has become a by-word and a reproach. A diploma, so far from being a recommendation, is looked upon rather as an object of suspicion. It has become a common proverb, when a man knows nothing about a thing, to say that he knows as little about it as a graduate about Greek. If the education of colleges be so bad—what is the condition of our schools and academies?

Take the self-educated man, how different the process by which his character is formed—raised in poverty, perhaps, without a friend—a poor journeyman in a workshop—a ploughboy in the fields—or a herdsman on the lonely mountain top. Humble as he may be, he feels unearthly emotions in his bosom. His ear listens to a heavenly harmony that fills him with more than wonted rapture. He looks with a “peculiar eye” on the goings forth of nature. He holds communion with his own thoughts. He breathes a wish and feels a hope that he may rise above the common level of mankind, achieve honor for himself and glory for his country. In the spirit of poor Burns he can say:

I mind it weel, in early date,
When I was beardless, young, and blate,
An’ first could thresh the barn;—
E’en then a wish, (I mind its power,)
A wish that to my latest hour
Shall strongly heave my breast;
That I for poor auld Scotland’s sake,
Some usefu’ plan, or book could make,
Or sing a sang at least.

When he can no longer resist these aspirations of his heart, he boldly determines to brave every difficulty, and venture forth in quest of knowledge and renown. But now comes the toil and the strife. Obstacles rise on every hand. His course becomes intricate and con-

fused. He finds no arm on which to lean—no kind mentor to guide him in the right path. He must grope in darkness, and grapple with difficulties, until he finds the right way for himself—and then he must climb the steep ascent of knowledge by his own unaided efforts. No companion to cheer his solitary way, nor point the beauties of the landscape. But these very difficulties make the man. With such a man, the mind is not a passive thing, but an active agent—all its powers are wakened up and made to put forth their utmost strength—they become vigorous by self-exertion—the mind feels the presence and the power of greatness—it travails in its own strength, and with a giant's bound leaps every obstacle.

Need we pursue this subject farther, in order to show that the object of education has been entirely misunderstood? After what has already been said, will it excite surprise when we declare that the business of an instructor is not to *teach* the scholar, but to learn him to *teach* himself?—not to *tote* him, but to *lead* him? Will it be called extravagance, when we say that the least aid a teacher gives to a scholar the better? It may then be asked, where is the use of a teacher? If the scholar is to do all for himself, surely it is an unnecessary expense to procure a teacher. We answer, that a teacher possessing the character just described, is of immense importance—his worth cannot be calculated. If he does nothing more than to force the scholar to rely on his own resources, and not on the help of others, he has done more than all your plodding, matter-of-fact teachers have done since the foundation of the world. Surely there can be no need of argument to prove this—it is the very principle on which all nature operates. Does not the mother lead her little *toddling* child into the floor—then gently withdraw the finger and leave the child to totter along for itself? Should it fall, does she not raise it to make another trial, until by repeated efforts, and repeated falls, it acquires strength in its limbs and confidence in its own powers?

Does not the mother-bird take out her newly fledged young upon her wing—then drop it in mid air to flutter and fly for itself? We repeat, therefore, that reason and nature tell us, that the main business of the instructor is to unfold the powers—to strengthen them by forcing the child to self-exertion—and to create a confidence in his own powers and resources by teaching the scholar to rely on no other aid save his own.

When this task is accomplished, there still remains an important part for the skilful teacher to perform. When the powers of the mind have been once awakened and kindled with an enthusiastic love of knowledge, the instructor must then act as a guide to his pupil—employ his powers upon useful subjects—restrain him from improper indulgences, and encourage him in the severe toil of mental labor. When a child has just learned to walk, the restless activity of his limbs is perpetually leading him into danger; he must be constantly watched to be kept out of danger. So when the mind is first properly developed, its restless curiosity becomes impetuous—it leads him to search for pleasure and gratification wherever it may be found, regardless of the consequences—then comes the interesting and responsible part of the teacher's duty—better not unfold and strengthen the powers of the mind than to do it for evil purposes—better not un-

fold them at all than to guide them improperly afterwards.

The teacher who understands the profession which he has undertaken, can communicate the elements of knowledge in the *shortest and the most effectual way*. And at the same time that he is communicating the imperishable principles of knowledge, he is strengthening the powers of the mind.

Let us illustrate this principle by an example. Take arithmetic—the most elementary branch of mathematics. As commonly taught, it is of very little practical advantage, and no improvement whatsoever to the mind. Scholars are made to commit certain rules to memory, and solve problems mechanically by these rules, without ever seeing the necessity or the reason of the rule. Ask them why they do a sum one way rather than another—their answer is, *the rule says so*. But why does the rule say so? Do you see no reason for it. *No, sir! the rule says I must work so and so, and the answer will come. But why, I don't know.*

Now what possible good can come of such instruction? When the young man quits his school, and forgets his rule, (as he must, for he saw no reason in it,) he can no longer cipher. He must then begin, after his youth has been squandered away, to make an arithmetic of his own, or be content to live in ignorance the balance of his days. What improvement has it been to his mind? He has committed the multiplication table to memory, and practised his fingers on the slate—and that is all. The reason of things were never dreamed of by him nor his teacher. The Automaton Chess Player can give as good a reason for the move which he makes on the board, as our hopeful scholar can give for his rule—although he has ciphered through and through the whole of Pike! Now, we ask, if this is not the way in which arithmetic is generally taught? It is much the easiest way—the pupil will make a much greater show of progress, and a greater parade at an examination, which is the main object (sorry to say) of most teachers.

Is arithmetic ever taught as a science, based upon reason and the necessity of things? Is not every thing communicated to the mind of the pupil, arbitrary and constrained? And is it not a consequence that young men spend years at arithmetic, and after all, are not able to solve a problem which varies a hair's breadth from some rule to which they have been accustomed?

How different is the course pursued by the skilful and the conscientious teacher. He does nothing for which he cannot give a reason perfectly satisfactory to the youngest mind. He begins with the pears and apples of the child—makes him add, subtract, multiply, and divide among his little brothers and sisters—the whole matter is brought down to his senses—he is made to see the reason of every process, and to give his full assent to every principle. The mathematical powers of the mind are thus unfolded—a habit of mathematical reasoning acquired. And the pupil is carried on, step by step, until he can solve the most difficult problems by the force of his own reasoning alone, without the help of any arbitrary rule. He knows no rules—he wants none. He would not confuse his mind with them. He has learned principles, simple and imperishable. He has cultivated his *faculty* of mathematical reasoning;

and you had just as well attempt to destroy the mind itself as his capability of mathematical calculations—for this capability is one of the constituent parts of the mind itself.

By this means not only the soundest knowledge is communicated; but it is communicated in the shortest time.

In every science there are a few fundamental principles; which, when stripped of all circumstances, become plain and almost self-evident truths. An active and vigorous mind can seize them at once. And a knowledge of these principles is all that such a mind requires—it can run out the details for itself whenever occasion may require. For instance, when the principle on which the multiplication table is formed, is once thoroughly understood by the scholar, the drudgery of committing the table to memory may be dispensed with—by practice he will soon be able to multiply all sums under twelve or fifteen without resorting to a table for the purpose—hence, when the mind has been first prepared and the seed or first elements of knowledge sown, the native powers of the mind acting on these elements will do the rest—just as the husbandman has only to prepare the soil, sow the seed, and leave the rest to nature.

Let us illustrate this important principle by another example. Music, as generally taught, is a worthless thing. The pupil is made to learn a few tunes mechanically on some instrument. The fingers and the musical memory are alone exercised. The reasoning powers of the mind have no part nor lot in the matter. The pupil never suspects that music is any thing more than a combination of sound produced by arbitrary rule. He is not aware that it is a perfect science, founded on the most abstruse principles of mathematics and natural philosophy. Now, if the same course were pursued in music as we have pointed out in arithmetic, he would be made to acquire important principles, and at the same time would receive a valuable exercise to the mind. He will not then go home and forget all that had been learned,—he will have learned principles which cannot be eradicated from the mind—because they become incorporated and form a part of the mind. Music will then become (as it ought to be,) one of the most important and profitable branches of education. Pleasure will become a handmaid to science—wisdom and the graces will be companions to each other, and will steal knowledge into the mind along the chords of melody.

Now every body will say that all this is very plain and reasonable; and surely must be easy to do. It is certainly a plain truth; but who has practised it? To practise it, the teacher himself must have a profound knowledge of the science he professes to teach, so as to know what are truly the fundamental principles of the science. He must be so thoroughly acquainted with the constitution of the mind, as to know what faculties are to be exercised for the reception of these principles. He must be so conscientious in the discharge of his duties, so ardently devoted to the public good, as to pursue the course which reason tells him is right, whether it be for his own private interest or not. He must have the moral courage to withstand the clamor and opposition of those who can neither understand nor appreciate his motives. He must have prepared himself to encounter difficulties both on the part

of the parent and the pupil. The severe exercise of mind which he requires, will be revolting to the badly taught and undisciplined mind of youth—the plain and unostentatious way which he pursues—the entire abandonment of all rewards and distinctions—all stimulants to rivalry and emulation—will be a cause of complaint to most parents, who love to see their children distinguished at an examination, and love to hear that they have studied a great many things, whether they know any thing about them or not.

Thus thoroughly furnished, and endowed withal with the patience of a Job, an instructor may indulge some hope of success, in that most arduous, responsible, and delicate task—the education of youth.

But, the teacher has not yet discharged all his duties, when he has unfolded the powers of the mind, and communicated the elements of all science. Many things are to be learned which cannot be found in books—many ideas and notions necessary for the ordinary affairs of life, are not to be found in any treatise—many precepts to be derived only from the lips of the living teacher. One imbued with wisdom and experience can communicate valuable information every moment of his life. Around the social hearth or the board, in the fields or by the way-side, he may instil into the mind, knowledge far more valuable than any which can be acquired by the study of logic, mathematics, Latin, or Greek. By apt illustration and pleasing incidents, he may reveal the secrets and the passions of the human heart—may excite and unfold the noble and the social virtues, and all those tender affections, which constitute the better and the only redeeming part of our fallen nature.

The most useful thing to a young pupil is to develop, and at the same time, purify his sentiments, inclinations, and passions. But this most extensive branch of our subject, must be deferred to another occasion.

The teacher can do more by his example than by all the motives which can be presented to the mind. Socrates kindled in the minds of his pupils the love of knowledge, more effectually by his example, than by all his precepts, wise and instructive as they were. Wherever he might be found, in the market place, in the street, or in the groves of Academus, the love of wisdom seemed to be his only animating spirit. Not even that termagant of a wife, Xantippe, could disturb his contemplative mind. His pupils caught the ardor and devotion of their master, and made themselves the most eminent men of Greece. Philosophers, and the warriors, the statesmen, orators, and poets of that day, and of succeeding ages, were the pupils and disciples of Socrates.

We are creatures of imitation and example, is omnipotent. What made Washington and Bonaparte so successful in their campaigns? their own example. On the eve of some great battle, when all was doubtful, and the fate of thousands suspended on that one event, did they then calmly harangue their armies on the importance of valor and the necessity of victory—then retire to the rear and send on their soldiers to brave danger alone, and to toil in the conflict without a leader? Did they not rather brace themselves up to the great occasion? With an eye darting unusual fire, with a bosom dilated by strong hope, they marched to the front rank, brandished their sword in mid air, and cried

come on, follow me to victory or to death. Was there a soldier who did not feel the electric influence of such example? Was there a soldier, who did not grasp his sword with double vigor, and swear, come life, come death, to follow his glorious leader? What could stand before such men, animated by such example? Even so triumphant success must inevitably crown the exertions of every pupil, who is animated by the example of a master, that leads the way in the search after knowledge—who shows by his life that he values wisdom above rubies—who mounts up before him, the hill of science, and beckons him to follow—who shows by his animation and his enthusiasm, that he indeed looks out on a glorious landscape—so smooth, so green, so full of goodly prospects, and melodious sound, on every side, that the harp of Orpheus were not more charming.

Would you have a scholar of a bold and original mind, he must have a master of the same character, as Philip, Alexander, Aristotle. Nothing but genius can elicit genius. If the master be a chamois hunter in the pursuit of knowledge, the pupil will become a chamois hunter also.

To the chamois hunter, a love of the chase has become a passion; though he were sure that he must be precipitated from some mountain crag, and that the snow must be his winding sheet, he would not exchange his pursuits for the wealth of India, or for the throne of a Russian Autocrat. Carried away by the excitement of the chase, he knows no danger. He crosses the snows, without thinking of the abysses which they may cover—he plunges in the most dangerous passes of the mountains—he climbs up, he leaps from rock to rock, without considering how he may return. The night often finds him in the heat of the pursuit. But he passes the night—not at the foot of a tree, nor in a cave covered with verdure, as does the hunter of the plain—but upon a naked rock, or upon a heap of rough stones, without a shelter. He is alone, without fire, without light; he puts a stone under his head, and is presently asleep, dreaming of the way the chamois has taken. He is awakened by the freshness of the morning air; he rises, pierced through with cold; he measures with his eye the precipices he must yet climb to reach the chamois—and again rushes forward to encounter new dangers.

Oh! that all instructors were like the chamois hunter—in whom the love of knowledge were such a passion, that they would not change its pleasures for the wealth of a kingdom, nor the throne of a monarch—who feared no danger, regarded no toil, no self-denial, which might help them on to the attainment of wisdom. Such examples of daring adventure in the fields of knowledge, would kindle in the minds of youth such a spirit of improvement, such an ardent devotion to the cause of learning, that would lead them to surpass every previous age of the world, in the extent and the value of their acquisitions—they would soon embrace in the wide scope of their expanded and ever expanding intellect, all science and all knowledge. They will then show to the world the great blessings of education—its superior excellence above all earthly things. They will then show their superiority to the self-educated man, who must shrink before them like the twinkling star that dies away in the heavens before the face of the rising sun.

The self-educated man must always labor under a disadvantage, when brought in comparison with the scholar, whose mind has been properly developed and trained from the beginning, by the hands of a skilful master. The difficulties the self-educated man had to encounter, the many errors he made in the outset, have given him a bold and independent mind, but one of limited information and contracted views. The two characters may not be unaptly compared to the two great rulers of the animal kingdom—the lion, king of beasts—the eagle, king of birds.

The walks of the lion are confined within a narrow compass—he never travels beyond the region in which he was born—the sun that rises in the morning finds him in the same spot when it goes down at night—he lives only on one kind of food. The luxuriant plants of a torrid clime in vain spread their delicacies before him—the blood and flesh of animals constitute his repast—when they fail, he is without resource. But, within the limited space where he lives, he is absolute master, and the terror of every thing that hath breath—when he lifts his voice in thunder, the earth trembles—the beasts of the field start with sudden affright and flee to their coverts.

So with the self-educated man—his knowledge is confined within a narrow space—but in that limit, he is master absolute, without a rival—upon his own ground, none dare oppose him—his word is law—he is the lion of his tribe—but only of his tribe—his authority, elsewhere, is not known—as a professional man, he feels the power of a giant in his own peculiar department—but beyond that, he is shorn of his strength and his glory; all is darkness and confusion—he is conscious that he has ventured beyond his safe depth, and feels the impotency of a stripling. He feels that he does not possess those resources, which can only be acquired by a thorough education—"that education, which," in the language of Milton, "fits a man to perform skilfully, justly, magnanimously, all the offices, both public and private, of peace and of war."

The eagle is an animal that hath wings, expanded and vigorous—no climate can oppose him—no element can daunt his resolution—no region to which he does not penetrate. At one time, you find him in the frozen tracts of Iceland; at another, on the parched sands of Zahara—now you behold him on Alp or Andes, sitting amidst the thunders that leap from crag to crag—now he walks majestic on the barren shore, listening to the deep melody of the profound ocean. Again, you see him perched on some tall eminence, calm and unruffled, contemplating the scenes outspread before him, wood, vale, and lake, mountain high—then he mounts upward, above the clouds, takes the whole earth in one wide circuit, bends his course sun-ward, and kindles his undazzled eye at the full mid-day beam.

The thoroughly educated man, like the eagle, is confined to no region—dependant on no limited resource for the nourishment of his mind—for him the whole earth is filled with pleasure and stored with the treasures of knowledge—"he reads sermons in stones; books in the running brooks; and good in every thing." Like the eagle, he sits on some tall eminence, in awful solemnity; disencumbered from the press of near obstructions, he breathes in solitude above the host of ever-humming insects. Elevated above the murmur of

a thousand notes, many and idle, by which the soul is distracted, he can send his mind forth in deep meditation on the present, past, and future—he hath the power to commune with the invisible world, and hear the mighty stream of tendency uttering to his listening and intelligent ear, a distinct and sonorous voice, inaudible to the vast multitude, whose doom it is to run the giddy round of vain delight, or fret and labor on the plain below.

Let us exhort you to cultivate your minds with all diligence, that you may be thus elevated above the accidents of time and circumstances—that you may be thus imbued with a spirit which shall prepare you to sustain any destiny that may await you, adverse or prosperous. Imitate the example of those who have gone before you, and who have guided the destiny of nations by their wisdom and their valor—thoroughly imbue your hearts with their lofty and unfading patriotism—study the works which they have left behind as the imperishable monuments of human greatness—study them diligently—they are few—like green spots in a sandy desert, or stars amid the fitful clouds of a stormy night—study them day and night—they contain the sublimated wisdom of all ages—they contain a history of the remotest past, and a prophetic annunciation of the remotest future—tread along the steps of thought which they have reared, and you cannot fail to reach the sources of wisdom and the fountains of pathos.

When you have thus measured yourself severely with men of old—imbued your minds with their wisdom, and cultivated the affections of the heart by a participation in the feelings of your fellow-men—then will you need to have no fear when the evil day shall come upon us,—then will you be prepared to sustain the honor of your country—you will carry in your own bosom a rich treasure—an ever increasing source of joy and happiness. You will be lifted above the conflicting tumult of vulgar passions, and men raging in aimless commotion—you will have a fellow feeling of the mournful and the joyful, in the fate of all human beings—you can weep with those that weep; rejoice with those that rejoice. From your heart, as from a living fountain, will flow the streams of wisdom—then will you acquire the gift of communicating to men lofty emotions and glorious images in melodies and words, “that voluntary move harmonious numbers.”

THE ORIGIN OF THE MYRTLE.

“Eugenia, did’st thou note this budding flower?
See how it blossoms from that dry stiff branch,
And showers its incense on the doting winds:—
That opening flower is like our love, Eugenia,
Blooming from out our friendship. Once we smiled
To think we e’er should love, as now we do;
And when I brought that leafless, flowerless twig
And stuck it in thy garden, by thy roses,
And said in playful mood, ‘I plant this tree,
Emblem of friendship—calm as our’s shall be,’—
We little thought the beauteous flower of love
Would bloom within our hearts and bloom so soon.
And while we walked together, oft and long,

Fonder and fonder growing, as the Spring
Came balmily on and waked the sleeping buds
With whisperings from the South—and yet knew not
That it was love, yet feared, yet hoped it was,
That twig was putting forth a tender shoot,
As if to keep pace with our budding hearts.
And now upon this blessed morn, that I
Can call thee mine, friendship has bloomed in love.
My own, my loveliest—let us guard the tree
That hath been so propitious—and to love—
True love like our’s—let us here consecrate
Its future leaves and flowers. Dost thou weep,
Eugenia? Nay, brush off that trembling drop:
Ah, what hast thou to do with tears, my love?
Dost thou forebode aught that may mar our joy?”

“Nay, Hermion,” she replied, “I had a dream—
Only a dream—that love hath sometimes died,
And that its flower hath withered, while the hearts
From which it bloomed lived on—I dreamed that I
Had heard of broken vows and blighted hopes,
Born e’en from love’s sweet hours, as these from friend-
ship’s.

Dearest—’twas but a dream—forgive these tears—
In truth, I know not why they fell; I am
Too quickly, strangely moved. We’ll guard this tree,
And O if thou art true as I shall be,
The myrtle flowers shall see no more such tears.”

C. P. C

THE VICTIM OF LOVE.

A TALE OF “BY GONE TIMES.”

It was a lovely evening, the last of the Indian summer, when, on a tour through the far west, in the fall of 18—, after a long and wearisome ride, I suddenly emerged from a dark oaken forest, through the immense body of which I had for many hours been slowly tracing my almost trackless way. Before me lay stretched in all its barren grandeur, as far as the eye could reach, a broad tract of country, on which it seemed as if for ages upon ages the iron hand of time had been working destruction—with nothing but here and there, a wandering buffalo, or a solitary deer, or a tall clump of majestic trees with their withering branches, to break its dull monotonous extent. The glorious sun had just sunk beneath the distant horizon; its last lingering beams tinging with their bright colors the airy clouds and the far off skies, and lighting up with double brilliancy the rainbow hues of the surrounding wood. The scene was truly sublime—and by an involuntary act, on a rising ground, I reined in my chafing steed, and looked around. I had been upon the broad bosom of the deep, when nothing but its blue waters were around me—I had gazed on its unbroken surface, when the winds and the waves were at rest, and had cast my eyes in vain for some other object, far away over its blue sheen;

from the tops of the loftiest mountains of the earth, I had beheld with admiration the wonderful works of nature—the twinkling stars and the flowery vale—but never had I seen before aught which could be compared to this; or been so awfully impressed with the mightiness and glory of him who rules the universe. Here, thought I, might the exile from his home and country, pass away his wearisome days, free from the hisses and scoffs of his oppressors—here might the lonely hermit offer up his prayers to Heaven and count his beads in peace; and here, might the sordid misanthrope, uncontaminated by the corrupting touch of his fellow-beings, drag out to his heart's content his miserable existence.

The shadows of night had far advanced—though now and then they were thrown back by the unveiling of the chaste moon and pearly star of even, as the light zephyr blew aside the fleecy clouds—when I was awakened from my reverie by the voice of my guide, who had been, as well as myself, for some time lost in meditation, and who was now calling to me, saying, that he feared, unless we hastened on to our place of destination, we should be considered by its inmate, unwelcome visitors.

“And is it possible,” I asked, “that there is indeed a lone being, who has shut himself out from the world, in this vast wild?”

He said there was some years ago a habitation, not far hence, where he could insure me a hospitable reception, unless the owner's torch was extinguished before we arrived. Concerning his history he could give me no information; but said, that when he last saw him, he bore about him marks of a nobler birth and a better life than that which he then led.

I said nothing more, but passed on, still wrapt in the contemplation of the surrounding scenery, and in thoughts of distant things, until my companion exclaimed, in the full ecstasy of joy, at the idea of reaching his journey's end, “We are in time; the light still burns”—and at the same time I heard the hoarse barking of a watch dog to my right. I turned and found myself at the entrance way to one of the loveliest cottages my eyes ever rested on.

The faithful animal ceased barking, and shortly after, the voice of a man, who now slowly advanced towards us, supporting with a staff his feeble frame, greeted my ear, asking who we were and what our purpose, to disturb him at this late hour.

I answered—we were benighted travellers, whose way lay through the trackless and almost boundless plain before us, and who, being much fatigued by our day's ride, craved shelter of him for the night, from the inclemency of the weather. For a while he bent upon us a scrutinizing glance, until having satisfied himself of the truth of my

assertion, he said, that though he could offer us but scanty fare, and a rough couch—being himself but ill provided with the comforts of life—yet such as he had, we were welcome to, and he felt happy in being able to confer on us so small a favor.

Accordingly we unsaddled our horses, and left them to browse, and followed our kind host into his humble dwelling, where we were soon seated by a cheering fire, making fair way with the coarse but wholesome food which the good old man placed before us. By the time we had finished eating, he had spread out a comely pallet of bear and buffalo skins, to which he pointed, saying, that knowing we were much jaded, he would no longer detain us from rest with farther questions concerning our travels, but for the present would bid us good night, hoping we would experience no inconvenience from such rough quarters.

I thanked him for his kindness, and ere long was lost in sweet dreams of my far home, and absent friends.

Scarce had the morning began to glimmer in the east, before I aroused my companion, and we caught and caparisoned our steeds, ready to start on our way, as soon as we could bid adieu to the old man, who had given us so hospitable a reception; nor was it long before he came out and inquired the cause of such early preparations. We answered, that having a long road and short day before us, we had determined to make as much of our limited time as possible, and, therefore, had concluded thus early to commence the journey.

He seemed to be much concerned, and said, that it was true he could make us no very tempting offer, but if we would consent to remain with him a day or two longer, he would consider us most welcome guests; by the end of which time he would not only suffer us to depart in peace, but insure us a more speedy trip; at the same moment turning to our horses, as much as to say they needed, perhaps, more than we did, a short respite from constant exertion.

Not unwillingly did I accept his invitation, for the lonely site of his humble dwelling, was well suited to my depressed spirits; and again I freed my gallant though wearied charger, and followed him to his fireside, glad of the chance of becoming better acquainted with one whose history seemed so completely enveloped in mystery. But my guide, who from his earliest infancy had been accustomed to toil and danger, and who would almost have considered it a crime to let such a morning pass without engaging in some active sport, with his rifle swung to his back and hunting knife and pistols braced to his side, mounted his horse, and in a few minutes might have been seen in the distance, in swift pursuit of the timid deer. In the mean time, mine host—while an

old servant, his only companion, was preparing our morning's repast—agreeably entertained me with an account of the settlement of the surrounding country, the depredations of the Indians, and their bloody border conflicts with the white man; for I found him, to my surprise, possessed of a vast fund of information, and an education which a prince might have envied. He told me, that many years had elapsed since his unlucky stars had led him to leave his native place, in the State of Virginia, and to settle at his present residence. He omitted to mention any of the secrets of his early life; but whenever he referred to those days, a cloud would settle over his brow, and a deep sigh would burst from his bosom, telling at once that there was something connected with those by gone times which rested heavily upon his soul. What that was, is the object of this tale to show.

Scarcely had the old negro placed a hot bear's-steak with some roots and other eatables, on the table; when I heard approaching the shrill whistle of my merry "Sancho," and on looking out, I perceived behind his saddle a noble buck, the result of his morning's excursion. Shortly afterwards he came in, and both of us with appetites not a little increased by the night's fast, did ample justice to the frugal board of our hospitable entertainer.

It was thus, in eating, sleeping, hunting and talking, that we passed our time, until the arrival of the third evening of our stay, when I told the good old gentleman that we should be compelled to leave him in the morning. As yet I had been unable, by any question, however artful, to draw from him a disclosure of the incidents of his life, which I felt so anxious to know. The evening was mild, and he had been seated for some time on a rough bench, at the foot of an old but majestic oak, seemingly in deep thought; and it was evident from the contraction of his brow, and the flashings of his keen gray eye, that something was passing within his mind, which caused many a bitter pang to shoot, burning, through his frame; but again his countenance would clear up, and it was impossible to discover beneath its serene and benevolent expression, the storm that was raging within. It was in one of these moments, that he looked up and called me to him; and seating me by his side, asked, in a tone slightly touched with melancholy, if I was "George Hastings, the son of Henry Hastings, formerly of L— in the State of Virginia." I told him I was—and he arose, incapable of utterance, and clasped me in his arms, while the big tear-drop rolled down his time-worn cheeks, and his breast heaved with emotion. I feared I had touched a chord which vibrated to his heart, and caused the waters of anguish, which had been for years pent up in his bosom, to overflow, and I was about to beg for forgiveness, when he suddenly stopped his

tears, and once more collected himself, saying, he hoped I would excuse his childish conduct; for he found it impossible to control his feelings on learning that I was the son of his earliest and kindest friend. And looking me full in the face, to trace therein, as I supposed, the likeness of my father, a dark shade might have been seen to come again over his features, and tears to start afresh in his eyes—but he suppressed his emotions, and, after a slight pause, continued:

"Henry Hastings," and for a moment his whole soul seemed absorbed in thoughts of things, which came up to his recollection like a dream, and his very frame shook with the intensity of his feelings. I sat motionless, for never before had I observed the full force of mental suffering.

"Henry Hastings," he continued, as if forgetful of my presence—"thou wert indeed a true and faithful friend. How often have I turned, in the bitterness of my grief, to those halcyon days, when the night went not, and the morning came not, without bearing witness to a friendship reciprocated by hearts, free from the withering touch of selfishness and uncontaminated by a less heavenly feeling! Yes—how often do I turn to them as the bright spots in the wide waste of my life, and wish, vainly wish, that thy words had not been thrown away to the idle winds."

Then turning to me, he said, "George, I knew him from his childhood. In after years 'we lived and loved together,' and together roamed through 'many a changing scene.' The buffeting and storms of life we alike encountered—and after the clouds were blown aside, revelled in the sweet sunshine of the soul. Open, frank and generous, he had that within him, which few men possess; but if possessed, causes life to pass away as smoothly as a sunbeam glides over the blue sheen of the sparkling waters. Those were happy, happy days—but they are gone—and where is he, the companion of my youth? And what am I?" and again he sunk into a deep reverie.

I was unable to speak, for my feelings stifled my utterance. He remained in that situation, apparently unconscious of any thing around him, until finally all outward appearance of inward care entirely vanished—and he commenced in a full, soft and sonorous voice, the following narrative:

"George, I know you were surprised at the deep emotions which overpowered me, when you answered my inquiry concerning your name and family. It was a shock indeed which my old frame has not suffered for many—many years. Why I was not struck with the name, at first, I cannot tell. Perhaps time had dealt too heavily with my decaying memory—or, being such an utter stranger, I took too little interest in you. But this evening, when the thoughts of other scenes and other days, crowded themselves upon me, that name was associated with them; and the

idea struck me that you were in some way connected with it. You have seen the result of the discovery, and, since then, I have determined to relate to you, the son of the only individual whom I ever called friend, what I would do to him, were he living and here present—the causes which have led me to seek this lone spot, free from the world and its cares. Your curiosity on this point has not escaped my notice. But I had long since determined never to disclose the secrets of my life, and therefore evaded all your questions relating to them; then I knew you not, nor did I expect ever again to see a member of your family.

"I will pass over the occurrences of my more childish days—for the relation of them would be as uninteresting to you, as tedious to myself,) and commence at that period which gave a coloring to every incident of my after life: I speak of the time when the frivolities of the boy, were to be thrown aside for the more lasting and arduous pursuits of the man—when the cup and ball, were to be dashed to the earth, and the staff of the philosopher taken up in their stead. It was no easy task to throw off my youthful sports and youthful companions; but, ambitious as I was and had always been, I did not hesitate, and it required but a moment's reflection to determine me to choose William and Mary College, as the place where I was to form my character—not only because it had been the '*alma mater*' of many of my country's deliverers, but because there, I knew, besides the many advantages which it held out in instruction, I could have an opportunity of entering the most refined circles* on this side the Atlantic—and thereby, at the same time that my mind was undergoing a thorough course of training, my body would acquire grace, ease, and dignity, and my manners by possibility might become highly accomplished. Whether I have ever had cause to repent that choice, you will perceive in the sequel.

"Your father had decided upon pursuing the same course—and at the same time we bade adieu to the homes of our sires, and set out for the ancient metropolis of the Old Dominion. The names of Henry Hastings and Charles McDonald, unless effaced by the destructive hand of time, may still be seen cut on the chimney piece in one of the rooms, on the southern side of the college, which we then occupied. Many a night did we see our taper flicker and die away in its socket; many an hour did we pass in searching out the secrets of philosophy, and the mighty principles of science—but at length the gay season commenced, and we found time to enjoy that intercourse which I had looked forward to with so much pleasure. But, alas, the day was now fast approaching which was to stamp upon me the seal of wretchedness.

"The spring season set in with all its flowery

* Williamsburg has always been celebrated for its good society—but more particularly so at the time here alluded to.

sweets—the modest violet opened its tender blossoms, and the wild honeysuckle and jessamine diffused their fragrant scents through the neighboring woods, and the beautiful rose bloomed over every walk; the merry song of the robin, and the wild strains of the thrush, echoed in the distant groves; and the melodious notes of the mocking-bird issued from each garden bower. The beauty of the land were here collected together—and the halls of pleasure thrown open for their reception. I entered eagerly into their sports—their presence acted upon my spirits like healing balsam to the painful and distracting wound,—it was necessary, it soon appeared to me, to my very existence. When languishing and melancholy, and worn out by a close application to my studies, the gay circles of beauty and fashion soon roused my heart from its drooping state, and ere long with buoyant spirits I fluttered in all the lightness of joy. I could then gaze upon the fairy forms around me, unmoved by any other emotion than that of friendship: towards each and all I felt the same, and even looked upon them as sisters. To have injured one, either by word or deed, would have destroyed my happiness forever—the stain would have acted upon my heart—spreading and increasing daily, in magnitude and blackness, and grown hourly more foul, until, at last, what was once as pure as the innocent child's, would have perished, leaving a dark cloud resting over the damned spot, pointing out to posterity its unhallowed site, and telling, in a manner more expressive than words, its unrighteous tale.

"But these feelings soon vanished. On a clear and lovely night—such as generally marks the commencement of May—when all appears doubly brilliant, by the bright stars, and the glowing, though mild and serene light of the chaste moon—I attended as usual one of the many parties given at this season of the year to the young, the gay, the light-hearted, and the thoughtless. I entered the hall, and looking around to see if I could recognize any familiar face, in the numerous assembly there collected, my eyes rested upon one, fair and beautiful, and it seemed that in years past I had seen the same countenance—where, or how, it matters not. 'Tis enough—and too much—to know, from that time she was the object of my thoughts by day, and the vision of my dreams by night. The stream of my affections was turned into a new channel, and conducted into a new reservoir.

"I *went*—the smile which played around her lip, the mild expression of her eye, and the sweetness of her voice, all made an indelible impression upon me. I *saw*—the tenderness of her manners which some blamed, as being coquetish. I *admired*—and *was conquered*! 'Twas enough—I was no longer the being I had been. That universal attachment which I had for all, was

gradually drawn off, and centred on this one object—that joy and delight which I formerly found in the society of others, I found no longer. It was only with her, that I felt contented and happy; and yet I was not—for, when with her, though my heart was full to overflowing, still I could not speak. Every other thought, but those pertaining to the burning passion within me, fled from my brain—until, finally, there came a gloom—a portentous gloom—and settled over me; and the mirthfulness of my heart was changed, like all things else, into the calmness of melancholy.

“Henry noticed this change—for it forced itself upon him—and vainly attempted to break the spell by which I was bound. In vain did he place before me, honor and fame, as the reward of exertion. In vain did he tell of the warrior’s laurels, or the statesman’s wreath—and depict the glory of immortality. The charm was too powerful for any thing human to dispel;—and his words passed—heard, but unheeded.”

Here he paused, and a smothered sigh broke from his bosom. At length in a milder tone he continued—

“Ellen Howard, might have been truly called transcendently beautiful—with an eye, dark and lustrous, and a form of the most perfect symmetry. In the light cotillon, or more stately minuet, she moved as a queen, in the midst of the graces, striking at once with admiration, the beholder, and afterwards chaining him to her side by the powers of her mind, which displayed themselves with such brilliancy, that she seemed to be a being of another world, sent on earth only for the purpose of showing its vain creatures how frail and imperfect they are when compared to the things of Heaven. Alas! she has long since passed away, but her image still dwells with me—and at times methinks I can see her, with her white robes, and airy curls, as she appeared to me on the night when I first beheld her.

“The close of the college session was now rapidly approaching—and for the last time, as the sun sunk to rest beneath the western skies, on the evening of the 3d of July, I wended my way to her father’s dwelling. She was alone, gently reclining upon a sofa. Her head rested lightly on her lily white hand; and her beautiful eyes—their usual brightness being partially dimmed by a tear which had stolen unconsciously from its pure fount—shone with a mild lustre, and were fixed, in silent pensiveness, on the floor. It was evident from the soft sighs, which now and then slightly broke on the ear, that a melancholy sadness pervaded her soul. I approached, and seating myself by her side, declared in burning words the imperishable love that I bore her. She spoke not—but placing her hand within mine, rested her head innocently upon my bosom, and wept.

“For once in my life I was happy—the cloud vanished from my brow—the smile played around my lips—and my eyes again shone with their wonted lustre. But, alas! how short was the duration of my happiness; how soon were the bright hopes which cheered my youthful dreams to pass away forever—the cup of bliss was no sooner raised to my lips, than some mysterious power shattered it to atoms. The next morning found me, with a heavy heart, on the road to the home of my childhood—and though that home was once to me the sweetest place on earth, surrounded by my friends, and former associates—yet when again there, I soon became restless and discontented—the hours passed like days—and the days like months. I sighed for the arrival of the college course—I longed to see Ellen.”

And again he pressed his hand against his forehead—and again his feeble frame shook with the intensity of his feelings. But at length he continued:

“Yes! she was once my own—my beautiful Ellen—my plighted, my promised bride—on whom my every hope of happiness was centred. Indeed, I wished for any thing which might serve to drive away the negative state in which I existed—and soon was my wish gratified. News arrived, that the western tribes of Indians under a new leader, had broken from their forests, burning and destroying the border settlements, in the present states of Kentucky and Tennessee, and massacring the inhabitants. This called up my patriotism, and animated me with a double desire for distinction. And it was scarcely the work of a moment for me to raise a corps of volunteers—at the head of which I placed myself and marched off to assist in repelling the invaders. It would be useless to detail the many conflicts and hairbreadth escapes which we encountered; suffice it to say, that the final struggle at length came; when, unexpectedly, as I was marching through a dense wood, my whole company was surrounded. We fought bravely—and struggled manfully against their superior numbers—but every exertion proved in vain. As the last resort—driven to desperation—I turned to the faithful few, who as yet remained unscathed; and exhorted them to follow me. They did so,—we rushed among the thickest of our enemies—and at every stroke sent a foe from the earth forever. Their bodies lay heaped up around us, but their ranks continued to strengthen; till, finally, faint and weary, I saw my brave followers, one by one, cut down by my side. I despaired of life, and determined to die like a soldier. Seeing at a short distance, an Indian chief, who appeared to be the leader of the hostile band, at one bound I was by his side, with my sword descending over his head, when, pierced by a ball, my weapon dropped from my hand, and I fell nerveless at his feet. How long I remained

in that situation I know not; but on coming to my senses I found myself in a strange land, and heard their savage laughter ring in my ears, as they saw life returning in me. For they had applied their healing balms to my wounds in order to reserve me for a more cruel death. In about a month afterwards through the attention of Meona, the chief's daughter, I was entirely restored. Many laborious tasks were then, day after day, and month after month, imposed upon me, until, finally, the time came, which would have ended all my sufferings. Meona discovered the preparations for my funeral pyre, and urged me to fly while I was yet unfettered. But I was immovable, and declared my determination to remain, until she satisfied me that she feared nothing on her own account, that not a hair of her head would be touched—and that night, through her assistance, I effected my escape.

"But many days came and went, before the tall spires of L—— greeted my eyes. Twelve months had scarce elapsed, since, full of high hopes and ardent aspirations, at the head of a gallant band I had left it; yet hunger and disease, together with my uncouth habiliments, had worked such a change in my appearance, that no one knew me. The inhabitants were just throwing off their mourning robes; and I learnt, though I did not reveal my name, that an account of the unfortunate accident which has been mentioned, was soon spread through the country, causing many a scalding tear to flow from the eyes of the childless matron. And I moreover heard, that Ellen Howard who had remained for some time inconsolable for my loss, had at last yielded to the solicitations of her friends, and consented to give her hand in marriage to a young man of wealth, who had since my departure addressed her. George! I never knew until that moment how much I loved her. I had borne all my sufferings with patience—I had witnessed with a calm and steady eye, the anguish which, through my misfortune, I had caused; I had heard, unmoved, myself spoken of in a pitying tone as the 'poor unfortunate.' But this was more than I could bear. If Heaven's fiery bolt had fallen upon me, the shock could not have been more violent. The blood seemed to boil in my veins, and I thought my very heart would have burst with its unspeakable anguish. I waited not to speak to friend or foe, but, almost as swift as the winds, I flew over the space which separated us, and in a few days might have been seen, dashing, as fast as my noble steed could carry me, into the ancient metropolis. It was about dusk—and the mansion of Ellen Howard was already lighted up. I approached and entered it—and, oh God! what were my feelings, when, at the next instant, I saw the fatal ring placed upon her finger, and she pronounced another's! A deadening pang shot through me. My brain fired

and my head reeled, and I fell against a pillar at the entrance of the room. At this moment, I heard my name accidentally mentioned—I turned and saw a paleness like that of death come over the features of Ellen. 'Twas enough—I knew that it was still sacred with her. And reflecting upon the consequences which might result from a discovery of myself, I rushed from the house; the next day found me a lonely exile, wandering over the face of the earth, with every tie, that bound me to my fellow creatures, torn asunder—my fortunes shattered—my hopes blasted. I fled—the mere wreck of my former self—away from my home. Since then, Charles McDonald has never been heard of in Virginia. Concerning her who was 'the morning star of my memory,' I have since made many inquiries—and learnt, thank Heaven, that her life passed away like a summer flower in the midst of its own sweetness."

His voice died away—and as I looked upon his silvery locks and furrowed cheeks, I could scarce refrain from weeping through very sympathy.

We retired to rest—and the next morning I bade him an affectionate farewell, with his blessing on my head.

The winter's blast had passed on, and the gentle breath of spring swept softly by, when I found myself again—on my way home—at that lovely spot, the home of the wanderer; but its owner had been gathered to his fathers! and I stood by his grave, over which the wild violet unfolded its humble blossom, and dropped a tear to the memory of "THE VICTIM OF LOVE." T.

TO MARGARET.

"Daughter of the hand of snow, I was not [then] so mournful and blind—I was not so dark and forlorn." * * * Youth of the gloomy brow, raise the praise of the daughter of Barno, and give her name to the wind of the hills. * * Attend to the tale of Ossian, oh maid! for he remembers the days of his youth." "Why dost thou come, my love, to frighten and please my soul?"

My fair—my gentle cousin;

My meek and winsome lass—

At every time, in every clime,

Through which I've chanced to pass,
Since our adieu, thou hast been near:
Thy presence is a blessing here.

The blue lines of the mountains,

Which kiss the bending skies,
And the clouds around the mountains bound,
Less beauteous in mine eyes
Have grown; but in thy glance I see
A brightening smile reserved for me.

Our brook no longer prattles,

Adown its shining way,
Nor flowers, in ranks, upon its banks,
Rise at the wand of May,
As in the past; but at thy side,
I hear its blossom-bordered tide.

Thy blooming tree—thy bower,
So beautiful in Spring—
Beneath whose screen, of rustling green,
We used to sit and sing,
Is gone—yet, in my dreams of thee,
We sit beneath that blooming tree.

The "old house" is deserted,
And through its ancient halls,
Mid poisonous air, engendered there,
The noxious reptile crawls;
But, come! and I will breathe that air,
Nor feel the desolation there.

Oh! the happy, happy voices,
That cheered life's radiant dawn;
And the gladsome band, that, hand in hand,
Gambol'd upon the lawn,
Have ceased—but, in thy voice, appears
The melody of distant years.

Long in the past I linger,
When memory leads astray;
For wearily and drearily,
Trails off the present day.
Let in those memories to my soul—
The curtain is at thy control.

A prospect of the future
No consolation brings,
But doubt and fright,—for, horrid Night
There spreads her darkling wings.
She comes, she hovers round me now,
But, bless my being, here art thou.

Cheerless were earth, my cousin,
Without thy heavenly smile,
To light, to bless, my loneliness,
My terrors to beguile:
But with thy love, deep, pure and warm,
Life has its sunshine and its charm.

Middletown, Va.

G. B. W.

LETTER FROM MALTA.

Opera House at Malta; Sir Thomas Maitland; God save the King; Misunderstanding between the English Army and American naval officers, &c.

The Opera House in Valetta is, during the greater part of the year, the principal resort for amusement: it was erected in the time of the "Order," and is sufficiently large to contain some two hundred persons in the pit, and numbers upwards of seventy boxes. It is very much in the Roman style, of an oval form, and brilliantly lighted by a large French chandelier, which hangs from the centre of the ceiling. The pit, and third tier of boxes, are occupied by respectable citizens, while the second or dress circle, is solely for the "bon ton." Being patronised by the admirals of the station, the highest officers in government employ, and by the native nobility of the island, the house, during the winter, is very much crowded; and the company as mixed as can well be imagined; indeed, people from every

country, and voices of every language, are to be seen and heard during the carnival, within the walls of this building. That period of the year, when of all others this opera should be avoided by respectable females, is immediately after the arrival of the Mediterranean fleet. At this time, crowds of seamen come on shore from the different ships, with sufficient money to riot during the day in the numerous dram-shops of the city, and at night to seat themselves in the upper gallery with the women of the town. While here, having no taste for Rossini's music, and not understanding the language, they amuse themselves by cracking nuts, the shells of which they throw in all directions—by uttering oaths, and using such language as would be sufficient to corrupt the minds of children, and shock the ears of refinement. At no season, however, are the boxes better filled; and if by chance, a drunken tar utters a vulgar joke, or blasphemous oath, fit only for the inmates of billingsgate to hear, 'tis then, some have been noticed to use their handkerchiefs to conceal their blushing cheeks. The principal performers, whom I have seen at this opera—and neither of whom deserve to be named, for bad are the best—are the tenore Dagnini, who I regret to add was among those who were thought by the Palermitans to have introduced the cholera among them, and was stoned to death by the ignorant inhabitants, in that Sicilian city—the basso del Riccio, and the prima donna Madam Darbois. This last has been singing for several years, and was, in former days, a great favorite with all classes who visited the opera. In her youth, she was gifted with a pretty face and sweet voice—but what with her increasing years, and over exertions, her good looks have left her, her powers are fast failing, and she must content herself ere long, however loathing to her spirits the thought must be, to occupy a second place, even in this colonial theatre.

As an American and a republican, and oftentimes the only one present, who was not the subject of a king, I was forcibly struck on my first arrival at the island, with the attention which was paid by all present, to the national air of "God save the King." This air is performed in the interval between the first and second acts, and the whole audience rises at the commencement of it, and remains standing and uncovered until it is concluded. Indeed, during my long residence at Valetta, I have never known this custom for a single evening to be dispensed with. Perhaps I may be justified in saying, that in the present disturbed state of the island, it is not at the moment a favorite tune with the people; and instances have recently occurred, when the last notes were being played, previous to the dropping of the curtain, that all present, except those only, who, as His Majesty's officers, were compelled to remain, have suddenly retired, and left the musicians to play this "crowning rose of the musical wreath," to an almost empty house. One night, I remember in particular, when the Basso, who chanced to be a political exile from Italy, was in good voice, and the subject of his song was the blessings of liberty, he so excited his audience, that there was simultaneously a round of applause, and a general cry of "Liberta"—a little while after, when "God save the King" was being performed, there was almost as general a murmur. Although the opera, in which the Basso's song occurred, was one of the most popular with the people, and most profitable

to the managers, yet orders were given that it should be struck from the list—and it has never to this day been repeated in the “royal opera house” of Valetta.

Some twenty years since, His Majesty’s officers of the army, were far more sensitive on the subject of their national tune, than they would wish to be at the present day. The time which was formerly occupied in the performance of this air, was passed in observing, and afterwards insulting those who might through ignorance or inattention, have remained seated. It is now far more pleasantly, and as many would say profitably employed, in ogling through an eye glass the fair haired daughters of Europe, or the native brunettes of the island, as each in his taste may fancy.

In the spring of 18—, not many years after peace was declared between the United States and England, and at a period also when the feelings between the two nations were any thing but friendly, an incident occurred, which, but for the foresight of Sir Thomas Maitland, and prudence of the American Commodore, might have led to the most painful and fatal results. It was at the moment the signal gun was discharged from fort St. Angelo, to denote the hour of sunset, that an American line of battle ship, with a frigate and corvette in company, were observed to be entering the harbor of Valetta. The wind being light from the south, the smoke was slowly wafted in the direction from which the ships were approaching. This circumstance served to elicit from an old quarter gunner the following blunt remark—“I say, messmates, this, at our entrance, being greeted at the mouth of the cannon, is but an evil welcome, and proves any thing but a gracious reception.” His hearers, who were in a merry mood, called him a superstitious old fool, and added that it was always the same with him; if he spoke of home, he could think of nothing but a haunted house or a walking ghost; when at sea, he was eternally talking of “Mother Cary’s” chickens, a mackerel sky, or blowy weather—and now, when after a long cruise, and on a beautiful evening, entering a friendly port, he could see nothing but grim death staring him in the face, and Charon’s boat ready for his reception. The old gunner heard the first part of their remark with perfect good humor; but when they spoke of his courage, on which subject he was naturally sensitive, he instantly lost all patience, and remarked—“If by that, messmates, you mean that I, who have served under Lawrence, McDonough, and Decatur—who have been in three naval engagements, and always found among the victorious crew—am now afraid of an empty gun, or a puff of curling smoke, you are most — mistaken; and it ill becomes your saying it.” As no one could dispute his reasoning, he continued, as he carelessly looked at a group of idle soldiers lazily lounging on the Marina, “If our blue jackets don’t have some dust with these red coats, before they get out of this, I, as Jonathan Davis of Marblehead, will lose my guess—for my part, I would rather be holy, striding the deck of the old Montezuma, in a thunder squall on the equator, than to see this good old ship running her nose in this cursed hole. You may laugh as you like, my boys, but my motto is, give us the ocean, and fair play is a jewel!”

At this moment, the ships had arrived at their anchorage, and taken a position equidistant between the shores of Vittoriosa and Burmola. The sails were

quickly furled, the yards squared, the top gallant yards sent on deck, and to a cursory observer, every thing appeared as if the ships had been at anchor for as many days as it had been minutes since they passed the fortifications from which the sunset gun had been discharged. The hoarse sound from the trumpet, as the officer of the watch quickly walked the quarter deck, and observed with a seaman’s eye, those of the crew, who might be neglecting their duty aloft, or to quote his own words, “were playing the soldier,” had for a time been unheard, and the shrill notes from the boatswain’s whistle, as the evolutions were performed, had ceased, when a number of the younger officers made their appearance before the Commodore, and asked permission for an evening’s absence. This request was readily granted, and each one, when on shore sought, as is customary, for a place of amusement, in which to while away their few idle hours of liberty. One of the younger officers being at the opera, and on his first cruise, was unacquainted with the custom of rising when the national air of “God save the King” was being performed, and therefore, remained seated. This circumstance served to draw the attention of those who were around, and to excite the indignation of an ensign of His Majesty’s tenth regiment, who chanced to be a sprig of nobility, and consequently, as it would appear, felt himself bound to take notice of, and resent any insult which “he thought might be offered to his royal master.” The feelings of the one addressed, were naturally aroused, and as he handed his card, he coolly remarked, that where no disrespect was intended, no such language would be permitted. The American officers having observed the situation in which their companion was placed, and thinking he had been insulted, quietly resumed their seats, and, as one remarked, “before the tune had done jingling in their ears, were all accommodated with their neighbor’s address.” On the following morning, at an early hour, a boat was observed approaching the flag ship, in which were seated two officers, each of whom was of the rank of captain, and of the “king’s army,” as was written on their cards when handed for introduction. On going on board they were well received, their business explained, and every thing arranged to the satisfaction of the parties engaged. After pledging each other over a glass of Madeira, they were shown to the gangway, the marine presented arms, and the gentlemen retired. All this was done without the knowledge of the Commodore, and it was not until the salute of nineteen guns had been fired, as a compliment to the garrison, and the same had been returned, “that the commander in chief of the American naval forces in the Mediterranean” was informed by a note from his excellency the Governor, of his regret at the misunderstanding which had taken place between the two nations, who, from their descent, similarity of language, and customs, ought always to be united. Sir Thomas, at the same time, expressed a wish that the matter would be explained; and if this could not be done, that a plan should be devised to prevent the movements which had already been made, and by which it appeared that a greater part of the Americans had pledged themselves, as they came on shore, to ride into the country, to a garden not far distant from St. Antonio, where unobserved, they would await the arrival of their opponents, and

with the pistol, settle the matter of dispute, which unfortunately existed between them. All attempts at a reconciliation were fruitless—the motto with all being, first fight, then an apology, or another shot, as might suit the parties who had the ground. This reasoning, has oftentimes led to the most unfortunate results, and would, most undoubtedly, have done so in this instance, had not the Commodore and Sir Thomas hit upon the following stratagem, by which, if the misunderstanding could not be permanently removed, the proposed mode of settlement should be, at least for a time, deferred—and in a manner also, by which the honor of the parties engaged should not be compromised. At noon, on the following day, which was some two hours previous to the time appointed for the first hostile meeting, garrison orders appeared for a brigade review at Florian, which compelled the officers, who were preparing for an afternoon's ride, to be with their respective regiments till sunset—at the same moment, a signal was hoisted on the American flag ship "for all boats to be along side," a command which could not be misunderstood, or by the rules of the service, under any pretence whatsoever, be violated.

It was near nightfall, when the soldiers returned to their barracks, and the officers to the bastions, to take, as they sneeringly remarked, a last look at their transatlantic brethren, who were brave, if they should judge from their words, but wanting, when it came to the point. The young ensign, who caused the difficulty, was heard humming the words:

He that fights, and runs away,
Will live to fight another day—

when he, most unexpectedly, received a second challenge, which put an end to his song, and made him think of the morrow. It so happened, that one American was left, who had been in the navy, seen some service, and was then filling a diplomatic situation in one of the Regencies of Barbary. Going up to a group of officers, who appeared equally astonished at his coolness and daring—as the one whose impudent tongue had been so suddenly silenced, he remarked, "Gentlemen, I am but one; but I have the will, and indeed intend to fight you each in turn, until it shall be my lot to fall." Need I add, that those who heard him, were brave men, and acted in every sense of the word, as became Englishmen and officers. The major who was the eldest present, immediately stepped forward, and extending his hand, observed—"We know not your name, sir, but admire your spirit; and from your conduct when alone, we are satisfied that were your absent friends present, they would have acted in the same honorable manner."

On the morrow, all the officers left their cards, and during the day, Mr. Consul J**** was informed of his election, without ballot, as an honorary member of the regimental mess, during his residence at Malta. In the meantime, the Governor, Sir Thomas Maitland, had made known the reasons which induced the commodore to take French leave, which served to make our countryman still more popular. Would I might name him—I can only mention, that he is at present a judge in one of the middle States, and universally esteemed in the district in which he resides. It is by such like

instances of cool courage, that the Americans have obtained a character abroad, which it is to be hoped all who follow will maintain. Republicanism is not a very popular creed in Europe, more especially with those who have titles, without either money or character to support them.

W.

Malta, August 3d, 1838.

TRIBUTE TO THE MEMORY OF L. E. L.

BY J. C. M'CABE.

And thou—the lovely, gifted one—art gone!
Gone to a brighter, better world than this.
The goal of Immortality is won—
The fadeless wreath of everlasting bliss!
Cold malice now may seek to dim thy name;
In vain may envy from its native hell
Glare with distempered vision on thy fame,
Or soil thy stainless memory, L. E. L. J. C. M.

She has gone! the gifted spirit hath burst its prison bars and sought its habitation in the skies! The lyre of beauty hath given its last, last echoes to the wind,—the hand that woke the soul of melody from its chords and bade it live, is smitten in its glory, upon the string which was destined to prolong the proud fame of its possessor.

When conquerors die, the pomp and pageant—the nodding plume and the crape shrouded banner—the muffled drum and the cannon thunder—tell the gazer that the great have fallen, that the mighty have been prostrated—and we moralize on the vicissitudes and mutations of time, the uncertainty of life and the darkness of the tomb—and we unite to rear the proud mausoleum to their memory and their glory.

But when the gifted ones of earth are removed—when the priest falls at the altar, and the hand which lighted the shrine-fire forgets its duty, we weep o'er the memory of the hour when the song of praise rose from the Courts of the Temple, and the blaze of the altar told that the services of the sanctuary were remembered. When the poet dies

"Mute nature mourns her worshipper,
And celebrates his obsequies."

And to the eye of the individual who can understand and appreciate the spells of poesy, the very trees and waters, the gentle hills and the green valleys—the bright young flowers, and the birds, all, all seem to catch the pervading gloom, and mourn the loss of their friend and companion! Thus, gifted one, we miss and mourn thee. We feel as tho' some household deity had been hurled from its sanctified home, and we weep as tho' some idolized flower, beloved and beautiful, had been rudely crushed before us. Thine hath truly been the poet's destiny; and though not "born in sorrow and baptized with tears," it has been a chequered pilgrimage of but little sunshine and much gloom. From the most authentic accounts before us,* we learn that "Lætitia Elizabeth Landon, was born in Hans Place,

* Sketch by Mr. S. C. Hall.

London. She is of the old Herefordshire family, of Tedstone-Delamere. Her father was, originally, intended for the navy; and sailed his first voyage as a midshipman, with his relative, Admiral Bowyer: he afterwards became a partner with Mr. Adair, the well known army agent, but died while his daughter was very young. Her uncle, the Rev. Dr. Landon, is Head of Worcester College, and Dean of Exeter. As we have heard her say, she cannot remember the time when composition—in some shape or other—was not a habit. She used in her earliest childhood to invent long stories, and repeat them to her brother; these soon took a metrical form, and she frequently walked about the grounds of Trevor Park, and lay awake half the night, reciting her verses aloud. The realities of life began with her at a very early period. Her father's altered circumstances induced her to direct her mind to publication; and some of her poems were transmitted to the Editor of 'the Literary Gazette,'—the first and most constant of all her literary friends. He could scarcely believe they were written by the child who was introduced to him. 'The Improvisatrice' soon afterwards appeared, and obtained for her that reputation, to which every succeeding year has largely contributed.

"In person Miss Landon is small, and delicately framed; her form is exquisitely moulded; and her countenance is so full of expression, that, although her features are by no means regular, she must be considered handsome. Her conversation is brilliant, and abounds in wit. Like most persons of genius, her spirits are either too high or too low; and those who have seen her only during her moments of joyousness, imagine that the sadness which too generally pervades her writings, is all unreal—

Blame not her mirth who was sad yesterday
And may be sad to-morrow.

"One of her prose tales records the history of her childhood. It is but a gloomy one—and she treats it as the shadow of her after life. In a communication before us, she says, 'I write poetry with far more ease than I do prose, and with far greater rapidity. In prose, I often stop and hesitate for a word—in poetry, never. Poetry always carries me out of myself; I forget every thing in the world but the subject which has interested my imagination. It is the most subtle and insinuating of pleasures,—but, like all pleasures, it is dearly bought. It is always succeeded by extreme depression of spirits, and an overflowing sense of bodily fatigue. Mine has been a successful career; and I hope I am earnestly grateful for the encouragement I have received, and the friends I have made—but my life has convinced me that a public career must be a painful one to a woman. The envy and the notoriety carry with them a bitterness which predominates over the praise.' It has perhaps been her lot to encounter those best of friends—enemies—on her path through an eventful life; but she has the affection, as well as the admiration, of many; and her own generous and ardent zeal in forwarding the interests of those she regards, has not always been met with indifference or ingratitude."

From the pen of one who does honor to the land of his birth, we learn the true history in the case of the gifted and unfortunate lady—and if spirits from their

blessed abodes on high, smile benignantly on those who hallow their memory on earth, methinks this friend* of her early youth, will have thrown across his pathway from the skies a holy ray to lighten with its chastened beams his upward path to honorable renown.

"Poor L. E. L.! a more melancholy fate than her's is not to be found in the history of literary calamity. In the very bloom of a consummated hope—a hope which had supported her through many hard and bitter trials; and to which, though darkened by the clouds of adverse circumstance, she clung with the enduring faith and trust of woman—in the very moment of her seeming reward, the cup was suddenly snatched from her lips—nor love, nor constancy, nor genius could save her from the inexorable hand of the destroyer. In another world, we may indeed hope, she has a reward more perfect and pure than the highest earthly one could have been; and we have no right to murmur at the decree which called her hence. Heaven but lends the spirits—it hath endowed with inspirations of its own divinity—to the world, and in its own good time recalls them.

But while we humbly bow to the mandate of Omnipotence, there is no need that we should do violence to the best sympathies of our nature, by withholding expressions of regret at the severance of cherished earthly ties, the breaking up of social and endearing affections. This is not the creed of nature, and, therefore, not of truth.

The writer of this slight sketch, from his earliest youth, has been intimately and personally acquainted with L. E. L. She was the companion and playmate of his sister's childhood, and the friend and confidant of her riper years. To a warm admiration of her genius, he has ever united a feeling of brotherly affection; nor could the fame of his own mother, were she no more, be well more sacred to him than is that of L. E. L. We advert to these things, only as furnishing proof, that in what he may advance hereafter, he will not speak without knowledge.

There was something peculiarly melancholy and shocking about the manner of L. E. L.'s death; but heart-rending as was that calamity to her friends, the unfeeling and brutal speculation which has been set afloat respecting her, has been to them, if possible, a source of yet severer anguish. If the unprincipled manufacturers of scandalous gossip, would but reflect upon the bitter misery they cause in their vocation, surely they would abandon it. The most depraved nature would not pursue a course so vile; while if he needs must be a villain, a hundred nobler methods are open to him. The tone of a portion of the press in relation to this melancholy affair, has been not only ungenerous, but positively wicked and unjust. People have not been content merely to indulge in speculation, but have actually fabricated falsehood for the support of their ridiculous and shallow theories.

One of the most infamous of these stories, we regret to say, is of English origin. We are as proud as any man that breathes, of our native land, and seldom, aught connected with its name, costs us a blush; but truly, when we read the article we have referred to, our cheek did burn with shame and mortification, that the writer and ourselves should have sprung from the same soil. And for his sake, we could almost have renounced the name and birth-right of a Briton. We have no disposition to withhold the name of this person, nor do we fear to publish it: inasmuch as we are ready to prove at any time, that his assertions with regard to L. E. L. and Mr. McClean, her husband, were base lies; and that he knew them to be so while writing them. Shelton Mackenzie, a hack scribbler in Liverpool, who by some infatuation on the part of the editor, has been permitted to thrust himself into respectable company as correspondent of the New York Star. Shelton Mackenzie is the man—psha! we did not mean to write the word,—the creature, who merely to pander to a vitiated, but unfortunately too prevalent, appetite for gossip, has deliberately slandered the fair and honorable reputation of the living, and cast reproach upon the sacred memory of the dead—upon the memory of a woman—and of his own land; a woman, too, who had adorned that land by her

* Tho. R. Hoffman, Esq., son of the talented authoress, and himself a writer of no little merit. The article which we select is from the "American Museum," edited by Brooks the poet, and Dr. Snodgrass of Virginia.

glorious genius. But why dwell upon the subject: the broad seal of infamy is affixed plainly upon the transaction. There is no need for us to point it out.

The article to which we allude is, we doubt not, familiar to most of our readers, as it was extensively copied by the press throughout the country. In case, however, there should be some unacquainted with it, we will briefly state its substance. It declares that Mr. McClean insulted his wife by open profligacy of the most indecent and wanton description; and that, crushed and broken-hearted by this treatment, she sought refuge from her sorrows in self-destruction. Now even had there been any foundation for this report, it would, at least, have evinced but common manliness of feeling, not to have aggravated the deep affliction of the friends of the departed, by giving it publicity almost before the earth had covered her remains.

But there was no foundation for such a report. A more gratuitous and infamous falsehood was never engendered in a malicious heart. That our readers may be enabled to form a judgment in the matter, we will briefly sketch the history of Mr. McClean's connexion with L. E. L. Our information is derived from sources unquestionable and unimpeachable—as in the event of its being questioned we shall not fail to prove.

The attachment of Mr. McClean for L. E. L. was of the purest and most ardent character—an attachment, not suddenly formed, but one which had endured through a long period of years, constant and unchanging, save in the continual increase of its depth and devotion. It is now some ten years, since McClean and L. E. L. first loved. How such a nature as her's must have loved—if it loved at all—may be easily conceived; and we do not hesitate to say, that in purity of sentiment and thought, he to whom she gave her heart, was her equal. That the man to whom such a creature as L. E. L. had given the priceless treasure of her young and pure affections, should have felt proud and happy in the gift, who can doubt? and that he would have sought for a consummation of his happiness by a speedy union with the object of his choice, might reasonably have been expected. But in his mind—his strong and honorable mind—there existed obstacles in the way of such, which, though at a severe sacrifice of his feelings, his generous manly nature would not suffer him to forget.

He was young, without fortune; and he felt that he was unable to offer prospects to L. E. L. worthy her acceptance—not that he misdoubted she could be influenced by worldly feelings; but his heart sickened at the idea of asking this young and gifted creature, for his sake, to renounce the comforts and luxuries of her own home, to share in the vicissitudes of his uncertain fortunes. He knew, also, that the friends of L. E. L. would have considered the match a sacrifice on her part; and not even for the sake of her, whom he so fondly loved, could the proud and lofty spirit of McClean endure the thought, that he could be looked upon coldly or slightly.

This noble sacrifice of feeling to what he considered his duty, was not more severely felt by himself, than by her who had called it into action. The tone of her writing—so exquisite in its plaintive, melancholy beauty—was derived from the inspiration of her own feelings in this affair; and very much of the glorious poetry, which has been read and admired as but the creation of a fertile fancy, was the genuine overflowing feeling of a sorrowing spirit—a spirit so divine in its nature, that its very complainings were robed in loveliness—its very miseries a source of joy to others.

But McClean did not despair. He devoted himself energetically to the practice of an arduous profession. We will not dwell upon his sufferings—his trials; though many and severe; he drooped not, nor repined; for in the dim distance, he saw still shining, with an undimmed and holy lustre, a star of promise, which, ever amid the gloomiest moments, shed a ray of sunshine in his soul.

Well! at length, he triumphed; he was able to offer L. E. L. prospects worthy her acceptance. He found her unchanged in her feelings; and the separated but faithful friends of years were united. The reader knows the rest. We may be excused from dwelling upon after events—events of so painful and melancholy a character.

Now we put it to the common sense of the community—Is it likely that such a man, as we have described Mr. McClean to be, (and that our description is correct, we will avouch at any time, and in any place,) could have acted the part ascribed to him by this reckless libeller, Maekenzie? Men do not rush from

virtue into vice headlong in a moment. The change, when change there is, is gradual. The character of McClean had always been remarkably pure; and at the very time, when he had increased incentives to preserve it so, could he thus suddenly become the vile wretch this fellow would have us suppose? The idea is too preposterously absurd to dwell upon.

What, then, does the wretch deserve, who could thus basely assail the reputation of a virtuous, and honorable, and sorrow-stricken man? surely the scorn and execration of the whole world. But we have already wasted too many words upon the fellow. We leave him to the reproaches of his own conscience, "and to the thorns which, in his bosom's lodge, shall prick and sting him."

It forms no part of our purpose, in this place, to enter into speculation as to the cause of L. E. L.'s death. We think the tone of her letters written the very night preceding her demise, furnish sufficient evidence that she was in no state of mind, that was likely to induce her to the crime of self-destruction. We do not indeed believe, that under any circumstances, however afflictive, she could have committed such an act. It is one at variance with the whole tenor of her life—a life which had been characterised by self-sacrifice and endurance, in a more than ordinary degree. But we have no evidence worthy the slightest regard, that there existed any incentives to such an act; on the contrary, it may reasonably be supposed, that the happiest period of her existence was that when she was so suddenly called upon to resign it. She was united to the husband of her choice and her affections, and between that husband and herself, it was expressly stated on the coroner's inquest, there had never passed an unkind word. Was this, then, the first instance of casual death which has been known, that it should cause so much speculative wonder, and excite imputations of so horrible a kind? The mind that is disposed to look always upon the darkest side of things, in its gloomy and desolate nature, is a proper object of pity; but when it attempts, by distorted statements, to prejudice the vision of others, it should be the object of contempt and scorn. There is no sublimer sentiment in the whole christian creed—that sublimest of all moral codes—than the one which says, "Judge not, lest ye be judged." But for this divine and beautiful maxim, how full of doubt, and suspicion, and mistrust, would be the intercourse of man and man! An evil imagination can invest an angel of light in the semblance of the fallen; how much more then poor human nature, frail and full of error at the best.

Gentle reader! whosoever thou art, that hast borne with us through this imperfect but well intended sketch, let us claim a privilege from our brief connexion, and beseech you to cherish this holy maxim in your souls—"Judge not, lest ye be judged." For L. E. L., let not a thought injurious to her memory, find a resting place in your heart; and for the bereaved and broken-hearted husband, give him your prayers. Our task is ended: Farewell!"

But our task is not—nor is the task of England accomplished! L. E. L. slumbers in a foreign grave, far away from the scenes which were hallowed by her muse, and the homes she made glad with her song. It is the duty of her countrymen to have her remains placed in the soil that gave her birth—nay, it is the duty of her husband to bury her in that land where first

"She learned to lip a mother's name,
The first beloved on earth—the last forgot"

England has yet another duty to perform. The press is mighty to build or to destroy—to publish infamy or to sustain virtue. Let the press of England unite to scout from their columns, nay, from the association of his fellow man, the polluted wretch who dared to defame her character. Let the fiery brand of public execration be placed upon his brow, till like the fratricide Cain, he shall "flee when no man pursueth."

Farewell, sweet spirit! Peace to thy manes, beautiful sleeper! Wherever thy "sanctified dust" shall slumber—whether it be beneath the fervid blaze of a

tropical sun, or amid the "green lanes of old England," the spirit of hallowed poesy shall guard thy tomb, and in the language of a sister spirit, "too lovely and too early lost,"

Thy grave shall be a blessed shrine,
Adorned with nature's brightest wreaths;
Each glowing season shall combine,
Its incense there to breathe.
And oft upon the midnight air,
Shall viewless harps be murmuring there.

VERSICULI—NO. I.

BY LEWIS ST. MAUR.

While conversing a few evenings since with a warm-hearted girl, the eloquence of whose buoyancy had elevated my feelings from their despondency, my lightness was arrested by the question, "What causes depression of spirits?" from a sweet, gentle little friend, whose pensive eyes will, in the future, often come up in my memory, as the recollection of the angel-visitant of some dream of my childhood. The following lines were penned that evening as an answer to the interrogatory.

I.

To trace in remembrance, the spell
Of a witchery, thrilling and cherished,
While the sighs of the burdened heart tell
That the spirit which wrought it has perished;
To sit from the giddy apart,
To list to the gay and the cheerful,
While the thoughts that well up in the heart
Make the visage of Sadness more tearful:

II.

To enthrone one you love, as divine,
In the heart to rule ev'ry emotion,
And bow at that altar and shrine
With the heart's fondest, mildest devotion;
Then to find that the being you love,
Is unworthy your heart's precious offering,
Or in sorrow and sadness to prove
That she turns from the gift you are proffering:

III.

To have o'er the memory come,
Some cherished and fondly loved token,
Of the bliss of our childhood and home
And a heart that once loved us, now broken;
Of a childhood whose bright dreams are past,—
Of a home where those visions first found us:—
Oh! these, these are thoughts that can cast
The mantle of Sadness around us!

VERSICULI—NO. II.

I.

To love, and yet to know
The feelings which you cherish,
Like flowers that earliest blow,
Are destined soon to perish;
To have a vestal flame
In the heart's temple sleeping,
While yet you dare not name
For whom that fire is keeping:

To see some star above
In brilliancy declining,
Or round the flower you love,
The fun'ral ivy twining:
This is pain! this is pain!

II.

To know that some sweet soul,
With love's warm passion burning,
Like the needle to the pole,
To you is fondly turning;
To feel, when you're depressed,
Some lov'd one is desponding,
And when Hope soothes your breast
Some other heart's responding;
To have the passions blend,
In an unbroken union
Of love that knows no end—
The spirit's deep communion:
This is sweet! this is sweet!

LECTURES ON PHRENOLOGY AND ITS APPLICATION.

BY GEO. COMBE, ESQ.

Reported for the New Yorker.

LECTURE II.

In the last Lecture we decided that the brain is the organ of the mind, and that each distinct fundamental faculty is manifested by a distinct cerebral organ. We now come to inquire whether the condition of the brain exercises any influence on the manifestation of mind. Does it matter, in short, whether the brain be old or young, healthy or diseased, fine or coarse, small or large?

It is certain that a young and immature, or an old and shrunken brain cannot manifest its functions with the vigor and continuity of one in the heyday of life. Thus we see the feebleness of childhood and the imbecility of age. Usually at 55 or 60 the painter's conceptions become clouded and the poet's fire darkened. The influence of disease we observe in insanity and other affections.

It is the opinion of Phrenologists, that size, other things being equal, is a measure of power—that is to say, if age, health, exercise and temperament be the same in two individuals; but if in one the mental organs be small, and in the other large, the latter will manifest mind most powerfully.

You have all read the pleasing fable of the old man who showed his sons a bundle of rods and pointed out to them how readily they might snap them asunder separately, but how difficult it was to break the whole at once. Whence arose this difficulty? Clearly from the added rods or fibres producing additional resistance: so it is with living parts. A muscle is stronger in proportion to the number of its fibres; so is a nerve. But suppose an objector to present a rod of iron of the same thickness as one of the wooden twigs, and insist that to break that single rod was as difficult as to break the whole bundle of twigs before referred to. The answer

is obvious. Here the things compared differ in kind and quality. The condition that size is a measure of power, *other things being equal*, has been entirely overlooked. Take ten iron rods of like thickness, and you will find, as in the former case, that it is ten times as difficult to break ten rods as to break one.

And this leads me to observe that the things compared must be of the same species. The bee has a very minute brain, and yet it manifests great constructiveness. Now it may be argued, that if size be a measure of power, then should the comparatively enormous organ of constructiveness in man cause him to manifest the faculty with proportionate energy, which is not the case. But this objection is unsound. The structure of every species of animal is modified to suit its condition, and you can no more compare a bee with a man than a twig with an iron rod. Correct conclusions can be obtained only by comparing animals of the *same species*. It is to be observed, however, that the more nearly any two species resemble each other, the fitter they become for profitable comparison. Thus, the heads of the cat and tiger illustrate each other much better than those of the tiger and sheep; hence, too, by comparing man to the higher animals, analogy throws on human organization a reflected light, which serves admirably for illustration, though not for proof. Direct observation on man himself is the only evidence on which Phrenologists depend, and on such evidence alone their science rests.

All animated nature teems with proofs that size is a measure of power. Large lungs aerate blood better than small ones, and large muscles are more powerful than small ones. If a liver with a surface of ten square inches secrete four ounces of bile, it is certain that, other conditions being equal, a liver with a surface twice as great would secrete twice as much. Bones are large in proportion to the weight they have to support: hence their enormous size in the elephant and the mammoth, a complete specimen of which I saw at Philadelphia—and their strength is always in proportion to their size, other things being equal. But suppose the arrangement of the bony matter to differ, then may the same quantity produce different degrees of strength. Thus, if you wished to place an iron pillar weighing ten tons in the centre of this room, for the purpose of supporting it, the strength of the pillar would be much greater if you disposed the matter in the cylindrical than if you disposed it in the solid form. So when nature wishes to give strength to the bones of birds without increasing weight, the bone is made of large diameter, but hollow in the middle. It would not do, therefore, to compare equal quantities of bone, in one case compacted and in the other arranged cylindrically, inasmuch as the conditions would not be equal. But of two cylindrical bones, containing matter in proportion to their size, the largest would be the most powerful. And of two compact bones, the same would hold good.

We have striking confirmation of the principle I am advocating, in the relative distribution of the different kinds of nerves. Speaking generally, there are two classes of nerves, those of motion and those of sensation. Now, wherever the power of motion preponderates in an animal, there are the nerves of motion most numerous; and wherever the power of feeling predominates, there are the nerves of sensation most numerous. Thus, in the horse, which is noted for its muscular

power, the nerves of motion going to the limbs are one third more numerous than those of sensation. Whereas, in man, distinguished for acuteness of feeling, the nerves of sensation are one fifth more numerous than those of motion. The nerve of feeling going to the elephant's proboscis, and ramified on its tactile extremity, exceeds in volume all the muscular nerves of that organ put together. Birds require to rise in the air, which is a medium much lighter than their bodies: Nature, therefore, to avoid enlarging their muscles and thus increasing their weight, has bestowed on them large nerves of motion, and the power is thus secured by applying a powerful stimulus to muscles comparatively small. In fishes, on the contrary, which live in a medium almost equal in density to their own bodies, the muscles are comparatively large, and the nerves small. Thus does nature beautifully adapt the structure of the animal to its condition.

We find this adaptation well illustrated by the external senses. Each of these senses is composed of an instrument on which the impression is made, and of a nerve to conduct that impression to the brain. Now a large eye will evidently collect more rays of light, a large ear more vibrations of sound, and large nostrils more odorous particles, than the same organs if small. And the nerves ramified in these organs give intensity of perception proportionate to their extent. The organ of vision affords a most interesting example of this. A large eye collects a greater number of rays, and consequently commands a greater sphere of vision than a small one. The ox is remarkable for the size of his eye; (hence the term 'ox-eyed,' applied to large-eyed individuals;) he consequently commands a large range of space without turning round; but as his provender lies at his feet, his sight need not be acute: accordingly, we find that the optic nerve is not large in proportion. The eagle, on the contrary, soaring as it does to an immense height, needs not a large eye to give it range of vision, but it needs intensity of vision, that it may perceive its prey at a great distance. We find its eye, therefore, of small size, but of great keenness: the optic nerve is enormously large. It does not, as in man, form a mere lining membrane to the posterior chamber, but is composed of folds hanging loosely into the eye, and augmenting largely both the nervous surface and nervous mass, giving that great intensity of vision, which particularly distinguishes this bird of prey and enables it to discover its quarry at immense distances.

The external ear is for the purpose of collecting the vibrations of sound; and we find the lower animals to have large trumpet-ears, which man imitates when he wants to hear distinctly, by using an ear-trumpet.

In man, the olfactory nerves spread over 20 square inches; in the seal, over 120—and in this animal the sense is so acute that the hunters have to approach him in the teeth of the wind. There are two dogs, the greyhound and pointer: the first follows the game by its eye, and the last by its smell. The nose of the first is narrow and pointed; that of the last broad and extended. The sheep excels man in the acuteness of smell; and accordingly, while in it the nerve is thicker than this pencil, in man its size is not greater than thin pack-thread or whip-cord. The mole is remarkable for the acuteness of its smell, and the nerve is very large. It

is remarkable for the feebleness of vision—thus, “as blind as a mole,” is a common saying. Corresponding with this is the smallness of its optic nerve.

Lord Jeffrey, in an article which he published in the *Edinburgh Review*, opposed this doctrine of size being a measure of power. “The proposition,” he says, “is no less contrary to the analogy of all our known organs than to general probability. Grandmamma Wolf, in the fairy tale, does, indeed, lean a little to the phrenological heresy, when she has large eyes to see the better. But with this one venerable exception, we rather think that it has never been held before that the strength of vision depends on the size of the eye, the perfection of hearing on the magnitude of the ear, or the nicety of taste on the breadth of the tongue and palate.”

Now it happens that so far as the weight of authority is concerned, the venerable grandmamma Wolf has complete advantage over Lord Jeffrey, and fairly beats him out of the field—Semmering, Cuvier, Monro, Blumenbach, Magendie, Georget, and a host of others, taking her side in the controversy. Blumenbach says: “While animals of the most acute smell have the nasal organs most extensively evolved, precisely the same holds in regard to some barbarous nations. For instance, in the head of a North American Indian the internal nostrils are of an extraordinary size. The nearest to these in point of magnitude are the internal nostrils of the Ethiopians.” Monro primus says: “The sensibility of smell is increased in proportion to the surface; this will also be found to take place in all the other senses.”

Suppose that, after these expositions, I were to tell you that size has no influence on power in the human brain—would you be disposed to credit the assertion? I think not. Here is the skull of an infant; here one of an adult—mark the difference in size. This is the skull of a Swiss; this of a Hindoo—see how large the one compared with the other—and what says history of their manifestations of power? While the one people achieved their independence at an early day, and have maintained it at times against fearful odds, the other have ever been the prey of invaders, and one hundred millions of them are at this moment kept in subjection by forty or fifty thousand Englishmen. Before studying Phrenology this last fact was utterly inexplicable to me. The Hindoos are considerably advanced in the arts of civilized life. They have written language, systems of law and religion; and yet, they are utterly unable to contend against a mere handful of Anglo-Saxons. But now the reason is perfectly plain. The small comparative size of their brains explains all. Again, here is the head of a Peruvian Indian, a fair specimen of the race. See how small compared with the European head; and you know that a few Spaniards conquered a nation of them.

But again, when the brain is below a certain size, idiotism is the invariable result. In the lowest class of idiots, the horizontal circumference of the head, taken a little higher than the orbit, varied from 11 to 13 inches; in a full-sized head, the circumference is 22 inches; in Spurzheim’s skull it is 22½. In such idiots the distance from the root of the nose backwards over the top of the head to the occipital spine is only 8 and 9 inches; in a full-sized head it is 14; in the skull of Spurzheim it is 13 6-10. Let those who deny the in-

fluence of size reconcile these facts with their belief. We challenge them to produce a man with a small sized head, who manifests great general mental power.

“But,” say some, “we know idiots who have large heads.” Our reply is—so do we; but, then, in these cases the brain is not healthy. A large leg is usually indicative of strength; but this is not the case when the leg is large from disease. But though disease be absent, if the size be very deficient, idiocy is invariable, and men remarkable for great force of character, as Bruce, Cromwell, Bonaparte, Franklin, and Burns, invariably have heads of unusual magnitude.

But here allow me to save you from error. Many, after hearing this statement, immediately commence to try on the hats of their acquaintance, and are apt to conclude that the man with the largest hat is the most clever. Now, here is a little bit of a mistake. The hat is only the measure of the head’s circumference in a part of which he need not be so proud. It does not measure a great part of the intellect and none at all of the moral sentiments. Hatters, in seeming anticipation of moral improvement, have left in the upper part of our hats ample room for the moral sentiments to sprout and grow. Sir Walter Scott’s hatter told me that the hat of that celebrated individual was one of the smallest which went out of his store. But then the perceptive faculties, which were large in Scott, were not reached by the hat. The upper and lateral portions of his forehead were only full. Cautiousness was little more than moderately, and concentrativeness only moderately developed; and these organs, taken collectively, determine the circumference of the hat. His forehead and coronal region towered high. His head from the ear to veneration, was the highest I ever beheld; but of these dimensions his hat gave no account.

That size has an important influence on the power of manifestation, is now admitted even by the *Edinburgh Review*. In the 94th number appeared a paper written by Dr. Conolly, containing this sentence: “The brain is observed progressively to be improved in its structure, and, with reference to the spinal marrow and nerves, augmented in volume more and more, until we reach the human brain, each addition being marked by some addition to, or amplification of, the powers of the animal—until in man we behold it possessing some parts of which animals are destitute, and wanting none which they possess.”

The principle for which we contend being thus established, we would remark that it is susceptible of a most important application. It is found, in four cases out of five, that in insanity the nature of the derangement bears direct reference to the predominant organ or organs. Some are affected with melancholia; in these the organ of cautiousness will be found large. Some fancy themselves the Deity; in these, self-esteem will be found predominant. Some are furious: in these destructiveness will be found large. These are generally cases of functional derangement; and by examining the heads of the insane I can generally determine with accuracy the nature of their derangements. But a small organ may become diseased, and sometimes does so. Most frequently, however, the derangement is structural: thus, I have seen a small organ deranged by a spicula of bone growing into it, and by the pressure of a fungous deposition.

Let us now inquire into the circumstances which modify the effects of size. The most important of these is the *constitution* of the brain; and the question naturally arises—do we possess any means of ascertaining this constitution? We do, in the observation of what are called the temperaments, which are four in number—the lymphatic, the sanguine, the bilious, and the nervous—each of which is accompanied by a different degree of activity in the brain. The temperaments are supposed to depend upon the condition of particular systems of the body: the brain and nerves being predominantly active, seem to produce the nervous temperament; the blood-vessels being constitutionally predominant, give rise to the sanguine; the muscular and fibrous systems being predominant, give rise to what is called the bilious, but what should be called the *fibrous* temperament; and the predominance of the glands and assimilating organs give rise to the lymphatic.

The temperaments are indicated by external signs:

1. The *lymphatic* is indicated by roundness of form, softness of muscle, fair hair, pale skin, sleepy eyes, and inexpressive face. In this temperament the brain and all other parts of the system are feeble in action, slow and languid.

2. The *sanguine* is indicated by a well-defined form, moderate plumpness, firm flesh, chestnut hair, blue eyes, and ruddy fair complexion. There is great fondness for exercise and intolerance of muscular quiescence. The brain partakes of the general activity.

3. The *bilious* is indicated by black hair, dark skin, moderate stoutness, firm flesh and harsh features. It gives great power of *endurance*, or bottom, as the jockies call it.

4. The *nervous* is indicated by fine thin hair, small muscles, thin skin, paleness of countenance, and brightness of eye. This temperament gives great vivacity of mental action.

These temperaments are, however, seldom found pure. We have a mixture of the nervous and bilious, as in Lord Brougham, giving great activity and endurance. As an example of Brougham's power of continuous activity, I may mention a circumstance related to me by one who knew it well. Brougham was engaged in a Court of Law all day; he went from the Court to the House of Commons and remained there till two in the morning; on going home he wrote an article for the Edinburgh Review, by the time of finishing which he had to go to Court; from the Court he again proceeded to the House of Commons, where he remained till some time in the morning—and it was not till the morning of the third day that he retired to bed. During all this time his vigor seemed unabated.

The nervous and lymphatic temperaments are not unfrequently combined: this gives alternations of great activity and indolence. It was the combination of Professor Leslie. He would for a day or two apply himself with great vigor, assiduity and success, to scientific studies. It would then seem as though the nervous energy were exhausted, and the nutritive system came into predominance. He would sit and eat, and dose and sleep—paying no attention to study for one or two days. He would often take another day to go about and attend to any matters not requiring much mental exertion. Again would the nervous system come into

predominance, and again for two or three days would he apply himself most assiduously to study.

The nervous and sanguine temperaments both give activity; but the first is more of a mental, and the last more of a physical character. One of the former temperament would rather write a note than walk across the floor; one of the latter would rather walk the length of Broadway than write a note.

Shakespeare admirably contrasts the lymphatic and nervous temperaments in the scene between Cæsar and Anthony:

Cæsar. Let me have men about me that are *fat*—
Bleek-headed men, and such as sleep o' nights.

Yond' Cassius has a *lean* and *hungry* look:

He thinks too much—such men are dangerous.

Anthony. Fear him not, Cæsar; he's not dangerous—

He is a noble Roman, and well given.

Cæsar. Would he were *fatter*—but I fear him not;

Yet if my name were liable to fear,

I do not know the man I should avoid

So soon as that *spare* Cassius.

It is to be remembered, then, that a large organ may, in fact, be less powerful than a smaller one, if its temperament be inferior. But in judging the relative power of organs, temperament need not be considered, as all the organs of the same head are in this respect alike.

In cases of disease, great size may be present, and yet the manifestations of mind may be very feeble and imperfect. In this case, size forms no measure of power any more than does the size of a leg affected with dropsy.

Now, if the brain be the organ of mind, and different parts of the brain manifest different faculties, it cannot be indifferent what part is most or least developed, for it is obvious that two brains may be composed of precisely the same quantity of cerebral matter, and yet manifest totally different qualities. The *form* of the head, therefore, is not less interesting and important to phrenologists than the size. Before proceeding further with the consideration of this subject, however, let us glance at the means which have been used by those not of the phrenological school, to ascertain the true philosophy of mind and functions of the brain.

By one set of philosophers, the laws of thought have been expounded without any reference to organization. Such were Locke, Hume, Reid, Stewart, and others. They reflected on their own consciousness, and they inform us of the result of their investigations, what they have thought and what they have felt. The dependence of the mind on material organs forms no part of their philosophy.

With the hope of obtaining some information concerning the functions of the brain, the anatomists cut it up in every possible direction; but no sentiment was ever perceived slumbering in its fibres, nor half-formed ideas starting from its folds. In fact, a dissection never yet disclosed the functions of any part whatever. Formerly it was very prevalent in France to cut out parts from the brains of living animals, in order to ascertain functions; a practice as absurd as it was cruel. The experimenters proceeded on the supposition that nothing was known concerning the functions of the brain, and yet they expected to ascertain their functions, by observing what powers were not manifested when various parts were destroyed. Suppose an instrument were

presented to one of these operators, and that his object was to discover, by experiments, what sounds it was capable of producing, and by what part of it each sound was emitted. Imagine him to take a hammer and smash at random a number of its springs and wheels, and then set the machine a-going. By listening to the sounds emitted, how could he tell *what were wanting*, when he did not know the whole originally within its compass? and how could he tell by their silence, the sounds which the broken strings were originally calculated to emit? Yet this would be precisely analogous to the procedure of the vivisectioners. They are unacquainted with the number of the mental powers, and they destroy several of them at random, that they may find it out. They do not know what particular power is manifested by any particular part of the brain, yet they destroy that part to get it to reveal its function. They destroy the string of a musical instrument, and then listen to hear what sound it will not emit!

We hear of Magendie and others cutting away certain portions of the brain, and some animals went forwards, some backwards, some to the right, some to the left, some seemed drunk, some stupid. And then we have from these experiments, a number of so-called important deductions drawn. But how can deductions, fit to be depended on, be drawn from the actions of animals so tortured? Suppose you take a beautiful black bird and cut through its integuments and skull, and cut out a portion of its brain, do you think it would favor you with a song? And because it did not, would you be correct in calling the excised portion of brain the organ of time? Suppose you take another animal and serve it in like manner, do you think it would be in the humor or condition to tend and nurture its young? And because it did not, would it be correct to say that the excised brain was the part which manifested love of offspring? Had phrenology been based on such observations, then would it have merited all the obloquy which has been heaped upon it. But because such cruel experiments have been performed to overthrow phrenology, they have been lauded as most philosophical!

Again, pathological cases have been brought forward to illustrate the functions of the brain; and sometimes to oppose phrenology. Now, before you can draw any conclusion concerning the function of a part from a state of disease, you must know the function of the part in health. But as the non-phrenologist is ignorant of the situation of particular organs, he cannot tell, when a certain feeling is deranged, in what organ to look for disease,—nor, when he sees disease in an organ, what faculty was probably deranged. To illustrate my meaning, I relate the following circumstance:

Sir R—— L——* was a man highly respected for talent and character; he was at one time minister plenipotentiary to this country, and at another to the court of Constantinople. He lived to the age of ninety-three. Seven years before his death, his character commenced to undergo a remarkable change; from being one of the most amicable and courteous, he became one of the

most violent of men. He abused his aged gardener, spit in his face, and threw things at him. He also from being an admirable linguist, became unable to use words. When he died, Dr. Abercrombie and Mr. Craig examined the brain, and I, being related to the family by marriage, obtained leave to be present. I knew that the organs of combativeness and language were those in which to look for lesions. Accordingly the medical gentlemen found an abscess, one inch in length by half an inch in breadth, in the posterior lobe, where combativeness is situated; thinking they had found out the cause of disease, they were about to stop, but I got them to proceed, and when Mr. Craig came near the organ of language, I took the scalpel and proceeded very carefully, and in the convolution which is marked as the organ of language, I found another lesion. Mr. Craig published an account of the case, in which he mentioned the large lesion, and connected it with the loss of words. He had been unacquainted with the furious conduct of Sir Robert. I immediately published another report, stating the conduct of the patient in this respect, and showing clearly the manner in which the post mortem appearances harmonized with phrenological doctrines. I repeat that a non-phrenologist is incapable of reporting pathological cases of the cerebral organs with success.

Dr. Roget, an opponent of phrenology, confesses, that "the brain is still as incomprehensible in its functions, as it is subtle and complex in its anatomy." Dr. Conolly, in the 94th No. of the Edinburgh Review, well describes the utter confusion of the anatomists and physiologists, even in late years, when trying to unravel the mysteries of the brain.

It is plain, then, that if Dr. Gall could boast no superior method to that of ordinary physiologists and metaphysicians, he would have been unable to solve the question, What parts of the brain and what mental faculties are connected? He was led, however, to adopt a different and superior mode of inquiry, which will be best explained by relating briefly the history of his discovery.

Dr. Gall, from an early age, was given to observation, and was struck with the fact, that each individual was distinguished for some peculiarity of talent or disposition. Some of his schoolmates were distinguished for the beauty of their penmanship, some for the elegance, others for the stiffness and dryness of their style of composition. Their dispositions were equally different; and this diversity appeared to determine their partialities and aversions. Some manifested a fondness for employments which they were not taught. Some would spend their leisure in painting, some in cultivating a garden, some in carving, some in noisy games. Each individual presented a peculiar character, and Gall observed, that an individual who one year had displayed selfish or knavish dispositions, never became in the next a good and faithful friend.

The most formidable rivals of Gall, at school, were such as learned by heart with great facility, and these he noticed had prominent eyes. They gained from him, by their repetitions, the places which he had obtained by the merit of his original compositions. Some years afterwards he changed his residence, and he still found that his school-fellows so gifted had prominent eyes. He made the same observation on entering the Univer-

* Mr. Combe, for the sake of authenticity, mentioned the name, which the reporter deems it proper on this and like occasions to suppress, lest pain should be given to individuals in private life, with whom the parties mentioned were connected by the ties of blood or friendship.

sity. Gall could not believe this connection to be purely accidental, but suspected that they stood in an important relation to each other. After much reflection, he conceived that there might be external signs for the other intellectual powers, and thereafter all individuals remarkable for any mental quality became the objects of his attention. Light broke in upon him by an almost imperceptible induction, and by degrees he conceived himself to have found external characteristics, indicative of a decided disposition for painting, music, and the mechanical arts.

In following out the principle which had thus presented itself to his mind, he encountered great difficulties. The prevailing notions of the philosophers and physiologists were a continual stumbling-block, till abandoning every theory and preconceived opinion, he gave himself up to the study of nature. He visited prisons and schools, and was introduced into the courts of princes, to colleges, and the seats of justice, and visited every individual remarkable for any particular endowment. During my recent visit to Vienna, I was informed that such was the ardor with which Gall pursued his inquiries, that he created quite an alarm; people were afraid of dying lest Gall should obtain their skull, and some left orders in their wills that means should be taken to prevent him.

On reflection, Gall was convinced that, without anatomy, physiology must be imperfect; and although he had always supposed the external indications to depend on the brain, he had not gone beyond other anatomists in explaining its structure. From observing a woman afflicted with hydrocephalus, who manifested an active and intelligent mind, he declared that the structure of the brain must differ from what was generally conceived. From that commenced his anatomical discoveries. Gall did not first dissect the brain and thus pretend to discover the mental organs, nor did he first map out the skull according to his imagination. On the contrary, he first observed a concomitance between particular talents and dispositions, and particular forms of the head; he next ascertained, by the removal of the skull, that the size and figure of the brain are indicated by external appearances; and it was only after these facts were ascertained, that the brain was minutely dissected, and light thrown upon its structure.

Dr. Gall, for the first time, delivered lectures on his system in 1796, at Vienna; in 1800, Dr. Spurzheim became a student of his, and in 1804, his associate.

When I was in Germany, I saw a collection of barks describing the science at different stages of its progress, and also skulls marked at different times; all proving that the organs were discovered piece-meal. Indeed I found in this country a most unexpected corroboration of the fact. Mr. Nicholas Biddle, when quite a young man, and on a visit to Europe, in 1806, attended a course of Dr. Gall's lectures, and was so much interested, that he requested Dr. Gall to mark out the places of the organs on the skull, which the Dr. did. When in Philadelphia, Mr. Biddle presented me with the skull so marked, saying, that I could make a better use of it than he. This is it, and you perceive that there are quite a number of unoccupied places. You perceive that Hope, Conscientiousness, Individuality, Concentrativeness, Time, Size and Weight are not marked upon it—they, at that time, being unascertained.

So far indeed was Gall from advocating a hypothesis, that in the disjointed items of information which he first presented to the public, there appears a want of ordinary regard for systematic arrangement. A candid and uncolored statement of facts was all he seemed desirous of furnishing, leaving their value to be ascertained by time and farther investigation. But gradually a system of mental philosophy emanated, almost spontaneously, from the seeming chaos.

A REMEMBRANCE.

Yes, 'midst the lingering visions of the past,
She comes—as Venus in the train of stars—
The brightest of them all! She was not fair;
If that expression only can describe
The dazzling beauty of a perfect blonde;
But the soft hue spread o'er her neck and brow,
The pure, transparent color of her cheek,
Were strangely beautiful;—and then her eyes,
Dark as the night, with lustre like the rays
Of summer-moonlight, splendid, clear and calm,
Seemed, in their crystal depths, to be the home
Of a bright spirit, heavenward in its gaze.
Her lovely brow was shadowed by a cloud
Of glittering hair—'twas of the raven's hue;—
And in the matchless contour of the face,
The chiselled lip—a rose-bud in its dye
And freshness—there was still a spell, a charm,
No shape or color could alone impart—
A spell, a charm, exclusively her own.
You would have tho't her birth-place was the clime
Of song, and genial air and radiant skies,
Where glow the purple clusters of the vine,
And where the breeze is laden with the sweets
Of countless blossoms—for her beauty bore
Th' Italian cast, tho' it was nurtured here.
One pen has well described her. One alone.
In all the varied pictures which the muse,
With Fancy's magic pencil, yet has drawn
For favored poets, I have never seen
Aught that resembled her, save in the page*
That tells, in language full of soul, the tale
Of the fair Spaniard, lovely and adored,
Victim of passion's dark and deadly aim.
So like Isora was she, that to me
It almost seemed, when first I read the book,
It was her portrait. Gentle as a dove,
Gay as a child, she was—but like the flowers,
In brevity and beauty, seen no more
Was she among the living, when the leaves
Of Autumn strewed the ground, her eighteenth year.
It might be that her Maker did not choose
One innocent and delicate like her,
To bear the world's cold acorn—the unhallow'd glance
Of passion from the base—for *she was poor*,
And had her home amidst the vulgar herd,
Who could not feel with her, or be her friends.
And deeply grateful was she to the few
Who sought to draw her from that mean abode—
A dark seclusion, totally unblest;—
And her young heart seemed full of tenderness

* See "Doveroux," by Bulwer.

For all who marked her with a kindly eye.
It has been long ago—I was a child,
When that bright blossom withered at the touch
Of fell disease—but never can the light
Of her transcendent loveliness be dimmed
In my remembrance. No, I see her now!

July 1, 1839.

E. A. S.

THE LOVER'S TALISMAN; OR, THE SPIRIT BRIDE.

BY MRS. SEBA SMITH.

"Anna," said the young collegian, "you are a noble girl—no die-away airs, because your lover is so long absent; no making all the rest of your admirers feel, that they are just the last persons in the world that you care anything about—no, no; you are not so selfish as all that, Anna."

A shadow passed over the face of the fair girl, and the smile died away upon her lips.

"Indeed, cousin, this might be a cutting reproach; but you do not intend it as such—I know you do not."

"Never," said the youth passionately; "I meant only to commend my cousin's sweetness of temper—her constancy is"——

Anna raised her finger.

"I have issued my interdict upon that score, cousin; but do you know I have a Talisman that will ensure me the constancy of William—and it is of a kind too, that is valueless in case of fickleness upon my part?"

"Indeed; initiate me into its mysteries, Anna; there are a pair of blue eyes, that I should like amazingly to fix for me alone; and when you are married, sweet coz, perhaps your Talisman will be transferable."

"Aunt can describe its virtues best, cousin George; and if she will tell you the story of Hannah Newton, you will never be at a loss to understand the nature of the Lover's Talisman."

Mrs. B., the aunt, raised her eyes from her needle, and a faint smile played over her placid features. She was an unmarried lady of nearly fifty, dressed with great simplicity, her gray hair neatly parted over her forehead, which was still smooth and fair. The plain muslin cap, with its white satin strings, denoted a member of the Society of Friends.

"Thou art very fond of that story, Anna; but thou must not rely too much upon the power of the Talisman, as thou calls it; for ours is the constant sex, Anna, and we remember long, it may be, after we are forgotten."

I observed a faint blush stole to her cheek as she uttered this, and for the first time I began to ask myself why Mrs. B., (I use the English term of Mrs. as applied to ladies of a certain age, as I think it dignified, and altogether proper,) with all her sweetness of manner, and feminine excellences, should still have remained, like "the last rose of summer, left blooming alone." But the tone of the voice, the flitting blush, and more than all, the sentiment she had expressed, revealed to me at once a record of wasted affections, of lonely watching, and midnight tears, of the bitterness of sor-

row, known only to Him, who seeth in secret, and of that "concealment, that preyeth like a worm in the bud" upon the human heart.

Mrs. B. from that time became with me an advocate for the whole sisterhood of those who are to seek for a kindred spirit amongst the pure essences of the invisible world, instead of the grosser elements of earth. She told the story with a grace and pathos, that I dare not even hope to transfer to my pages—I can only give the details, leaving my readers to imagine the many fine touches of feeling and beauty, which could be imparted only by the lips of Mrs. B.

THE STORY OF MRS. B.

Hannah Newton, at sixteen, was merely a quiet, sweet-looking girl, with small pretensions to beauty; for she had nothing of that regularity of feature, and brilliancy of complexion, that are supposed to be essential to it. She was neither a blond nor a brunette, but a mixture of both—her eyes were neither black nor blue; they were, I believe, hazel, but they owed much of their power to long curved lashes that veiled their extreme tenderness of expression, and made them appear much darker than they really were. I say this of Hannah in the early part of her life, for at thirty she was called beautiful by those to whom an elevated expression of countenance, combined with softness and grace of manners, constitute beauty.

Her mother was a pale, gentle woman, with large blue eyes, who had always been an invalid, and whose delicacy of look and demeanor contrasted strongly with the rough, harsh manners of her husband. Constant ill health had made her winning and dependent as a child; yet beneath all this softness of exterior, she carried a fixedness of principle, an elevation of mind, and strength of purpose, that had their full share of influence over her stern, imperious companion. Whatever might have been his previous irritation of feeling, no sooner did he enter the presence of his wife than all traces of it disappeared, even as if his rigid brow had been swept by the wing of his good angel.

Hannah had inherited all the fine womanly qualities of her mother, superadded to an excellent constitution, and a dash of her father's energy of will. It was well for her that it was so, for even from a child the duties of a woman had been exacted from her, and she was at once sister and mother to the little group about the domestic hearth. As she approached maturity she became the friend and companion of her mother, the nurse of her sick room, and even the utterer of her religious faith and devotion, as physical suffering sometimes dimmed the vividness of exalted truths. At such times the high-minded girl might be seen kneeling by the bedside, and with clasped hands, potiring forth the simple, fervent prayer of a young heart, deeply responding to the blessed truths of revelation.

The mother pressed her to her bosom with tears and blessings, for her progress to the tomb was made a pleasant pilgrimage, while cheered and supported by such a child.

At this time an addition was made to the little family, in the person of a youth of rare piety, and such powers of intellect as to warrant the elders in setting aside their ordinary rules for his benefit. Andrew Horton was an orphan, left pennyless by his young parents, who both

died of an epidemic when he was scarcely a year old; bequeathing this, their only earthly gift, to the charity of the church. He became, as it were, the property of the church, and each individual of it claimed a right for the discharge of kindly offices in behalf of the little orphan. As he grew up, it was evident, he was not unworthy of their solicitude. He was of rare modesty, deep piety, and such wonderful intellectual endowments, that all eyes turned to him, as one destined to become a leader in Israel, a burning and a shining light in the temple of the Lord. Unusual care was bestowed upon his education; as was meet for one who was hereafter to become the expounder of the Word, and a voice to the people of the Lord.

Friend Newton had now claimed his privilege of entertaining, at least for one year, the favored youth, while he should prosecute his studies, and engage in those acts of devotion and piety, which so much engrossed his affections, and were so appropriate for one called to his high and holy vocation.

Mrs. Newton listened to the lofty utterance of prayer from the lips of the pious young man, with a new strength, and felt her faith quickened, and her hopes elevated while she heard the truths of her religion explained and illustrated in his clear, vigorous manner, with the glowing language of his aspiring imagination and fervency of spirit.

Hannah, always retiring, and occupied with household matters, had little time for converse with the youth; but in the secrecy of her own heart, she sat even at his footstool, and imbibed not only the stores of wisdom from his lips, but the far more dangerous lessons of youthful love.

Andrew Horton scarcely noticed the quiet, unobtrusive maiden, so occupied was he in his studies and devotions. But when it became necessary for him to accept the hospitality of another of the brethren, he started to perceive how often the image of Hannah mingled in his dreams, and obtruded upon his meditations. He missed everywhere her sweet voice and placid smile, and felt that she must henceforth be to him what no other maiden ever could become.

The affliction of the little family, occasioned by the increasing illness of Mrs. Newton, seemed to justify his frequent visits, and Andrew Horton, more than once, upon his return from the bedside of the dying, threw himself upon his knees, and besought forgiveness from the Father of spirits, that his visits should have been rather the promptings of earthly attachment, than those of a high and holy sense of duty.

All sternness and pride of manhood forsook Friend Newton, as he stood by the side of his dying wife. He threw himself upon his knees, pressed her thin hands in his own, and the tears streamed from the eyes even of the strong man. Andrew Horton was there, and his rich deep voice breathed the language of prayer. He ceased—the soul of the sufferer had taken its flight upon the wings of his lofty aspirations; the mystery of life had ceased in the cold form before him.

Hannah arose with pale cheek, and approached the bereaved husband.

"Go with me, my father," she said, gently putting her arm in his, while she pressed her lips to his pale, damp brow. The old man arose with the docility of a little child, and she led him forth to an inner room,

where none might witness the agony of that moment. When she placed the large arm chair for him and had adjusted the cushions, he opened his arms to his child, and she fell upon his bosom. It was an unwonted tenderness, for Mr. Newton had never expressed anything like it for any other being than his wife. Now that she had left him, he yearned for some heart to which he might reveal the burden of his sorrows.

"Thee has been a dutiful child, Hannah, though I may never have told thee so before. It always grieved, Hannah, that I expressed so little tenderness for thee; but it wasn't in me—I couldn't do it—but I love thee just as well, child. And I might have made thy mother a great deal happier, but for my stern, hard ways. Oh, Hannah, Hannah, the grave is the revealer of all hearts. What would I not give to hear her say once again that she forgives me!" and the old man bowed his head upon the bosom of his daughter, and wept like a little child.

Hannah had wept too, but she felt that she ought not to witness the humiliation of her parent, and she raised her head calmly—

"Thee has ever been a good father to us all, and my mother loved and blessed thee to the last."

"Hannah, Hannah, I was unworthy of thee!" His voice was choked by a gush of tears.

Hannah turned to the Bible and read a part of the fourteenth chapter of John, "I will not leave you comfortless, I will come unto you," and gradually the anguish of her father became soothed, and he pressed her again to his heart, saying—

"Thy voice is like thy mother's, Hannah, and thee will be to me all that a child can be; I know thee will; and I will subdue my nature for the sake of thee and the little ones."

He kept his word—from that day a gentleness was infused into his manners, and a tenderness of feeling hitherto unknown. If occasionally his former spirit gained the ascendancy, he went alone to the chamber that had witnessed the suffering and death of one so gentle, and when he returned, it was as if her mantle had fallen upon him.

Andrew Horton found himself the pupil, rather than the teacher of the noble girl; and his own zeal and piety were strengthened by his intercourse with her. They had exchanged their pledges of fidelity, and Andrew was about to leave the vicinity to prosecute his mission in a distant field. It would be many years ere he would return. Hannah in the multiplicity of household avocations, in attendance upon her sick mother, in the exercise of her own religious views, to which the silent worship of their sect afforded ample encouragement, had imbibed a lofty enthusiasm, a shade of spiritual mysticism, little in accordance with the practical faith of her people. She had watched the operations of her own mind, and compared them with circumstances and events, till she saw a mysterious connexion between them, and even at times was led to a something verging upon the spirit of prophecy. She delighted to dwell upon the inter-communication of mind with mind, and the power which she believed it had to influence a congenial spirit, even though separated at ever so great a distance. The mind was unsubjected to the laws of the body; it traversed the fields of space, and lived in the past as well as the present. Even the future, under

certain circumstances and states of the mind, she believed might be revealed to it. Why then should not the intense thoughts of the human mind, especially when directed to an object of attachment, go forth like winged messengers and work their influence upon the distant and beloved? For this reason, she said, she would keep her thoughts and imaginations pure, that no emanation from her own mind should mislead the conceptions of another; that no unhallowed emotions should ever be associated with her in the minds of those she loved.

Andrew Horton listened to these mystical views of the lofty girl, until his own mind shared a portion of her enthusiasm—if it were a weakness or error in judgment, it was at the least a harmless one,—one that to them could only purify and exalt, while it could never mislead another. Therefore, he gave himself up to the beautiful illusion, that established a perpetual intercourse between himself and Hannah in the long period of absence.

"I do not ask, said Hannah, whether I shall be forgotten. You cannot forget me, unless I cease first to think upon you. For oh, Andrew, I can never forget you; and the emanation of my thoughts will momentarily create an image of myself within your mind. Do you realize, my friend, what it is to love one like me? You can never forget me, even should you desire it; for my thoughts, fixed as they will be upon you, will forever present an intense image of myself to your mind. You may cease to love, but you cannot cease to think upon me. I hold the talisman, that will ensure me this. But, oh! Andrew, when you shall cease to love, when you shall desire to forget me, think not I can remain ignorant of the fact. No, never. While the attachment is mutual, and the thoughts and memory of each other pleasant to the mind—the emanations of each will conjoin, and there will be produced upon the fancy of each, the most vivid conception of the other—it will be as if a pleasant painting of each should be presented to the eye. But should the affections of either become cold, the image of that one will fade from the vision of the other. He may retain the memory, but that vivid impression that brings up the eloquent eye, the speaking lip, and the very tones, and look of endearment, will grow less and less distinct, till it shall fade altogether away. Now, Andrew, this must be the case with you. My image will be forever distinct to you, for I can never cease to think upon you. But should your's fade from my mind's eye, alas! I shall know too well how to interpret it."

Andrew Horton's brow contracted.

"Hannah, I did not expect this from thee. Have I ever given thee cause for distrust?"

"Never, my friend," she said, laying her hand upon his; "but thee will have many snares to encounter, Andrew. Beautiful faces will look up to thee in thy holy ministrations;—timid maidens, who will flatter more the pride of thy heart, than ever Hannah could, will tremble and weep at the fervor of thy eloquence, and come to thee as to a spiritual guide. Would it be surprising then, if vows to one like me should be forgotten?"

The youth trembled under her searching, anxious glance; but he drew the hand to his bosom and kissed the lofty brow of the impassioned girl. Hannah's head fell upon his shoulder, and tears started from her eyes.

"Hannah, thou hast a lofty soul, and thy love is to me dearer than aught upon earth. Do not distrust me, Hannah, I shall have thy prayers and thy blessings, and that mystery of inter-communication of thy soul with mine, which of itself will be an amulet to preserve me from danger. All that is noble and pure in life is associated with thee, and thou well knowest it is in contemplations like these that I delight."

Two years passed away, and the smile grew faint upon the lip of Hannah. She had taken the child, who was an infant at her mother's death, upon her knee, and its cheek rested upon her bosom.

"Hannah, dear, don't thee humber?" said the child, lifting its eyes to her face.

"Humber, my dear—what does that mean?"

The little one heaved a deep sigh. "There, to do so, sister—that was a humber."

Hannah felt the tears spring to her eyes.

"No, Georgy, I won't do so any more—it is wrong. I must make thee feel quite happy."

The child kissed her cheek many times, and put his arms about her neck, calling her a dear sister.

From that time Hannah went about her daily avocations, with a strong purpose to forget her own sorrows, in ministering to the happiness of others. The child had taught her to feel the selfishness of concealed suffering, and she wrestled in prayer for strength to sustain her under the many trials of her lot. She felt a strong internal conviction, that Andrew Horton had ceased to regard her with his former attachment. Impressed with this belief, she wrote a letter in answer to one of his, from which I shall extract a few sentences.

"Thy letters reach me with the same punctuality as ever, and their language is still tender; but, Andrew, the spirit is wanting. It is as if the sentiments turned to ice under thy pen. There should be no disguise between us. Thee should never attempt it with me, Andrew, for I can divine all. Thy image has almost faded from my sight, and I know that thee desires to forget me. The vows that bind thee to me have become shackles. It would more become thy calling, Andrew, if thee would tell me so at once; for deceit must be painful to thee. I absolve thee from thy vows, my friend; thou art free to do as seemeth to thee good. I will try even to forget thee, that my image be not troublesome, as I know it will be if I continue to think upon thee. My thoughts, fixed on thee, will perpetually create in thy mind an image of myself, which I would not do, if thy affections are fixed upon another.

"Farewell, my dear friend; I say it for the last time, and thee will forgive the utterance. Do not distress thyself upon my account. I was made for endurance—it is a woman's destiny. I would forgive thee, if I had aught to forgive; but the affections are not to be schooled like wayward children. I cannot even now believe they are transferable. Farewell—and may thee be very, very happy."

In the reply of Andrew Horton, he confessed all. Hannah had indeed divined the truth. He spoke of a sweet, gentle girl, whose witchery had chased the love of Hannah from his heart. But he implored her forgiveness, he deprecated his own fickleness of heart, and conjured Hannah to forgive him, to forget him, and be happy in some new attachment.

Hannah's proud lip curled in scorn, and she laid the

letter upon the coals of the hearth. She went about her accustomed duties with a new pride, a womanly spirit of endurance, that knowing the worst, hath nerved itself for the trial.

Ten years passed away, and Hannah had become like unto Deborah, in the estimation of her people. Her proud beauty, her fervent piety, and the burning power with which she sometimes expounded the truths of her religion, had raised her up to be a leader amongst her people; little short of a prophetess, indeed, did she seem to many, as she held forth in the congregation.

It was rumored that Andrew Horton would return, and explain the scriptures once more in the place of his nativity. Hannah took her seat early, amongst the matrons—for time had abated nothing of the interest with which she once regarded him, although it had become modified by the circumstances in which he was now placed. Ten years had elapsed since the reception of that last letter, yet Hannah Newton felt her limbs tremble as she found herself once more in the presence of Andrew Horton.

She raised her eyes, as a stranger sat down upon the form beside her. It was the bride of Andrew Horton—a fragile, fair girl, whose eyes were fixed upon her husband, through the whole exercises, as if the only divinity she worshipped were vested in the manly form of the preacher. As the rich tones of his voice once more broke upon Hannah's ear, and she encountered those deep, passionate eyes, she closed her own, for a new weight of misery seemed pressed upon her heart. Why had he returned, to do away at a glance, that firmness which it had cost her years to acquire?

Hannah was quite alone when Friend Horton called. She arose with native self-possession, and spoke to him as to a brother.

The preacher struggled for utterance.

"Hannah," he at length said, "I have taken this long journey only upon thy account. I have come to implore thee to forget me. Thee has had much to forgive, Hannah; but thee cannot have suffered as I have done. When I took the hand of my bride at the altar, thy form seemed to come between me and her—and oh, Hannah, I felt then, and have not yet ceased to feel, that thou art the wife of my spirit."

"Andrew Horton—I must not listen to this. Thee wrongs the fair girl who lives only in thy smiles. Why did'st thou return to bring new sorrow to my heart, and to plunge thee deeper in sin?"

"Hannah, I returned not for this, but to implore thee to forget me. Thee cannot have forgotten that intercommunication of spirit with spirit, of which we used to talk. I feel its full power now; for thy image is ever with me, and daily am I taught to feel the constancy of thy attachment."

"Why should'st thou return to tell me this? I think of thee, Andrew, as the husband of another. I pray for thy happiness, thy usefulness, and that thee may be preserved from temptation. Friend Horton, this is unworthy of thee. I forgive thee—but let us part."

"Nay, Hannah, thee must hear all. I come not to speak of aught that might wrong my bride; no, it is for her sake as well as my own, that I implore thee to forget me. When her cheek is pressed to mine, I see only thee, Hannah. When she sleeps upon my bosom, with her fair arms about my neck, it is thy form, and thy

arms that seem to entwine me. I shrink from her caresses as from a deadly sin, for I bestow them as unto thee. Mary is as a sister unto me; but thou, Hannah, art the bride of my spirit."

Hannah turned deadly pale, and covered her face with her hands, while low moanings escaped her heaving bosom.

"Andrew, I foresaw all this, when I warned thee of the peril of loving one like me. I knew the nature of thy sex—delighting in the timid, the trembling and dependent—and that should one like this cross thy path, the love of Hannah would be a shackle. It is as I foresaw—but I will not reproach thee, Andrew; it was thy nature."

"And most bitterly have I suffered. My broken vows have rung a perpetual knell in my ears, and barred up the avenues to enjoyment. The loving, the trusting Mary, hath been the victim of my error. And thee, too, Hannah. The blight hath fallen from me upon two spirits, of whom the world is not worthy. Woe, woe is me!" And he pressed his hand to his brow; for the large veins were swollen and rigid with the intensity of his suffering.

Hannah laid her hand gently upon his shoulder.

"Andrew Horton, thou art called not to ease and enjoyment, but to labor and trial. Gird thyself for the contest, and be strong even in the strength of the Most High. I will strive once more to forget thee. But, oh God! have I not striven? Have I not wrestled day and night, with tears, and many prayers? Andrew, I will pray yet again, that this bitter cup may pass away from us. But, oh! when I pray to forget, even in the agony of my spirit, do I not still remember thee? I will strive yet again. Andrew, return to thy bride; be all to her that thou hast promised at the altar to be, that thy conscience upbraid thee not for wrong done to the gentle and timid, whose spirit is ill able to bear suffering of any kind, far less to have it dealt out without measure, as it hath been to me. Farewell." She pressed his hand gently, and left the room.

For many years had Hannah Newton discharged the duties of her sex with a pale cheek and placid brow, sympathizing in the sorrows of all, but herself seeking sympathy from none; for with a mind lofty and exalted as her's, human sources of consolation were utterly unavailing. She stood alone in the majesty of grief, seeking consolation only from the Great Comforter. But now the smile lingered about her mouth, and the light returned to her eye—yet her step grew feeble, and her brow assumed a more transparent beauty. The image of Andrew Horton again mingled with her dreams, and visited her mental vision. She felt, she knew, that her love was still dear to him, that he turned to her with the fondness of earlier days. She knew this, but it filled her with doubt and anxiety. Had Andrew Horton, the minister of the Most High, dared to forget his vows to his wife, to her whom he had sworn to love and to cherish? Or was the fair bride at rest, gone in her youth and beauty to the bosom of her God?

Again, Andrew Horton, with pale cheek and a loftier beauty stood by the side of Hannah. He told how the sweet, child-like Mary, had fallen asleep, like a young floweret blighted upon the stalk. He dwelt upon her love, her beauty, 'till the tears of Hannah mingled with his own.

"And now, thee wilt be my own wife, Hannah, even as thou hast been the bride of my spirit. I shall acquire new strength with a spirit like thine. Thee will caution, advise, and elevate me. Thy love shall purify and exalt me. Mary was as a beautiful child, slumbering upon my bosom; when doubt and suffering came upon me, she would fling her white arms around me, and mingle her tears and sighs. But thou, Hannah, would'st have dispelled my doubts; thou would'st have led me to the true sources of consolation; and thy prayers would have been as the dew of Hermon to my spirit. Thy caresses would have blessed, while they exalted me. Wilt thou not be my own wife, bride of my spirit?" He drew her to his bosom—her cheek rested upon his. She pressed her lips to his, and her arms encircled his neck. A deep sigh escaped her, and her head fell upon his shoulder.

Andrew Horton raised her from his bosom and gazed upon her face. Hannah Newton was to be only the spirit's bride. She was dead!

JUDITH BENSADDI: A TALE.

Second edition, revised and enlarged by the author.

Preface to the Second Edition.

Ten years ago the author heard, at bed time, some extraordinary incidents that had befallen a young friend of his. The romantic character of these incidents excited his fancy so, that he could not sleep until a tale was fabricated out of the materials, and the mind had unburdened itself by putting its conceptions on paper. After a hasty revision, this effusion of a restless imagination was sent to the press. It was published in a literary periodical of Philadelphia, and, to the author's mortification, a good deal blurred by a foul typography. It was copied, errors and all, into several country papers; and in spite of defects, whether in authorship or typography, the natural interest of the story caused it to be considerably read and admired.

After some two or three years, the author's name accidentally leaked out, and became generally known among his acquaintances; and it has been from that time, sent abroad occasionally, in connection with this sole specimen of his literary fancy-work. Feeling some regard for his reputation as a writer, even in this unusual line, he has been induced now, after so long a time, to employ some of his leisure hours in preparing a corrected and enlarged edition. He has given more development to the chief incidents and characters, added some of a subordinate kind that are new, and interwoven some descriptions of natural objects with the narrative. Thus he has more than doubled its size, and, he presumes to think, greatly increased the interest of the story. There is still in some parts a want of the careful finish, and strict correction, that are desirable, even in the smallest work of taste and fancy. For remaining defects, of whatever kind, the author can offer no apology, but either the want of genius for such compositions, or what is certainly true, the want of sufficient uninterrupted leisure amidst weighty cares and occupations, to polish a work of literary amusement. He has found an agreeable relaxation from severer labors of the mind, in this exercise of the imagination. Should any of his acquaintances think that the

composition of a tale, however innocent in its tendency or serious in its effect, misbecomes the gravity of his office, he begs to be excused for this once; and to be indulged in treating the only child of his fancy so far like a pet, as to be allowed, after such long neglect, to give it a new dress, and thus to let it go forth with better hopes to seek its fortune in the literary world.

CHAPTER I.

INTRODUCTORY REFLECTIONS.

Sometimes a single incident at the outset of a man's career, may determine the course and color of his after life. He may find himself placed, unexpectedly, in such critical circumstances, that by a decision which cannot be delayed, he has the prospect of making, yet the apprehension of marring, his fortune during life.

An unlooked-for tide in his affairs may seem ready to bear him away to the islands of the happy; but he fears by the way some hidden rocks and quicksands by which all his hopes are in danger of being wrecked and engulfed forever. He stands upon the shore in trembling perplexity, strongly tempted yet afraid to embark. The tide of fortune begins to ebb; warning him that time and tide wait for no man; and that procrastination will be the death of opportunity. He still hesitates, painfully suspended between the attractions of hope and the repulsive suggestions of fear. The tide is gone: the happy opportunity has fled: he discovers, too late, that the danger was imaginary and the offered good inestimable. Then does he bewail his indecision, and reproach himself through life for the neglect of that golden opportunity. A bright and lovely object had, like a heavenly meteor, flashed upon his sight, and kindled his feelings to a glow. As it shone upon his enraptured vision, it invited him over the waters to its region of felicity; but when he delayed to answer the call, it vanished forever from his sight, and left him weeping upon the desolate shore. His only consolation was, that the result, though unfortunate, was not fatal, and still left open to him the humble path of exertion and the ordinary prospects of life, to which he had formerly looked. Reflection teaches him the salutary lesson, that the accidental opportunity was an act of Divine Providence, throwing rare circumstances into conjunction, to show man that his way is not in himself; and that his own conduct in so extraordinary a case, is evidence of weakness and fallibility, which should humble him beneath the mighty hand that aways the destiny of man.

Such a critical tide of fortune once occurred in the affairs of my life. It gave occasion to these reflections; and was of so rare and striking a character, as to make a story somewhat interesting and instructive. I proceed to record it, not only for the entertainment, but the admonition of the young reader; who should learn from it to act promptly as well as prudently, in critical conjunctures, and never to indulge any feeling in regard to human affairs to such excess, as to disqualify himself for the exercise of a cool and dispassionate judgment. This is the lesson which I would now teach him, from the most affecting portion of all my experiences.

CHAPTER II.

A STUDENT'S JOURNEY TO THE SOUTH.

I was born and educated in Rockbridge, a county that lies in the great valley of Virginia, and derives its name from that famous curiosity, the Natural Bridge. My parents were respectable, but in such moderate circumstances, that they could afford me nothing more than a good education. Our residence was on the North River side, near Lexington,

the seat of Washington College, an institution which has never made an ostentatious display of its claims to public notice, but which has nevertheless produced a large number of good scholars and excellent men. Here, of course, I pursued my liberal studies. We lived so near the village that I could attend all its schools without boarding away from home. This prevented in my case, what often happens in others, a breach of domestic attachments by early absence and long association with scenes and persons at a distance from the parental domicile. All my pleasures during the freshness and ardor of youth, were associated with home and kindred and the beautiful scenery of my birth-place.

Having by years of diligent application, obtained a distinguished place among the graduates of my college, which does not bestow its honors with a lavish hand, I betook myself ambitiously, and I may add, successfully, to a course of professional studies, under a learned gentleman of the village, whose office I frequently visited while I kept my lodging at home. My industry was the more energetic, because my worldly hopes depended on my personal exertions: and I was resolved to make up for my want of fortune by mental accomplishments and professional ability. Before I had finished the extensive task allotted to myself, I suffered a disheartening check upon my exertions. Excessive application to books gradually brought on me the symptoms of a consumption—the penalty often paid for literary ambition. Still, though aware of danger, I was loathe to quit my books. But the frequent cough and the hectic spot on a pale cheek, alarmed my friends so much that they called in a physician to aid them with his authority in persuading me to desist. His warning voice added to their anxious remonstrances, at length overcame my reluctance to quench the lamp of study: yet I did it reluctantly, even when I knew that persistence would extinguish the lamp of life; so treacherous a guide is even the noblest passion, and so needful of control. I consented, however, to fly from the sharp air of the mountains and to spend the approaching winter in the warm plains of the south. I promised also to abstain from all study, and to apply myself wholly to the social pleasures and amusements, which might cheer my drooping spirits and promote the restoration of my health.

When the chill winds of November admonished me to depart; I prepared to travel alone on horseback. My simple preparations being soon completed, I bade a sorrowful adieu to my friends and to the homestead of my youth, where every object was pleasant and dear to my soul. Never had I felt so melancholy. My previous absences from home had been only short excursions for amusement: my local attachments were strong and unbroken; my little circle of kindred and friends was nearly all the world to me. My journey was a solitary one to a strange land; my disease I knew to be always insidious and often fatal. I was constitutionally subject to fits of mental dejection. How could I be otherwise than sad? I was in fact plunged into the deepest gulf of despondency. When I reached the top of the Blue Ridge, a lonely fugitive from home, breathing short from obstructed lungs, going far away for the first time, to live and not improbably, to die among strangers, I turned to take what might be my last look over the woody hills and the cedar cliffs, that bent the river half round my paternal home. I saw the smoke in bluish wreaths ascending from the peaceful nook. I began to weep—yes, though a man grown, I wept like a child, when I waved my hand to bid the unutterable adieu to my native land, and turned my horse's head down the southern declivity of the mountain.

I pursued my journey moping and sometimes despairing, but occasionally interested, and the more so as I went farther on, with the new scenes through which I passed, and the new aspects of human life that occurred to my observation. I arrived safely, though still in low health and spirits, at a village near the Savannah river, where I purposed to sojourn during the winter. The location was suitable in every respect; the climate was mild, the society good, and one of my former college mates was the most popular physician in the place. By him I was soon introduced into some of the most agreeable families in the town and neighborhood. Now I learned by experience, what I had heard from the reports of travellers, how engaging are the charms of southern hospitality. My case seemed to excite as much sympathy among these benevolent strangers, as if I had been of their own flesh and blood. They ministered to my diseased mind a thousand delicate and consoling attentions. My rustic backwardness in strange company was quickly subdued by their easy and open simplicity of manners—that true politeness which is not an imitation of conventional forms, but an agreeable manifestation of kind feelings. New scenes, cheerful conversation, pleasant rides in the soft winter air, and all the nameless appliances of watchful benevolence to a drooping invalid, soon turned the wreath of my health and spirits into reviving flow. My appetite was restored, my cough ceased, my respirations became free, the purple tinge of health revisited my cheek, and all the world again brightened around me: And what was not a recovered good, but a positive and a delightful acquisition, I began to relish in a high degree the pleasures of society, and was daily learning to act my part in company with a better grace, and a more ready communicativeness than formerly. During my studious life, I took no pleasure in social parties, but preferred to ramble alone for amusement in the green woods, or on the wild cliffs and shady river banks about home, or over the high mountains that border my native valley; from whose forest-crowned summits I could look out, and see finer sights than “the cloud-capped towers and gorgeous places” of the artificial world. But now the experience of three months, devoted to the enjoyment of mixed society, had completely tapped a new fountain of pleasure in my soul; and the stream that flowed from it, if not so deep as some others, was yet so sweet and sparkling, that I was resolved no more to neglect its pleasant entertainments. My new circle of hospitable friends had gained such a hold upon my affections, that I felt much less than I had anticipated, the weariness of a long absence from home. But still I did not forget my dear native mountains. In the solitude of my chamber, I often longed for their whispering shades and mossy rivulets; but I could bear my absence without repining now, because I hoped, ere long, to see them again, as I had often seen them with delight, raising their green heads aloft in the vernal air, and bathing them in the cerulean light of heaven.

CHAPTER III.

THE STUDENT'S NEW STAGE ACQUAINTANCES.

To confirm my health and to enlarge my scanty knowledge of the world, I resolved to visit Charleston on my way home, and thence to take a sea-voyage round to the Chesapeake. Accordingly, when spring began to smile over the woods and fields, I bade my southern friends an affectionate farewell, and took a seat in the Charleston stage, which left the village two hours before sun-rise. I found two other passengers within; but discovering by the starlight only, that they were a man and a woman, I said nothing to them, and they said nothing to me, until day-light.

We seemed on both sides, to feel a diffidence of venturing to address a stranger in the dark, when we could not see even the color of his face. They once in a while spoke a few words to each other in a low and remarkably sweet tone of voice. This awakened in me a curiosity to see what manner of persons they were, whose half whispered words sounded musically. When the dawn began to disclose the personal appearance of my fellow travellers, I was struck with their beauty. They were evidently brother and sister; the one being a masculine likeness of the other. They were in the bloom of youth, with complexions between brown and fair, raven black locks, and eyes moderately large, not quite jetty black, but star-bright interpreters of intellect and feeling. Their faces were roundish oval, all the features in just proportion, and the expression of the whole, vivacious and benign. In person, they were well shaped, the limbs plump and rounded, their stature of the middle height, and the body inclining to fulness. Nothing else in their personal appearance struck me as remarkable, until I saw them walk, and then I noticed an easy and graceful agility of movement, indicating muscular elasticity, sprightliness of mind, and, as I thought, a cultivated taste.

The young lady struck me at once, and indeed at all times, as the most beautiful gem of humanity that I had ever seen. At first I considered her, but rather doubtfully, as a brunette—a sweet pretty brunette—but when I looked at her in the open air, and the full light of day, the ebon black of her flowing hair, and the mild black of her lustrous eyes, contrasted so strongly with the delicate hue of her complexion, that I pronounced her so fair, as to be only not florid. I endeavored to criticise every part of her person and features—but, except what I have mentioned, I discovered nothing in the superlative degree—her round forehead was not very round; her nose had no very marked character; her mouth was neither wider nor narrower than common; her lips neither thick nor thin. The only striking circumstance about her mouth, was a sort of tremulous vivacity of muscle, ready to catch and to express the slightest movements of the soul. As to her chin and cheeks, I could not say that they were or were not dimpled; for the play of her features made dimples appear and vanish alternately. Nor could I call her neck long and arched, as the necks of beauties are usually described—this young lady's was neither long nor short, though it tapered a little. Her foot was not very small, not a withered Chinese foot, but in good proportion to the person which it had to support. As to other first appearances, my fellow passengers were genteelly but not showily dressed, and had all the air of good breeding.

After several glances of curiosity had passed between us, we gave token of a willingness to try each other's conversation. We began with due caution, feeling our way with a short remark at a time on the weather, the road, and other such trivial matters. This fortunate proving satisfactory, we extended our remarks to subjects less trite—such as the features of the country and the condition of its inhabitants. Here too, we mutually elicited observations, good in themselves and savoring of better yet in store. Encouraged by our progress thus far, we promptly advanced another degree, and launched forth our thoughts into a bolder strain; making, in turn, little discourses on the effects of climate and geographical circumstances, in modifying the character and pursuits of the population around us. Here we at least bordered upon the philosophical, or

got perhaps within its confines; yet none of us failed, not even the lady, young and beautiful and bright-eyed though she was. Her speeches thus far on in the conversation, were neither many nor long; but they were music to the ear, intelligence to the understanding, and to my heart, they were—I knew not the nature of the impression—it was something undefinable—it can only be suggested by comparison; and yet I am in doubt whether to say that it was refreshing as a crystal fountain in the shade, when the fields glow with summer heat; or rather a genial warmth, like that of the April sun, when the zephyr breathes softly and the flowers are springing.

We soon dismissed all caution and reserve. We had found ourselves to be mutually agreeable, and in a short time understood one another so well, as to feel assured that nothing would be said or taken amiss; so we poured ourselves forth without measure, and were soon flowing on with a full current of loquacity. My fellow travellers delighted me more than strangers had ever done—their speech was so intellectual, yet so modest—was set off with such a sparkling vivacity, yet with such a kindliness of manner, that it raised in me the highest tide of social animation, that I had experienced since my melancholy departure from home; or perhaps the highest that I had ever experienced.

But who were my new acquaintances? I had a great desire to know, but not the impertinence to ask. They spoke English with the perfect ease and idiom of well-educated natives of England or America; but in their persons differed from my notion of the anglo-saxon race. The course of our conversation, however, soon led us to speak of the people of different countries. I alluded to my Virginia mountaineers—they, to their fellow cockneys, and to London as their native city. Their name, Bensaddi, soon afterwards mentioned, sounded in my ears like an Italian name; and I shrewdly conjectured that their dark eyes and hair, with their brunettish complexion, were due to the influence of an Italian, perhaps of a Sicilian sun, upon their ancestors.

I was now curious to know the object and course of their travels. As if he had perceived my curiosity on the subject, the open-hearted young gentleman took occasion to tell me the following particulars. The father having some business with a planter in the West Indies, had sent his son to attend to it; the sister took a fancy to accompany him, and had after much pleading, obtained their father's consent, that she might see the curiosities of nature in the torrid zone, and "the black man in the miseries of West Indian bondage, and the white man in the highest state of freedom, as he is in your happy country," said the young gentleman politely.

"Miss Bensaddi sees man in the extremes of slavery and freedom here," said I candidly.

"Not so far gone in the dark extreme of slavery, (said he,) for West Indian bondage is worse than yours; though I confess that the mildest form of slavery is a degradation bitter to the feelings of mankind."

"Yes, sir, to us it would be intolerably galling, because we have the birth-right and the sentiment of freedom. But happily for the poor negroes, they have never known the state of freedom, nor imbibed its sentiments; hence, they are not aggrieved by a sense of degradation and wrong. Born to slavery, they grow up with minds conformable to their condition, and rarely, if left to themselves, brood over the hardships of their lot; but finding their parents, themselves, and nearly

all their race, placed in it by Divine Providence, their only thought is to make the best of a condition which is not without its comforts and advantages."

"True, sir, you have accounted for a fact, which is little known in England, and which both surprised and gratified us, when we observed it in America. The slaves, in general, seem to be as contented and merry a set of beings as any in the world. They laugh, and sing, and dance, not to "drive dull care away," for dull care seems never to visit them: they seem to think that, as they themselves belong to their master, he is bound to take their cares into the bargain; so they throw the vexatious pack upon his shoulders, and leap for very lightness of heart at their deliverance."

"Now, brother, (said the young lady, playfully,) did not I tell you when we left Savannah, that if you staid much longer among these merry slaves, you would renounce abolitionism, and defend slavery as the best condition of poor laborers. You know what care-worn wretches most of our hiring laborers and small jobbers are at home, especially the mechanics and manufacturers; how hard they must work for a scanty subsistence, while they are healthy and strong; how precarious their resources, and how little they can hope to lay up for their future support; and consequently, what a miserable prospect they have for the coming days of sickness and old age—having nothing better to rely on than the cold comfort of the parish hospital, with a stinted dole of public charity often grudgingly administered. What a contrast to your light-hearted slaves, who are sure of a competency without care on their part, a provision which they look to as their right, and enjoy without the mortification of being dependants on charity. Thus released from the care of providing for themselves and their families, their only remaining care is how to get easily through the hours of labor, and merrily through all the rest. Now, brother, have you not proved that we ought to renounce abolitionism?"

"Not yet, my sister. You have made an ingenious web of my argument, and thrown it dexterously over my own head; but you have not so fastened the loopholes, but that I can escape its entanglements. Every thing that has length and breadth has two sides, you know. So has slavery, and so has free labor. I turned up the bright side of slavery, and you showed the dark side of free labor. The contrast was strikingly advantageous to slavery—so you clapped, without further ceremony, this inference upon me, as the conclusion of the whole matter. That was not fair—was it, sir?"

"You need not appeal, brother, for I acknowledge that I was too hasty. But, sir, (said she, addressing me,) we are sincerely gratified at one result of our observations thus far in America. We have discovered that negro slavery is not on all sides so dark and doleful as we had imagined. It has, indeed, some cheerful sunspots, delightful to look upon. Brother, tell Mr. Garamo of the pleasant scenes that we witnessed at Colonel P—'s, where we saw the negro wedding. That sight would have convinced any one that slaves might be happy in their slavery. It was an example in point—or, what I have heard Doctor Magruder call, an ocular demonstration. Do tell it, brother."

"Tell it yourself, Judith, for you enjoyed the sight fully as much as I did, and you probably remember the circumstances better."

A slight tinge of rose-colored modesty suffused her cheek, as she hesitated a moment to answer.

"I fear that I should make a wearisome story of it—for, after all, it was but an humble scene of joy, felt by untutored hearts, and manifested in a way so unrefined, as to afford little scope for entertaining description; especially when told to one who is so familiar with incidents of the kind as I suppose Mr. Garamo is. Such pleasant passages in the experience of slaves often occur in this country, I presume—but they are almost unheard of in England—and I shall carry this one home in my memory for the edification of some friends there, who have been lately filled with dismal ideas of American slavery, and almost raging indignation against all slaveholders. We were fast catching the same dark colored views and feelings when we embarked for America. One object of our voyage was, that we might see how the poor slaves lived and fared, and what could or ought to be done for their relief—and we rejoice to find, that in some cases, nothing better can be done for them, than to leave them in the undisturbed possession of their blessings."

"I am glad that you have found it so—but, Miss Bensaddi, I beg that you will favor me with an account of the negro wedding. I know that the slaves in my part of the country have as light a task of labor, and enjoy as many comforts, as common laborers can well experience in any country or any condition; and that they have both hearts and leisure to frolic as much as their white fellow-laborers; but I am a stranger in these Southern parts, and have had very limited opportunity of observing the condition of the slaves. You will, therefore, gratify me by giving a sketch of the wedding scene."

"Well, sir, an imperfect sketch is all that I can promise. We went by invitation to the hospitable mansion of Colonel P—. On approaching the house, we observed a large party of slaves, before one of the quarters, by the yard fence, and we were struck with their tidy apparel and joyous looks. Seeing us regard them with interest, Col. P— remarked, that they were to have a wedding among them that evening. When we expressed our pleasure at their appearance, and our curiosity to observe their manners and customs, he told us that we could have the opportunity of witnessing the whole affair, if we pleased, as some of his family always attended their marriage ceremonies; and that we could look in upon their supper and ball, after the ceremony was over. We gladly embraced the offer, and were much gratified with more than the novelty of the sight. These slaves had more comfortable accommodations, and were more civilized than the West India slaves; and we thought, more also than the generality of slaves that we had seen in this country. The reason was, that they had an excellent master. I never anywhere saw so gladsome a wedding party. There was, of course, nothing elegant or refined—but there was enough of finery in their dresses—indeed, a profusion of gay colors and flaunting ribbons, and gewgaws in their bushy curls; with all which their simple fancies were mightily pleased. I was, myself, exceedingly gratified with the full hearted joy that sprang up in them, and sprang out of them too, when the fiddle and the dance gave free vent to the fountains of feeling within them. Merry jests started forth every instant, and jovial laughter burst in claps of delight from their souls. We looked through a window upon this scene of harmless mirth and of joy, that gushed light and free from the hearts of nature's children; and we could but consider these outpourings of pleasure as a re-

ward—if not a full one, still a jeal reward—bestowed peculiarly on them for their submissive toils at a master's bidding; and while I looked and reflected on what I saw, I felt a strange mixture of emotions; tears trickled down my face—for what I could not tell—they might be tears of joy or tears of compassion, or both together—and while the tears came, I sometimes found myself laughing—but whether out of diversion at their oddities, or out of sympathy with their merriment, I do not know; for I seemed to have all sorts of incongruous feelings at the same time.

"The next day an incident occurred, that gave us a still more touching proof of their happy condition. News arrived that their dear 'massa' was 'lected to Congress.' Perhaps they did not exactly understand what this was, but they understood at least that it was some high honor, and they triumphed as if the honor were all their own. They could not contain their gladness—they shook each other by the hand—they came in a crowd to the door, and sent in a request to see their master. When he came out, and asked them kindly whether they wanted any thing, their spokesman answered: 'Nothing, massa, only to tell you how we thank God that you be 'lected to Congress.' 'Well, boys, (said he, with emotion,) I am gratified to find that you are so rejoiced at it—and, boys, you need not go to work to-day; you must have an infair for the bride and bridegroom; so make ready for that.' 'Yea, massa, thank'ee; but we lef' a little to do in dat field; we'll go finish it—then we'll dress for the infair.' When they were retiring, one of them, as he passed near the window where we stood, said aloud to himself: 'God bless my good massa.'

"I thought, (continued the young lady, wiping her eyes,) that next to the blessing of good parents to take care of us in childhood, was the blessing which poor ignorant laborers have in a good master to direct their labors, and to take care of all their interests."

"Now, sister, (said the young gentleman, smiling, with a tear in his eye,) do you not see that you have become an advocate for slavery—quite a pleader, and as earnest in the cause as a feed barrister?"

"If I am earnest, you must observe, brother Eli, that I am pleading only in a particular case—and if I advocate slavery, it is only in such cases as the one which I have described—where the master is discreet and humane, and where the slaves are unfit for any higher condition than that of common laborers, and are moreover contented with their situation, as in such cases they are likely to be. Then I believe that they are happier than they could be in a state of freedom. To abolish their slavery, is then to abolish their best source of happiness—and what sort of philanthropy would that be?"

"There you are right, sister. I think, sir, that in this country at least, many cases exist, in which the abolition of slavery would be a sorry boon, one for which the merry fellows, whose happiness we had taken in charge, would not thank our philanthropy; at least, not after the experiment of freedom had taught them, that they must now shoulder their own cares, and still work or starve. And, sir, when we consider that the half of mankind do, and must labor in poverty, whether they be bond or free, the loss of human happiness through slavery will not appear to be of such mighty magnitude that the heart of a zealous abolitionist must needs burst in attempting to conceive it."

"Your zealous abolitionists, (said I,) probably con-

fine their attention to the evils of slavery, and swell their conceptions by brooding over these alone, until the miseries of bondage grow to an uncontainable magnitude before the imagination. These philanthropists would suffer a less painful distension of their sympathetic hearts, if they would condescend to take an impartial view of all the facts, and in the fulness of their humanity, would allow their horror of slavery to be somewhat abated by a consideration of the exemption of the slave from some of the worst ills of poverty, and some of the most corroding cares of life, and by a consideration of some positive comforts, which grow out of the relation between the slave and his master. Divine Providence has annexed to this relation some of the happy feelings which arise from the relation of parent and child. But even the filial feelings of a son or daughter may be destroyed by ill usage; much more the correspondent feeling of the slave. Notwithstanding the exceptions, however, the general fact in this country is, that the slave is attached to his master, and feels sensibly, almost every day of his life, that there is comfort in having such a protector and superintendent in his humble station as a poor laborer. But I suppose that some men are so violently philanthropic, that they will not look at this side of the picture. Why, sir, in the same partial way of considering a subject, they might soon gather up a store of indignation against a higher character than the slaveholder. They have only to set their imaginations to brooding over the evils alone of any condition in life, even the highest and best, and they will soon engender in their minds, and nurse to maturity, a heavy indignation against the Disposer of our lot, and raise their feelings to a sublime pitch of philanthropic blasphemy."

"Yes, sir, (said the young lady, with animation,) we knew from experience, how the dark-sided representations of slavery tend to inflame the imagination, and to exasperate one's sympathy, until the milk of human kindness is poisoned with gall and wormwood. When we left home, we were beginning to consider slavery in America, as made up of little else than knotty scourges, brutal oppression, and the heart-rending cries of mothers robbed of their children—of peccadillos punished with bloody lashes, and taskmasters wringing toil from every age and sex, without reward and without mercy. I shudder now, to think how exaggerated reports of this sort, often reiterated, so galled my humanity, that I could almost wish to see the horrors of St. Domingo repeated on every set of slaveholders in America—such a bitter charity did I feel for African bondsmen. But I have learned a lesson from it, which I hope not soon to forget;—and that is, never to let partial statements of human oppression work up my sympathy to rage; and never, if possible, in any case, to let a good feeling overrun the heart like a torrent, and gather impurities by the violence of its course."

During this conversation, my fair companion had gradually acquired a spirit and energy of expression, of which we all partook, but which in her bordered on the impassioned eloquence of enthusiasm. Her delicate frame had begun to dilate with swelling emotions, and all her features to express the glowing fervor of thought. I began to expect from her a lofty outpouring of soul; and would probably have been gratified, if the coach had not stopped at the breakfast house so soon, and turned the bold current of our conversation into the shallow and discursive channels of small talk.

I need not say that I was highly pleased with my fellow travellers. The subject of our last conversation

was a serious one, but well adapted to draw forth their moral sentiments and to try the strength of their reflective powers.

I have attempted to give the thoughts which they uttered, and to imitate their style of expression—but there was an indescribable something in their manner, especially the sister's, which gave an extraordinary interest to their conversation. The brother's language was peculiarly witty and amusing, and withal very sensible; but when Judith spoke,—the soft melody of her voice, and after she became excited, its lively intonations,—the kindling lustre of her eyes, the play of her expressive features, with the winning modesty of her manner, and the undefinable eloquence of both her manner and her style—made all that she said go warm and animating to the heart; as if an ethereal fire had penetrated to the sources of animation, and given an exhilarating impulse to all the principles of life. Not to admire such a person with such a mind, I considered impossible.

"I could love her, (said I to myself, when I got out of the stage, and saw her trip gracefully into the house,) yes, I could love her with all my heart—but how rash and vain were that for me—her accidental companion for a day! I must not indulge this amatory propensity. The warmth of so delicious a passion might solace and delight me to-day, only to afflict me with aching regret and hopeless longings, after she will have left me to-morrow. I must close my breast against this dangerous Cupid. I see him now with bended bow and malicious eye, watching for an avenue to my heart."

So said I to myself—but I was a sheer novice in the mysteries of love. Ovid may teach the signs and rules to the inexperienced; but we shall be still unwise, till nature shall by actual experience teach us the interpretation.

CHAPTER IV.

THE STUDENT'S DESCRIPTION OF A BRIDGE.

After resuming our seats in the coach, we began to speak of our journey to Charleston, and our ulterior courses of travel. My free-hearted companions promptly communicated their plans. They would spend a few days in Charleston, and then take a packet and go to Norfolk by sea. They would thus avoid the disagreeable route by stage, through the tame sand-flats and miry swamps of the Carolinas; disagreeable at all seasons, they had been told, but most so in the watery month of March. From Norfolk they would visit Washington, Philadelphia, and so on to Boston, where they intended to embark finally for England.

My heart gave a leap—a higher one than necessary, I thought, when I heard of the days in Charleston and the voyage to Norfolk.

"Your route to Norfolk, (said I to Mr. Bensaddi,) coincides at all points with mine, and if mutually agreeable, I should be glad of your company all the way."

"Very agreeable, I assure you, and I esteem it a fortunate circumstance that we shall have your company so far."

His pleased look confirmed his complimentary declaration, and my instinctive glance, (or was it accidental?) at Miss Judith's face, caught the smiling token of her satisfaction, as it played over her beautiful features. But what did that signify? Travellers generally like

company, though it be not *particularly* agreeable—but for all that, when the smile was caught playing so sweetly over her countenance, I felt it glide down immediately into my heart, and nestling there, produce a series of agreeable little titillations. But Mr. Bensaddi thus continued:

"We are total strangers in this country—we have not a single acquaintance nigher than Boston. To meet with a companion every way agreeable is very gratifying to a land traveller, and particularly so to a voyager. One who has travelled much feels this pleasure the more sensibly, because he has been annoyed with accidental companionships, which not only plague him for an hour, but stick and grow to him like barnacles, and make heavy sailing for the poor wight, whether it be on land or water. I am the more inclined, therefore, to stick like a barnacle myself, when I fall in with a choice companion. I wish your route coincided with ours all the way."

"I wish so too, Mr. Bensaddi; but my route from Norfolk leads me westward to Richmond, and thence still westward to my home in the mountains. I should be much pleased if your curiosity led you to visit my native valley—its scenery is fine, and well worthy of a traveller's attention."

"I should delight to visit the Natural Bridge, (said Judith, with kindling eyes.) Is that near your residence?"

"Within fifteen miles; and that single object would reward a trip to the mountains."

"Writers describe it as a great curiosity; but I have a very imperfect conception of it. Do, if you please, give us a full description. You are doubtless familiarly acquainted with its appearance, and can describe it better than travellers, who have taken but one hasty look."

The brother joined earnestly in the request.

"Do, if you please;" said the beautiful sister again.

How could I refuse? Yet, I professed, as in modesty bound, that I was not a good describer—and I added, what was true, that no description could do justice to this singular object, which refused to confer a just impression of its beautiful magnificence, through language or painting; and demanded, that all who would enjoy the delightful conception, should come personally and do homage in its own rocky abode. Hence it comes to pass, that no visitor of common sensibility ever viewed it attentively, without acknowledging that the reality exceeded all that he had conceived or anticipated.

"Well, sir, that only increases our desire to know something more of an object so interesting, and which we cannot visit. We will make allowance for the inadequacy of all description, and still thank you for improving our notions of so rare a curiosity, of which, at present, we have very obscure conceptions from accounts defective in themselves and imperfectly remembered."

"Well then, sir, I will make the attempt:—In the first place, imagine yourself to be travelling from the village of Lexington, southwestwardly, through a valley ten or twelve miles broad, separating two ranges of high mountains, and presenting a surface broken into every variety of hill, dale and ravine. Twelve miles from the village you leave the main road, and after crossing the hill on the left, pursue the course

of a brook which glides over a bed of solid limestone. Within two miles of the main road, you cross the brook a second time, and go up an acclivity to an inn by the way side. Here you find that the road continues to ascend the slope of a hill, which gradually rises before you to the elevation of a mountain. Your course is west of south. A few yards beyond the inn, your eye is drawn towards a vista between the forest-covered hill that you are ascending, and a similar one on the left. This opening is made by a deep narrow glen, through which you descry, at the distance of several miles, a portion of the high and many-formed blue ridge, bounding the great valley on its south-eastern side. Attracted by this, you may not be aware of any thing remarkable about your feet, as you ascend the slope, until you observe that you are in the line of this deep glen, and apparently at its head. Casting down your eyes, you discover a sudden break in the rocks by the road side. The glen seems to terminate there in a deep, narrow chasm. You approach the margin, a few yards from the road; perpendicular cliffs open to a fearful depth under your eyes, as you lean forward and see at the bottom a small river, which seems to issue from a cavern underneath the road, and passing between parallel cliffs, is joined about a hundred yards below by the brook, which falls to the bottom of the glen over a high bank of limestone. You turn about, towards the opposite side of the road, to observe whence the deeply sunk rivulet flows. There you discover the same or another dark wild glen, with the tokens of a like chasm on that side. You go with breathless curiosity to the margin of this, which is about twenty yards from the other chasm. Here again parallel walls of rock crowned with evergreens, open a passage for your eyes down, and yet further down, till you lean over the abrupt brow, and with a shudder behold the same rivulet coming from the deep dusky ravine above and passing under the *Natural Bridge*. You might have crossed it unwittingly, if you had kept your eyes directly upon the road, as it continues to ascend the acclivity of the mountain.

"Desirous now to peep under the bridge, you return a few steps along the road; and passing by the side of the chasm among cedars and *Arbor-vitæ** trees that love such wild limestone cliffs, you find a projecting point of rock a little below the crown of the precipice, and a few rods up stream from the bridge. Here you see the massive thickness of the bridge, thirty feet of solid stone, with the arch gracefully spanning this great mountain cleft, down into which you look with dizzy head and mute astonishment.

"As yet, you have seen only one side of the arch, which being on a lower level than your position, precludes a sight of its vault. Curiosity soon prompts you to descend, that you may take an upward view. For this purpose, you must follow a path that conducts you south of the bridge, to the place where the brook tumbles over the rocks. Here is the nearest place where the descent is practicable. Winding round the base of a crag near the bottom of the glen, you behold from beneath the trees that overshadow your path, the high arch supported by its abutments, somewhat rude in appearance, but solid and everlasting as the moun-

tain that supports them. Yet the form of the whole is so nearly symmetrical, that you are impressed rather with the beauty than the sublimity of the object. As you advance towards it, the perpendicular walls of rough rock enclose you on either hand, and leave but a narrow space of sky visible between the cedar-topped crags overhead. The arch seems now to expand and elevate itself, to receive you beneath its ample vault, and to awe you into a due respect for its superb majesty. When you look around and observe near the bridge some forest trees of the ordinary size, growing from the bottom of the glen and reaching with their tops the feet of others, which having fastened their roots in crevices of the wall, strive to reach the upper air, yet fail by far to attain the elevation of the arch; and when you look up to the arch itself, moving your eye slowly from side to side and from end to end over its spacious vault, it seems still to enlarge its amplitude, and to rise heavenward, until your breast labors with the grand conception; you think how centuries and millenniums have rolled over this changeless structure, and how other centuries and millenniums are yet to roll over its undecaying solidity; you think of it as the emblem of its eternal Creator; and the puny works of man dwindle to insignificance before this cloven mountain, from whose deep interior you look up and behold the everlasting rock, that bends its glorious vault from crag to crag, seventy feet in span, and two hundred feet above your head.

"When filled with these contemplations, you move to a point in the glen above the bridge, where you see its beauty and magnificence under another aspect. The arch has apparently a different curvature, and the opening beneath it a different yet a more beautiful outline, than it does when viewed from below. Shift your position to some other spot, where from under thick trees and beetling precipices you can take another look. Now the same features appear under another form, and as you move from side to side and farther or nearer, new transformations appear, such as you never observed in a work of art. You wonder how it is possible that one object, so simple in its general structure, should exhibit such an entertaining mutation of aspects—which are the more interesting, because they put at fault the rules of perspective, and consequently differ from the anticipated effects of your changes of position. If you study the cause of this, you will find perhaps that it arises from a general approach to regularity of structure, combined with deviations from it so various and so graceful, that the visitor sees at every step, some new and unexpected combination of forms and appearances, variable as the shifting scenes of the kaleidoscope, but all disclosing new features of beauty and sublimity, leaving on the mind the final impression, that this singular curiosity is a wonderful specimen of Divine art, which has diverted its workmanship of formality, but retained the graces of form and proportion in the general outline, while it has left just so much of unfinished rudeness in the details, as to cast an air of wild sublimity over the whole work."

Here I closed my lame description. After a pause, Judith started as from a reverie; emotion depicted in her face, and lighting her fine eyes to a glow like that of the evening star. Turning to her brother, she said, "Oh, brother! how can we leave the continent, where

* *Thuja* or *thuya* is the botanical name of this beautiful evergreen.

such an object may be seen, and not go to enjoy the sight? I would cheerfully travel a thousand miles to see that bridge, so grand, so beautiful—Nature's sole specimen of divine art in the construction of a bridge. Is it not, Mr. Garamé? Or does the world contain another?"

"I think you are right, Miss Bensaddi; though Humboldt describes a natural bridge in the Andes; but it is not like ours. There is a solid arch, but very inferior, and also a broken arch, composed of loose rocks, which by a rare accident in falling down a deep narrow chasm, got wedged together, and continue firmly lodged against the sides at a great height from the bottom. The bridge itself is of difficult approach, and the bottom of the fissure is inaccessible."

"Oh, yes—now I remember to have read of it. That must be a wild place—but it is not comparable to your Natural Bridge. It has less appearance of design in its formation—it cannot impress you with such awe by its immovable solidity, nor with such admiration at its lofty proportions, struck off with Nature's careless, but master hand. It is not very wonderful to see loose rocks caught midway down a great mountain cleft, though the scene be romantic enough—but to see a real bridge, built by Nature for a highway, skilfully designed for it, then cut without hands out of the solid mountain rock—defying all human power to shake it, and human art to imitate its magnificence—springing its grand arch aloft—so mighty a mass, yet so high, so airy, so light. Oh, brother, can we not go to see it? I know that your time in America is limited; but if you will give me that sight, only for a day, you may hurry me as rapidly as you please over the rest of the journey."

"My dear sister, I would gladly afford you that pleasure, and gladly enjoy it myself; but I am doubtful whether we can spare the time. Yet, if we have a quick passage to Norfolk, we may possibly run up to the mountains and snatch a glance at so wonderful a specimen of Nature's handiwork—or rather un-handiwork, for Nature works without hands, I believe, I will tell you, Mr. Garamé, what sort of fancy your interesting description suggested to my mind. I thought that dame Nature must be sitting somewhere about that bridge, probably hidden in a thicket of cedars on a craggy point of the rocks, watching the visitors as they come and look and wonder; and when they turn to go away, sending an elfin breeze to whisper in their ears, 'Ye are pretty two-handed folks to be proud of your works—are ye not?'"

"Your pleasant fancy conveys a truth. When a man is under the bridge and thinks of himself and his fellow bipeds, it is with a feeling of humiliation that is salutary without being painful. But, Miss Judith, in relation to the inquiry which you made a while ago, I have another curiosity to mention—one of little notoriety as yet, because it is hidden in the mountain wilds of Virginia—which may boast of having the only curiosity comparable to the Natural Bridge: that is, the *Natural Tunnel* among the Cumberland mountains, in the southwestern angle of the State. Here, a small river flows between high mountains, along a narrow valley, which is suddenly closed by the junction of the mountains. But, nature has cut a tunnel four or five hundred feet long, through solid rock, and thus given egress to the water. The arch of the tunnel is nearly

regular, solid throughout, and of considerable span; but its elevation above the floor does not exceed forty or fifty feet. This tunnel would be a finer object if it were straight, so as to let one see through its whole length at once. But such as it is, or as I have heard it described by an intelligent visitor, (for I have not seen it,) you will readily conceive that it is a rare and interesting curiosity, and one that would be much visited, if 'dame Nature' had not (as if jealous of showing too many of her works of *internal improvement*) hidden it among rugged mountains, in a place remote from the great highways of travel."

These notices of the bridge and the tunnel, with some allusions to various particulars of my native country, awakened a lively interest in my fellow travellers. I saw it and was glad. Their eager inquiries about the scenery, the population, the literary institutions and state of society, not only gratified my habitual feeling of patriotism, but strengthened, while it gratified a new feeling, as yet so undeveloped in the recesses of the heart, or so concealed under the disguise of other feelings, as to be unacknowledged even by consciousness. I knew only that I thought the bright-eyed beauty, who had been shining now for hours into mine eyes, to be the most bright-eyed of beauties, and to be moreover in mental qualities, the most attractive vision that had ever realized itself to my perception. I may have conceived the like, when fancy garnished some ideal picture of a lovely woman; but here seemed to be the living substance of what poets had taught me to imagine, but experience had never taught me to expect in this iron age of degenerate humanity. True, this lovely creature did not appear to be exempt from defects of character. I could discover on a few hours acquaintance, that she was subject to illapses of mental excitement, bordering on enthusiasm; yet did she not lose in my view one feature of loveliness on account of this over-excitability; for here I acknowledged a point of agreement in our tempers.

I had called up prudence, and set that dignified virtue to guard, with hundred eyes, the avenues of my heart against the insidious Cupid. "But, then, (said something within me,) I have since discovered, that she is not to be my companion for a day only, but for a whole quarter of a moon—and according to the proverb, 'Circumstances alter cases.'" "Well, (said prudence, faintly,) if they do alter cases, it is not always for the better. Does this new state of the case diminish either the probability of your falling in love, or the danger of your falling afterwards into something less pleasant?" This remonstrance was so feebly uttered, that prudence was evidently yielding to somnolency. Oh, thou drowsy Argus! What subtle enchanter had so soon drugged thy hundred eyes to sleep?

This I well remember, that I sought occasion to set forth to these strangers all that was attractive in my country; and that, in portraying its landscapes, and whatever else might commend it to my fellow-travellers, my imagination then, more than ever before, bloomed with rich ideas, and my mouth shed forth every rising conception with a fluency of eloquent expression, which I can but imperfectly recall in making this record.

Among other entertainments which my native land affords to the visitor, especially if his mind be imbued with the love of nature, I mentioned the fine views from

the mountain tops; and I suggested that I had made some delightful excursions to the House Mountain near Lexington, and could never forget the splendid prospects that its lofty summit spreads before the spectator.

This suggestion had the intended effect. My companions instantly besought me to describe my visits to the House Mountain. No longer coy, with memory and imagination on the wing, I was commencing a prelude to my story, when the coach stopped for dinner, and gave me the opportunity of arranging my thoughts a little. As soon as we resumed our journey, I was called on to proceed, which I did substantially as follows.

CHAPTER V.

THE STUDENT'S ACCOUNT OF HIS VISITS TO THE HOUSE MOUNTAIN.

To make my description more intelligible, I shall begin with a general sketch of the Alleghanian region of Virginia.

The Alleghany mountains consist of parallel ridges, casting off short spurs and sometimes long branches, that vary from the general direction; but they always embrace rich vallies watered by clear streams, that either murmur over pebbly beds or dash over rough rocks. To find their mother ocean, they had to break their way through the ridges that run between them and the sea coast. Some of them as the Powhatan or James river, have made several breaches through successive ridges, two thousand feet, more or less, in height.

The line of continued mountain nearest the sea is the Blue Ridge, which beginning in Pennsylvania about the Susquehanna, increases in height, ruggedness and diversity of form, until it stretches its vast length into the Carolinas, where, being joined by the chief Alleghany, it becomes the great father mountain of the system, the huge, wild, prolific source of a thousand rivers, that gather themselves together in the deep vallies, and with their several aggregations of water run brawling and working their ways out in every direction, to seek the common source and depository of all sublimary waters.

Between the Blue Ridge and the North Mountain, lies the Great Valley, my native land, "the loveliest land on the face of the earth." (Here I detected a smile, instantly suppressed, on the faces of my auditors; but not a smile of contempt, I was sure.)

The Valley is full twenty miles wide near the Potomac, but narrows to twelve miles in Rockbridge; where it is infinitely diversified with mountain hill, knoll, slope, vale, dell, ravine, cliff, rift, with every other modification of surface that is named, and that is not named, except plains and lakes, whereof we have none; but we have clear limestone springs, gushing from forest-crowned hills, and "giving drink to every beast of the field."

Westward of the Great Valley, for many miles, the country is composed altogether of high mountains with narrow vales between. But here, and further west, fountains of health flow; a hundred mineral springs of different qualities, with a pure atmosphere, delightful summer weather, shady forests, beauty in the vale and sublimity in the mountain; all combine to invite the

invalid for health, and all for pleasure, who love either the charms of nature or the social enjoyments of a watering place. But enough of introduction. Now for the House Mountain.

This short isolated mountain is a conspicuous object in the picturesque landscape of Rockbridge. It stands about six miles west of Lexington, from whose inhabitants it hides the setting sun, and not unfrequently turns the summer showers, that usually come with the west wind. Being separated by deep vales from the North Mountain, and more lofty, it stands like an island of the air, with its huge body and sharp angles to cut the current of the winds asunder. Clouds are often driven against it, cloven in the midst, and carried streaming on to the right and left, with a space of blue sky between, similar in form to the evening shadow of the mountain, when the light of departing day is in like manner cloven. Sometimes, however, a division of the cloud, after passing the town, will come bounding back in a current of air reflected from another mountain. It is not unusual to see a cloud move across the Great Valley in Rockbridge, shedding its contents by the way—strike the Blue Ridge—whirl about, and pursue another course until it is exhausted. The traveller, after the shower is passed, and the clear sunshine has induced him to put away his cloak and umbrella, is surprised by the sudden return of the rain, from the same quarter towards which he had seen it pass away.

What is called the House Mountain, consists in fact of two oblong parallel mountains, connected about midway of their height, and rising upwards of 1500 feet above the surrounding country. The summit ridges are each about a mile long, and resemble the roof of a house; the ends terminate in abrupt precipices, and all around huge buttresses, with their bases spread far out into the country, rise up against the sides and taper to points which terminate some hundreds of feet below the summit. These buttresses, or spurs of the mountain, are separated by vales which run up between them.

The students of our college make parties every summer, to visit this mountain for the sake of the prospect. They set out in clear weather and spend the night on the mountain, that they may enjoy the morning beauties of the scene, which are by far the most interesting. Now the ladies too have begun to adventure on this romantic enterprise. Last summer I had a delightful ride by moonlight with a party of them and their male friends. We pattered along, while the whole country was hushed in sleep,—through woods, by meadow sides, over hills, and up a vale that led to our object. The vale was at first broad, and spread open its fields to catch the flood of moon-beams; then it contracted itself, swelled up its dark rocky sides, and entered the mountain between two of the buttresses; it terminated high up against the steep rocky side of the summit ridge. Here we had to dismount. We tied our horses in the forest, and taking to our feet on ground piebald with moonshine and shadows, we began to scale the rocky steep; clambering over stony fragments and trunks of fallen trees, catching hold on bush and jutting rock; now working our laborious way; then stopping to recover breath for another effort; till we succeeded in mounting the summit and

taking our stations, some on projecting top-rocks, and the more hardy on branches of storm-battered trees; before the sun, whose rising we aimed to see, had surmounted the piny top of the Blue Ridge. He soon rose; but in a haze, shorn of half his beams; and therefore with much less worshipful glory, than when he ascends his mountain throne, full-robed, amidst the pure blue of the ether, when no earthborn vapor sullies its transparency.

My first trip, some years ago, was with a party of students only. Then we were disappointed in our hopes by a sudden clouding up of the atmosphere, before we reached the place; and we should have made an unprofitable trip, had not an unexpected scene afforded us a partial reward for the toils of the ascent. We lodged like Indian hunters, not far from the summit; where an overhanging rock affords shelter, and a spring trickling through a crevice supplies drink to the weary climber. After we had slept awhile, one of the company startled us with the cry of fire. We saw with surprise, in the direction of the Blue Ridge, a conflagration that cast a lurid glare through the hazy atmosphere. The flame rose and spread every moment, tapering upwards to a point and bending before the night-breeze. At first, we conjectured that a great barn was in flames, and then that the beautiful village of Lexington was, as it had been once before, wrapped in devouring fire. Whilst we gazed anxiously at the fiery object, it rose higher every moment, and in rising seemed now to grow less at the lower extremity, until finally it resembled the last flicker of a dying lamp-flame; and then it stood forth, to our joyful surprise—the moon, half in the wane, reddened and magnified by the misty air, beyond what we had ever seen. Its light afforded us an obscure perception of the most prominent objects in the landscape. Shadowy masses of mountains darkened the sight in various directions, and spots of dusky white, glimmering here and there, indicated fields and houses. We perceived just enough to make us eager for a more distinct view; but when the morning came, the cloudy confusion of the atmosphere concealed every thing; and a rain succeeding, put us quickly to scampering down the mountain, and sent us home as dirty as pigs, and as wet as drowned rats; and with the wings of our fancies completely bedrenched and bedraggled into the bargain. We were cured of scene-hunting and gypsying in the wild mountains for that season. But by the next summer my spirit was revived, and I longed for another excursion to the great observatory that was daily standing aloft with its rocky solitudes in the back ground of our landscape, and stimulating the spirit of the students to try what romantic incidents and wide prospects a night's lodging on its high eminence might yield.

So one fair midsummer's day we set off, a dozen of us, full of high enterprise, and laden with whatever might be necessary for use and comfort. This time we lodged on the aerial summit of the mountain, where we built a fire of logs, that illuminated the rocks and trees about our wild encampment, and blazed like a beacon-fire before the eyes of nearly all Rockbridge. We prepared our coffee, drew forth our bread and cheese, and ate our supper merrily; and for hours we made those gray rocks hear, what perhaps they had never heard before, the jests and quips and shouts and laughter of

a dozen college youngsters, let loose and exulting in the wild freedom of nature.

This time the weather proved eminently favorable. We slept two or three hours and rose before the dawn; that we might watch for the opening of the scene. Our fire had sunk to embers; the desolation and death-like stillness of our situation were impressive. The heavens above were perfectly serene; the stars looked down upon us with all their eyes, from mansions of the purest blue; but the lower world was enveloped in a dense fog. We seemed to have been separated from the society of the living on the face of the earth, and to have ascended to another sphere, where we held communion only with the silent orbs and the blue ether that drew our spirits into their heavenly fields. The merriment of the evening was changed into sober thoughtfulness. We spoke little, and that with a low voice; and each one seemed disposed to retire from his fellows, that he might give his mind to contemplation. Such at least was my case. I withdrew to a naked rock that crowned a precipice, and turning my face to the east, waited for the sun, if not with the idolatrous devotion, yet with the deep seriousness of the Persian fire-worshippers.

Presently the dawn began to show, at the distance of twelve miles, the dim and wavering outline of the Blue Ridge in the eastern horizon. When the morning light had opened the prospect more distinctly, the level surface of the mist which covered the valley became apparent, and the mountain tops that rose through it in almost every direction, looked like islands in a white, silent and placid ocean. I gazed with delighted imagination over this novel and fairy scene, so full of sublimity in itself, and from the sober twilight in which it appeared, so much like the creation of fancy in the visions of a dream. The trees and rocks of the nearest islands began to develope their forms; more distant islands were disclosed to view, various in size and shape, and variously grouped; but all were wild, desolate and still. I felt as if placed in a vast solitude, with lands and seas around me, hitherto undiscovered by man.

Whilst I looked with increasing admiration over the twilight scene, and was endeavoring to stretch my vision into the dusky regions far away, my attention was suddenly attracted by sparks of dazzling brilliancy, shooting through the pines on the Blue Ridge. In the olden time, when Jupiter's thunderbolts were forged in the caverns of *Ætna*, never did such glittering scintillations fly from beneath the giant forge hammers of the Cyclops. It was the sun darting his topmost rays over the mountain, and dispersing their sparkling threads through the pure serene of the atmosphere.

Very soon the fancied isles around me caught the splendid hue of the luminary, and shone on their eastern sides like burnished gold. In the west, where they were most thickly strewn over the white sea of mist, and where their bright sides alone appeared, I could fancy that they were the islands of the happy, (so famous in ancient story,) where the spirits of the good reposed in the balmy light of eternal spring. But the pleasing illusion was soon dissipated. The surface of the mist, hitherto lying still, became agitated like a boiling caldron. Every where light clouds arose from it and melted away. Then the lower hills of the country began to show their tops, as if they were emerging from this troubled sea. After the sun had

displayed his full orb of living fire, the vapory commotion increased, and in a little while the features of the low country began to be unveiled. The first audible sound from the living world, the barking of a farmer's dog, arose from a vale beneath, and completely broke the enchantment of the twilight scene. When the sun was an hour high, the fog only marked the deep and curvilinear beds of the river.

The prospect of the country around, now yielded a pleasure, not inferior in degree, though it differed in kind, from that which I had enjoyed in beholding a scene, rare and beautiful in itself and embellished by mist and twilight with the visionary charms of a creative fancy. The country appeared beneath and around me to the utmost extent of vision. On the diversified surface of the Great Valley, a thousand farms in every variety of situation were distinctly visible—some in the low vales, where winding streams had begun to shine in the glancing sunlight—some presented their yellow harvest fields among the green woods and wavy slopes of hills—and here and there, others were perched aloft among the primordial forests and antediluvian rocks of the mountains. In the northeast, the less hilly country of Augusta was seen in dim perspective, like a large level of bluish green. Stretching along the eastern horizon, for many a league, the Blue Ridge mustered a hundred of his lofty heads, among which the Peaks of Otter rose preëminently conspicuous. The valley southwestwardly was in part concealed by the isolated line of the Short Hill. But beyond this, at intervals, I caught glimpses of the vale of James river, from the gap where the stream has burst through the Blue Ridge, to the place where it has cloven the North Mountain, and thence round by the west, to the remarkable rent through which it flows between jutting crags in the Jackson Mountain. Here the Clifton forge, though not seen, could be imagined, sounding in the deep ravine with the roaring waters, and making the dark cliffs re-bellow at every stroke.

On the western side the scenery differs from that on the eastern. Here it seemed as if all the mountains of Virginia had assembled, to display their loftiness and their length. Line after line, ridge behind ridge, peered over one another and crossed the landscape, this way and that way. Here a huge knob swelled up his roundness—there a peak shot up his rough stony point—out of a huddle of inferior eminences, or from the backs of ridges that stretched away far and wide, until they faded off in the blue of the atmosphere, and all distinction of form and color was lost in the distance.

When I was able to withdraw my sight from the grand features of the prospect, and to look down upon the country near the base of my observatory, I was attracted by the softer beauties of the landscape. The woody hillocks and shady glens had lost every rough and disagreeable feature; the surface looked smooth and green like a meadow; and wound its curvatures, dappled with shade and sunlight, so gracefully to the elevated eye, that they seemed to realize our dreamy conceptions of fairy land. The little homesteads that spotted the hills and vallies under the mountain, the large farms and country seats farther away, and the bright group of buildings in the village of Lexington, relieved the mind from the almost painful sublimity of the distant prospect, and prepared us, after hours of

delightful contemplation, to descend from our aerial height, and to return with gratified feelings to our college and our studies again.

CHAPTER VI.

THE NEW FRIENDS IN CHARLESTON.

When I had concluded my House Mountain story, the brother maintained for a few seconds the attitude of a listener; until I remarked that my other visits to the mountain produced nothing new, and that my theme was therefore exhausted.

"I am sorry that it is; (said he,) for I could listen with interest to much more of the same sort."

Judith, who seemed to be in a state of thoughtful abstraction, now heaved a deep sigh, which roused her; and being conscious that she had sighed, she blushed; and when she felt her cheeks warmed with blushes, she hung down her head in silence.

"Heigh-ho! Judith, what is the matter with you? You pay Mr. Garame a poor compliment for his description of one of the finest landscapes in the world—it seems to have made you sad."

"If I am sad, brother, it is because we may not be able to visit the mountains of Virginia. Mr. Garame will not think me disrespectful when he knows the cause of my sadness."

"Certainly not, Miss Judith; (said I with great sincerity,) but I hope that you may still find time to run up to our valley, and to look out from our mountain tops."

"Oh, how delightful that would be." She raised her head as she spoke, and her countenance flashed up to more than its wonted animation, as she thus continued:

"I love the mountains—I prefer the country to the town—joy springs up in my heart when I look upon the summer hills and vallies, the clear brooks, the green fields, and all the objects and employments that occur in rural life. Most of all I admire scenery like that which you have described;—grandeur and beauty spreading to immensity, and blending into indescribable labyrinths of variety. There nature feasts the soul with her choicest entertainments—there man leads the happiest life, and is inspired with the noblest feelings. The inhabitant of the plain and of the town may be intelligent, virtuous, refined; but the man of the mountains has sources of deep and holy feeling, which cannot be found among the artificial structures of a town and the no less artificial forms of city life; and which are absent also in great part from the monotonous campaign, especially when stripped of its natural garb and clothed with the petty embellishments of human art. There is beauty even in a scene like this: He who has reared his neat cottage in a grove, and can look out upon his fields and flocks in the plain, has much to love in his comfortable home. But he has feeble impressions from nature, and through nature draws only faint inspirations from God. But who can look upon the great mountains, and not feel his bosom swell with sacred emotions? Who can look up at the towering peak and the beetling crag, or look down from them? Or who can see, as you have seen, the sublime ridge, that seems to present an insuperable and immoveable barrier to ocean and river, cloven from the top to the bot-

tom—yes, snapt asunder by an Almighty hand, as you would snap a mouldering twig,—or who can dwell in the valley, fenced on either side by cloud-capped mountains, upon whose hoary steep the old forest shakes his thousand arms in the wind, while the cataract roars beneath pine-covered rocks in the dusky ravine—and not feel the movings of the Divinity in his soul? Here are the representatives of the Divine Majesty, the exhibitions of the Universal Spirit. Can a mortal mind contemplate such objects, and not feel a high-toned energy infused into it? Must it not catch the lofty impress of these sublime monuments of eternal Power and Godhead. And then the softer beauties of the broad uneven valley, the round hill-top with its sylvan crown, the sweet winding dale with its purling brook and flowery meadow; these seem to me to shed the milder effluences of deity into the soul—to breathe gentleness and love into the heart, to mitigate the fierce passions, and to soothe the wounded spirit. And where both these characters of scenery, the sublime and the beautiful, are combined, as they are among the mountains of Virginia, the people must be deeply imbued with religion and virtue, and their virtues must be a finely tempered mixture of the heroic and the gentle. But; (said she, checking herself,) I am running on with my crude notions, on a subject that I do not understand—yet still it does seem to me, that the people of your country must have a noble character—have they not, Mr. Garamé?"

"They certainly have in them the elements of a noble character, and need only to be more highly and generally improved by education, to become all that you suppose. I think too, that your theory derives confirmation from the history of the ingenious Greeks of old, and of the patriotic Swiss of modern times. Mountaineers are often rude, but rarely mean-spirited; and their local attachments are always strong, because they dwell among objects strongly characterised, and therefore strongly impressed on their minds."

"I am glad to find that my notion of the effect of mountain scenery is not altogether a groundless fancy: I thought, while speaking, that it seemed reasonable; but then I remembered how often I speak rashly, under the impulse of excited feelings: obtruding my hasty thoughts on others, and proving my need of instruction, instead of my ability to instruct."

"That is her way, (said Eli, smiling :) she is of such excitable stuff, that when she hears or sees any thing fine, she kindles and flames away like tow in the fire; and often for five minutes she will emit a constant blaze of fancy or feeling, sentiment or philosophy,—then she will sink at once into the ashes of humility."

Judith blushed good naturedly, as she said, "Well, brother, I have confessed my weakness to Mr. Garamé; and he will have the goodness to pardon my long rant."

"It was not rant, Miss Judith; and needs no apology. I should be very sorry if you conceived it necessary before me to lay any restraint upon the utterance of your thoughts—especially such thoughts. Do me the favor to give them free passage. I love the unstudied, unchecked effusions of the soul in conversation."

She looked up with one of her sweetest smiles and said, "Thank you, Mr. Garamé."

"I must do my enthusiastic sister the justice to say,

that of late she is less often carried out of her usual sobriety by these impulses, than formerly; now it is only something of uncommon merit that has power to tap her spiritual soda-fountain; and the jet, although still foamy, is for the most part racy and good."

Here Judith and I at the same time bowed to the speaker, and said, "Thank you, sir."

This little scene prepared us for a lighter strain of conversation; and we kept it up with hilarity until the evening. My companions charmed me more and more; their fund of good sense, sprightly wit, and sound knowledge, showed no symptoms of exhaustion, but continued to supply an increasing flow of thoughts, that came with unaffected simplicity and grace from their minds. There was a great resemblance in their mental characteristics, as well as in their persons; yet also a difference which every hour became more manifest. The brother had a more ready wit and a superior talent for light conversation; the sister a more lively and profound sensibility to whatever was grand, beautiful, or pathetic—more genius—and, what I could hardly reconcile with the evident enthusiasm of her character, more reflection.

My admiration of these young persons was increased, when we happened in conversation to tell our ages, and I learned that Judith would not complete her nineteenth year until the first of June, and that Eli was only twenty-two, that is, one year older than myself.

When the twilight came on, and we were yet twelve miles from Charleston, the coach stopped to change horses at a country inn. A party of slaves were coming in from the field; and, as often happens, they began to sing with a full voice one of the melodious airs that they have among them. Judith listened with breathless attention, as if the strain were new to her. I had heard it before. The same air was repeated to a succession of stanzas destitute of merit, but deriving pathos from the chorus or burden, "Long time ago," which sounded delightfully, because it was uttered with enthusiasm by many voices joining in symphony from different parts of the neighborhood.

When we were driven off, I remarked to Judith that the air just heard had a sweet and touching simplicity in it.

"Yes; (said she, with emotion,) it touches both the fancy and the heart; the melody is pleasant in itself; and it makes one think that the people who sing it with such enthusiasm, must be happy."

Having spoken these words, she relapsed into meditation, and seemed indisposed to further conversation during the evening's ride. We reached Charleston before nine o'clock, and obtained excellent accommodations at a hotel.

The next day we spent several hours together, viewing the city. After dinner Eli and myself left Judith in her room that we might go to the harbor and inquire for a packet to Norfolk. After some time, we found a stout well built schooner that was to sail in four days. We engaged the cabin for ourselves, and the attendance of a half grown black boy, attached to the schooner; then after strolling about the town, we returned in the evening and found Judith in our private parlor, playing the air of the preceding evening on a piano, which I was so unobservant as not to have noticed before, or I should have asked her to play. She had arranged the

notes on a blank page of the music book before her, which I found to be her own. I was charmed with her style of playing; there was so little appearance of art in it; she struck the keys with such nice tact, and in such perfect accordance with the spirit of the piece, that she made one forget the player, and lose even his self-consciousness in the Lethean tide of music that came stealing over the soul.

When she discovered that we were in the room, she rose with a blush to leave the instrument, saying that we had caught her attempting to learn the negroes' melody. I asked her to play it again, but she declined, with the apology that she must learn it better before she could venture to play it in company; but at my solicitation, she resumed her seat, and not only played several pieces with the delicious artlessness of her art, but gratified me also by singing two songs, with such "linked sweetness" of melody, that one which was of a pathetic character, drew tears from my eyes, and continued to run in streams of sensibility through my nerves during the night.

Our apartments were, as we had requested, in the most private part of the house, in a wing designed for families, and, as it happened, occupied at this time by none but ourselves. I mention this to explain an incident that occurred the next evening. When we had all satisfied ourselves with looking at the public institutions of the city, and had taken our tea, Eli proposed that we should walk the streets that we might observe the nocturnal customs of the place. I instantly gave my consent; but Judith pleading fatigue, declined; and then I was sorry that I had consented, but ashamed to retreat. She locked the parlor door when we went out, telling us with a playful smile, to say 'open sesame,' when we wanted admittance. After we had gotten to the street, I remembered that my room was left unlocked, with several articles exposed to pilferers. I requested Eli to wait until I should return and lock the door. I hastened back, ran up stairs, and had almost reached my room, a few steps from the parlor door, when my attention was arrested by the notes of the same negroes' melody, sweetly touched on the piano. The unlocked door, Eli, and all the world, were forgotten in a moment; I was insensibly drawn on tiptoe quite to the parlor door, when a momentary pause in the music, allowed me to feel that my heart was palpitating violently. I was beginning to fear that the exquisitely pathetic tones would come no more; when lo! with the melting tenderness of an angel, singing a newly departed saint to rest, she attuned her voice, as she touched the keys again, to the same melody; and these are the words of the simple ballad that she sung:

SALLY OF THE VALLEY.

Once I wandered through a valley,
Where waters flow;
There I saw the lovely Sally;
'Long time ago.'

Trees and banks were full of flowers;
Soft winds did blow;
Leaty vines made dusky bowers;
'Long time ago.'

By a rock beneath the mountain,
She, bending low,
Shed warm tears beside a fountain,
'Long time ago.'

"Maiden, why so broken hearted?
Fain would I know."

"Sir, my love and I here parted,
'Long time ago.'"

"Here he wooed and here he won me,
Then far must go:
Left his kiss of truth upon me,
'Long time ago.'"

"Soon he sunk beneath the billow,
When storms did blow:
Then I planted here this willow,
'Long time ago.'"

"Fare thee well, sweet mourning Sally;
Keen is thy woe."
So I left the flowery valley,
'Long time ago.'

Once again I saw the valley,
Where waters flow;
Then again I looked for Sally,
'Long time ago.'

By the rock beneath the mountain,—
Saw willow grow
O'er a grave beside the fountain,
'Long time ago.'

She ceased. I was rivetted to the spot. For minutes I was entranced with the mournful vision of poor Sally's grave under the weeping willow; while my nerves yet quivered sympathetically with the heavenly tones, that made the simple story of her fate so dolefully affecting. I was roused at last by Eli's voice calling me from the foot of the stairs. I hurried down without thinking of my door. He asked whether I had missed any thing out of my room. I simply answered 'No,' and walked on, I knew not whither. I spoke not during the most of our walk, except when spoken to, and then sometimes I gave irrelevant answers. Eli soon observed my mood, and several times looked at me with amazement, but made no remark. To prevent unpleasant conjectures, I told him on our return what had so strangely affected my spirits. Whether he inferred any thing more than the merit of the ballad, and my susceptibility of musical impressions, I know not—probably he ascribed nothing of the effect to the musician, as he had not yet passed his novitiate in the mysteries of Cupid. As for myself I did not then reflect on the subject; I was too much absorbed by the emotions produced by the sweet music and the sweeter musician, to analyze my feelings, and to search out the causes which might be at work in carrying my soul away at such a rate.

At the parlor door, we said, 'open sesame,' and were admitted. When I told Judith how I had undesignedly overheard her ballad, she blushed and was a good deal confused at first; and then began to apologise, by saying that the air of the negro-song chanted sonorously in the calm evening and quiet fields of the country, had taken such possession of her fancy, that she could not rest until she had put together a few stanzas, according in simplicity of language and sentiment with the simplicity of the air, to whose melody they were to serve as a vehicle. We soon stopped her modest apologies, by insisting that she should repeat the song, at least for Eli's sake. She did so, more sweetly if possible than before. That night I dreamed that I visited the flowery valley, and saw first, Judith

weeping by the fountain side, and then, the willow waving its green tresses over Judith's grave.

CHAPTER VII.

THE SEA VOYAGE.

When I awoke in the morning, I rejoiced to find that my dismal conceptions were but a dream. But I was sad through the whole forenoon, and but partially relieved towards the evening by the conversation and cheerful looks of my companions. Pleasant rambles with them about the town, the amusements that we shared after dark, and a good night's sleep, had done much to counteract the downward tendency of my spirits. At breakfast time the next morning we were startled by a message from our captain, warning us to be on board within two hours, because the wind was fair, and he would sail a day sooner than he had intended, for fear of a change. We therefore hastened our preparations and were on board by eleven o'clock. According to contract, we took exclusive possession of the cabin, and were pleased that no other passengers of any sort were on board: the crew consisted of five men, the servant boy, and the captain.

We set sail immediately. It was one of the most delightful mornings of a southern spring. Balmy breezes wafted us gently out of the bay, whilst from the deck we contemplated the retiring city, with its advanced guard of islands and batteries. When these began to sink away in the distance, I had, for the first time, a full view of the ocean, spreading its desolate waste before me to the utmost extent of vision, and leading the imagination onward still, over its vast unfathomable deeps. How different from the diversified scenes of beauty and grandeur in my native highlands, yet even more awfully sublime! It was a scene of such naked simplicity, and such outspreading vastness: nothing to divide and relieve the attention: nothing to contemplate, but the unvaried immensity of the earth-girding waters. I sat mutely gazing over that liquid desert, until it opened to my view the whole canopy of heaven, bending down towards the waters;—the waters seemed to swell upwards as they spread, until all around, skies and waters met, and enclosed us in the centre of their grand periphery.

Serious impressions of the object before me, thoughts of its fearful might, when storms awaken the rage of its billows: thoughts of its gloomy unsearchable abysses, where monsters play among lost treasures and the bones of lost men—all came upon me, and sunk my spirits more and more, until I was deeply immersed in the melancholy to which I had been tending for the last two days. After I observed how the trees and sand-hills of the coast had seemingly slidden away down the western side of the globe, and had left us alone in this boundless waste of waters, and precariously floating over the dark gulfs of brine, in whose vast receptacle so many dead are hidden till the day of judgment, I became not only sad but terrified: and what made my situation more distressing was, that sea-sickness came upon me with its dismal nausea: itself sufficient to conjure up a fantastic host of goblins from the troubled deeps of the soul.

Eli had left me to arrange some affairs with his sister in the cabin. While my soul was thus sinking to the

bottom of the sea, he came up with her, and seeing my melancholy looks, approached me, and said, with his usual smile of benevolence:

"Now, Mr. Garamé, you remind me of the day when I first put out to sea. I kept thinking how wide and how deep is the sea!—yet I have to go all the way over it; and if I should plunge into it some dark windy night, or a tempest should crack this wooden-shell that now bears me up;—why, then I must sink all the way to the bottom, though it were thousands of fathoms down. What made me feel worse, this little sister of mine, who, as you have observed, has a touch of the romantic in her constitution;—she sat crying her eyes out. She had an unconquerable fancy to embark with me: she was not afraid! oh! no—she was a bold seafarer enough in her chamber at home; but, then, when she came into this wide presence chamber of old Ocean himself, her brave little heart quailed before the face of his hoary majesty. However, I must make due allowance for natural sorrow at parting with our father and friends. Judith, cannot you comfort Mr. Garamé, by telling him how dismally you felt at first, and how, in spite of all your fears, you passed safely over the Atlantic, and got well and cheerful before the voyage was ended?"

"Brother, (said she—and her voice was like a flageolet, breathing soft airs)—I wish that we could cheer Mr. Garamé. But what can mere words do for one suffering under two such natural causes of distress—the first awful impression of being out in the sea; and the heart-sickening nausea that soon comes to blacken every thought. I know from experience how impossible it is to be cheerful under such circumstances, and how little a friend can do to clear the dark current of our feelings."

Here Eli cut her short with the good humored remonstrance—

"Now, Judith, you are paying me a poor compliment on my ability as a comforter, and you are preaching like a Job's comforter to Mr. Garamé."

"Nay, brother, I mean not so; I know that you did all that any brother could have done for a distressed sister. You had your own sorrow to bear; yet you forced your countenance to look cheerful, for my encouragement; and if your exertions did not succeed in relieving me at once, it was because such a weight of sorrow, aggravated by sickness, could be removed only by degrees; so you removed the load which oppressed my spirits, and so, I trust, we shall succeed in taking off the burden that depresses Mr. Garamé. Nay, I think that he will find relief much sooner than I did; for he has two advantages in his case, which did not exist in mine. I was leaving home, kindred and friends on a long voyage;—he is returning by a short voyage to his home—his home in the glorious mountains. Mr. Garamé, think of that. Then, again, I had the heart only of a girl, a timid, foolish girl of the town: he has the heart of a man, and the bold spirit of a mountaineer, to bear his sufferings."

Here I was thoroughly ashamed of myself, and began to feel the mountain spirit rousing up its energies at the life-giving touch of my charming comforter. She concluded in these words:

"So now, brother, I think that I am not as bad as Job's comforters; if not a skilful, I am, however, a well meaning comforter: Am I not, Mr. Garamé?"

A sudden impulse had almost made me exclaim—"You are my elixir of life." I had opened my mouth to say it, when I perceived the impropriety of so passionate a declaration at this time. With an instantaneous effort I shut it in: but having no substitute ready, I felt confused, lost my self-possession, hung down my head, felt miserably like a fool; and was verging to madness under the mortification of being speechless with confusion, when Judith, perceiving my agony, though scarce divining the cause, brought me relief by saying—

"Brother, Mr. Garamé has one of the dreadful qualms that overcame me so often—and now I am glad that I have thought of it, I have still in my trunk a phial of the medicine that I took when the fits came on; it did not effect a cure, but it palliated my sufferings. Do you stay and comfort Mr. Garamé, while I go and search for it."

She started off, but seeming to recollect suddenly that I had been looking down over the side of the vessel, as if meditating something desperate, she stopped, and turning round, said, half seriously—

"Brother, people sometimes do rash things in a fit of sickness: take care that Mr. Garamé's tormenting nausea does not make him leap into the sea."

"No danger, Judith; a plunge to the bottom is not so agreeable to his fancy just now: he has no more relish for a four mile dip in salt-water than I have. But, perhaps, a dive to the sea-country would not be so bad an adventure after all, as one is apt to think when he has qualms. Suppose that he should find the Nereides down there, combing their wet locks in the green sea-meadows, among the coral groves; and they should sing him a ditty 'lovely well,' and take him into their shell-caves, and feast him on—let me see—what?"

"Oh! brother, (said Judith, interrupting him,) change the subject; you frighten me."

Then she hastened down the companion-way.

"Pardon me, (said Eli to me,) I meant only to divert you, but probably I have taken the wrong way."

And so he had, when he took the way to the bottom of the sea; for I found myself going down again rapidly to the lowest deep of mental dejection. I imagined myself, Judith and all, sunk by a storm in passing Cape Fear, which we must soon approach. What aggravated my sufferings was, that the weather had begun to change from fair to cloudy; the wind veered to the south-east, and freshened so much as to curl up the waves, and make the schooner rock with a quicker and heavier motion. My nausea and mental gloom were consequently growing worse every moment. Eli saw the gathering clouds on my face, and said:

"Mr. Garamé, resist this sinking of the heart; think of cheerful objects."

"Fain would I, Mr. Bensaddi; but I am constitutionally subject to fits of despondency, during which I am the passive and miserable slave of fantasy. Even now, frightful images of distress haunt me: I cannot even shake off the impression that they are ominous of some approaching disaster."

"Oh! think not so, (said he again,)—consider that they are the natural effect of a disordered stomach, and of your new situation out here in this 'barren sea,' as old Homer calls it."

"Your opinion may have the sanction of reason, but my feelings refuse to be governed by its dictates; they

point prophetically to some doleful calamity at hand; they call up a spectral tragedy. Something dark and horrible—I know not what—looms cloudily up to view: it makes me shudder, as if it were a real premonition. What can it mean?"

"Nothing, nothing, my friend, (said he, moving towards me quickly, to let the sailors shift the sails for a different tack of the vessel,)—nothing but the work of fancy, operating on the materials of your sickness and melancholy, and casting them into misshapen images of misery and disaster."

He had reached the place where I sat on a bench by the side-rail, and as he pronounced the last word, was turning round to take his seat with me, when he was tripped by a sudden lurch of the vessel and thrown backwards, head foremost, into the sea. He almost brushed me as he fell. Before I could think, he was gone. When I looked, I could see no sign of him but the bubbling of the water where he had sunk.

"A man overboard!—heave to!—down with the boat,"—were the orders of the captain, and every preparation was hastily made for the rescue. For my part, my eyes stared with the fixedness of death on the fatal spot as it receded every instant. Soon he rose to the surface, but strangling. A bench had been thrown out for him; but he either saw it not, or was unable to buffet the waves that separated him from it. The only hope was in the boat; I saw that it was so, and felt the rush of a new spirit through my whole man. As the boat was being pushed off, I sprang into it.

"Fast, fast, men: pull, pull, for God's sake,—he is sinking."

My eyes were fixed on him: he struggled convulsively, but with a strength that was failing every instant. The rowers strained their nerves to the utmost, but all in vain: we were yet ten yards off, when I saw his raven locks disappear beneath the wave, and when we reached the place, not even a bubble marked it. Cruel wave! It had already forgotten its victim.

The boat was turned immediately towards the vessel. I remonstrated.

"It is useless to wait, sir; he will never rise again."

Still I looked back, as the boat was dashed through the waves on her return. A shriek smote my ear! I turned with the quickness of instinct. Well did I know whose soul was pierced. She was running distractedly over the deck; her tresses fell and streamed in the wind:—her suppliant arms were flung up towards Heaven; then flung down in despair. The frenzy of despair drove her on, convulsively—she knew not what she did—against the fatal side-rail: she fell over into the sea: her white robe fluttered as she touched the wave; the wave tossed its ample folds, as the briny liquid enfolded her. I cried out, 'Oh! mercy!' and became speechless. The steersman urged the rowers; we neared the spot; a vanishing remnant of the robe—that snowy emblem of her purity—was all that could be seen of Judith Bensaddi. The boat was rather too distant to reach her in time: my foot was on the prow: my nerves were strung to a frenetic energy: one heaven-directed spring, and the robe was in my grasp. In my struggle to sustain her, we were both sinking, but were rescued just in time. She was carried insensible to her berth in the cabin; where, after some moments, my terrific apprehensions were relieved by signs of resuscitation.

Every thing possible was done to complete her restoration, and to promote her personal comfort. My presence of mind and vigor of muscle, since he, and especially since she, had fallen, seemed almost miraculous. Sickness, melancholy, languor, even consciousness of my own existence, were gone. I had no thought, no feeling, but for Judith's bereavement, and Judith's melancholy situation. Poor hapless maiden! Better, so her life had still been preserved, that her consciousness had not returned—at least for that dark night of sorrow, whose thick gloom of clouds and rain gathered over Eli's watery grave, just as she began to remember that her brother was lost in the dark stormy sea. Then her breast began to heave convulsively,—a sob—a groan—a shriek—the same wild sort of shriek that I had heard in the boat—these were all that she could utter.

In vain did I attempt some words of consolation. She heard me not. External things could make no impression on a soul absorbed in one idea and one emotion. Hours passed away before that one thought and feeling could find utterance in words: then they came forth only in broken accents, during intervals between the more violent paroxysms of grief. Merciful Heaven! Even the distant remembrance almost freezes my blood. Still do I seem to hear that voice, like a mourning dove's, utter its broken notes of woe in terms like these:

"Oh! my brother! Dear, lost brother! Lost in the sea! Oh, my poor brother! Drowned in the deep waters! Brother! oh, brother! can you not return? No, never. Too deep—far down in the cold sea. God have mercy on thee, my dear, lost brother! Oh, hapless fate! So sudden! He looked and smiled—he was happy: I went away—they called me—'your brother is lost!' Oh, God of Israel! pity my lost Eli—so lovely! so kind! so joyful! In a moment, he fell, he sunk; they could not save him. Alas for thee, my brother—cold! silent! alone! deep! No friend can find thee there, oh, lost brother! I cannot close thy dear eyes, in thy dark briny bed. Thy heart is cold, that heart that loved me so—Oh, my heart will break! Oh, that I had died for thee, beloved Eli! Alas, he hears me not! He hears no more the storms of this dark world—poor brother—in his oozy bed, far, far down beneath the waves. Farewell, lost brother—farewell, forever."

But vainly do I attempt to describe her grief, or to give a just conception of her heart-rending lamentations.

I will pass briefly over the next stage of her mourning. She began to think of her father's bereavement, and to condole for the grief that must afflict his aged breast, when he should hear that his only son was lost. Lastly she thought of herself; and then she deplored her sad condition as a lonely and friendless maiden on a foreign shore. Here I made a second attempt to gain her attention, that I might assure her of my friendship and protection. Still, though sometimes her eye seemed to rest upon me, her heart was too deeply buried in grief, her soul too fully possessed with the one idea of her bereavement, to let her recognize my person, or remember our late acquaintance. Her eyes—those eyes lately so bright with intelligence and joyful emotions—were now swollen and dimmed with weeping.

I kept anxious watch over her. I was prompt to see,

and, as far as possible, to supply every want. I had administered a dose of laudanum mixed with a cordial. This ultimately produced a soothing effect; though it was past midnight before she could cease from wailing and lamentation. But exhausted nature, aided by the anodyne, compelled her grief at last to yield to some intervals of repose. She sank first into short slumbers, broken by starts of terror, and calls for her lost brother: then she would fall back again into a transient oblivion of her sorrows. Finally she was overcome by a heavy slumber of two hours. When she awoke, the dark, dismal night had passed away, and the morning broke less cloudy and rainy. I watched her anxiously during her sleep, and more anxiously on her awaking, fearful lest her slumber should prove to be a respite without relief. For an instant, she looked around with a countenance of wild affright. Then remembering her situation, she began to sob and weep. But to my great satisfaction, she soon became more composed, and gave indications of a returning sensibility to present objects. When she looked at me with a countenance expressive of recognition, and I drew near to address her, she could only exclaim—

"Oh, Mr. Garamel!" before a new flood of emotions choked her utterance.

"Endeavor to compose yourself, dear Judith," was all that I could say, when I felt a sudden change in myself. Thus far my feelings had been absorbed in her's; my whole attention had been abstracted from self and fixed on the lovely sufferer, whose agony of grief was enough to excite a demon's pity. Now, when she was so far relieved as to recognize me, and call my name, self-consciousness returned; my existence, as a distinct being, was felt again, engrossing sympathy yielded to a softer emotion, all the fountains of compassion were opened within me, and for some time we silently shed our tears together.

When I recovered the power of speech, I gave her the most heart-felt assurances of devoted friendship; I exhorted her to rely on me as an affectionate brother; I solemnly promised to treat her as a sister, and not to leave her until I had deposited her safely with her friends. I saw with unspeakable satisfaction that she could now listen, that she understood my words, and that she was soothed by them; and what was particularly gratifying, that her grief, although still poignant, had passed its most alarming stage, and that she no longer suffered the utter despair and prostration of soul, which had threatened to destroy her reason, if not her life.

Hoping that she might sleep again, I left the cabin for half an hour, and when I returned, I found her dozing. When she opened her eyes, I asked her to sit up and take some food. She could only swallow a little tea. I then renewed my expressions of condolence and fraternal care; afterwards I attempted, in the following manner, to direct her mind to the best source of consolation:

"My dear friend, it is natural that you should grieve intensely for the loss of a brother so deserving of all your affection. I too have lost in him a friend, whom our few days' acquaintance had taught me to love, as one brought up with me from childhood. I cannot comfort myself, how much less can I comfort you? In such a case we are strongly reminded of our dependance on

a higher power, who overrules our destiny, and ordains both our prosperity and adversity. He has sent this sore affliction upon you, not in cruelty but in love; for when He afflicts, it is in mercy. He wounds to heal, and bruises that He may bind up. He designs by the ills of this life to train us for a happier life to come. When He seems prematurely to remove our friends away from us, we should not infer that He does it in wrath to them or to us: we see the good cut off in the midst of their days, or suddenly bereft of their dearest friends; then we should remember that it is not chance nor fate, but the Father of mercies who takes them away; and that their removal from this world, where sin entices and sorrow afflicts, is no evidence of his having cast them out of his paternal care. He can still behold them with his compassionate eye, and reach them with his arm, that is not only strong to save, but tender in the guidance of them who fear Him, frail and erring as they may have been. Commit yourself then to His benevolent care: He is your Father, and the Father of all whom you love: His tender mercies are over all his works: He calls Himself your Father, and teaches you to trust in Him as the God of love. Open your heart now to His consolations: He will heal its pains and mollify the bruises of the contrite spirit. Believe that He has done the best for you and yours, and that some day both you and your lost brother will see cause to thank him for this dispensation."

Such was the tenor of my discourse.

When she heard another speak of the horrible disaster, which had, since yesterday, cut off her communication with the external world, her grief started afresh, and threatened a return of her violent paroxysms. I was at first alarmed at the effect of my words, and was sorry that I had broached the subject. But as I proceeded, she visibly strove against her feelings, and directed her attention to my discourse. When I had concluded, I saw a change in her countenance; its late unmixed expression of anguish was mitigated by perceptible indications of humble submission to the will of Heaven? In a few hours I was satisfied that I had taken the best course, when I embraced the earliest opportunity of opening a free communication between our minds on the subject of her grief. She was the sooner drawn off from the first absorbing view of the calamity as a present object, and familiarized with the consideration of it as past, irreversible, and, therefore, to be acquiesced in as the will of Heaven: and the farther I could put it back in the order of her remembrances, by occupying her attention with other objects, the sooner would the keen edge of her sorrow be blunted, and consoling thoughts find admission to her heart.

I alone exercised any care over her. The captain and crew showed so little sympathy, that I, in the fulness of mine, thought them brutally indifferent; as if they considered the drowning of a passenger an event rather to be expected than lamented, and the grief of a lovely sister, a womanish weakness scarcely deserving pity. I have since learned to make allowance for the circumstance, that whilst I had leisure to think incessantly of Judith and her sufferings, they had to busy themselves with their navigation, and felt that the 'poor girl,' as they called her, might be left to my willing and assiduous attentions.

Towards evening Judith could talk with me somewhat freely of her misfortune.

"Oh, my friend, (said she at one time,) how kind was it in God to send you along with us on this fatal voyage. Dear, lost brother! if his departed spirit can look back on the affairs of this world, he must feel comforted to think that so kind a friend was provided for his poor bereaved sister. And my good father! bitter enough will be the day when he shall hear that the best comfort of his old age is buried in the ocean; but still more bitter would it be, if it had been his lot to hear that his helpless daughter was left alone and friendless on the waves of a foreign shore."

Here a gush of feeling interrupted her speech; but she strove for self-command, and was soon calmer again. Then lifting her teary eyes and grief-worn countenance upon me, she continued:

"Mr. Garame, I accept your offered protection—I accept it gratefully: pardon me that I have not expressed my gratitude and my confidence in you sooner. Indeed my feelings have been too strong for utterance. Now I can say that I feel as much as my bruised heart is capable of feeling,—yes, I do feel that you are truly my friend, and will act towards me the part of a brother. Alas! no one else can now show me the kindness of a brother: he that was born my brother, and from my childhood endeared himself to me by innumerable kindnesses, my beloved Eli, is now cold and lifeless at the bottom of the sea. Oh! Jehovah, God of Abraham, teach me resignation! Excuse me, dear friend, I cannot refrain: I am a poor bereft thing: a weak creature at best, always needing counsel and guidance, and now more than ever. I commit myself to your care: you will indulge my weaknesses, now that I am stricken down, and with my natural infirmity, have to bear a heavy load of sorrow. You will be my guardian, my comforter, and—my brother."

Having said this, she seemed to feel more ease, as if she had discharged a portion of her load; she fell back on her couch, sobbed a little, and then sank gently to sleep.

As the native vivacity of Judith's feelings made the first tempest of her grief irresistibly violent, so it caused the tempest sooner to spend its force, and to settle down into a comparative calm. Never had I seen such agonizing distress—nay, such frantic desperation of grief as seized her, when the lightning stroke of bereavement fell so terribly upon her. By the morning of the third day, however, she could take some nourishment, and converse with less frequent spasms of anguish. But the effect on her person of the mental suffering and corporeal exhaustion of the last two days, struck a deep impression of sadness upon my heart, whenever I looked at her. Grief had in this short time driven the rosy flush of health from her cheeks, the sparkling radiance from her eyes, the buoyant elasticity from her members; and had left her faded and withered, like a scorched blossom of the desert.

What were my feelings, when I had leisure to reflect that this lovely drooping flower was now under my sole care! And by what a surprising stroke had Divine Providence driven her for shelter to my honor and benevolence! In herself to me the loveliest, she was made by these affecting circumstances, the dearest by far of all earthly beings. My passion, heretofore un-

cherished in the bud, was thus nourished, expanded, matured, and at the same time refined into the tenderest and most unselfish feeling of fraternal affection. If ever my breast was visited by the pure sentiment and seraphic glow of an angel's love, it was now, when I looked on that countenance, pale with sorrow—remembering how lately it shone with the light of joyous innocence; and comparing its expression then with its present look, so humbly submissive, yet so keenly sorrowful; so smitten, yet so patient and so holy.

On the evening of this day she began to express regret for the inconvenience and trouble that she would cause me to experience. I replied, that if ever in future life I could reflect with unalloyed satisfaction on any of my actions, it would be upon that of restoring her to her friends, whatever it might cost me. How feelingly did she look at me, and say—

"The mourner's gratitude will be a poor reward; but the mourner's Heavenly Friend, in whom you have taught me to trust, will not forget such kindness."

I embraced the occasion to consult her about ulterior movements, after we should reach the Chesapeake; asking her to tell me, without reserve, which course would be most agreeable to her; whether I should take her to Rockbridge, until I could prepare to go with her to London; or whether I should take her on straight way to New York or Boston, and thence home, leaving deficiencies in my outfit to be supplied by the way.

She meditated a little and then replied, that she could now, without scruple, accept my services to any extent that might be necessary; but that she was under no necessity of asking me to go all the way to London; that her brother had arranged with a friend of their's to meet him in Boston, where he had lately settled, and to embark with him there for England; and that she needed, therefore, to ask no more of my kindness than to go with her to Boston, where that friend would release me from further trouble on her account. She added, that as this great extension of my journey would add much to its expense, and none to that which she and her brother would have incurred, that I would not scruple to use their funds—especially as so unexpected and so large an increase of expenditure might not have been provided for.

"But (said she in conclusion,) though I would not unnecessarily trouble you to go to London, yet if you ever find occasion to visit that city, I claim that you give me and my friends the opportunity of showing that we remember what it is to deal kindly with a stranger in a foreign land."

Whatever vague desire I may have entertained to conduct her on a visit to my native valley, I acquiesced without hesitation in the obvious propriety of the course that she suggested. The same reason that governed her choice of this route, made it proper also to proceed without delay from Norfolk to Baltimore by water, and thence to Boston, through Philadelphia and New York.

CHAPTER VIII.

DETENTION AND SEPARATION IN PHILADELPHIA.

We entered the Chesapeake after a voyage of five days. In Hampton Roads we met a steamboat on her

way from Norfolk to Baltimore. As the day was pleasant and the water smooth, we determined to transfer ourselves at once to the more speedy and comfortable vehicle without landing at Norfolk. The boat instantly obeyed our signal; in a few minutes we were snugly bestowed in our new quarters, and with a mighty puffing and splashing, were being dashed through the waters of the 'Old Dominion' at the rate of ten miles an hour. The next day we landed in Baltimore, where I asked Judith if her feeble health did not require a day's rest before we proceeded any further. She acknowledged her extreme debility, but thought that she could travel in steamboats, and desired to go on whilst she was able: so we took passage the same afternoon, and proceeded by way of Frenchtown to Philadelphia. We landed at the Chesnut street wharf the next day at two o'clock, and took a hackney coach to convey us to one of the principal hotels of the city. Judith's weakness was now so great, (and to me it was alarming,) that she admitted her inability to continue our journey, until her strength was recruited by a day's rest. A day's rest might have been all, if an accident had not prolonged our stay.

The coach had stopped before the door of the hotel, my foot was on the step, and my hands were let go to descend, when a sudden start of the horses, which were frightened by something unusual, threw me violently on the rough stones of the pavement. I sprang up, unconscious of hurt, and ran after the coach, on hearing a scream from Judith. The horses were stopped within ten yards. My feeble companion, with fright depicted on her countenance, inquired, as I helped her out, if I were not badly hurt.

"No, scarcely at all:—yes, I believe I am a little—Ach! my ankle begins to pain me some—My hip seems to be slightly bruised."

We were now in the front parlor: before we reached a seat, I was writhing and limping badly. She looked anxiously into my face:

"Mr. Garamé, you are *seriously* hurt."

There was a degree of animation in her look, that I had not seen during the week of her mourning. I seated her on the sofa, intending to go instantly and speak for our rooms; but on turning round, I felt such pangs that I dropped down by her side, put my hand first to my ankle, then to my hip: but intending to quiet her fears, I said:

"'Tis true, I am a good deal hurt—oh! ah!—but no bones are broken—I shall soon get over it—ah! oh!"

I could not suppress these interjections, for at every movement of the wounded muscles, a needle seemed to shoot through the irritated fibres.

What was my surprise to see Judith, whose languor had for several days made her positively unable to walk without assistance, now rise from the sofa, go alone to the bar-room adjoining the parlor, and after speaking to the clerk, and having two servants called, return, and when the clerk came in, request me to order rooms for us. I told him that the young lady was a friend of mine, in deep distress, and that we wanted private chambers in a retired part of the house, with a parlor to ourselves, as the lady's situation did not admit of her mingling with strangers. We were accommodated in every particular. When the servant man came and announced that our rooms were prepared in the second

story, I rose with difficulty, and as usual offered Judith my arm. She rose without difficulty, and looking into my face with marks of lively concern in her's, exclaimed—

"Oh, Mr. Garamo, you cannot go up the stairs without assistance; do, if you please, let this servant call another to assist him in supporting you."

I accepted the aid of the servant on my wounded side, but persisted in keeping her on the other. Thus we made our way up the stairs, which, to my pleasing astonishment, Judith mounted, rather giving than receiving support. I wondered and rejoiced at this sudden amendment in my dear charge. From the moment when she saw me writhing with sharp pains, a new vigor was infused into her debilitated frame, new animation was visible in her face, new light beamed from her eyes; and from this moment, while she officiated with the tenderest care as my nurse, her health and spirits continued to return with a rapidity which was not only surprising, but at first unaccountable, and the more so because my sufferings were a new affliction to her; she sympathized keenly with every twinge of pain that she saw me endure, kept anxious watch for the minutest occasion to serve me, and where she could not relieve, to share the suffering. But this pungent anxiety on my account was doubtless the cause of the happy change in her own condition: it effectually diverted her mind from the depressing contemplation of her late disaster, gave a new turn to the current of her feelings, started new trains of thought, and put the terrible accident that afflicted her, far back in the series of recent facts and interesting experiences. Had my sufferings been of a more appalling character, they might have aggravated her malady; but they were just sufficient to excite the languishing powers of nature without exhausting them. Thus she soon recovered the elasticity of her mind so far, that she was able in some degree to control her grief by the exercise of reason and conscience: and this she did; for she told me a few days afterwards, that she deemed it ungrateful and rebellious towards God to persist wilfully in grieving for any loss that He saw good to inflict upon us. Therefore, although she could not avoid mourning for the loss of her dear brother, she felt in duty bound to reconcile herself as soon as possible to the Divine will, and to subdue a grief which could serve no good end, except so far as it was involuntary, and which would, if wilfully indulged, unfit her for the duties of life and the enjoyment of the blessing yet left to her. One end of grief might be, she thought, to exercise us in subduing it; this might be one of the appointed trials of our piety towards our Heavenly Father, a salutary discipline to fit us for serving him in all circumstances, whether of prosperity or adversity. In these rational and devout sentiments I fully concurred with her. But it is time to resume the thread of my narrative.

I was scarcely disposed on the sofa in our parlor, before a surgeon (the most eminent in the city, as I afterwards learned,) was ushered in by a servant, and without preamble or introduction, ordered the servant to "strip that foot." Judith had just finished the operation of pillowing it softly on a stool. As she rose from her reclining posture, she whispered to me that the clerk had sent for the surgeon: then she told the maid in waiting to lead the way into her chamber.

The surgeon, whose abrupt order had surprised, and for a moment irritated me, glanced at my ankle, and pronounced it badly sprained: then in the same breath he asked—

"Have you any other hurt?"

"Yes, on my hip."

"Strip his hip, servant—quickly."

He gave it a hasty look and a touch.

"It is only a bruise: rub it with liniment, and apply a flake of raw cotton: put a bread poultice to your ankle."

"How long shall I be confined, doctor?"

"That will depend on your care, and on circumstances. Do not tread on that foot; drink no stimulants, eat sparingly, and take a Seidlitz powder or two daily. Good day, sir."

He spoke and was gone.

The next morning after breakfast he called again—asked just three questions, staid just two minutes, and was off instantly after uttering these words:

"Continue the same applications, till the swelling and soreness abate: nurse your ankle until it is well; a week or more, if necessary; and if it gets worse send for me. My hat, boy! Your servant, sir."

I saw him no more; but I did see that he was full of business, and had no need of complaisance.

Judith, my sweet nurse, was present when he enjoined on me a week's confinement or more. I saw a little cloud of sadness flit over her countenance, when she heard it. I could easily conjecture why this detention should be unpleasant to her, especially when I remembered what Eli had said about the necessity of a speedy prosecution of their journey: but as to myself, shall I confess it? the prospect of delay foisted a secret joy into my heart in spite of bruised flesh and an aching joint—in spite too of my biting conscience, which bade me wish for a speedy return of Judith to her friends, whatever delight I might take in her company. But when I looked upon my dear companion, whose eyes of reviving brightness were now directed towards me, how could I help longing for a continuance of our intercourse? But if the desire was itself unconquerable, it did not subdue my conscientious feeling, so as to prevent my acting in accordance with my duty on this occasion. I asked my dear charge what was to be done now: would she wait until I should be able to travel, or would she write to her Boston friend, that he might come and meet her here? She answered that she ought to write, and make known her situation, without delay.

"Then (said she,) having done my duty, I can wait patiently, whether it be the will of Providence that you shall carry me on further after your recovery, or that my cousin shall be able to come and release you from the necessity."

She retired to her room and wrote the letter. When she came with it into the parlor and rang the bell for a servant to have it carried to the post-office, the marks of recent tears were upon her face; and when the servant closed the door, on going out with the missive that would probably in a few days bring her a new protector, she turned with drooping head and staggered to a chair. No wonder that she was deeply affected, for the writing of that letter "renewed the sad remembrance of her fate." But, oh! the weakness of human nature—at least of my human nature: for I—yes, even

I—so lately the purely disinterested, the simply fraternal lover, now felt the wish that a part of her emotion, even the greater part, might be on account of her approaching separation from me *myself*. How was my love descending from its angelic height, and settling upon the low grounds of human selfishness! In truth, at this moment, when I contemplated the loss of her society, my passion began to be ambitious of conquest and jealous of interference: I coveted all the affection of that dear heart: and any suspicion that it throbbled for others, and chiefly for them, whilst every sight and every thought of her raised the strongest pulsations in my heart, produced in me an irritability and sensitiveness of feeling, new, painful, earthly, and humiliating to think upon. Not only how selfish, but how inconsistent had my love become. It had been produced, nourished and refined, in a great measure, by her various manifestations of a heart, rich in every tender, virtuous and amiable affection; and now my full grown or overgrown passion, after being so born and bred, demanded that for its gratification, she should feel a less dutiful affection for others, and that in order to satisfy its cravings, she should make herself less worthy of being loved. Still, however, if I had been sure that love for me was seated on the throne of her heart, I might have allowed other affections to occupy a high but still a subordinate place: but whilst the precedence was unsettled, I was jealous of all possible rivals: even filial love was not pleasing in my sight.

Whilst the letter was speeding its way, and we waited for the result, and for my convalescence, our days were spent almost exclusively in each other's society;—happy days they were to me—transcendantly happy I may call them, notwithstanding the cloud-shadows that often flitted across their summer brightness. I allude not to corporeal sufferings; for under the balmy care of the sweetest nurse in the world, my bruises were soon mollified, and my wrenched ankle ceased to pain me; yet it was a week before I durst attempt the passage from parlor to bed-chamber, and contrariwise, without the help of the servant who attended upon me. But too fleeting seemed the quarter of a moon, which brought my dear companion the answer from her cousin that he would follow in two or three days, and requesting her kind friend to stay with her until he should arrive. That 'kind friend' needed no persuasion to detain him, nor would he have left her one day before necessity required, if he had even had the wings of a dove to fly away.

Meanwhile I saw with delight how Judith's grief yielded daily to sober cheerfulness, and how returning health was continually restoring the vernal bloom to her cheeks, and the starry radiance to her eyes. Though still a deep mourner, she soon began to show occasionally, in placid smiles, the budding promise of a new spring-time of the heart. When I saw the first of these renovated smiles illumine once more the beauties of her countenance, what a rushing tide of joy flowed through my heart!

Every day increased my admiration of this extraordinary maiden. I had seen her in the days of her joyous vivacity, drinking the pleasures of bountiful nature from a thousand springs; every sparkling feature and buoyant motion expressing the gaiety of an innocent heart. Then, all in a moment, I had seen her riven

with a thunderbolt of misfortune, and hurled into the lowest deep of affliction. And now I saw her rising again to the light of consolation, and walking in the mellow shade of patient resignation and dawning cheerfulness. In this diversity of situation, extreme and intermediate, every feeling of her heart, and every trait of her character, seemed to be developed: and whatever light shades of human infirmity might be discerned, such a character of intellectual brightness, moral purity, and unsophisticated amiability of temper, all becomingly set forth with such personal beauty, had never before realized itself to my perception. Whether my fancy contributed to adorn this lovely being or not, the vision was to my heart so perfectly enchanting, that I was rapt (if I may so express it without profaneness) up to the third heaven of love. Whether others have been so entranced by the sweet passion, I cannot say; probably few—for few indeed have been placed in such peculiar circumstances—but this I know, that I could not possibly love a mortal being—no, not angel—more: my heart was full.

To avoid all expression of my love until Judith should be with her friend, as a delicate regard to her feelings required, became at last impossible. Whilst I abstained from verbal declarations of more than fraternal kindness, tokens of my deeper passion began to steal from me every hour that I spent in her company. If the reader have felt the strong workings of the tender passion, and observed their effects, then the reader knows that there are a hundred signs of love more expressive than words; signs, which they whose hearts are tenderly attached, but not yet conclusively affianced, instinctively give and instinctively understand. Many of these are too delicate in their nature, and pertain too exclusively to the mysteries of the passion, to be intelligible to the uninitiated. Not until one's heart is illuminated by nature's love-torch, can one read the language of love spoken by the eyes—the tender meaning that plays about the lips,—the sentiments delicately suggested by certain undesigned postures and inadvertant motions, or by certain tremors, certain touches of the hand,—the interesting significance of certain accents, tones and stammerings of the voice, flushings and blanchings of the cheek;—all expressive; and the more so, because, to be felt by the one party, they must spring undesignedly from the feelings of the other: they are nature's language; and therefore inimitable by the feigning pretender, who, attempting to act without feeling, is almost sure to be exposed to the instinctive sagacity of real passion.

Such signs I could no more repress than I could have stayed the eruption of a volcano. I detected them springing involuntarily forth in every form and on every occasion. They were understood—that I saw; signs of reciprocity were not wanting: they broke through the guarded modesty of Judith's heart: they could not escape the vigilant sagacity of mine. My satisfaction would have been complete, my joy unbounded, had these auspicious tokens come alone. But they came attended with others of such sinister omen, as to baffle my judgment, and to becloud my hope. Tokens of pain attached themselves to her tokens of love. When she appeared to apprehend in me the symptoms of more than a brother's affection, nature speaking back from her heart, and flashing through every avenue

of expression, told me that my love was both pleasant and painful to her soul. Whenever something in my voice and manner indicated the ardor of my feelings, the tremulous joy that sprang forth to her tell-tale countenance, was in a moment saddened by a twinge of anguish; as I have seen on a rainy day, the blooming meadow of my native vale, when the flashing beam of sunlight that disclosed its flowery beauties, was suddenly extinguished again by the shadow of the rain-cloud.

A remarkable instance of the kind took place on the fifth morning after the letter had been sent. We had just finished our private breakfast, and Judith was asking if my ankle were not in a painful position on the stool, where I still kept it during most of the day, when a servant brought up a newspaper with the landlord's compliments and suggestion, that we might find something in it particularly interesting to ourselves. On glancing over the columns, I found an article taken from a Norfolk paper, and headed "Affecting incident at sea." I soon discovered that it was our captain's account of poor Eli's fate, and of Judith's fall and rescue. He had done full justice to my agency in the affair, but stated as a fact, a conjecture of his own, that Judith and I (but only the initials of our names were given,) were betrothed in marriage.

Judith perceiving my agitation, asked with great concern whether I had found any bad news.

"Nothing new to us,—it is the captain's story of our misfortune. You will have to read for yourself. One of the circumstances mentioned by the captain is a mistake; you may pardon that, as all the rest is correct."

She took the paper with a trembling hand, and retired into her room, which, like mine, opened into the parlor. Presently I heard her half-suppressed sobs; then she was silent during a few moments; then, as if moved by a sudden impulse, she started up with the exclamation—

"My preserver, and I knew it not! I might have gone home without knowing my chief obligation to him."

She was hastening towards the open door; but stopped where I could see that she was still reading. Soon she again returned to her seat, where I could not see her; and sat in profound silence for a quarter of an hour.

It may be readily supposed, that Judith was not sensible of the part that I had acted in rescuing her from the sea, (if indeed she could remember that she fell into it,) and that she was not likely to be informed, unless I had told her myself, which my sense of delicacy forbade, though I was not at all displeased that she should learn it in such time and way as she did. Nor was I sorry for the mistake about our betrothal, because it might obviate disagreeable remarks about our secluded intimacy in the hotel; and, moreover, it might assist me in judging how the idea of such a relation would affect her. But it placed her in a very embarrassing situation, impelled as she was by gratitude to rush in and make her acknowledgments, yet restrained by the fear that I might give the wrong interpretation to the warm expression of her feelings.

Finally, she again rose from her seat and came into the parlor, slowly and stultily, hanging down her head as if ashamed. My heart palpitated, and I felt confused, not knowing how I should receive her; so I seemed not to be aware of her approach, and kept my eyes on the floor, as if engaged in meditation. She stood a

minute at the end of the sofa, opposite to that which I occupied, with my lame foot on the stool. I looked up towards her at last; she had her eyes fixed on me with a look of indescribable tenderness and sadness. Her eyes met mine, and the mutual glance of feeling overcame her; she put her handkerchief to her face with both hands, and dropped to her seat on the sofa, exclaiming, "Oh, my preserver!" and burst into tears.

"Thank God, my dear Judith, that I was able to preserve so precious a life."

She recovered, after a few moments, sufficiently to say—"I can never compensate you, my friend; but I am not sorry to lie under obligation to such a benefactor—one more than a common friend—a brother who risked his own life to save mine—yes, a kind, good brother—alas! alas! the only being on earth whom I can now call brother, and him only by courtesy; but I will cleave to the privilege; I will try to show that I am not unworthy to be your sister, and shall always claim to be so considered."

I spoke some kind words in reply, and while I spoke, happened some how or other to move a little nigher to her end of the sofa; and taking the hand that she had dropped, while the other still held the handkerchief to her face, I drew it slightly; her body obeyed the gentle attraction, and her head, with the handkerchief still over the eyes, dropped upon my shoulder; but had not rested there, before she suddenly drew back, gave me a glance of heart-piercing love and anguish,—her glowing cheek was suddenly blanched; and with an interjection expressive of keen suffering, she rose, hastened to her room, and threw herself on a chair, moaning and sobbing, till she so far conquered her emotion as to become perfectly silent.

I was at a loss. The shrinking delicacy of her feelings, and the doleful remembrances so lately recalled to mind, did not solve the phenomena; there was a visible pang unaccounted for—a shooting pang—that could in one instant drive back the warm current of love in a freezing eddy to the heart. What *could* be the matter? Of all the suppositions that I could think of, one only carried an air of probability—she must be affianced to another. The conception was torture to my soul. I dwelt upon it, until I was persuaded of its truth. "Her promise to another, and her love for me, will account for the struggle in her heart," said I to myself; then, before I was aware, a heavy groan broke forth and started me out of my reverie.

Judith also started up at the sound, and came with an agitated look, exclaiming—

"Oh, Mr. Garamè! pardon my rudeness: I left you as if I were offended—no, no; it was not that. I could not suspect—I did not imagine—that my preserver, my brother, meant any thing wrong or offensive—oh, no!—it was pure friendship and brotherly kindness—I knew it was. Something else came to mind—but—"

Here she stopped abruptly, and appeared much embarrassed, as if she had some painful communication to make, but felt a delicacy or reluctance to make it.

I assured her that I did not suspect her of being offended, and that my distress had a different origin—a painful thought, suggested by the appearance of some secret cause of pain in her mind. Here I was on the point of declaring all my heart; but feeling unprepared, and deeming it improper at this time, I stopped short

and became embarrassed in my turn. She relieved me with the ready tact, of which she had before given me striking examples.

"Well, brother, (said she, with all the cheerfulness that she could muster,)—now, as our mutual confidence is restored, let us drop these delicate matters and resume our book. I will read first, then you may take your turn."

So we occupied ourselves with "Specimens of American Poetry," and our comments on the passages read. By dinner time, our minds were restored to their usual calmness.

That night, after mature reflection on my pillow, I resolved to defer my declaration no longer than until another occasion should arise, when I would make it without abruptness. I sighed to unburden my heart, and to solve the mystery of her painful love for me. I was persuaded also that she would gladly accept relief from the embarrassment of understanding, and being known to understand, my feelings, yet unauthorized to admit, without a breach of delicacy, that she did understand them. The mystery of the pangs which embittered her love for me, did not continue so to torture me as they had done. My fond heart began to flatter itself that all might arise from the black fountain of her recent grief, together with her virgin diffidence in the secluded company of one so new to her acquaintance. This more comfortable view of the case presented itself in the loneliness of my bed-chamber, after a gratifying review of the manifest tokens that she had given me, involuntarily, of her devoted affection; and under the persuasion that if she were not at liberty to accept my love, she would not have left me to go so far in ignorance of the fact. Still I longed to be rid of suspense, and of a fearful apprehension, certainly not without cause, that my hopes might still be sadly disappointed.

The next morning I found my ankle so much better, that after the servant had helped me into the parlor, and breakfast was over, I sent him to order me a crutch, which came at dinner time, and to my joy I found that with care I might safely hobble about the room upon it.

When the servants had cleared our table, and left us alone after dinner, we began to speak of the probability of our speedy separation. This afforded the occasion that I waited for, to introduce the avowal of my passion. I omit the series of remarks by which I gradually prepared her for the declaration. I apologised for broaching so delicate a subject before the arrival of her friend. I alleged my unrestrainable affection, and my fearful doubts; besides the painful embarrassment which I inflicted on her, by involuntarily signifying the passion which I had not explicitly declared. I further alleged the near approach and probable suddenness of our separation, when the shortness of the time, the hurry of preparation and the distress of parting, would render such an explanation intolerably painful, whatever the result might be. Finally, I avowed my passion in all its fulness, and offered her my hand with the expression of my perfect assurance, that my life could in no way be so happily spent as in the closest and most endearing connection with her.

"But (said I, in conclusion,)—I am not so rude as to ask of you at this time any answer or explanation of your feelings, if the slightest reason would incline you to defer it. Be assured, however, that if you should now

or hereafter tell me of some impediment to our union, be it whatsoever it may—grieved as I shall be that the fondest desire of my heart cannot be gratified—I shall cling with but the closer attachment to the admitted relation of brother and sister, and will love you as my dearest friend, if I may not love you as the partner of my bosom."

Thus I brought my speech to a successful conclusion, although at the commencement and through the greater part of it, I had hesitated and stammered so much, as to feel doubtful of a safe deliverance.

She was again sitting at one end of the sofa, while I sat at the other with my crutch between us. When she discovered the drift of my discourse, she first hung down her head, then beginning to tremble, she turned and leaned over the back of the sofa to steady her nerves, while I could see the alternations of blushing and paleness upon her cheek; then she put her handkerchief to her face, and when I had concluded, I saw the tears streaming from underneath the handkerchief; and when these had ceased to stream, sob after sob started from her full breast. But she soon evinced the desire to compose herself; she wiped her eyes; changed her position; swallowed her sobs; and gradually sank with bended head into the posture of silent meditation. I waited anxiously during fifteen minutes; till she lifted her head from its declined posture, and turning herself towards me, she began with downcast eyes, and with a voice low and plaintive, gathering strength as it proceeded, but still sweet as the sweetest tones that summer wind ever stole from *Æolian* harp:

"Mr. Garamé, you have acted kindly to tell me your feelings, before the parting hour. I have seen the involuntary signs of your tender affection for me; they placed me in a situation of painful delicacy; I could not conceal that I understood you, nor speak as if I did. You have now but added one more to the many proofs before given of your honorable affection and tender regard for my feelings. I will at once confess what I suppose that I have heretofore betrayed—that your love is not disagreeable to me, nor met with a cold return in my heart. No, my dear preserver; on the first day of our acquaintance, I felt a new and strange sort of pleasure in your company. Then I thought not of love; I expected soon to see you no more;—and though I was sensible of a strong reluctance at the thought of parting with you, I did not suspect that a new passion had sprung up in my heart. What followed—you know. Oh! how could my bruised and desolate heart do otherwise than love such a friend? Since I have recovered sufficient composure to reflect on my feelings, and have observed the evidence of your's, I have become conscious of a sister's devoted affection; and within these three days, of more—I need not affect to conceal it—I can go all lengths with you in affection; there is no want of love to make me happy in the most intimate connexion with you; nor am I debarred by any engagement or impediment of any sort, so far as my feelings or circumstances are concerned. Yet there is one thing which you have not heard—an important fact; it may be fatal."

Here she paused to struggle with her feelings; presently she continued, while pale dread sat brooding upon my heart,—“I have lately reproached myself for not telling you sooner. But before my calamity, I thought

it unnecessary; during the agony of my grief, I could think of no such matters, and since I have recovered the power of reflection and have seen occasion to tell you, I have waited for an opportunity of doing it without abruptness; now the opportunity has occurred. Oh my friend! prepare to hear a disclosure which must pain your affectionate heart. You have looked upon me as a suitable companion for life; when you know all, you may think differently; you are a sincere christian; will you not shudder at the thought of marrying a Jewess?"

Never was intelligence more surprising. My fearful and busy imagination had created a dozen impediments—such as a prior engagement—a father's refusal, or even a plague spot of infamy upon the family; but had never caught an inkling of the reality, which now struck me like an electric shock.

"A Jewess! you a Jewess?" said I, with a start and an emphasis that conveyed more than was meant. Her eyes were upon me; and when she saw and heard the effect of her disclosure; a new gush of feeling came and overpowered her.

"Oh (said she in a tone of sudden grief) my fears were true!" Then she rose in confusion to leave me; while the tear-drops began to fall. Now my former feelings, like reflux waves which the dash of a tornado had displaced, came rushing tumultuously back again, and I exclaimed,

"My dear Judith, do not leave me now. I am surprised but not changed. If you will not let me hope, tell me so at once. But why should a mere name blast my dearest prospects, and sever those whom affection has united?"

She fell back on her seat almost choked with emotion, and sobbed out; "I love you none the less for that name. It is not my heart that such a circumstance will change. But I am afraid that my being a Jewess will canker your love for me."

"Oh no, no," said I quickly.

She continued in a calmer strain, "My heart is your's; the difference in our national descent and religious education, shall not prevent me from giving you my hand, if on full consideration, you and your friends think that these things will not prove fatal to your happiness. Some of my kindred have married christians; my father has told me, that if I should meet with a christian whose temper and character were suitable to mine, he would not refuse to own him for a son-in-law. I am no bigot. Though educated in the religion of my fathers, I have learned to respect the christian religion; I have perused the New Testament, and love its excellent precepts of benevolence and purity; and though I do not profess the christian faith, I could easily live in concord with one who professes it as mildly and sincerely as you do. But I am aware of the prejudices which many entertain against my nation, and what a horror they would feel at so intimate a connection with an Israelite. I know too, that a sincere christian may feel conscientious difficulties in such a case. I do not know what feelings and sentiments you may have entertained on this subject; the case is probably new to you, and therefore demands serious and mature consideration before you proceed further. It would kill my poor heart to find, when too late, that I had caused—" Here she became so deeply affected, that she had to break off and retire to her chamber.

I also got up, and with my crutch hobbled to my room in deep agitation, delighted yet troubled. My lameness and perturbation of mind effectually precluded all regular thinking while I was on foot, although my mental machinery was driven with an impetus that disposed me to bodily action at the same time. I lay down on the bed that I might compose myself, and obey the injunction to consider well this new feature of my love case; and somewhat after this manner did my mind work at the task of sapient reflection:

"Reflect! She tells me to reflect whether I can press that dear affectionate heart to my bosom! Yes, that heart! What sobriety of reflection is mingled there with the light of genius and the living fires of sensibility! She loves me with all that heart; sweet child of sorrow! How candidly has she told me that she is a Jewess, though she expected to make me loathe her by the intelligence—and that too at the very moment when she confessed her love! True, I have never liked the character of the Jews, either ancient or modern; but she has charms enough to put all such prejudices to flight. And why should I object to marry a daughter of Abraham, the friend of God, and the father of all believers? Were not the prophets and the apostles and the son of God himself, Israelites? And am I to feel degraded or mismatched, when I marry a kinswoman of their's? But were the Jews never so vile or loathsome as a people, my Judith has sufficient personal merits to redeem her from all objection and to cover all her people's sins. Has not the Creator stamped on her lovely person the evident marks of his favor and delight? How divinely sweet has he fashioned her? What a pure and lovely spirit has he breathed into that beautiful structure! Those eyes, beaming tenderness! That mouth, so rosy-lipped, and so eloquent—every smile a young Cupid—every word flavored with ambrosial melody! Such a soul in such a body! Formed and compounded to lead captive every sense and every faculty of the soul! And I am to question whether I can live happily with her! Have I not been with her a month in pleasure and in suffering, and found her equally amiable, equally engaging, whether I ascended with her to the ethereal heights of joy, or descended with her to the Stygian caves of sorrow? If a month—or is it a month? No, scarcely three weeks; but such a specimen of all experiences may give assurance for a life-time. But, says an objector, she is not a Christian. But in spirit and feeling she is a far better Christian, than nine-tenths of those who make the loudest professions. She loves the rules and the spirit of the Christian religion, and I have no doubt that she only needs to be placed in Christian society, and under Christian influence, to be soon persuaded to believe fully in Jesus of Nazareth. Oh! then what a happy life could we live in some sweet vale of my native land! I see plainly that all is safe. Shall I then bid her go for a Jewess, and break her heart with mourning her slighted love, or bestow her unrivalled charms on another? No, by all that is precious, I cannot, I will not—even now she is weeping for the perturbation that she gave my spirits. I have reflected—I am prepared to give her the result, and to ease her dear heart at once."

With this conclusion firmly grasped, though reached through a confused mixture of arguments and feelings, I got up and returned to the parlor. Not finding

Judith there, I became restless, and limped and stumbled about the room, full to overflowing of my sage meditations, and impatient to deliver the result to my beloved Israelite. When she heard me hobbling about, and striking against stool and chair under the impulse of my boiling thoughts, she came in with a countenance of half subdued anxiety, and said: "Well, my dear friend, I have allowed you a short time to compose yourself after the shock that I gave you, and to consider the consequences of a marriage with one who turns out to be not so unobjectionable as you supposed. But you must have a much longer time to settle upon a final conclusion."

"No, my dear Judith, I have had time enough; the thought of giving you up is distraction to my soul. I see no impediment in what you have told me to our loving and blessing each other for life. When you discovered to me what I had never conjectured or imagined, the suddenness of it startled me a little; but the fact itself cannot shake my love for you; it cannot mar my delight in you; and I can now most freely offer you my hand again, with a heart untouched by fear and altogether devoted to your happiness."

"I have (said she) the most perfect confidence in your sincerity; but the case as it now stands is quite new to you; it is but half an hour since you first conceived the possibility of your ever marrying a Jewess. I cannot with a good conscience bind you by an absolute promise so soon; I must give you time and opportunity to deliberate coolly on the subject, and to consult your friends at home. As to myself, I have heretofore considered whether I might honestly and safely give my hand to one against whom no objection could lie, except our difference in one point of religious belief. My mind has been made up. If he, after full consideration, can freely and conscientiously make me his companion for life, then I can accept his offer, if our affections are united. I am authorized by my father, and prepared by reflection as well as by feeling, to give my beloved friend and preserver all the satisfaction which the most solemn pledge can afford—this I will now do, and I rejoice that I can do it without fear, without hesitation, and with all my heart."

So saying, she rose and advanced to where I stood leaning on the back of a chair, and putting first her right hand in mine, she then with queenly grace and dignity, yet with all virgin modesty, addressed me in these words: "Here, my dearest friend, I give you the disposal of my hand, that you may accept or decline it finally, after you have considered the whole case in the presence of your kindred. You will then come to the conclusion, whether you can safely do what your heart desires. Write to me then. If you confirm our engagement, I shall rejoice as much as gratified love can make me; if you annul it, as you have the right to do, I shall grieve for the result; but I shall not blame you for exercising your liberty and consulting your happiness, instead of destroying it, and then mine with it, by an unsuitable marriage. You will at all events be gratefully remembered and unceasingly beloved as my friend and preserver. Thus I commit myself to your disposal; and now as my mind is deliberately made up and unchangeably settled, I hazard nothing when I call upon my God and yours, the God of Abraham, as I solemnly do, to witness the sincerity of the vow that I have made."

She then let go my hand and seemed about to retire. My first emotion, when she concluded, was deep reve-

rence, inspired by her language and manner. Next, when I looked upon her lovely face, and considered her now as my affianced spouse, I could not resist the impulse to clasp her to my bosom. "My love!" said I, as she began to retire; I advanced a step and opened my arms. She looked at me with angelic sweetness mingled with shrinking diffidence; and as she uttered these words, "Excuse me now, dear friend," she drew back and returned to her chamber, but without closing the door; she would not indicate the slightest fear—she did not feel it—for well did she know that I held that sanctuary of her's as inviolable, as if it were the consecrated abode of a divinity.

The painful embarrassment of our late position was now over. The satisfaction that she meant to give me by her solemn pledge, I felt in all its fulness. We had settled our engagement on terms, which left me nothing to wish for, and left her apparently very little to fear. At least she had acted towards me with such a conscientious and self-denying generosity, as might convince me, if I had not been convinced before, that a heart of such rare and amiable virtues could never make me unhappy.

Now the few remaining days that we spent at the hotel, flew away in all the delights of innocent affection, restrained without being diminished, by my dear companion's maidenly reserve, combined with the most winning evidence of her confiding love. But ah! too soon were these happy days brought to an end! Only four suns were suffered to shine upon our plighted love, before a servant entered our parlor to announce that Mr. Von Caleb, my Judith's cousin, and another gentleman with him, had arrived. We told him to show them up as soon as they were ready. I retired to my chamber, that I might not disturb the first feelings of the interview. When they came in, I soon heard the sound of mingled weeping and rejoicing. I was made to hear also that the companion of Mr. Von Caleb was a Jewish acquaintance picked up at New York, and who, as he had just arrived from London, brought intelligence that Judith's father and other relations were all well.

After the salutations and first inquiries were over, I opened my door and joined the company. Judith introduced me first to her cousin, Von Caleb, and then to her friend Mr. Levi. I noticed that she did not emphasise the word 'friend.' Mr. Von Caleb shook my hand affectionately, and at once thanked me fervently for my kindness to Judith. He was a middle-aged man, with a stout well built person and open pleasant countenance. But friend Levi was a small, old, shrivelled, sharp-visaged man, with little gray eyes deeply sunk under projecting shaggy eyebrows; his head was bald on the crown, but this defect was amply made up by a gray frizzled beard, which filled up all the spaces under the chin and jawbones about the neck, as if it were a cravat. He gripped my hand tightly, and with a squeaking voice, broken frequently into huskiness, uttered some friendly words; but I did not like either the looks or the manners of friend Levi. No where and at no time would I have liked them; here just at this time, I was most disagreeably affected to behold, in living reality before me, such a representative of the Jews, according to my former habitual notion of them. The disagreeable impression was, however, effaced for the time by a glance at my lovely Judith, and the open benevolent face of her cousin. These were enough to sweeten any one's imagination of the Jews.

After a few minutes' conversation, I got myself down to the bar room, that I might give the friends opportunity for a more private conference. In a short time Mr. Levi came down also, and seeing me alone in one corner of the room, he took a seat beside me. After some questions on his part about poor Eli's fate, I began from a natural curiosity to make some inquiries about Judith's father and family. I found the little man so communicative, that he soon told me more than I had asked to know; soon too he discovered to me that his darling theme was money; for start him on any track whatsoever, and he would speedily arrive at this goal of all his thoughts and affections. To this propensity I was indebted for a piece of information, which had now become more interesting to me than the little miser was aware of. The following specimen of his part of the conversation will convey the same information to the reader, and at the same time show the turn of the speaker's thoughts and expressions. I should remark also that he spoke English with a German accent, betraying the land of his birth.

"Is Judy's father very old, you ask—why, no, not so very; his hair is gray like mine—that's all. He walks on 'Change like a young man; and when he goes to his bank and counts the monies, he can see as sharp as any body—sure he can. Is Nathan Bensaddi a banker, do you ask? Why, yes, sure he is; every body in London knows that. He owns one of the greatest banks in London, I know—sure I do—for I have been his agent to collect money. Ah, he has the monies—sure; yes, money, money. Oh, so much money! That is not all—sure it is not. He lives in a big, fine house, on the street called Piccadilly. I have been in it. I have eat dinner there on feast days. Yes, the feast of Purim; and then I saw with my own blessed eyes what fine things he had in his house. Why, sure, his table was covered all over with plate. Yes, gold plate and silver plate—silver this and silver that—gold here and gold there—this, that and the other, all gold and silver. Ah, sure, you would think it was Solomon's house. Rich, you say? Yes, sure, that he is; and I have not told you all. Isaac Von Caleb told me last night that Nathan Bensaddi has mortgages on a great sugar estate in the West Indies, on an island they call Saint Kish, or Kitts, or something like that. Yes, and he told me that Nathan would soon have the land and the slaves and the sugar and the coffee and the spices, and all—sure. Yes, and that Eli was gone to see about it when he got drowned. Yes, and he told me too that Judy had a great fortune of her own besides. I knew that before—sure I did. Yes, I know how she got it too—sure I do. Old Simon Mordecai, her uncle by the mother's side, was so pleased with her nursing him in his long sickness, when he had no wife nor child to do any thing for him—and he was so cross and snappish, nobody could please him—but Judy pleased him—sure she did; and when his will was opened, there was Judy left heiress of all Simon's three per cent stocks. Yes, sure, a hundred thousand pounds. Ah! who would not nurse a sick man, if he *was* crabbed, for such good pay? Did it out of kindness you say? Why, yes—sure she did. She is the kindest thing in the world. I have heard her friends say so. She is *too* kind. She gives away *too* much money. Ah, Judy is a good girl—so rich. And sure, yes, she'll have the half of Nathan's fortune too, when he dies, now that Eli is drowned; and she has only one sister, Rachel, older than Judy; and she is married to a Christian—

hang him—I don't mean you—but I hope Judy won't marry a Gentile."

By this time my squeaking friend had fallen into a half soliloquizing mood, as if an idea had struck him, and drawn off his attention from me. A servant now entered and brought me a request to walk up to the parlor. I arose immediately to go, and while adjusting my crutch, I observed that friend Levi's chin had dropped meditatively upon his breast, while his tongue played incessantly, though his voice had sunk to a husky murmur. I heard only these words more, "Judy will be rich, rich—ah, so rich! Now, sure, if my boy Joseph —" I was by this time out of hearing, and hobbling towards the parlor with bran new ideas blazing before my imagination. I had conjectured that Judith's family could not be poor; but neither Eli nor Judith had ever given me a hint from which I could infer great riches. In fact Judith had seemed to me rather too reserved on this point, especially since our matrimonial engagement; for both before and since, I had let her understand that my parents were not rich, and that my inheritance would be small. I had hitherto in my dream of happiness with Judith, indulged no splendid fancies; my modest aspirations were limited to a snug cottage by a fountain side, in some green vale where forest trees bordering a meadow, would yield "in summer, shade—in winter, fire."

But now, as if touched by a magician's wand, the picture changed, and presented me instead of this humble scene, an elegant mansion seated upon a hill, commanding a view of the Great Valley and its mountain boundaries; with a fine library, not without paintings and other specimens of the fine arts; and windows looking out on all sides—here upon a park—there upon meadows in the vales around—and yonder upon fields on hill sides—and here and there on white cottages sending up wreaths of smoke from the fire-sides of happy tenants, a tribute grateful to the hearts of the proprietor and his lady. This new picture was completed just as I entered the parlor, and saw Judith conversing with her cousin. She, after all, was herself the sweetest vision of my heart; and the lovely reality dissipated the illusions of a dreaming fancy.

On seeing me, she rose blushing and retired to her chamber. Mr. Von Caleb also arose from his seat, and again taking me by the hand, expressed his approbation of our matrimonial scheme, of which Judith had just informed him. After we were seated, he continued in these words, lowering his voice, that Judith might not hear:

"God must have designed this union of two such good hearts; or he would not have brought you so closely together, by such an extraordinary dispensation of his providence. Now, after he has bound your affections together by so many ties, I would think it an impious resistance to his will to throw any hindrance in the way of your marriage. I could wish that you were both of the same religion; but still if you are willing to take a daughter of Abraham for your wife, I do not see why you may not both agree in worshipping the God of Abraham; and if you serve him as father Abraham did, He will bless you, though you may not have the same belief on some points. One thing I feel sure of, that Judith will never willingly disturb you on matters of conscience. I have known her from a child. Father Abraham never had a lovelier daughter; her temper is the sweetest and kindest in the world; her discretion is extraordinary for so young a person; it

was so remarked a year ago, when I left London; and she has an uncommon turn for improving by experience. I heard a poet of her acquaintance say, 'She is like the busy bee, gathering the honey of wisdom from every blossom of experience in the pathway of her life.' And now I must do what she has just enjoined upon me; that is, tell you all her faults, without favor or partiality, as if upon oath. First and foremost then; they say she has too much feeling, or sensibility, as they call it. This not only makes her suffer too much for the sufferings of others, but it lays her open to the impositions of beggars and rogues of all sorts. I don't mean that beggars are all rogues; but some of them knowing the tenderness of her heart, impose on her by falsehood or exaggerated stories of their distresses, and make her give them more than they deserve. This is only an excess of goodness, and I think that experience and hard rubs in this scuffling world, will teach her more prudence in this particular; and in this only has she seemed to lack discretion. So much for her first fault; now for the second: Let me see. What is it? Yes, they call her an enthusiast; because, I suppose, she takes fits of high feeling sometimes, and talks a little wildly, like a prophetess. I have heard her two or three times in these fits; I thought she talked very beautifully, if she did go out of the common way. She will get over this too, I think, as she grows older, and as she finds by mixing more with mankind, how much low selfishness and rascality there is among them. This will give her less poetical views of human life, and make the world seem less fit to kindle enthusiasm, and more as it is, a scuffle-field for the base passions and interests of men. That is my view of it, after twenty years experience; for so long I have been trying my hand amongst my fellow men. The more I have had to do with them, the less confidence I have in the greater part of them. But I am forgetting Judith's faults. I have told you two; next comes the third; but I believe I have forgotten it. I thought she had three notable ones. Little human weaknesses she has like other people; but I had a third with a name to it, that she told me not to forget. Oh yes, she is *romantic*; that is what they call it. She is indeed too romantic in some of her notions. She don't like fashionable society and city amusements. She is too fond of climbing the lonesome mountains, and of standing on a rock by the sea-side, and looking at the waves when the wind dashes them against the shore; and when other people go in summer time to the wells at Bath or Cheltenham, to drink the waters and dance in the splendid saloons, she loves to steal out into the country with a companion or two, where she can wander among green vallies and gather flowers along the sides of brooks; or sit on a sod with her book and read under a shady tree, where a spring bubbles out of the ground; and I verily believe that she would rather go out and eat a cottage dinner with plain country folks, than attend the richest city feast with its gay company of lords and ladies, its gold and silver wares, and all its wines and comfits, its ice-creams and syllabubs. Yet I have seen her dine at home with a great company, when her father made a feast; then she could enjoy it, and behave herself with the finest lady of them all. So I think she will some day get over her romantic notions too, and make you a good sober house wife.

"And now that I have done her bidding, and told you all that I know of her faults, I will tell you another thing, that she has not authorized me to tell. It is right

that you should know it; and I understand that she has not told you; for she has just expressed to me, how much she was gratified that you offered to marry her, without knowing or seeming to care whether she was rich or poor. Well, if you set no value on riches, and are satisfied to have Judith alone; still I hope that you will not throw her large fortune into the sea. You will find it right convenient to have her three thousand pounds a year, when the business of love has been settled, and the business of house-keeping comes on. Then her rich father, if no misfortune happens, will be able to give her a great deal more. But, my friend, if you find after a trial that a great fortune is good for nothing, and more plague than profit; why, then you may just give it to me and be done with it. So much for that. One thing more, and then I shall be through. I am sorry to tell you that I am so straitened for time, that I cannot give you another day with Judith, unless you go with us to Boston. I was ready to embark, and just waiting for poor Eli, when I got Judith's letter. I have important business in London, that cannot be put off; and there are papers in Eli's trunk that must go directly to England; they relate to a great plantation in St. Kitts, that is in suit between the owner and my cousin Bensaddi, who has a mortgage on it. What say you, my friend; will you part with Judith to-night, or will you go with us to Boston?"

Gladly would I have gone to Boston or any other place with Judith, but an obstacle lay before me, which would have been removed in a moment, if Judith or cousin Von Caleb had known or even suspected its existence. But strange as it may seem, just now when my charmer's newly discovered wealth came fresh and glittering into view, I felt a most swelling repugnance to a disclosure of my beggarly account of an empty purse; although I knew that she would esteem it a great favor in me to accept any thing from her hands. She had put her purse into my hands at Norfolk, and requested me to defray all our expenses out of it; but I told her that I would not consent to defray more than her own; and when I was lamed at the hotel, I returned the purse, telling her that she had better keep it now until we left the hotel. So I had given no sign that my funds were low. Now on counting, I found that I had scarcely a sufficiency to carry me home. I had to choose therefore whether to accept a supply from her who had given herself and her all to me, or to go home straight way. I chose to go home straight way. Why such reluctance now to put my poverty in glaring contrast with her riches? Was it a just feeling of self-respect? Or was it pride, a little spiced with envy? Or a compound of all these? However this may be, the feeling seemed natural. The fact may serve to illustrate the various workings of the human heart. Yet the discovery of my Judith's wealth was unquestionably pleasing to my heart—highly pleasing. Was this also natural, that a purely disinterested lover should rejoice at finding the gifts of Mammon attached to one who had been loved and sought solely for the qualities of her mind and person? What sayest thou reader? Would not such a discovery have *gladdened* thy heart? Thou art human—so am I. Happy is he who can content himself in his poverty. Contentment is better than riches; but let the poor man, happy in virtuous poverty, find a gold mine in his barren field, and in a moment his heretofore contented heart will swell beyond the confines of his poverty; and the loss of his gold mine would make him sit down and weep. But to re-

sume my story. After a moment's consideration, I told Mr. Von Caleb that I too was under a necessity (and was I not?) to return home speedily; and as I hoped ere long to follow Judith across the ocean, I felt the less difficulty at parting with her now; because a quick return home to make my preparations, would enable me the sooner to set off on my voyage.

"Well, then, (said he, raising his voice,) our boat will go to-morrow morning at six. As this will be your last evening together for some time, I will leave you to yourselves. You will not be sorry for that I suppose? I shall be out awhile on some business with Mr. Levi. He will not interrupt you, for we are after money." He smiled as he spoke the last words.

"Then, (said I,) as you go at six in the morning, I may as well take the Lancaster stage that goes at three o'clock."

"So then we have settled it, (said Mr. Von Caleb,) Good bye, till supper time."

He went out with his usual heavy tread; and when he had shut the door behind him, I heard Judith's door open gently on her side of the parlor. I had risen and was standing about the middle of the floor, without my crutch, which I no longer needed. I turned and met her eyes with mine. What a look she gave me of mingled love and sorrow! I approached the chair on which she leaned. She looked up again into my face. I saw the rising moisture of her eyes, as she said, "This night then we must part." The last word was stifled under a wave of emotion. I opened my arms; she fell upon my bosom, and for the first time we felt each other's embrace. Oh, Elysian moment! It was the seal of our betrothal, and the pure delight of love. Several minutes elapsed before we could utter a word. We had seated ourselves on chairs, and we continued to sit with drooping heads until we recovered the power of conversation.

After some exchanges of sentiment on the prospect of separation, I took occasion to allude to what I had just heard of the wealth of herself and family. "Then he told you that too? Well I am glad that you did not know it sooner."

"Since I have heard it at last, dear Judith, I will tell you that it gives me the satisfaction to know that you can afford to take a poor husband."

"Poor in pelf, he may be; (said she promptly,) but I know the wealth of his mind; that is the highest of all endowments; and in comparison with that gold and silver are but dross. If such earthy dower as I can bring, be of any consequence, I rejoice in it for this that you can the better afford to take me for a wife. Such wealth as I have is nothing to be proud of; for millions of it would argue no personal worth but only good fortune. I have hitherto found my worldly goods rather an obstacle to my happiness; for while they brought me numerous suitors, they brought with these applicants for my favor the painful suspicion, that my fortune, not myself, was the object of pursuit. Therefore I could love none of them, because, however sincere their professions might be, they could not give the proof of real affection that my heart required. Often did I wish that I could appear divested of accidental circumstances, and just as I was in myself, an honest, simple maiden; and then might find some congenial soul whom I could freely love, and who would love me

heartily for myself alone. I wished on another account to form an attachment in this way. My friends call me romantic, and I confess a fault which they would not impute to me without evidence. I am conscious indeed of a warm and I suppose a romantic attachment to the country—London bred as I am. Particularly do I love mountain scenery, and would most delight to spend my days among the sublime and beautiful works of nature, and a virtuous rural population, such as are found in your country. With my strong predilection for such a life, how could I expect to form a happy alliance in London, where all or nearly all are bred to relish artificial objects and manners, and to covet wealth as the means of artificial splendor and the pompous show of fashionable life. I could not entrust my heart to any, where the prospect of finding a congenial spirit was so hopeless. In the days of my sorest affliction, God was pleased to show me a heart in all respects agreeable to my desires, and to give me the love of that heart under circumstances that banished all possibility of suspecting its sincerity. He has bound us together by the strongest ties of sympathy in all that makes prosperity joyful and calamity grievous. But I forget that there is one root of bitterness planted in the garden of our affections."

"Forget it, dear Judith, forever; it shall never spring up to trouble us."

After a little further conversation the servants brought in our tea, and we sent an invitation to Judith's friends to join us. Mr. Von Caleb came. After tea I went out for half an hour to enter my name at the stage office, and to give Judith and her friend the opportunity of completing their arrangements. On my return from the stage office near the hotel, I found Mr. Von Caleb in the bar-room. He shook my hand affectionately, and told me that he would let me and Judith spend the remainder of the evening alone; so with another friendly shake of the hand, he bade me farewell.

When I entered the parlor, I found Judith sitting pensively on the sofa. We were both sad almost to death. We first arranged that I should write to her at farthest by Mr. Levi, who was to embark at New York on the first of June. I might write to her as soon as I reached home, and then the oftener the better, she said, were it only to let her know of my welfare. I promised not to be hasty in my final determination about our engagement; for so she again required, although a sigh escaped her when she made the requirement. If I ratified the engagement, she would be happy to see me in London as soon as I pleased, but I must understand that she could not put off her mourning weeds for a bridal dress, until she had given a full year's sorrow to her dear lost Eli; so that if an early visit to London should not suit my convenience, she would not impute the delay to alienation of heart. If I annulled the engagement, I must still consider her as my grateful, devoted friend, who would rejoice at any opportunity of showing her gratitude for my disinterested kindness and care. Her voice faltered when she spoke of the contingency that I might decline the marriage; yet her conscientious judgment on this point wavered not, painful as the expression of it evidently was. She made the self-denying sacrifice of her own feelings to give me every advantage for the security of my happiness. Many expressions of tenderness did she utter,

and of ardent gratitude and unalterable friendship, whatever I might do with our connubial engagement. I wondered—in fact I was not well pleased—at her repeated allusions to the possibility of my discarding her—an act as remote from my thoughts at that time as Heaven is from Tartarus. But she had evidently reflected much upon the causes that might operate a change in my views. As to her own part in our correspondence, she promised to write as soon as she landed in England, and would then wait for a letter from me before she wrote again.

Having in these and other particulars come to a full understanding with each other, we had leisure to feel how distressingly near was the dreaded moment of separation. Two or three hours more, and we must part. What were our feelings? Oh hours of sorrow and delight! How did we snatch every fleeting moment, to fill higher and to mingle deeper the cup of our youthful love! We clung to each other's embrace; our tears mingled as they fell; our hearts answered throb for throb. How could we part? The clock struck eleven. "Adieu"—but she stammered in the attempt to utter it.

"Not yet, not yet; I cannot leave you." One more hour passed away—the last hour—it flew with eagle's wings, as it shed down upon us all the delicious luxury of innocent sweetest affection saddened—the full relish of the bitter-sweet of love—the fiery rapture of joy, flooded with grief, yet bursting through the flood.

Propriety admitted of no longer delay. The clock sounded the hour of midnight, long and loud, with clang after clang. Clang after clang struck on our hearts the knell of the last blissful hour; then all was still again, except our beating hearts. Our time was come; yes, the last moment of our realized union with its unutterable sensations; the separation must now begin, and widen and widen, till lands and seas should intervene, and time and chance should cast all their changes and their hazards between us, and possibly open a gulf impassably broad and deep, across which our now blended hearts could never commune again. Once more she meant to say, "Adieu," but the word died on her lips. I caught the expiring accent as I pressed my lips to her's; the balmy sweetness remains to this day. We retired to our respective chambers like criminals going to execution, so deadly was the sadness of that parting.

Could I sleep? Not a wink. The sensations of the evening kept thrilling in my nerves; unconquerable musings on the past and the future, ran perpetually through my mind. I seemed to have lived an age within the last three weeks. To go back aloft to the home and the landscapes of my boyhood, though less than a month before it was the object of my fondest desire, seemed now like going into the shades of death; for whilst I would be returning to my hills again, my Judith would be on her way to cross the wide ocean, and would soon be far hidden from my sight among the myriads of London. But I imagined myself following her course, traversing the seas, pressing her again to my bosom, yes to my "heart of hearts" in the dear character of wife, and bringing her back to bless my sylvan days in the green vallies of Virginia. This was the new age of gold that was rising to my mental

vision, arrayed by fancy in all the charms of happy love and pastoral scenery.

CHAPTER IX.

THE STUDENT'S RETURN.

Fifteen minutes before three o'clock, my waking dreams were interrupted by the servant, who announced that the stage coach would soon be at the door. I got up, dressed myself in a hurry, and wrote another adieu to my love; which, although but five lines in length, was sufficient to carry me away again into the fairy land of dreams; there I sat with my elbow on the table and my head on my hand, till the servant, supposing me asleep, jogged me. I started up, hastened down to the bar, and called for my bill, which the clerk had, rather strangely I thought, declined to furnish until now. When he gave it to me, I found the surgeon's and all as I had requested, made out in full, but unexpectedly paid by Mr. Von Caleb, according to a receipt appended. With the bill the clerk also handed me two other papers; the one was a sealed packet directed to myself, and the other a receipt for me to sign, acknowledging that my bill was presented with the receipt as aforesaid, and that a packet was given me, directed as aforesaid, and sealed with a seal having the word "Fidelity" for its motto. "Who wrote this?" I asked. "Mr. Von Caleb," answered the clerk, who added that Mr. V. was a very particular man in doing business. "Yes, (said I,) he seems to know how to guard against tricks upon travellers."

I had scarcely signed the receipt, before I was summoned to take my seat in the coach. I handed the clerk my *billet-doux*, thrust the papers into my pocket, and hastened out. On taking my seat I looked up at Judith's window—it was lighted—her sadly declining form was distinctly shadowed forth upon it, with the head resting on the hand, as if she were looking down upon me. "Shade of my beloved (said I in my full heart)—shade of my beloved, fare thee well, fare thee well." The whip cracked, the wheels rattled over the pavement, and I no more saw even the shade of my beloved. "Now we are parted indeed," said my heart, aching and not ceasing to ache.

I was driven rapidly to Lancaster, heavy with grief and watching, yet unable to rest from the spontaneous workings of the imagination. The dear image floated continually in the fields of mental vision; the music of that voice still sweetly chimed upon fancy's ear; those eyes whose look could never be forgotten, shed incessant lovebeams into my soul; and that pure soft heart—I felt it beating yet responsively to mine.

I spoke not to my fellow-passengers. I heard not their conversation. Time and space were flying past, as the vehicle crushed the pebbles of the road, and the flint-stones sparkled under the armed hoofs of the horses; but I marked not the flight of time or space; my spirit was away with Judith, first in the parlor, next in the steamboat—watching the tear-drops as they fell from her eyes, and the palpitations of that affectionate heart; and my thoughts, like spiritual messengers, seemed to penetrate into the recesses of that throbbing breast, and to find my own image cherished as a nursling there. Thus I enjoyed a realizing sense of the fact, that although time and space might sepa-

rate our bodies, our souls could still melt and mingle into one.

At the breakfast house, I took the opportunity to open the sealed packet that I received at the bar. Under the envelope I found two sealed billets; the one was superscribed in Judith's hand-writing, and contained something hard. I opened the other first to have it out of the way. I read as follows:

"Mr. Garamé,—Pardon me for using a little art to do you an act of justice, which you might have declined otherwise to accept; but which, as agent for my cousin Nathan Bensaddi, I could not in good conscience neglect, nor would he be satisfied to learn that it was omitted. Your kindness to his daughter has put you to considerable expense and trouble. The enclosed note of one hundred dollars may reimburse the expense; but for the trouble, which you would count as nothing, and for the generous kind-heartedness, which we count above all price, I know not what compensation we can make you, except you conclude to take my sweet young cousin herself. However that may be, I pray the God of Israel to reward your goodness with every blessing.

Farewell, kind friend, ISAAC VON CALEB."

This was all quite agreeable. Agreeable in matter because delicately agreeable in manner. I thought I saw my Judith's delicate tact in the management of this little affair. The other note was surprisingly interesting.

"Two o'clock.—How can I sleep, when the sound of the wheels that are to carry you away will soon be heard in the street? My cousin, Von Caleb, sends me word that he is awake, and will take care that you receive whatever communication I may yet have to make. This only I would repeat to my dear friend: In your happy valley think of your Judith; but be prudent and destroy not your happiness and consequently her's, by obeying your desire at the expense of your judgment and conscience. If after reflection you cannot marry a Jewess—yet I know that you love one—always love her. Yes, my heart tells me that you will. Write at all events before June—as a friend, if nothing more. The enclosed memorial was brought from England by cousin Von Caleb, and put into his trunk when he left Boston. He had forgotten it until after he went to bed. He has sent it to me, asking what I would do with it. I give it to my beloved preserver, knowing that he will value it as a keepsake; and value it the more, if he should never again see—Oh, that painful thought! let it die in silence. Farewell, once more, dear friend, farewell, farewell. J. B."

The last words of this note were blotted with tears. With trembling hands and a beating heart, I unwrapped the memorial, wondering what it could be that under its wrappings felt roundish and hard like a coin, but considerably larger. Think of my exultation, when I discovered it to be an elegantly wrought golden locket-case, which opened with a spring, and exhibited to my eyes a perfect miniature likeness of my own Judith! Oh, that sweet face! That well formed bust! Whilst I leaned over and devoured this picture with my eyes, I was called to breakfast. "Breakfast indeed! (said my heart :) Who could leave such a feast of the soul to put coarse viands into his stomach? Let the body wait for its earthy nutriment, until the spirit is satisfied with

this celestial nectar and ambrosia." So I gazed upon the lovely portrait—kissed it—then gazed—then kissed it again, alternately, until the stage-driver's signal roused me. I put the dear jewel into my pocket, and resumed my place in the coach. Away we went with whirling wheels, which left behind them a train of dust ground from the stones of the pavement. At the rate of eight miles an hour was I carried homewards, but away from the place where I had parted with Judith. Nine times, according to my conjecture, did I read my Judith's note; and nine times steal a look at her portrait, before we stopped for dinner at Lancaster. I dined without appetite, and continued my journey towards Harrisburg. About ten o'clock at night we reached the sleeping house. I went supperless to bed, and after tossing about till midnight, fell into a troubled sleep. At Lancaster I had suspended my beautiful locket-case by a ribbon about my neck, and put it into my bosom directly against my heart. I was awakened out of my unquiet sleep by some unusual sensation. I felt for what was uppermost in my thoughts, the golden treasure of my bosom; and behold! I found it drawn out, and lying at the full length of the ribbon, towards the front side of the bed. I knew instantly that some rogue had attempted to filch it, and had failed only from my ready wakefulness. I suspected a fellow passenger, who slept in the room with me. I had that afternoon detected him eyeing my jewel, once that I drew it out to take a sly look. I thought then that he coveted my treasure, and had the look of a rogue. For safety, therefore, I locked it up in the very bottom of my trunk; hard as I felt the self-denial to be, when I deprived myself of the opportunity to look at my Judith's likeness, some ten or twelve times a day.

By three o'clock the next morning I was again on my way. At Harrisburg I ate a little breakfast; then crossing the Susquehanna, I reached Carlyle early in the afternoon. Here my strength and spirits began to fail so greatly, that I doubted my ability to pursue the journey without a day's rest. The extraordinary scenes in which I had been engaged during three weeks, had kept me in a state of constant excitement; ten days confinement in Philadelphia had impaired my health, and now two days of violent emotion, watchfulness, and loss of appetite, had exhausted me. Such a protracted strain upon the nervous system, followed by loss of appetite, want of sleep and fatigue of travelling, was more than human nature could bear without a distressful prostration of both corporeal and mental powers. In the case of one who, like myself, is constitutionally subject to fits of melancholy, the necessary consequence would be a state of deep mental dejection, accompanied with sombre and dispiriting views on all subjects. I cannot otherwise account for a change, which on this second day of my journey, began to come over my spirit.

I frequently read my dear Judith's note; at first in the morning with the same unmixed pleasure as on the preceding day; but in the afternoon the word Jewess began to grate a little on my feelings, and to suggest some thoughts, transient and obscure, yet rather unpleasant; amounting to no more than a general impression, that my happiness in love would have been complete, if with all its positively agreeable circumstances, this unfortunate one of my beloved's Judaism had not been mingled.

In the neighborhood of Carlyle, I recognised clearly the features of the Great Valley, my native land, with which previously to the last few months, all the affections and pleasures of my life had been associated. Here, though with less sublimity of mountain and less variety of low ground, were the parallel ridges, and the wide interval of rich slopes, with their limestone rocks and rivulets; all which reminded me strongly of the objects of my boyish delight. This effect of scenery to revive old habits of thought and feeling, was increased on the third day, when I felt partially refreshed after some hours of sound sleep. I had pursued my journey notwithstanding my exhaustion; better probably had it been for me, if my impatience to reach home had permitted me to stop and recruit my wasted strength. However, on the third day I saw the country assuming more and more the appearance of my native land; then more and more did my thoughts revert to former days—days of calm delight in study, or cheerful amusement, in rambling over hill and dale, fishing in deep shady pool, or gathering flowers on meadow sides or wild mountain steeps.

With the revival of old and fixed habits of mind, my new delirium of passion began to abate; not that I thought Judith less beautiful or less worthy; but now when the placid current of old thoughts and feelings was started afresh, the new torrent of amorous passion began naturally to exhaust itself. Judith, all charming as she was, no longer engrossed all my powers of thought and feeling. Her lovely presence with all its affecting circumstances, our parting with its unutterable emotions of delight and sorrow, had raised within me a turbid and overwhelming tempest of feeling, which had so far abated under the influences just mentioned, that calm reason could now begin to shoot some rays of its light through the troubled atmosphere of the mind. Yet the mental fluctuations that followed, ought perhaps to be attributed as much to the disease of low spirits, as to the efforts of reason to sway the violence of passion. I shall not stop to philosophise, but proceed with my story.

Whatever the cause might be, it so happened that on the third day of my travels, the word *Jewess* in the dear note so often read, began to strike positively disagreeable impressions upon my mind. Whilst I would be musing on my lovely Judith, and seeing her with fancy's eye arrayed in all her charms, that troublesome word "*Jewess*" would come with some ugly thought behind it, and dissipate, as with a wizard's spell, the fascinating colors of the vision.

On the fourth day, when I entered Virginia, the souring tendency of my thoughts increased. More frequently would that detestable word return and trouble the sweet current of my feelings. "*Jewess*," "*Jewess*," would I say to myself, and that too in spite of myself. "Am I really in love with the daughter of a Jew? Am I to connect myself with that accursed race?" Every successive day would such villainous thoughts rush in more obtrusively. When I looked at the mountains on either side of the way, and at the ever changing views occurring along the road, and recognized the likeness of my dear homestead in many a wood-crowned hill and rocky vale, I would think of my youthful delights, and the long familiar faces of those whom I loved; then gliding from the past to the future,

my heart would take the amiable Judith to the home and society of my former days, and imagine what new pleasures she would bring with her, and with what new charms she would invest my future dwelling place in this lovely land; then uncalled for, would the same and other loathsome ideas come in like imps of Satan, and thrust their ugly visages into the very foreground of the picture. "*Jewess*," "*Jewess*," would I repeat, as if by some instigation of the arch fiend. Yes, a *Jewess* is to be my wife. My children are to be half-blooded Jews. My neighbors are to point at her as we pass by and say, "That is the *Jewess*." When we go to church—*we*, do I say? Perhaps she will not go to church; but be wishing for her Rabbi and her synagogue; but suppose that in compliance with my desire, she do go to church; then every eye is upon her—whispers go round, "The *Jewess* has come to church! Do you know whether she is likely to be converted?" and so on. Then the minister preaches at her, and deals out anathemas against the unbelieving Jews—and I am to be reproached, and to reproach myself, for the inconsistency of professing christianity and yet marrying an unbelieving *Jewess*, and making her the mistress and the mother of my family. Oh how can I do it?

I groaned with horror at these reflections; unable to banish them as baseless fancies, and vexed with myself for admitting them. But every day they crowded harder into my mind, assuming at each return more grim and appalling aspects. In vain did I muster facts and affections against them. Judith's personal charms; Judith's amiable temper, extraordinary intelligence, admirable genius, exquisite accomplishments, fascinating manners—our congenial tastes, our mutual love, her generous pledge to me, my assurances to her—all that had filled and captivated my soul for weeks—all were brought forward on the side of love, and admitted on the other side to be true—yet could not all these considerations banish the hateful accompaniments of that cursed word, "*Jewess*!" Still would it come and fetch its goblin retinue of conscientious scruples and ingrained prejudices.

Sometimes indeed my love was victorious, and beat this haggard crew out of the field. Judith would rise in all her charms before my imagination—memory would tell the affecting story of our grief-born union of hearts—reason would demonstrate her inestimable worth—impassioned fancy would adorn her, as nature had adorned her, with the hues and lineaments of angelic loveliness, and my heart would be feeding on the delicious vision. But then, (my black bile beginning to work,) all of a sudden, like the harpies of old, and quite as abominable as those monsters, a new flight of black vulturine thoughts would descend upon the banquet of my soul, and change the zest into nausea by their defilements. "*Jewess*," "*Jewess*," would I again mutter like a demoniac. "A Jewish wife must make me miserable. When I teach my children the doctrines of christianity, their Jewish mother will be a hindrance to their faith and a grief to mine. I must either omit the worship of God in my family, or be disturbed in my devotions by the thought, that when I utter the Saviour's name and express my reliance on his mediation, the partner of my bosom, whether she kneel like a hypocrite, or sit like an infidel, will in her heart attach the title of impostor to that venerable

name." Then would my heart rise up with disgust against the whole race of unbelieving Jews, ancient and modern. Then in rapid succession would texts of Scripture, facts in history, passages in books of travels, and all that I had read or heard, that was dishonorable to the Jews, rise up in my memory and fill me with detestation of the very name of Jew. "The Jews! The stiff-necked hard-hearted race, (would I mutter bitterly,) who provoked the patience of God, until He by his prophets cursed and banned them out of his mercy and from the pale of human society, and made them a hissing and a curse among all nations." Did they not, like furious demons, cry out "Crucify him, crucify him?" And how many acts of fiendish malignity and loathsome baseness, have they committed? They are hated by all nations, by Christian, Mussulman, Pagan—"by saint, by savage, and by sage"—all concur in executing the Divine curse upon them. And I am to marry one of them! Oh, why was so beautiful, so amiable a creature born of the accursed race? The miserly knavish race! The scorn and the detestation of travellers in Poland, and wheresoever strangers are exposed to their knavish tricks and unprincipled exactions! Faugh! The squalid occupants of suburbs and streets, where a decent passenger is nauseated by their filth! The bearded venders of old clothes! The malignant Shylocks of the money market! Their very name has become a term for villainy and extortion. *Jew* signifies miser and rogue. Yet these people I must take into my bosom for my wife's sake—and call them cousin!

Such was often the train of my reflections, especially when the evil spirit of melancholy diffused his bile over my thoughts. Judith herself was always lovely to my soul; the black demon could not dim the lustre of her beauty, nor stain the purity of her character, except by incorporating her with the mass of her nation, so as to obscure the merits that shone out from her charming individuality. But the one fact personal to her, her Judaical education, combined with prejudices against her people, harassed me from day to day, and crossed the path of my love with an omen too sinister, and too obviously real, to be any longer regarded as a mere freak of the brain, originating in melancholy.

The contest of antagonist principles began at last to assume a degree of regularity, after the misty turbulence of my feelings had measurably subsided. But the violence of the mental strife rather increased, as the opposing principles began more distinctly to array themselves for the contest. I will not call it a contest between love and reason, for there was evidently much reason on the side of love; but in the ranks of the other side, there was not only a host of prejudices, but something besides, of giant force and of ghastly aspect.

The agony of the struggle was temporarily abated by the appearance of my beloved Rockbridge. When I entered its confines, I hailed with delight the grim aspect of the Jump Mountain, as he reared his black and shaggy brow over the border of the landscape. Not less did the great Hogback please my eye, when I saw him, the next in order, bend up his swelling ridge bristled with pines. But most joyfully did I behold the rising majesty of the House Mountain, as it gradually stood forth in solitary grandeur, and exposed to view its double ridge and huge buttresses, like a palace

built for the king of the giants. Again were my home-felt pleasures more vividly restored, when I crossed the high swell of Timberridge in the middle of the Great Valley and saw far away in the southern horizon, the dim Peaks of Otter, shooting their points deeply into the vault of Heaven. Next, the familiar scenes near my father's cottage shed their sweet influence upon my heart, from verdant hill and from meadow brook, stealing its way along the dale beneath the covert of its willows. When the cedar cliffs by the river showed me the pathway to the dear nook where I drew my infant breath, I sprang from the coach, threaded each well known turn by rock and tree, saw in all its rural quietude the home of childhood, bounded into the house, heard the cry of joyful surprise, flung myself first on one breast, then on another, of parents, sisters and friends, and received with delight the enthusiastic greetings of the servants, whose sooty faces were enlightened by the shining white of their teeth, and the not less shining whites of their glad eyes. Now for awhile I felt as simply happy as I had been, when

In rustic boyhood, free from care,
I hooked the trout and chased the hare.

But I soon relapsed into my distressing meditations. When the first gale of delight on arriving at home had blown over, I remembered my matrimonial engagement with a Jewess, and the remembrance struck a damp on my feelings. "Now (thought I) comes my sorest trial. I must tell my parents and friends that I am about to fetch a Jewish wife into their circle; and how it will shock them! How they will wonder and grieve!" I had walked out to look over my old play grounds, and my favorite bank for summer fishing and reading beneath the shade of a broad elm, when these painful thoughts occurred. To banish them, I returned to the house and busied myself with conversation. I was not yet delivered from my tormentors, when my sister Elizabeth asked me for the key of my trunk, that she might dispose of my apparel. Then I remembered the dear portrait, which I had not taken out, and in the confusion of my thoughts seldom even remembered, since it was put away. Fearing that it might be found and bring on a premature discovery, I hastened up stairs alone, took it out, opened the case, and again felt the witching charm of those lovely features, to such a degree that all doubts and fears vanished like ghosts before the rosy-fingered beams of Aurora. "I will write to-morrow," said I, as I closed the case and locked it up in my drawer. On going to bed I looked at it again, and felt doubly assured that the soul which beamed through those eyes, could never make a husband unhappy. "I will write to-morrow, (said I again,) and inform her of my safe arrival, and of my unalterable determination to fulfil our engagement." I went to bed and mused sweetly on my Judith, until my waking thoughts faded away into the purple twilight of dreams; then Judith herself appeared in a green meadow of fairy land, gathering sweet flowers,—her form invested with the airy lightness of a sylph, and colored with the rainbow tints of a blessed spirit.

The next morning I slept so long and soundly, that when I awoke I heard the family at breakfast. I dressed myself and hurried down to join them. After breakfast we went to the parlor, where I was pleasantly

engaged during the forenoon in conversation with the family, and some friends who called to see me.

Towards noon my father alluded incidentally to the sale of a horse, which he had lately made to a traveller. I asked some question which led him to give us an amusing account of the transaction—amusing to all the rest, and it would have been equally so to me, if my unsuspecting parent had not used an expression, which I had often heard and often used myself, but which now had gall and wormwood in it to my feelings.

"He tried to *Jew* me," said my father.

"Was it that little bald, sharp-faced man that I saw with you at the post-office?" asked my sister.

"Yes, (said my father,) with small gray eyes and a shrill voice."

"Perhaps he *was* a Jew," added my sister.

"Possibly enough, (said my father :) his knavish looks would at least become a Jew. He tried first to impose on me by undervaluing the horse, and then by passing uncurrent money upon me, protesting that it was current. If he was not a rogue of a Jew, he was a Jew of a rogue."

These unusually bitter expressions of my father went like daggers' points to my heart. But my kindred most undesignedly condemned me to still keener torments. My good mother spoke up, and said :

"It is a happy circumstance that we have no Jews among us in the Valley. I should hate to have any thing to do with them."

My mother's face exhibited her anti-Jewish disgust as she spoke.

"They are not *all* so bad," said my father in extenuation ; and I thanked him in my heart for the sentiment. But my mother drove the dagger up to the hilt, when she replied :

"Good or bad, a Jew is a Jew ; and I should hate to have any of them about me."

This was too much for my feelings. I rose hastily and went out to conceal my agony. Doleful indeed were my dumps. "They will never consent," said I, as I rushed away from the house, with as much hurrying impetuosity, as if I were stung by a swarm of hornets. "Perhaps they never ought to consent," was the next reflection. The whole train of my evil thoughts returned, headed this time by the squeaking miser Levi, so like my father's horse buyer. I hurried wildly on, till I found myself on the brow of a precipice by the river side. I was not prepared for a lover's leap into the stream below ; therefore I stopped, and seating myself on a rock, leaned my head upon my knees, and in that meditative posture sank deeper and deeper into the black sea of my reflections. Here I was found by a negro boy sent to tell me that dinner was ready. After swallowing what I supposed might conceal my want of appetite, I remembered that Judith's portrait had hitherto operated as a charm, either to keep off the black demons, or to exorcise them if they had possession. Inspired with eager hope, I rose from table and went hastily up stairs for the portrait. I found my table drawer unlocked, as I had inadvertently left it in the morning. I hastily searched the drawer, and lo ! the portrait was gone ! My talisman was gone ! Instead of the hoped-for relief, additional miseries came upon me ; the dun clouds of despair boiled up more thickly and fearfully in the horizon of my soul. Who could

have taken my jewel ? I could not conjecture, and I durst not inquire ; because inquiry would end in a disclosure of my love-engagement with a Jewess—a secret, which in my present state of mind, I could not bear to reveal.

After some days my conscience smote me for withholding so important a communication from my parents, who had a right to know my matrimonial scheme ; and who were best qualified to teach me by their cool and experienced judgment, how to distinguish the dictates of sober reason from the illusions of passion and the suggestions of prejudice. Freely could I tell them all but the one fact, that although my Judith was the best and the most beautiful of maidens, and wealthy withal, yet she was that most disagreeable thing—a Jewess. Oh misery ! how often, when the story was on the point of my tongue, did I shudder and draw back at the thought of telling that. But *that* was the critical point of the case ; to withhold that would be to evade the gist of the difficulty.

Days and weeks rolled on but gave no return of brightness to my soul,—no decisive result to my agonising reflections. I moped and mused and pined away. My friends observed my melancholy air and haggard looks. They ascribed all to returning consumption, and often took counsel about the means of cure. Alas ! they little dreamed that the malady was consuming the heart and not the lungs.

Thus I drooped and hesitated, until the month of May, was three-fourths gone. I had not written even the friendly letter which my Judith had so earnestly requested. What a beast was I ? Now the time was come when I *must* decide the matrimonial question, either by action or by procrastination. I must now write to my lovely Jewess, or forfeit all claim even to her friendly regard. I had promised to write my decision *at the latest* by the sharp-visaged miser Levi, who would embark at New-York on the first day of June. Often did I sit down with pen in hand, resolved to write something. But what could I write ? That I was well ? No ; That I had decided to marry her ? No ; That I had consulted my friends ? No ; not even that ;—That I was tormented with doubts and fears, and yet unable to decide ? yes ; but why write a fact which could only distress her ? Better not write at all : the failure of the promised letter might be imputed to accident. But on second thoughts, this appeared unfeasible ; for she had reason to expect several letters ; and all could hardly fail. One other course remained ; I might if I pleased say to her ' Forget me, lovely Judith.' In a misanthropic mood, when every thought was dark and bitter, I twice sat down in desperate resolve to end the strife by writing her a letter of dismissal—but ere the fatal sentence, "I have decided not to marry you, my Judith," could be finished, I seemed to hear thunders roll at a distance, and to see the lightning flash of my tutelary angel as he descended at this awful moment ; and then a monitory voice within me would whisper, ' Cast not that pearl away ? ' Then I could not—for my life I durst not—wilfully cast that pearl away.

The eve of the last day had arrived when I must write to secure the stipulated conveyance. To defer my answer beyond the next day, would be in effect to discard my beloved Jewess. The sun of the evening had set in the deepest gloom of a cloudy atmosphere ;

my soul was gloomy as the shadow of death. My powers of mind and body were almost prostrated by long and deep melancholy, now reaching the acme of a doleful hypochondria. I sat in my room; my candle burned dimly with its knobbed, unsnuffed wick. I leaned over the back of my chair with my elbow behind it and my temple supported with the palm of my hand; my eyes were half closed, and scarcely sensible of the glimmering light in the room. Horrid spectres now for the first time flitted across the fields of my imagination, and disappeared. Then they reappeared, bloody and fierce; they stopped and gloated and grinned at me, until I almost fainted with terror. I was verging to absolute madness. Suddenly I heard a low tapping at the door. I started up, shuddering with dread; for I conceived that murderers were coming with daggers to stab me. "Who is there?" I cried, with a scarcely audible voice. "Me, massa Willie," was the answer. I felt instant relief, when I recognised the voice of old Hannah, my nurse, in infancy, who always had for me a mother's affection. She opened the door softly, and completed my restoration to sober sense by the sight of her honest face. "Massa Willie, I don't want to 'sturb you now, when you got so poorly again. I jist came to ax you if that slut Poll that Massa hired last Christmas, didn't take this curious piece o' money, or whatever it is, from you. I thought it must be your'n, for I know it ain't none o' her'n. See, here it is," said she, coming forward and holding up what I saw instantly to be my locket-case—my talisman! As the famished tiger or the boa-constrictor springs upon his prey, so did I spring forward and clutch my jewel; and when I had it in my grasp, I lifted both hands aloft and cried "Thank God, thank God, I have her once more." Then I said quickly, "Go down now, aunt Hannah, I wish to be alone." She was amazed, as well she might be, but retired promptly, saying as she went, "That can't be money, no how, that makes Massa Willey so glad." I hastily locked the door after her, already sensible of a new spirit within me; then taking my seat at the table, I snuffed the candle, and pressed the locket-spring. The lid flew up, and again presented to my longing eyes that sweet enrapturing face. The picture restored with magical force and rapidity, the lovely traits, corporeal and mental, of the dear original, now so nearly abandoned. I looked and looked; the beauteous image seemed to acquire animation as I gazed upon it, and to rise before the imagination into the living fulness and reality of Judith's lovely self. Yes, now my Judith was herself again. Melancholy with all his imps of darkness vanished at her presence. Again I felt the impression of those love-darting eyes; again heard in my soul the soft melody that flowed from those sweet lips; memory awoke and presented in pristine freshness and with enchanting effect, all the affecting images of the past;—the journey to Charleston—our stay there, with the piano and the songs of heart-melting pathos; then the disaster at sea, the throes of her grief, and the sympathy of our souls;—then our sojourn in Philadelphia, the maturity and the embarrassments of our love—the purity, the self-control and the intensity of her affection; lastly, the parting hour, its keen sorrows and thrilling delights, with all that made them keen and thrilling. I saw and felt them all again. After this revival of former emotions in my soul, could I then give

up my Judith? No, no; the dominion and the wealth of the world were a boon too poor to buy her out of my arms. I would have dared the stormy deeps of every sea—I would have crossed frozen Alps and torrid Sahara—I would have braved the shadow of death, and gone down, like Orpheus for Eurydice, to the dusky mansions of departed spirits—and would have deemed myself well rewarded to win so lovely a creature at last. The clouds were now dispersed, that had so long obscured the bright prospects before me. The word Jewess no longer drew after it the gloomy conceptions of fear, and of a diseased imagination; it was now associated only with Judith's self—with the radiance of her beauty, the unalloyed sweetness of her temper, the unsullied purity of her principles, and all the attractive qualities of her mind. Even my religious scruples, heretofore aggravated by melancholy, now gave way again to the conviction, that Judith already so esteemed christianity and was so nearly persuaded of its truth, as only to await the influences and the occasion that our marriage would present, to believe and to profess the whole. What then had I to fear? Nothing. Such was my conclusion within two hours after her portrait had begun its reviving influence upon my heart. Some of the reasonings which led to this comfortable conclusion, may have been the logic of reanimated passion. Whether it were so or not, my understanding then accorded its approval to the desire of the heart.

I hesitated no longer, but wrote the chief part of the letter that night; declaring my undiminished love, and my fixed resolution to go and claim her hand, as soon as she would permit me. I apologised for my delay, by acknowledging the diseased state of my mind, and the gloomy views that succeeded and produced a long struggle. I expressed my intention to visit her in London before the expiration of the year; but said that I would await an answer from her, that I might, if she gave permission, go prepared to consummate our union before the next spring which was the time that she had appointed as the earliest period of our nuptials.

Having written thus much, I went to bed; leaving what remained to be filled up in the morning, after a consultation with my parents. The next morning I did state the case to my parents, but with fear and trembling; not that I expected opposition from them after they should hear all; but I scarcely hoped for their full approval. Nevertheless, although they were shocked, as I expected them to be, at the Judaism of my betrothed, yet after I had given them a full history of our acquaintance, and exerted my eloquence in depicting her excellencies,—not forgetting the symptoms of her inclination for christianity, nor the fact so generally agreeable to parents, that she was very rich, I had the satisfaction to hear them yield their approval, and advise me to write immediately. They saw the hand of Divine Providence in the circumstances, and were persuaded that my happiness would be less hazarded by consummating the marriage, than by doing violence to my feelings, and plunging again into the deeps of melancholy.

So I finished my letter, and directed it under cover to Simon Levi at New York. It went by that day's mail, and would in due course reach New York on the 30th of May.

But one expression which the gray-eyed miser had

dropped about his "boy Joseph," gave me a suspicion, that if he knew the state of affairs between me and Judith, he might suppress my letter, with the view of getting Judith's fortune into his own family. Therefore to avoid the possibility of failure in this way, I wrote a second letter, directed to Judith's self in London, to go by the usual mode of conveyance in the New York packets. This I put into the post office four days after the other. Thus if the one should fail, I might rely upon the success of the other. I met with an immediate reward for my late fidelity; for when I put the second letter into the office, I found one there from Judith; short and written very hastily on her landing at Liverpool. She apologised for its brevity, saying that a swift sailing packet was to sail immediately for New York, and that she had time only to tell me of her prosperous voyage, good health and unchanged heart. She concluded with the promise of writing fully on the receipt of my first letter, which she hoped to receive within a fortnight after her arrival at home.

The expression of this hope gave me a severe pang of self-reproach. "Wretched procrastinator that I am! (said I,)—how sadly disappointed she must be!" But I had done my duty at last.

Now the months seemed ages until I should receive her answer. I began to make preparations for my expected voyage; and became weekly more impatient for the summons of my betrothed. I watched the growing and the waning moons, and 'chid the lazy lagging foot of time.' The delightful summer of our mountains seemed interminably long; for it shed its flowers and matured its foliage, but brought me no answer. I had set four months as the utmost limit to which even fear could postpone the return of an answer. Three months I thought sufficient; I was by that time prepared for the voyage, and went to the post office every mail day, expecting to find the desired summons to depart. Every mail day I went disheartened away; but still indulging the hope that the next mail would not disappoint me. Thus the fourth month passed over my impatient spirit—but to the end of it no letter came. I saw the leaves of autumn put on the bright hues of approaching decay, making the forest glorious to all eyes but mine. Still no letter came. Impatience was converted into fearful anxiety. I saw the leaves of autumn fade; and then fly, withered and sear, before the northern blast, until the forest looked sad beneath the gathering storms of winter. Sad and sadder grew my heart; for not a word from Judith reached my longing eyes. Winter shed his snows over mountain and valley; Christmas came, and New Year came; when days are shortest and dreariest in the out-door world; but hearts are merry by firesides: but my heart was more dreary than the dead earth and the leaden face of a cloudy sky. The winter began to yield to the benign power of the ascending sun; nature began to revive under the genial influence; but not so my desolate heart. Early flowers looked out on sunny banks; meadows drank new verdure from the joyful streams, that gushed out of showery hills, and bounded through the vallies. Now came the anniversary of the journey to Charleston—then of the sea voyage—then of the love pledges and the parting hour. The star of my hopes had faded into utter darkness; my letters were never to be answered; what could be the matter?

Whilst I had been able to cherish a lingering remnant of hope, that slow passages, or accidental detentions by sea or land, had only delayed the answer; I clung to that, and waited for the result before I would take any other step. But when five, and then six months had passed away, my characteristic hesitancy on such occasions, again operated to make me postpone any decisive movement to solve the mystery of my disappointment. One of two things I might do; write again and repeatedly, or go myself to London. To write again, presupposed that either both my letters or her answer had failed to reach their destination. But not only was I discouraged by the fact, that such failures had become very rare; but there was this further difficulty, that by writing again, I could gain no explanation in less than three months—a delay which my impatient heart could not resolve to incur. I concluded at last to renew my preparations for a voyage; but various difficulties (and in my desponding state of mind, mole-hills swelled to mountains,) caused delay until the opening of the spring. I was then completing my arrangements, and expected soon to depart, when an unfortunate accident gave another turn to my feelings.

I have since my college days been passionately fond of botany; and have never failed, when the mild sunshine and early flowers invite the lovers of nature abroad, to make frequent excursions about the warm dells and romantic cliffs of my homestead. One day, late in March, when the sun shone sweetly, and my heart was troubled with gloomy thoughts, I took a farewell stroll about the rocky steep of the vicinage, expecting in two or three days to leave them in search of my lost bride. I was clambering along the side of a steep cliff, washed at base by the river, now swollen and muddy from late rains. Happening to espy on the brow of the cliff above me, a flower of rare species, and of attractive form and colors, I started eagerly to reach it by climbing the precipice. But in my haste, I slipped and fell back almost into the river. I saved myself only by catching hold of a sappling, as I slid and rolled. My bodily hurt was small, but my sick heart received a fatal wound. My precious locket-case, which I still wore in my bosom, fell out, was caught by a stub as I descended, and the ribbon being broken, the case rolled down and plunged into the angry flood, out of sight and out of reach. "Oh, mercy! (I exclaimed;) she she is gone! she is gone!" Vainly did I go to the water's edge, and gaze wistfully at the turbid current, as if I expected it to restore my talisman—my Judith. At last I went home, gathering new grief and melancholy from this ill-omened accident. The reader knows me well enough by this time, to anticipate the consequence. Despair began to flap her raven wings over me, and dismal phantoms to haunt my imagination.

Hitherto I had refused to entertain a suspicion of Judith's fidelity. When such a thought occurred, one look at her portrait was sufficient to dispel it. I was perplexed, discouraged, and sad enough, at the long delay, and ultimate failure of an answer to my letters; but rather than think her false, I would suppose that the letters had been lost on the way, or that death had snatched her beyond the reach of my arms. Now I began to fear that she had repented of her engagement; that her return home to her kindred and friends had

affected her, as the same circumstance had for weeks affected me; with the restoration of habitual feelings first, and then less pleasing views of the brief episode of our love-adventure. My suspicion, once allowed to take root, and nurtured by a brooding melancholy, grew apace into a dark and bitter jealousy. In a few days I could even say in the bitterness of my soul: "Why should I go to see her? Or why write a third time? Shall I allow her to show myself or my third letter to her cockney beaux? of which she told me that she had crowds; that they may laugh at the uncouth simplicity of a mountain bumpkin of Virginia; who by his services at a critical period, when her grief was deep and her heart unguarded, had made a transient impression on her; but whom, in her cooler moments, she could not think of marrying; though she felt obliged to him for his kindness, and had, under the impulse of gratitude, given him more encouragement than prudence allowed. Shall I expose myself to such treatment as this? No, verily I will not!"

These suggestions of the melancholy demon were sometimes resisted by my better feelings; but never subdued, so that I could resolve again to prosecute my ill-fated love. I still indulged, from time to time, my bitter surmisings of Judith's falsehood; although my conscience often whispered that they were unjust. What inconsistencies will not a wretched man perpetrate in the bitterness of his soul!

Finally, I resolved that as the case seemed to be desperate, I would strive to forget that I had ever loved Judith Bensaddi. I was impelled to some decisive course, by the dread of a settled melancholy and imbecile moping, or of downright madness for life. Once conclusively resolved, I was as prompt and energetic in execution, as I was indecisive and procrastinating in cases of doubtful deliberation.

"Perhaps (said I to myself) it is a merciful interposition of Providence, that has thwarted an affection, which might have planted a thorn in my breast for life. A christian is forbidden to marry an infidel, and the prohibition is a wise one. Now for study and learning, and the glorious achievements of professional exertion."

My studies had been much interrupted by consumption first, then by love and melancholy. During a year I had made little progress; now I betook myself with renewed zeal to my books. But many a time and oft, while leaning over my learned author on the table, did I start out of a reverie, and find that my soul had unconsciously strayed into the regions of love, and drank sweeter waters at the fountain of Venus, than Helicon had ever yielded to poet or philosopher. But by persevering efforts, I conquered this propensity to revive scenes and emotions, which, however delightful once, were fleeting as a dream, and, like a dream, should be forgotten.

CHAPTER X.

AN UNEXPECTED LETTER.

By the end of the ensuing summer, my mind had recovered its usual tone and steady habits, and I had just finished the preparatory studies of my profession; when an incident occurred, which again raised my feelings to a tempest, and formed the closing scene of my story.

Going by the post office one forenoon, I was called to receive a letter which had arrived by the last mail: I turned in, expecting nothing unusual; when lo! it was a ship-letter, with the London post-mark. I instantly recognised upon it the hand writing of Judith Bensaddi! Good Heavens! what a volcanic stirring and heaving, what a rekindling and burning, of irrepressible fires, did I feel immediately within me. The flame of love had been smothered by despair, but the fuel was unconsumed, and the fire smouldering in secret; the first breath of hope was sufficient to reawaken its dormant energies.

I hurried out of the town on my way home, intending, as soon as I reached a private place, to tear open the mystery at once. But when I found a suitable place, I could not summon the resolution to break the seal. Hope shed reviving rays upon my soul, and I longed to realize its promise: but fear drew up a cloud from the Stygian lake, that threatened to overwhelm and extinguish forever the last star in my heaven of love. Hitherto the evidence that Judith had changed her mind, was purely negative; I had received no communication from her; that was all. Now I was to learn from herself the certainty of what I might still hope, or of what I had long feared: the question that had cost me so much excruciating conjecture, was now to be solved: I was to know in a moment, whether the lovely Judith might yet be mine, or whether the gulf between us was now fixed and impassable. When I put my thumb-nail to the seal, and felt that I was about to read the doom of a love, whose renovated power now ruled my soul, "terror took hold on me, and trembling which made all bones to shake." I could not break the seal. I staggered homewards under my load of fearful anxiety. Several times I stopped, and said, "Now!" but I could not; every nerve in my body quivered. When I got home, I stole unobserved into my room and locked the door. "Here (said I,) is the place, and now is the time." Still I hesitated; I sat; I lay down on the bed; I got up and paced the room: It would not do; my heart quailed and shrunk from the dread revelation. "I cannot do it here (said I)—I must go to the woods and rocks." To the woods and rocks about the farm I went. For hours I wandered from shade to shade, and from rock to rock, in deep and agitated thought; often forgetting where I was, or what was the matter. Often I took out the letter from my pocket, looked at it, one while examining the superscription, another while the seal; and then returning it to my pocket with a groan, I wandered again, like the evil spirit, "seeking rest and finding none." It may seem strange, that I should voluntarily undergo this lengthened agony of suspense, when I could end it in a moment. But I durst not end it. What man could dare, if he might, unseal the book of his final destiny? He would rather live in the uncertainty of a trembling hope, than hazard the withering blast of a remediless despair.

Towards evening I found myself by the river side in a solitary nook, to which I was wont to resort when in a musing mood. It was a snug corner, with the river in front, and high cliffs, topped with cedars, curving round the other sides. Three or four trees spread their umbrageous tops over head, and beneath a small fountain drew its silvery thread of cool water from the

inner angle to the river, between turfy banks and mossy stones. Here I had often meditated on my love, and here I resolved at all events to know its issue. I threw myself down upon a sweet grassy bank, near the river that ran murmuring by. Here a tuft of the golden rod waved its yellow plumes in the breeze; at the base of the cliff, near my seat, the wild aster was opening its purple-fringed eyes, seemingly to watch the dog-star in his nightly rounds. Elsewhere the atmosphere was glowing with summer heat; here all was cool, dusky and still. Again I took the letter from my pocket, and again I trembled all over like an aspen leaf. But my resolution was taken: "Now it must be done." My thumb-nail was again applied, and with a convulsive jerk I tore off the seal. With trembling hands I unfolded the closely written sheet, and with palpitating heart I read as follows:

LONDON, July 10th, 1820.

My Beloved Friend:

With you it is impossible for me to be ceremonious. I have experienced too much of your kindness, and I may add of your love, to suspect you of unkind neglect, or to think of you with any other feeling than gratitude and friendship. I wrote you a few hasty lines from Liverpool by a packet that was about to sail immediately after our landing. I will now give you the outlines of my sad history since I left Philadelphia.

The night when we parted! I yet weep at the remembrance of it: had I then anticipated our long, long separation, my grief would have turned to distraction. Our journey to Boston was speedy, and would have been pleasant, if any thing could have given pleasure so shortly after that parting hour. Two days afterwards I took ship with my cousin. The ship and the sea revived all my griefs; for they brought affectingly to mind the horrible day when I lost the dearest of brothers, and found all a brother's kindness in you. The voyage, as I wrote before, was prosperous; and on the thirty-fifth day after our separation, I was in the arms of my dear father. Cousin Von Caleb had written him notice of our calamity from Boston, on the day when he received my letter; so that before our arrival my afflicted parent had learned his irreparable loss: now he seemed equally divided between joy for his recovered daughter, and grief for his lost son.

I related to him as well as my feelings would allow, the circumstances of the disaster, and the history of my acquaintance with you, from the first day to the last; omitting at first the affair of our love. I told him how you had saved my life at the hazard of your own, and how you had thenceforth nursed me in my desperate grief, cherished me as a sister, and taken me far out of your way to restore me to my friends, until your care of me occasioned the severe hurt that confined you in Philadelphia. "Now blessed be that good young stranger, (said my father, with tears in his eyes)—how can we reward him for his goodness to my poor destitute child? I owe him for your life; yes, twice—for without him you would first have perished in the water, and then in your grief. We must do something—yes, a great deal, to show our gratitude. I trust that you showed yourself grateful, daughter—did you?" "Yes, father, your daughter endeavored to show that she could love such a kind protector, and such an honora-

ble, worthy gentleman." So I went on, until I had told him all. "He shall have you, Judith; he deserves to have you; he is the very man to make you happy." Then was the joy of my love complete.

I hoped in a fortnight or sooner to receive a friendly letter, telling me of your safe return, if nothing more. The fortnight seemed very long; and when a month passed without bringing me a letter, it seemed to have been a year. "But I am sure of one by Mr. Levi," said I; and so I endeavored to comfort myself. I could hardly wait until he should come, and when at last I was told that he was arrived, and actually in the house, I ran breathless with joy and demanded my letter. "None, (said he)—I went to the post office the first of June, and found none for you." "None?" said I. "No, sure, not one." I remember nothing more, until I found myself in bed and the physician by my side.

Still, though stricken down, I was not in despair. "Some accident has disappointed me, (said I,)—the letter may have miscarried; or he may choose to come, and give me a joyful surprise by bearing his own tidings. I shall hear or see before long." But another month passed—so long!—yet no tidings. We heard of a New York packet-ship wrecked on the coast of Ireland: the letter-bag lost—and some passengers; but your name was not among them. On this chance of your letter being lost, I fed my declining hope. But long months of fruitless expectation, compelled me at last to conclude that you had found the scheme of our union unpropitious to your hopes of happiness, and that your kind compassion would not suffer you to tell me so. I had promised not to blame you; I did not; but my heart bled, nevertheless—ah, many a weary day and weary night. I fled from the crowded city to hide my grief, and if possible to relieve it, among the lakes and mountains of Cumberland. They reminded me of the delightful scenery which you had described; where you made me hope to live, communing with nature and with the dear friend whose heart seemed purposely formed to sympathise with mine. But I must not pain that dear friend with the recital of my sorrows.

Long was the time before I could give you up with dutiful resignation. I imagined various reasons for your long silence, and sometimes renewed my hope on the ground of some vain supposition. Sometimes again I feared that you were dead; and then I mourned for you as for my brother. But I was relieved of this painful apprehension, two months ago. A friend of my father's has some lands in the mountains of Virginia. When he went to see them, my father requested him to visit your village and inquire after you. He learned that you were alive and well. Then I knew that you had abandoned our engagement, and that longer hope was vain if not sinful. Often had I dreamed both asleep and awake of rural felicity with you, my comforter in sorrow and my chosen companion for life. But when I found that all was a dream, and that I must resign my heart to widowhood, I resisted the fondness of a love that could only make me miserable. Hard was it to bring so sweet and so cherished a passion within the bounds of moderation. Often would it invite the fond illusion, that your difficulties might yet be removed, and that your love for me was yet sufficient to bring you over the waters in search of your Judith. But one long year and months of another passed away,

during which all the winds of Heaven had blown without wafting to me even a sigh from my friend. How then could the faintest illusion of hope remain, or ever dawn upon the darkness of my soul? "No, (thought I,) that dearly remembered night of our parting made me feel the last throbs that I shall ever feel, of a heart that will be dear to me, until this poor heart of mine shall throb no more." When this second summer came, and my last day of hope was gone, I fled again to the woods and the lakes, and there, after many a prayer and many a struggle, subdued my heart to a merely kind and grateful remembrance of you. So at least I thought: but what mean these frequent returns of my pen to the passionate expressions of tenderness, which flow spontaneously from my heart, and which after repeated trials I find will flow and mingle with the simple narrative that I meant to give? And what mean the tears and sobs which almost disable me from writing? May the gracious Redeemer, who knows what human frailties are, enable me to be faithful!—My friend! oh my friend! I must not, I dare not, love you now, as I formerly loved you. When my heart abandoned itself to widowhood, and I sought consolation from the Most High, among shades and rocks and waters, where, as well as in His word, the Divine Spirit dwells, I happened to meet a stranger on a visit to the same retreats, one who, in mind and person, in tastes and principles, resembles you, my dear friend; and who for that reason interested me in my desolate state. His company and conversation, last year, soothed and instructed me; but then my heart was beyond the reach of his love. A friendly acquaintance was all that occurred between us until this summer, when I returned in my despair to the woods and lakes, where I unexpectedly met with him again. He sought my company; I was pleased with his; he saw that I was a mourner, and he comforted me; he had learned that I was a Jewess, and he labored faithfully and eloquently for my conversion to christianity. By the blessing of God, he succeeded in removing all my remaining doubts and difficulties respecting the christian faith. I was almost persuaded when I parted with you; but I would not suggest hopes on that subject, until I should be fully persuaded. Now my faith in Jesus of Nazareth is my chief consolation; and the eloquent and pious friend who won me finally to Christ, has also gained so much of my esteem and affection, that I have after much hesitation accepted his offer, and we are betrothed. Now, my dear preserver, hear the last request of one whom you once tenderly loved, and whom no changes can release from her obligations to you. Should you ever find that I or my friends can do you any sort of service, I intreat you, by the remembrance of our voyage together, and by all the love that you may still bear me, to let us know it. Call on me,—or if death should have taken me away—on my father or my sister—for all the assistance that you may need. The half of my fortune I can easily spare, and would rejoice to impart to a friend whose disinterested kindness and essential service to me, I can never repay; but I shall thank Heaven, if an opportunity be given me to prove that I am, and will ever be your grateful and devoted friend,

JUDITH BENSADDI.

Before I had finished reading, my eyes grew dim. Self-reproach for my unjust suspicions and my fatal

procrastination, wrung my heart. The knell of departed hope boomed on my ears, as if the gentle murmur of the river had swollen to the roar of a cataract. I fell back and lay in a stupor of astonishment at my late blindness of heart, and at the unrolled scroll of my hapless destiny. I was for some time prostrated, soul and body, at the astounding revelation. When I recovered strength to rise, the sun was shooting his rays horizontally from mountain top to mountain top! The turtle dove, from her withered tree in the field, was cooing forth her evening lamentation. Shades almost as gloomy as my soul were thickening around me. Frantic with grief, I called to the dark-frowning rocks and to the waters that were rolling by, to pity me. I made the echoes respond to the name of my loved and lost Judith. One while my perturbed imagination pictured her looking down on me from the cedars of the cliff, and illuminating my dark retreat with the love-inspiring radiance of her countenance; then her fairy image seemed to be floating off in the air, and to beckon its sorrowful adieu, as it faded away, and was lost in the gloom of descending night.

And now, farewell, sweet Judith Bensaddi! Time may soothe my anguish, and mitigate my passion to the soft feeling of a mourner's love: but death only can dim the bright image of feminine loveliness, which my soul has caught from thee. Henceforth thou art my heart's model of what is sweet and pure in woman. Others I may see fair and affectionate, virtuous and holy; but none can take thy place. I am wedded to remembered beauty. Alas! all but the memory of thy charms is lost to me: once more and forever, farewell, farewell, sweet Judith Bensaddi!

JANNEY'S POEMS.*

We have had this neat little volume on our table for some time, and should have noticed it earlier, if our manifold engagements had permitted. Mr. Janney is, we believe, a member of the Society of Friends, and resides, we infer from the preface, at the village of Occoquan, one of the most romantic spots in Virginia. We wondered, indeed, while looking over the pages of his book, that the beautiful cascades and shady banks of the Occoquan river, had not claimed a special tribute from his muse. It is true that he has not forgotten the broad and majestic Potomac, to which the first mentioned stream is an humble tributary—for who of poetic temperament ever wandered on the "pebbly shore" of that magnificent river, or listened to the lulling sound of its moonlit waves,—and did not pour forth in mellow song the raptures of inspiration? The two principal poems in the collection, are "The last of the Lenapé," and "Tewinissa"—both founded on real occurrences, and illustrative of Indian traits of character. The minor pieces are classified into descriptive, elegiac, scientific, devotional, and miscellaneous, and occupy the greater part of the volume. To the whole, is prefixed an Essay on Poetry, which is very well written, and contains some excellent reflections upon the true uses of the poe-

* The last of the Lenapé, and other poems, by Samuel M. Janney—Philadelphia—1839.

tic art and the mischievous effects which flow from its perversion. Nothing is more true than the remark of Mr. Janney, that there is a class of writers, who "devote the energies of the loftiest genius, to decorate the couch of voluptuousness, to conceal the deformity of vice, and to strew with the flowers of poesy the path that leads to destruction." It is a melancholy fact, that the splendid immoralities of Byron and Bulwer are sought with avidity, when the purer pages of Wordsworth and Coleridge are suffered to keep company with dust and cobwebs. Mr. Janney belongs to a totally different school from that which would please a majority of modern readers. He aims not to rouse and stimulate the fiercer passions of our nature, but rather to hold converse with the mild affections,—to enlighten the reason, and commune with the devotional spirit of man. Like the poets of his own religious sect, Barton and Whittier, he disdains to purchase praise at the expense of truth, or to soil his pages with the fashionable licentiousness of the age. We regret that time and space will not permit us to dwell upon his poems in detail, or to point out some of their beauties. We shall content ourselves by extracting a few lines written in an Album. So many common-place things have been written in those pretty repositories of boarding-school misses and amiable young ladies, that our readers will be pleased with the following effort, which is at once characterized by simplicity and originality.

LINES WRITTEN IN AN ALBUM.

Methinks an emblem of the cultur'd mind,
The rich and varied Album was design'd;
Friendship and love, like amaranthine flowers,
Bloom here, selected from unnumber'd bowers;
And taste and genius each succeeding year,
Shall bring fresh flowers to shed their fragrance here.
Fain would I plant in this delightful spot,
That little modest flower,—Forget-me-not:
And oh! how happy, could I dare presume,
'Twere worth transplanting, in thy heart to bloom.

CURRENTE-CALAMOSITIES;

TO THE EDITOR OF THE MESSENGER.

BY THE AUTHOR OF "THE TREE ARTICLES."

NO. VII.

A JUNE DAY IN THE WOODLANDS.

"The clouds are at play, in the azure space,
And their shadows at play, in the bright green vale,
And here, they stretch to the frolic chase,
And there, they roll on the easy gale!"

When WILLIAM CULLEN BRYANT, the author of "Thanatopsis," the editor of the New York "Evening Post," and one of the "Printers to the Corporation," wrote those four lines, and about a score more like them, he was the poet Bryant,—the man Bryant,—he was not the political wrangler about petty men and pettier measures, about elections, and printers' jobs, and the like,—he was the great Poet of Nature,—the forceful creator of immortal hymns to that divinity, whose altars he has forsaken, if not forever, yet for far too long a time. I think I see him as he lay, supine upon this very bank where I now lie,—his head supported by

his clasped hands, his face turned towards yonder bright and busy city, whose hum the distance now hushes to my ear,—his eye taking in all this glorious panorama of near woodland and meadow, the placid Hudson's bosom, and all that it is reflecting. Just such a day as this it was: just so brightly glowed the sun upon the landscape, crowned with verdure deep, and foliage thick and spreading, as that which now waves merrily around me as I lie. The river's flow, the music of the birds and bees, the shifting of the clouds, the dance of the leaves, the laugh of the waves, and the sunny smile, are all the same, to-day, as they were when, lying here, this sweet poet demanded of all things around him,

"Is this a time to look cloudy and sad?
When our mother Nature laughs around,—
When even the deep blue heavens look glad,
And gladness breathes from the blossoming ground?"

Why should a lyre that can breathe such strains as these be so long unstrung, or hang so long idly upon the willows? And hark! another memory-awakened echo! And from a harp as mute! PERCIVAL'S!

"The waving verdure rolls along the plain,
And the wide forest weaves
(To welcome back its playful mates again,)
A canopy of leaves:
And, from its darkening shadow, floats
A gush of trembling notes!"

"Fairer and brighter spreads the reign of May!
The tresses of the woods
With the wild dalliance of the west wind play,
And the full-brimming floods,
As gladly to their goal they run,
Hail the returning sun!"

And here is more to the same sweet tune, swelling up from memory's lowest deep, and singing itself to my ear, again, though long years have lapsed since first I drank in its delicious music. And whence is this power? Do we ever forget what once we know? I think not,—provided that we have learned and known aright. And it is this magic power of Association that has unlocked the deep cell in which this beautiful strain of Percival has been lying mute so long, and now lets it forth, beneath the very sky, and amidst all the natural objects of seer and audible beauty, that originally inspired it!

"Spirit of Beauty! the air is bright
With the boundless flow of thy mellow light;
The woods are all in bud and bloom
And are weaving for summer their quiet gloom.
The tufted brook reflects, as it flows,
The tips of the half unopened rose.

* * * * *
See how the clouds, as they fleetly pass,
Throw their shadowy veil on the darkening grass!
And the pattering showers, and stealing dews
With their starry gems, and skiey hues,
From the oozy meadow that drinks the tide,
To the sheltered vale on the mountain-side,
Wake to a new and fresher birth
The tenderest tribes of teeming earth,
And scatter with light and dallying play
Their earliest flowers on the Zephyr's way.

"He comes from the mountain's piny steep,
For the long boughs bend with the silent sweep,
And his rapid steps have hurried o'er
The grassy hills to the pebbly shore;
And now, on the breast of the lonely lake.

The waves in silvery glances break
Like a short but quickly rolling sea,
When the gale first feels its liberty,
And the flakes of foam, like coursers run,
Rejoicing, beneath the vertical sun.

"He has crossed the lake, and the forest heaves
To the sway of his wings, its billowy leaves,
And the downy tufts of the meadow fly,
In snowy clouds, as he passes by;—
And softly beneath his noiseless tread,
The odorous spring-grass bends its head:
And now he reaches the woven bower,
Where he meets his own beloved power,
And gladly his wearied limbs repose
In the shade of the newly opening rose."

Match me this out of the Poems of your favorite bard,
friend of mine! It is like a lake, in its flow, covered all
over with the glancing tints of thousands of buds and
flowers, of every hue and odor, sparkling and flashing
in the air, as the bosom of their wavy bed is moved by
the summer-breeze.

But what books are these, thrown down beside me in
the long grass, while I have been idly listening to the
dream-returned echoes of old songs? "Buds and flowers,
and other country things; by Mary Howitt;" "Hymns
and fireside verses; by Mary Howitt;" "The Boy's
Country Book," by William Howitt. True enough,
William Cullen Bryant! This is not

"—a time to look cloudy and sad!"

MARY AND WILLIAM HOWITT! A day with them
in mid-June, abroad in the woodlands! Who talks of
Arcadia? Sit, Mary, thou upon my left, and thou, Wil-
liam, on my right, here, on this grassy slope: And
now, thy quaker bonnet quietly hanging on yonder
thorn, thy head protected from the sun by the broad
branches of the beech that spread their mass of leaves
above thee, open thou the "Hymns," Mary, and sing a
stanza, here and there! Fear not, but raise thy voice
loudly as thou wilt; we are but three, and there is none
other to disturb or interrupt the song!

How beautiful the volume is, with its wood cuts, so
daintily bespread throughout its pages! How clear the
type, how glossy the paper, and how tastefully bound
together is the whole! But why is it called "Hymns,"
Mary? I see no "Hymns" throughout its leaves, as
you turn them over. It seems to be a continuous story,
all about a maiden, named

"—Marien,—how she went
Over the weary world from day to day,
On christian works of love intent."

Ah! I see! You mean by a "Hymn," a divine song—
and this is an allegory. Christianity is impersonated
herein, under the name of Marien, "fearless in its inno-
cence, like a little child, wandering over the world."
"It brings liberty to the captive, joy to the mourner,
repentance and forgiveness to the sinner, hope to the
faint hearted, and assurance to the dying." "It is alike
the beautiful companion of childhood, and the comforta-
ble companion of age. It ennobles the noble; gives
wisdom to the wise; and new grace to the lovely; the
patriot, the priest, the poet, the eloquent man,—all
derive their sublimest power from its influence!" Beau-
tiful! Beautiful idea! I see the maiden starting on her
pilgrimage,—a holy halo round her placid brow,—her
hands clasped upon her bosom,—

"And, ever as she goes along
Sweet flowers spring 'neath her feet;
All flowers that are most beautiful,
Of virtues, strong and sweet!"

Hear her declare her purposes towards mankind, as
she stands, innocent, in her leafy coverture, and thinks
of the good that she, so gifted with "power from on
high," may do to the suffering world!

"I am alone! all, all alone!
Alone, both night and day!
So I will forth into the world,
And do what good I may!"

"For many a heart is sorrowful,
And hearts, that I may cheer:
And many a weary captive pine
In dungeons dark and drear:
And I the iron bonds may loose,—
Then why abide I here?"

"Up! I will forth into the world!"—
And thus as she did say,
Sweet Marien from the ground rose up,
And went forth on her way.

Marien brings consolation to the mother of a murdered
son, and lives with her, awhile, and becomes a daugh-
ter to her; and she then goes forth a day's travel with
her, on her pilgrimage. They part, and the little maid
goes peacefully on her way, until

"—the darksome night came on,
And Marien lay her down
Within a little way-side cave,
On mosses green and brown.

"And in the deepest hush of night
Rude robbers entered in;
And first they ate and drank, then rose
To do a deed of sin.

"For with them was a feeble man,
Whom they had robbed, and they
Here came to foully murder him,
And hide him from the day.

"Up from her bed sprang Marien,
With heavenly power endued;
And in her glorious innocence,
Stood 'mong the robbers rude.

"Ye shall not take the life of man!"
Spake Marien low and sweet;
For this will God take strict account,
Before his judgment-seat!

"Out from the cave the robbers fled,
For they believed there stood,
A spirit stern and beautiful,
Not aught of flesh and blood.

"And two from out the robber-band
Thenceforward did repent;
And lived two humble christian men,
On righteous deeds intent!"

And so she goes on her sweet pilgrimage blessing all,
by all blessed;

"Onward and upward still she went,
Among the breezy hills,
Singing for very joyfulness
Unto the singing rills!

* * * *

"Free, like the breezes of the hill,
Free, like the waters wild;
And in her fulness of delight,
Unceasingly, from height to height,
Went on the blessed child!"

And still her errand was the same, wherever her wanderings tended :

“ And ever of the Saviour taught :
How he came down to win,
With love, and suffering manifold,
The sinner from his sin.”

This was her lesson to the wise as well as to the weak, and ever as she went on her way her course was glorified. For the times are not now,—as to the reception of such truths as this fine Impersonation teaches,—as they were when holy Paul called Christianity a stumbling-block to Jews, and to Greeks foolishness,—and Marien's lesson is the same as that of the Apostle. Man's wisdom is foolishness in the eye of the Only Wise. Hard ! hard lesson for proud Corinth to digest ! Her lofty synagogues were swept by the broad phylacteries of the Pharisees, and her columned porticos were the pulpits of her subtle Philosophy. Both the Religion of the Pharisee and the Philosophy of the Academy embraced much that was high and refined, drawn, long before, from those sages of Greece who once illumined the now dark land of Egypt with fine learning, and its benign attendants, Refinement and Taste. This creed inculcated the search for hidden senses in the plain records of that Law of which these Pharisees of Corinth called themselves the most holy upholders. They sent forth their fancies into an unknown region, and crowding it with the ghosts of the dead, and the genii of the living, became proud in the elevation of thus believing in the sublime visions of a spiritual world, and delighted in speculations concerning the residents, the enjoyments, and the pains of that ideal world in which they darkly wandered ; exulting all the while in finding therein what, after all, were but the idlest whims and the vaguest dreams of their own wild imaginations ! So they were wont, when they “ sought after wisdom ” to sit at the feet of sophists and philosophers in the marble Portico, or amidst the shades of the Academe, and revelled upon mystic learning, and polished elegance and eloquence of phrase, which entertained their taste, and convinced them into how many intricate labyrinths the wonderful power of human Genius may wander, and never be the nearer to the truth.

To such people as these came Paul to preach. They called his religion folly ! He proved theirs to be no less ! They knew that he had been “ brought up at the feet of Gamaliel,”—*ONE OF THEM* ; a Rabbin who had the genius, and vigorous fancy, and bold independence of the literal meaning of the Mosaic law, that fitted him to follow Plato, in all that philosopher's discursive flights into the Incomprehensible and the Profound. Whatever they came to think of his teachings, they knew the teacher was no fool ! And how dissonant was the discovery to their feelings and their expectations, that this Oracle of Tarsus, the pride of their sect, was holding out the doctrine,—to the conviction of daily myriads of people,—that the age of Corinthian philosophy,—of that Human Reason which knew not GOD,—was past ! That that which they called foolishness in his doctrines, was but the simplicity, which ensured their ultimate universal reception by all mankind ! That while the high speculations which they had loved taught them to be proud of the Nature of Man, his instructions would place “ a stumbling-block ” in the path of that Pride !

He determined,—this Pupil of the Portico, this High Priest at the altar of Platonic Philosophy,—“ not to know any thing ” among them all, but Him whom they had “ slain and hanged upon a tree ! ” He “ came not,” he said, “ with excellency of speech or of wisdom,” among them : he came to tell them that through him his Master would “ confound their wisdom ! ”

But where is *THE HYMN* ? Oh ! there it is,—down on the roots of yonder tree, where we left it, when we began this stroll and I began my sermon. Thank you, William ! Please ask Mary to tell us the tale, on page one hundred and twenty-nine, of “ The Boy of the Southern Isle : ” it is told by “ an old seaman,”—and begins thus :

“ I'll tell you, if ye'll hearken now,
A thing that chanced to me,—
It must be fifty years ago,—
Upon the southern sea ! ”

And after that, we will have the fairy story of the olden time, about “ Mabel, on Midsummer day,”—how, when she went first to the fairy-dell,

“ Nothing at all saw she,
Except a bird—a sky blue bird—
That sate upon a tree ! ”

And how she did as she had been bidden, and

“ —did not wander up and down,
Nor did a live branch pull,”

and so had no reason to fear the vengeance of the dream-people,—for

“ When the wild-wood brownies
Came sliding to her mind,
She drove them thence as she was told,
With home thoughts, sweet and kind ! ”

And how she got the fairy penny,—and what she did with it, and the blessings the little people gave her, and the lesson she learned and teaches,—that

“ 'Tis good to make all duty sweet,
To be alert and kind ;
'Tis good, like little Mabel,
To have a willing mind ! ”

Then let us all three join and sing this carol of the “ Cornfields ; ” the tune will come of itself : the key is—stay ! take it from that Robin's pitch-pipe, in the oak over-head ! Now !

“ In the young merry time of spring,
When clover 'gins to burst,
When blue bells nod within the wood,
And sweet May whitens first,—
When merle and mavis sing their fill,
Green is the young corn on the hill.

* * * * *

“ What joy in dreamy ease to lie
Amid a field new-aborn,
And see all round on sun-lit slopes,
The piled-up shocks of corn ;
And send the fancy wandering o'er
All pleasant harvest-fields of yore ! ”

But, Mary, what do you mean by “ corn ? ” Not what we call by that name, here ? I thought not : you call all bread-grain in your country “ corn ”—and here you mean wheat, doubtless. But another stanza ! A little higher, William, if you please : ha ! that oriole yonder, pluming his golden wings for a fresh flight, will “ sound the pitch ” before he goes ! “ That's my A ! ” says he !

"The sun-bathed quiet of the hills;
The fields of Galilee,
That, eighteen-hundred years ago,
Were full of corn, I see!
And the dear Saviour take his way
Mid ripe ears on the Sabbath day!
"Oh! golden fields of bending corn,—
How beautiful they seem!
The reaper-folk,—the piled-up sheaves,
To me are like a dream:
The sunshine, and the very air
Seem of old time, and take me there!"

Beautiful poetry! Beautiful tune! Beautiful songstress!
Oh, for thy pen, thy voice, and thy constant presence,
to teach, to delight, to ravish, and to improve! I feel
the better man, Mary, for thy kind ministrations this
summer day in the woodlands, and would fain linger
here with thee, and thy accordant mate, while flowers
bloom, and waters wave, and skies are bright, and all
Nature is in smiles! Children must love thee, Mary,
with the deepest love: thine and others' children, too!
Do they not? Nay, answer me, out of the "Hymns!"

"Blessings on them! they in me
Move a kindly sympathy,
With their wishes, hopes, and fears;
With their laughter and their tears;
With their wonder so intense,
And their small experience!"

I knew it!

But where is the sunshine? And where are the
birds? And what means this deepening shade? Are
there clouds gathering in the just now clear sky? No!
There can no cloud be discerned between the overhang-
ing branches through which we gaze! And see! a
single—*star* peeping forth amidst the cerulean! It is
the twilight hour, and one summer day is gone! The
tinkle of the bell sounds from the distant ferry, and
our steps tend homeward! But what shall we do with
William's "Country Book," and Mary's "Buds and
Flowers?" lying, both unopened, there, upon the grass.

There are more days than one in summer, and so
shall you find, my dear Editor, when next you hear
from your friend,

J. F. O.

New York, June 15, 1839.

"RICHELIEU"—BY E. L. BULWER.

This play has already run through ten editions in
London, and has been recently republished this side of
the Atlantic. It is worthy of its distinguished author,
and to say this is to bestow upon it a high meed of
praise. We know of no writer better qualified to de-
velop the secret workings of the soul of such a man as
Armand Richelieu, than Bulwer. Whatever individu-
als may think in regard to the tendency of his writings,
all will award to him the possession of a rare power in
tracing the philosophy of mind—in analyzing motive,
and giving language to deep thoughts. His productions
abound in fancy, but they contain nothing hollow or
meretricious. They shine like the decorations of some
Gothic edifice, having in themselves magnificence and
beauty, and, at the same time, forming appropriate and
necessary parts of a grand and massive whole. He
touches that powerful instrument, language, with all

the skill of a master; but his music, is no mere empty
sound—it forms an eloquent medium for the strong and
burning energies of passion, or the melody only
smooths and makes sweet profound maxims of philo-
sophy. We would rather see a novel from his pen, as
far as those characteristics of which we have spoken are
concerned, having for its hero Richelieu or Cromwell,
than that of any author living. But it was only our
present purpose, to place before the readers of the Mes-
senger, some extracts from this new play.

The first which we give is from the scene between
Baradas, one of the conspirators, and the Chevalier de
Mauprat.

Baradas. Thou lovest—

De Mauprat. Who, lonely in the midnight tent,
Gazed on the watch-fires in the sleepless air,
Nor chose one star amid the clustering hosts
To bless it in the name of some fair face
Set in his spirit, as that star in Heaven?
For our divine affections, like the spheres,
Move ever, ever musical.

Baradas. You speak

As one who fed on poetry.

De Mauprat. Why, man,

The thoughts of lovers stir with poetry
As leaves with summer-wind. The heart that loves
Dwells in an Eden, hearing angel-lutes,
As Eve in the First Garden. Hast thou seen
My Julie, and not felt it henceforth dull
To live in the common world, and talk in words
That clothe the feelings of the frigid herd?
Upon the perfumed pillow of her lips—
As on his native bed of roses flush'd
With Paphian skies—Love smiling sleeps: her voice,
The blest interpreter of thoughts as pure
As virgin wells where Dian takes delight,
Or fairies dip their changelings!—In the maze
Of her harmonious beauties, Modesty
(Like some severer Grace that leads the choir
Of her sweet sisters,) every airy motion
Attunes to such chaste charm, that Passion holds
His burning breath, and will not with a sigh
Dissolve the spell that binds him!—Oh those eyes
That woo the earth, shadowing more soul than lurks
Under the lids of Psyche!—Go! thy lip
Curls at the purpled phrases of a lover—
Love thou, and if thy love be deep as mine,
Thou wilt not laugh at poets.

The next is from a scene between Richelieu and the
same.

Richelieu, (rising, and earnestly.)

Adrien de Mauprat, men have called me cruel;—
I am not;—I am just!—I found France rent asunder;
The rich men despots, and the poor banditti;
Sloth in the mart, and schism within the temple;
Brawls festering to rebellion, and weak laws
Rotting away with rust in antique sheaths.
I have recreated France; and, from the ashes
Of the old feudal and decrepit carcase,
Civilization on her luminous wings
Soars, phoenix-like, to Jove!—What was my art?
Genius, some say,—some, Fortune—Witchcraft, some.
Not so;—my art was JUSTICE!

In the above passage, and the following—taken from
the dialogue between the Cardinal and his confidant,
Father Joseph—we have displayed the prime rules of
Richelieu's conduct.

Richelieu. Favors past do gorge

Our dogs; leave service drowsy; dull the scent,
Slacken the speed; favors to come, my Joseph,
Produce a lusty, hungry gratitude,
A ravenous zeal, that of the commonest cur

Would make a Cerberus. You are right—this treason
Assumes a fearful aspect: but, once crush'd,
Its very ashes shall manure the soil
Of power; and ripen such full sheaves of greatness,
That all the summer of my fate shall seem
Fruitless beside the autumn!

HUGUET holds up his hand menacingly, and creeps out.

Joseph. The saints grant it!

Richelieu, (solemnly.) Yes, for sweet France, Heaven
grant it!—O my country,
For thee—thee only—though men deem it not—
Are toil and terror my familiars!—I
Have made thee great and fair—upon thy brows
Wreath'd the old Roman laurel:—at thy feet
Bow'd nations down. No pulse in my ambition
Whose beatings were not measured from thy heart!
In the old times before us, patriots lived
And died for liberty—

Joseph. As you would live
And die for despotry—

Richelieu. False monk, not so;
But for the purple and the power wherein
State clothes herself. I love my native land
Not as Venetian, Englisher, or Swiss,
But as a Noble and a Priest of France;
"All things for France,"—lo, my eternal maxim!
The vital axle of the restless wheels
That bear me on! With her, I have entwined
My passions and my fate—my crimes, my virtues—
Hated and loved, schemed, and shed men's blood,
As the calm crafts of Tuscan sages teach
Those who would make their country great. Beyond
The map of France, my heart can travel not,
But fills that limit to its farthest verge;
And while I live, Richelieu and France are one.
We priests, to whom the church forbids in youth
The plighted one—to manhood's toil denies
The soother helpmate—from our wither'd age
Shuts the sweet blossoms of the second spring
That smiles in the name of father. We are yet
Not holier than humanity, and must
Fulfil humanity's condition. Love!
Debar'd the actual, we but breathe a life
To the chill marble of the ideal. Thus,
In thy unseen and abstract majesty,
My France, my country, I have bodied forth
A thing to love. What are these robes of state,
This pomp, this palace? perishable baubles!
In this world two things only are immortal—
Fame and a People!

The following splendid soliloquy (we know no better
epithet to bestow upon it,) is uttered by Richelieu in
his castle at Ruelle, upon the night designed by the
conspirators for his assassination.

Richelieu, (reading.) "In silence, and at night, the
conscience feels
That life should soar to nobler ends than Power."
So sayest thou, sage and sober moralist!
But wert thou tried? Sublime philosophy,
Thou art the patriarch's ladder, reaching heaven,
And bright with beck'ning angels—but, alas!
We see thee, like the patriarch, but in dreams,
By the first step—dull-slumbering on the earth.
I am not happy! with the Titan's lust
I woo'd a goddess, and I clasp a cloud.
When I am dust, my name shall, like a star,
Shine through wan space, a glory—and a prophet
Whereby pale seers shall from their airy towers
Con all the ominous signs, benign or evil,
That make the potent astrologue of kings.
But shall the future judge me by the ends
That I have wrought—or by the dubious means
Through which the stream of my renown hath run
Into the many-voiced unfathomed time?
Foul in its bed lie weeds—and heaps of slime;
And with its waves, when sparkling in the sun,

Oft times the secret rivulets that swell
Its might of waters, blend the hues of blood.
Yet are my sins not those of CIRCUMSTANCE,
That all-pervading atmosphere, wherein
Our spirits, like the unsteady lizard, take
The tints that color and the food that nurtures?
O! ye, whose hour-glass shifts its tranquil sands
In the unweav'd silence of a student's cell;
Ye, whose untampt hearts have never toss'd
Upon the dark and stormy tides where life
Gives battle to the elements,—and man
Wrestles with man for some slight plank, whose weight
Will bear but one, while round the desperate wretch
The hungry billows roar, and the fierce Fate,
Like some huge monster, dim-seen through the surf,
Waits him who drops;—ye safe and formal men,
Who write the deeds, and with unfeverish hand
Weigh in nice scales the motives of the great,
Ye cannot know what ye have never tried!
History preserves only the fleshless bones
Of what we are—and by the mocking skull
The would-be wise pretend to guess the features!
Without the roundness and the glow of life
How hideous is the skeleton! Without
The colorings and humanities that clothe
Our errors, the anatomists of schools
Can make our memory hideous!

I have wrought
Great uses out of evil tools—and they
In the time to come may bask beneath the light
Which I have stolen from the angry gods,
And warn their sons against the glorious theft,
Forgetful of the darkness which it broke.
I have shed blood—but I have had no foes
Save those the State had—if my wrath was deadly,
'Tis that I felt my country in my veins,
And smote her sons as Brutus smote his own.
And yet I am not happy—blanch'd and sear'd
Before my time—breathing an air of hate,
And seeing daggers in the eyes of men,
And wasting powers that shake the thrones of earth
In contest with the insects—bearding kings
And braved by lackeys—murder at my bed;
And lone amid the multitudinous web,
With the dread Three—that are the fates who hold
The woof and shears—the monk, the spy, the headsmen.
And this is power! Alas! I am not happy. (*After a pause.*)
And yet the Nile is fretted by the weeds
Its rising roots not up: but never yet
Did one least barrier by a ripple vex
My onward tide, unswept in sport away.
Am I so ruthless, then, that I do hate
Them who hate me? Tush, tush! I do not hate;
Nay, I forgive. The statesman writes the doom,
But the priest sends the blessing. I forgive them,
But I destroy; forgiveness is mine own,
Destruction is the state's! For private life,
Scripture the guide—for public, Machiavel.
Would Fortune serve me if the Heaven were wroth?
For chance makes half my greatness. I was born
Beneath the aspect of a bright-eyed star,
And my triumphant adamant of soul
Is but the fix'd persuasion of success.
Ah! here!—that spasm! again! How Life and Death
Do wrestle for me momentarily! And yet
The king looks pale. I shall outlive the king!
And then, thou insolent Austrian, who didst gibe
At the ungainly, gaunt, and daring lover,
Sneaking thy looks to silken Buckingham,
Thou shalt—no matter! I have outlived love.
O! beautiful, all golden, gentle youth!
Making thy palace in the careless front
And hopeful eye of man—ere yet the soul
Hath lost the memories which (so Plato dream'd,)
Breath'd glory from the earlier star it dwelt in—
O! for one gale from thine exulting morning,
Stirring amid the roses, where of old
Love shook the dew-drops from his glancing hair!

Could I recall the past, or had not set
 The prodigal treasures of the bankrupt soul
 In one slight bark upon the shoreless sea ;
 The yoked steer, after his day of toil,
 Forgets the goad and rests—to me alike
 Or day or night—Ambition has no rest !
 Shall I resign ? who can resign himself ?
 For custom is ourself ;—as drink and food
 Become our bone and flesh, the aliments
 Nurturing our nobler part, the mind—thoughts, dreams,
 Passions, and aims, in the revolving cycle
 Of the great alchymy—at length are made
 Our mind itself ; and yet the sweets of leisure,
 An honor'd home, far from these base intrigues,
 An eyrie on the heaven-kiss'd heights of wisdom—
 (Taking up the book.)
 Speak to me, moralist ! I'll heed thy counsel.
 Were it not best—

The following scene, which is the second of the fourth act, we give entire. Richelieu has escaped by a stratagem from assassination, but the schemes of the conspirators have so far succeeded that the king has received him with but little favor. The despatch alluded to is one sent by the conspirators to Bouillon in Italy, and contains a schedule of treasonable treaty with Spain and the signatures of the conspirators, whose object it was to dethrone Louis, and as a preliminary step, to remove Richelieu, by murder. Father Joseph is his confidant, and is well known, we presume, to many of our readers. Julie, a ward of Richelieu, was married to the Chevalier de Mauprat, who had been deluded by the conspirators into the attempt to assassinate the Cardinal with his own hand, but had discovered his error and been restored to the friendship of his intended victim. In his anger towards Baradas, one of the conspirators, he had drawn sword upon him near the palace, and duelling being a capital offence, he was arrested and is now confined in the Bastile.

Richelieu. Joseph—Did you hear the king ?

Joseph. I did—there's danger ! Had you been less haughty—

Richelieu. And suffer'd slaves to chuckle—"see the Cardinal—

How meek his eminence is to-day"—I tell thee
 This is a strife in which the loftiest look
 Is the most subtle armor—

Joseph. But—

Richelieu. No time

For ifs and buts. I will accuse these traitors !
 Francois shall witness that De Baradas
 Gave him the secret missive for De Bouillon,
 And told him life and death were in the scroll.
 I will—I will—

Joseph. Tush ! Francois is your creature ;
 So they will say, and laugh at you ! *your witness*
Must be that same Despatch.

Richelieu. Away to Marion !

Joseph. I have been there—she is seized—removed—
 imprisoned—
 By the Count's orders.

Richelieu. Goddess of bright dreams,
 My country—shalt thou lose me now, when most
 Thou need'st thy worshipper ? My native land !
 Let me but ward this dagger from thy heart,
 And die—but on thy bosom !

Enter JULIE.

Julie. Heaven ! I thank thee !
 It cannot be, or this all-powerful man
 Would not stand idly thus.

Richelieu. What dost thou here ?
 Home !

Julie. Home ! is *Adrien* there ? you're dumb—yet strive

For words ; I see them trembling on your lip,
 But choked by pity. It *was* truth—all truth !
 Seized—the Bastile—and in your presence too !
 Cardinal, where is *Adrien* ? Think—he saved
 Your life :—your name is infamy, if wrong
 Should come to his !

Richelieu. Be sooth'd, child.

Julie. Child no more ;

I love, and I am woman ! Hope and suffer—
 Love, suffering, hope,—what else doth make the strength
 And majesty of woman ? Where is *Adrien* ?

Richelieu, (to Joseph.) Your youth was never young ;
 you never loved :

Speak to her—

Joseph. Nay, take heed—the king's command,

'Tis true—I mean—the—

Julie, (to Richelieu.) Let thine eyes meet mine ;

Answer me but one word—I am a wife—

I ask thee for my home—my FATE—my ALL !

Where is my husband ?

Richelieu. You are Richelieu's ward,
 A soldier's bride : they who insist on truth
 Must out-face fear ; you ask me for your husband !
 There—where the clouds of Heaven look darkest, o'er
 The domes of the Bastile !

Julie. I thank you, father ;

You see I do not shudder. Heaven forgive you
 The sin of this desertion !

Richelieu, (detaining her.) Whither would'st thou ?

Julie. Stay me not. *Fie.* I should be there already.
 I am thy ward, and haply he may think
 Thou'st taught me also to forsake the wretched !

Richelieu. I've fill'd those cells, with many—traitors
 all.

Had *they* wives too ? Thy memories, Power, are solemn !
 Poor sufferer ! think'st thou that yon gates of woe
 Unbar to love ? Alas ! if love once enter,
 'Tis for the last farewell ; between those walls
 And the mute grave—the blessed household sounds
 Only heard once—while, hungering at the door,
 The headsman whets the axe.

Julie. O, mercy ! mercy !

Save him, restore him, father ! Art thou not
 The Cardinal-King ?—the Lord of life and death—
 Beneath whose light, as deeps beneath the moon,
 The solemn tides of Empire ebb and flow ?
 Art thou not Richelieu ?

Richelieu. Yesterday I was !—

To-day a very weak old man ! To-morrow
 I know not what !

Julie. Do you conceive his meaning ?

Alas ! I cannot. But, methinks, my senses
 Are duller than they were !

Joseph. The king is chased

Against his servant. Lady, while we speak,
 The lackey of the anteroom is not
 More powerless than the Minister of France.

Richelieu. And yet the air is still ; Heaven wears
 no cloud ;

From nature's silent orbit starts no portent
 To warn the unconscious world ; albeit, this night
 May with a morrow teem which, in my fall,
 Would carry earthquake to remotest lands,
 And change the christian globe. What would'st thou,
 woman ?

Thy fate and his, with mine, for good or ill,
 Are woven threads. In my vast sum of life,
 Millions such units merge.

Enter FIRST COURTIER.

First Courtier. Madame de Mauprat !
 Pardon, your eminence—even now I seek
 This lady's home—commanded by the King
 To pray her presence.

Julie, (clinging to Richelieu.) Think of my dead father !
 Think, how, an infant, clinging to your knees,
 And looking to your eyes, the wrinkled care
 Fled from your brow before the smile of childhood,

Fresh from the dews of Heaven! Think of this,
And take me to your breast.

Richelieu. To those who sent you!—
And say, you found the virtue they would slay,
Here—couch'd upon this heart, as at an altar,
And sheltered by the wings of sacred Rome!—Begone!

First Courtier. My lord, I am your friend and servant,
Misjudge me not; but never yet was Louis
So roused against you:—shall I take this answer?
It were to be your foe.

Richelieu. All time my foe,
If I, a priest, could cast this holy sorrow
Forth from her last asylum!

First Courtier. He is lost! (*Exit.*)

Richelieu. God help thee, child! she hears not! Look
upon her!

The storm that rends the oak, uproots the flower.
Her father loved me, and in that age
When friends are brothers! She has been to me
Soother, nurse, plaything, daughter. Are these tears?
Oh! shame, shame! dotage!

Joseph. Tears are not for eyes
That rather need the lightning, which can pierce
Through barred gates and triple walls, to smite
Crime, where it cowers in secret! The despatch!
Set every spy to work; the morrow's sun
Must see that written treason in your hands,
Or rise upon your ruin.

Richelieu. Ay—and close
Upon my corpse! I am not made to live—
Friends, glory, France, all rest from me; my star
Like some vain holiday mimicry of fire,
Piercing imperial Heaven, and falling down
Rayless and blacken'd to the dust—a thing
For all men's feet to trample! Yea! to-morrow,
Triumph or death! Look up, child! Lead us, Joseph.
(*As they are going out enter Baradas and de Beringhen.*)

Baradas. My Lord, the king cannot believe your
eminence
So far forgets your duty, and his greatness,
As to resist his mandate! Pray you, madam,
Obey the king—no cause for fear!

Julie. My father!

Richelieu. She shall not stir!

Baradas. You are not of her kindred!—An orphan—

Richelieu. And her country is her mother?

Baradas. The country is the king!

Richelieu. Ay, is it so;

Then wakes the power, which in the age of iron
Burst forth to curb the great, and raise the low.
Mark, where she stands, around her form I draw
The awful circle of our solemn church!
Set but a foot within that holy ground,
And on thy head—yea, though, it wore a crown—
I launch the curse of Rome!

Baradas. I dare not brave you!
I do but speak the orders of my king.
The church, your rank, power, very word, my Lord,
Suffice you for resistance:—blame yourself,
If it should cost you power!

Richelieu. That, my stake. Ah!
Dark gamester! *what is thine?* Look to it well!—
Lose not a trick. By this same hour to-morrow
Thou shalt have France, or I thy head!

Baradas, (aside to De Beringhen.) He cannot
Have the despatch?

De Beringhen. No: were it so your stake
Were lost already.

Joseph, (aside.) Patience is your game:
Reflect, you have not the despatch!

Richelieu. O! monk!
Leave patience to the saints—for I am human!
Did not thy father die for France, poor orphan?
And now they say thou hast no father! Fie!
Art thou not pure and good? if so, thou art
A part of that—the beautiful, the sacred—
Which in all climes, men that have hearts adore,
By the great title of their mother country!

Baradas, (aside.) He wanders!

Richelieu. So cling close unto my breast;
Here where thou droop'st, lies France! I am very feeble;
Of little use it seems to either now.
Well, well—we will go home.

Baradas. In sooth, my lord,
You do need rest—burthens of the state
O'er'task your health!

Richelieu, (to Joseph.) I'm patient, see!

Baradas, (aside.) His mind and life are breaking fast!

Richelieu, (overhearing him.) Irreverent ribald!
If so, beware the falling ruins! Hark!
I tell thee, scorner of these whitening hairs,
When this snow melteth there shall come a flood!
Avaunt! my name is Richelieu—I defy thee!
Walk blindfold on; behind thee stalks the headsmen.
Ha! ha!—how pale he is! Heaven save my country!

Falls back in Joseph's arms.

*Exit, Baradas followed by De Beringhen, betraying his
exultation by his gestures.*

Want of room compels us to omit farther extracts in
this No. We shall continue them in our next by giving
the last scene and selections from the Odes at the end
of the volume.

WHEN WILL LOVE CEASE?

BY THE LATE EDMUND LAW, ESQ.

When Love's own star shall cease to know
Her station in the skies,
And rivers from the ocean flow,
And suns in sackcloth rise—
And vernal showers call forth no flowers,
And summer make no mirth,
And birds be mute at morning hours,
Then Love will cease on earth!

When music's tone no charm shall own,
To thrill the human breast—
And roses' bloom yield no perfume,
And doves in deserts rest—
And Heaven's bright arch, that gilds the showers,
The sign of wrath shall prove—
Then beauty's spell will lose its powers,
And man will cease to love.

And when the peace that virtue brings,
The vicious shall enjoy—
And fear, that guilty bosoms wring,
Shall innocence annoy—
And mercy spurn the humble pray'r
That sues to be forgiven—
Then earth, men, angels, all despair!
FOR LOVE WILL CEASE IN HEAV'N.

TO THE PRINTERS.

Permit a giddy, trifling girl,
For once to fill a poet's corner;
She cares not how the critics anar!,
Or beaux and macaronies scorn her.

She longs in print her lines to see,
Oblige her, (sure you can't refuse it,)
And, if you find her out, your fee
Shall be, to kiss her, if you choose it.

SONNET.—A PORTRAIT.

BY PARK BENJAMIN.

Born in the North, and reared in Tropic lands,—
Her mind has all the vigor of a tree,
Sprung from a rocky soil beside the sea,
And all the sweetness of a rose that stands,
In the soft sunshine on some sheltered lea.
She seems all life and light and love to me!
No winter lingers in her glowing smile,
No coldness in her deep, melodious words,—
But all the warmth of her dear Indian isle,
And all the music of its tuneful birds.
With her conversing of my native bowers,
In the far South, I feel the genial air
Of some delicious morn, and taste those flowers,
Which, like herself, are bright above compare.

A JOURNEY ACROSS THE ANDES.

When a traveller returneth home, let him not leave the coun-
tries, where he hath travelled, altogether behind him.

Bacon.

Of foreign travel, he spoke with fierce and bolsterous con-
tempt, "What does a man learn by travelling? What did Lord
Charlemont learn in his travels, except that there was a snake
in one of the pyramids of Egypt?"

Johnson, teste, Bostell.

The night was passed in anxious expectation. The morrow was to end a tedious voyage, and to be the commencement of a long journey. At the dawn of day, the port of Islay, in South Peru, was distant from our ship eight leagues. A white and dense cloud of vapor rested on the coast; but above and beyond rose the "Andes, the giant of the western star." The Cordilleras, with their indistinct masses of azure, became more defined as the sun rose to the horizon. The fleecy vapor, which veiled the coast from view, was gradually lifted by his rays. Saffron light spread over the distant horizon, threw into relief, the serried Cordilleras. High above the surrounding sierras, rose in majestic grandeur, the volcano of Arequipa. It was distant, about one hundred and ten miles; yet there stood this towering cone, painted upon the violet-colored sky, sharp and defined. The town of Arequipa, our first resting place in the prospective journey to Cochabamba, nestles at the foot of the volcano. It is a noble landmark, like the pyramid of Cheops, which marks the site of Cairo to the impatient traveller who ascends the valley of the Nile. The sun had not long gilded the crests of the sierras, before the intensity of light obscured the fainter azure of the Andes, and this mountain pyramid melted into air.

The coast presented a picture of arid sterility; it was scorched, fiery, volcanic. The sierras were brown and ferruginous, "whose stones are iron, and out of whose hills thou mayest dig brass." No verdure carpeted their slopes—no trees shaded their brows. The eye swept along an iron-bound coast, unindented by bay or harbor. From Quilca, north, to Arica in the south, there was no "soft green" to repose the vision. Peru must be the land of metals; her hills seem to be the scoræ of Nature's unworked furnace. All around is igneous, plutonic, ashy. Such a land might have been the inheritance of *Tubal-Cain*, the "instructor of every artificer in brass and iron."

On the 10th of April we sailed from Callao, the port of Lima. Our destination was the port of Islay, where our arrival has just been announced. I had already passed ten days in the sybaritic city of Lima, when the exigencies of the service with which I was charged, required me to proceed to the distant republic of Bolivia, to confer with the Supreme Protector of the Peru-Bolivian Confederation, General Don Andres Santa Cruz. The English and Americans in Peru generally called him the *Holy Cross*, which is the translation of *Santa Cruz*. He was supposed to be at that time on the southern confines of Bolivia, where existing hostilities with Buenos Ayres and Chili demanded his presence. His migratory head-quarters in this posture of affairs would be *ubi-ibi*; at La Paz, Cochabamba, or Potosi.

The Confederation had not yet been finally organized. For this object, a Congress of Plenipotentiaries were soon to meet in Arequipa. Meanwhile, no seat of the federal government had been adopted. The *habitat* of the Supreme Protector was virtually the federal capital, an apt illustration of the French monarch's *L'état c'est moi!* The protectoral government was consequently nomadic; the Peruvians termed it a *gobierno á caballo*—a government on horseback. General Santa Cruz had the reputation of being well suited to this Tartar administration, in his wonderful powers of physical endurance. He was lately at Lima, and now he is eighteen hundred miles distant, at Tarija. He is said to admire the sentiment of Béranger:

"Vie errante,
Chose enivrante!"

To the *Cholos* and Indians of the country, this Tartar government brought one advantage. Their *ranchos* or huts were termed *protectoral palaces*; for wherever the protector fixed his head-quarters, his official acts and proclamations were issued from the "*Palacio protectoral*."

Cochabamba, the actual capital of Bolivia, is eighteen hundred miles distant from Lima, as computed by Gen. Miller. This journey over burning deserts, abrupt and rugged sierras; would have deterred hardier horsemen than myself. In Peru the traveller has less accommodations than in Turkey, and the climate is, to a degree,

oppressive. I had, however, for my encouragement, the example of Mr. Belford Hinton Wilson, son of Sir Robert Wilson, now Her Britannic Majesty's Chargé d'Affaires in Lima. He performed this journey in nineteen days, and returned in a shorter time. This was certainly an equestrian feat; it would be so esteemed by the professional *Tatars* of Asia Minor. Mr. Wilson was, at this period, aid-de-camp to General Bolívar. He told me that he long felt the ill effects of this ride.

The road from Lima follows the sea-coast to the valley of Arequipa, one hundred leagues. It then turns abruptly from the sea, and crosses the Cordillera. The whole coast of Peru is a sterile desert, save where it is intersected by streams from the mountains. These streams are from thirty to a hundred miles apart, and it is only on their banks that any cultivation exists. No stranger can pass these sandy deserts without a guide. Nothing indicates that they have ever been trodden by man or beast, save the frequent skeletons of animals, that have perished from heat and thirst. The sands are as moveable as those of the African Sahara.

This part of the journey was rather uninviting. We were relieved from it, by the consent of our commander to convey us to Islay, one of the ports nearest to Bolivia. The government at Lima proposed to send an officer of the army in company with me to General Santa Cruz, and he thus became a fellow passenger. This commissioner was Colonel R—, lately in command, but now *en disponibilité*.

We were fifteen days in making a voyage of four hundred miles. The wind and current were combined against us. Of their powerful effect, the best illustration is the fact, that we returned to Callao in three days. To this Western Ocean, Vasco Nunez de Balboa, properly applied the appellation of *Pacific*. It is a summer's sea compared with the tumbling billows of the Atlantic. It is thus peculiarly suited to steam navigation; and our enterprising countryman, Mr. Wheelwright, has finally succeeded in forming a company in London for that object. One might then reach Lima, via Panama, in thirty or forty days from New York, whilst one hundred and twenty, or fifty, are now required.

The morning of our arrival off Islay, we were becalmed. We were in the torrid zone, and the heat was not moderated by the sea-breeze. The village of Islay, with its straggling huts, dotting the white and ashy shore, lay before us. After meridian, a ship of war was discovered to leeward, which proved to be a United States ship of war. Signals were made, and our ship must "run down" to speak her. This might delay our landing for more than a day, and we accordingly accepted our commander's proposition to land us in a barge. At the setting of the sun, we left the ship with a long pull before us of twelve miles. The night was dark, but the stars twinkled brightly, as they ever do in the Southern hemisphere. We had taken the bearing of the port, and our safe voyage was then left to the stout arms of our crew. At twelve o'clock we had entered the port. Whilst looking about for the landing place, our movements were discovered by the guard on shore, and we were hailed with "*quien vive,*" who comes there? My colleague had previously arranged that this challenge should be answered by the officer of our

boat, whose *Gringo* accent would prove that he was not a Chilian. In the present state of hostilities, if I speak, said he, they may suspect us of being enemies, and give us a volley. A satisfactory parley ensued, in which we called ourselves *Norte-Americanos*, to which the guard replied, *Ah, si!—Ingleses—English*. By analogy, our people usually call a South American, of whatever republic, a *Spaniard*. Colonial bondage affects language long after that condition has ceased. As an illustration of this, the following anecdote is not bad. The law of Colombia required *colonials* to pay a certain duty of importation. A cargo arrived at Guayaquil from the United States, and the discriminating duty on *colonials* was exacted. Mr. Bartlett was then United States Consul, and he protested to the collector or administrador, against the exaction. "*Hombre!* my dear sir! were not the United States colonies of Great Britain?" said the administrador. "Yes!" replied Mr. B., "and so too was Great Britain a colony of Rome." The classic repartee had its effect.

Our parley ended in a permission to land. We thus took tongue. *Prendre langue* was the term used at Malta, under the Knights of St. John, for landing at the port. The Templars were of *seven languages* or nations. We were conducted to the residence of the administrador or collector of the customs, where the *Islenos* assembled to learn the news. The Falmouth was suspected to be a Chilian frigate. That our boat should look out for a random shot from the guard, proved, therefore, not to be improvident. It was not known, certainly, where General Santa Cruz was. Our journey was therefore indefinite. There is no publicity in Peru, and the people hear of the movements of their chiefs much in the same way that the Turcoman hears of the doings of his Agha, *id est*, from rumor.

The night was wearing away, and it became a question where we were to lodge. In Peru there are no *fondas*, *mesons* or inns. There is an exception in favor of the large commercial towns. If a traveller have a letter, that recommendation procures for him hospitality; if he have not, "*n'importe*, some body will take him in," if his appearance be not *anti-sympathetic*, as the natives term it. The English Consul kindly took our officer home with him, and the Colonel and myself were billeted upon the military *commandante*. Our room was in the upper part of a rattle-trap of a house, and was furnished with a table and two chairs. Beds were soon spread by Indian soldiers, and I soon sunk to rest, through the *horny* gate of sleep,

Quâ, facilis datur, exitus umbris.

Early on the morrow we were making our preparations for the journey to Arequipa. Mules and horses were procured for ourselves. Our luggage was to follow us by the *reque* or caravan. We also hired a sagacious *vaquiano*, or guide, Don Pepe Sanchez, to accompany us. I was yet to learn how indispensable is a *vaquiano* in traversing the Pampas of sand. My companion had providently brought with him his horse harness, and equipments for himself, from Lima. He was an old stager, and he made his preparations accordingly. He had his *ponchos* or cloaks, his *palmas* or leggings, and a broad brimmed *vicuna* hat, with flaunting ribband. With his cigarillo in his mouth, I must say the Peruvian horseman was quite picturesque.

My wants were all to be supplied, and Islay was not the place for that. The Colonel became impatient, and said, "*Hombre! vmd tiene mil dificultades,*" "my dear fellow, you make a thousand difficulties!" However, I mounted with my *Xipirapa* grass hat, and a Macintosh cloak from Charing cross, although the costume was not legitimate. Pepe's figure was rather quixotic, with two hats, one above the other, for easier transportation, and a cartouche with a brace of horse-pistols, strapped round his waist. Thus equipped, we gave spur and sallied out of Islay, somewhat before two o'clock. By leaving at this hour, we would cross the desert Pampas during the night, and thus avoid the fearful heat of the day.

Islay is the port of entry for Arequipa, and contains perhaps eight hundred inhabitants. The houses or huts are slightly constructed. There is a church distinguished by a cross on the roof, which recalled to my mind, Ruschenberger's visit to this place. His book is as correct as it is humorous. Of what advantage, he asked, would the priest's indulgence be to the port. "*Ninguno,*" none, was his friend's reply? Of what advantage to the people? "*Ninguno pues—*none I tell you; but those who accept it, think their stay in purgatory will be shortened by it, and that you know," said his friend, with a sly cast of his eye, "is a consideration." The visit of Commodore Stewart, to this coast, in the Franklin seventy-four, is still alluded to by the natives. An American line-of-battle ship was a novelty, and the presence of an accomplished American lady, Mrs. Stewart, was equally so. Whilst the Franklin was laying off Quilca, the Subdelegado invited the Commodore and his officers to dine. The company of Peruvian and American officers was large. The Subdelegado's hospitalities were generous, and they brought forth the spirit of conviviality. The indigenous wine of the valley circulated freely, and many patriotic and personal toasts were drunk. A gallant young Virginian, late in the feast, rose, and said: "I propose the health of the Subdelegado! Tell him, somebody, that he is a man of the true grit, and that if he will come to Richmond, he shall pass over Mayo's bridge free of toll." There was evidently no interpreter for this sentiment. The anecdote amused me much: it was strictly Virginian.

The road from Islay gradually ascends the slope of the Sierra. At the distance of a league it suddenly plunges into a *quebrada* or ravine of the mountain. Through this gorge we were to pass the first range of the Cordilleras, which stretched across our road like some Cyclopean wall. We were already elevated several hundred feet above the level of the sea, and before we entered the *quebrada*, I turned, with a longing lingering look, to the glassy ocean. The eye swept over a wide horizon; but yet our noble ship was not in sight. Before I could again see her, and the gallant spirits who guided her march on the mountain wave, weeks would elapse, and many a mile of rugged travel must be performed.

I was gazing on the blue and infinite space, yielding to my sympathies and melting thoughts of home and country, when I was aroused by Pepe's abrupt exclamation, *Vamosnos, Cabelleros!* Let us be off, Cavaliers! and accordingly off we went. *Piquemos!* let us spur up, continued Pepe; we shall hardly reach the Santa Cruz—holy cross—before night. This cross stands at

the mouth of the defile into which we had entered, where it debouches from the sierra upon the desert plateau, called the Pampa. It was five or six leagues distant, and the road was fatiguing. A *vaquiano* is not only your guide, he is also your time-piece, if you will, and your *dromometer*. He measures the road for you, and he is correct to a degree. He establishes the pace at which the traveller must move, and he puts out, sometimes at a slapping pace, leaving you to follow.

At the distance of one league, is the *pueblo* of Cangallo, consisting of three or four Indian huts. Here the *requas* rest; and here we took a *traguito*—a little sup of *chicha*, a fermented beverage of maize. We were to ride fifty-four miles to the next habitation of man, and we were to see in that space no living waters, and no green grass. I made some inquiry about the commissariat, and Pepe smilingly opened his *alforjas* or cotton saddle bags, to show me several bottles of *chicha*, *aguardiente* and water. Again we set out. The ravine is broad, and the acclivities of the hills, which wall it up, are sharp. The road is deep with white ashes, and they lie like drifted snow upon the dark brown hills—"dusky and huge, nature's volcanic amphitheatre." The *cactus* is the only plant which defies this universal barrenness; and I was astonished to see it shoot out of the clefts of rocks, to the height of ten feet. Our rate of travelling was about a league the hour, and without distressing our beasts. At the hour of twilight we finally emerged from the *quebrada*, and stood upon a desert, sandy plateau or Pampa. It extends to the next range of the Cordillera, and is thirty miles in breadth.

By the faint light of remaining day, I discovered the wooden cross, which was both a terminus and the commencement of our journey. Here we dismounted to refresh ourselves and cattle. Pepe performed his vesper orisons, and then brought out the *chicha* and cigars. Night had now fully spread out its dark mantle, but the southern constellations shone with their accustomed brilliancy. The mule track in the sand was scarcely visible; and yet, by this track, we were to cross the Pampa.

We again mounted. *Piquemos!* said Pepe, and off he started. My *macho*, accustomed to the business in hand, followed his leader at a hand-gallop, and before I had gathered up the long lash of my bridle. I felt insecure in the dark at this rapid pace, and pressed upon the reins; my *macho* snorted, as if indignant at being held in, and away he scampered, in pursuit of his leader. It was some time before I could relieve myself from the apprehension of falling or stumbling over some obstruction. The freshness and vigor with which our beasts attacked the Pampa, was truly surprising. They had already travelled over a fatiguing road of twenty miles, nor had they been baited or watered—yet they gave no signs of fatigue. They could get no feed nor water till the Pampa was crossed. They seemed to know this, and to their work they went with good grace, which was the true philosophy.

We continued our sweeping gallop. Both riders and beasts were animated; it was very important that the latter should be so. One felt the "exulting sense—the pulse's maddening play," whilst carried along over an even plain, by vigorous, untiring beasts.

I was soon to make an ungracious acquaintance with

a phenomenon of this desert, of whose existence I was entirely ignorant. The whole surface of the Pampa is covered with hillocks of white sand of impalpable fineness, called *medanos*. When I first saw them, I was descending the second range of the Cordilleras on my return to Islay. In the gray mist of morning they resembled a Bedouin *douar* or encampment, on the plains of Baalbec. These *medanos* are shifting sands, like those of the Sahara, and they consequently obliterate the track, and perplex the guide. They are irregularly disposed over the Pampa, and among them the *Arriero* winds his tortuous way. They have the form of a demi-lune, or horse shoe, and they all face towards the north east, as the winds blow unchangingly, across the desert from the south west. Some of these crescents are twelve or fifteen feet, and others not more than three inches high. The light sands are borne along by the wind, until they meet with some obstacle, and then is formed a *medano*. I saw one rising upon the scapular bone of an ass; another was perking itself upon a stray bit of rag.

These crescents stretch out their attenuated horns, and the track passes near them. Under my guidance, the mule deviated a little to the right of the track, where the horn of the *medano* was somewhat elevated. He stumbled, and over his head I was near being pitched, to find a bed in the sand. My first impulse was to bawl out for the guide; for although there were no beasts of prey, and no cannibals in the desert, yet it was certain death to be left in the Pampa without water. Santa Maria! exclaimed the Colonel, who was passing near me; and the *vaquiano* hearing the noise, came to a halt, and returned towards us. This was fortunate enough, for they might have soon been beyond hearing, at their careering pace. I here thought of the amiable Stevens, who was thrown over his camel's head, when he had crossed the Red Sea, in the track of the Israelites, and who concluded that his journey was to end there, where it had just commenced.

Our *macheros* were brought out, and lighting our cigars, we sat down on the *medano*, and took a draught of chicha. The adventure was amusing enough, whilst no bones were broke. So we mounted again, and I determined that, as my mule knew more about the question than I did, he should, for the future, have his own way, and dash on, right or left, at pleasure. In this case, my business was merely to keep fast to his back. On we swept. Suddenly the guide turned off, abruptly, at right angles to our course. "*Bestia!*" said the Colonel, addressing the guide; "you have lost the track." There was now every chance of our bivouacking for the night, *sub dio frigido*, and cold the night, in truth, was. When the track is lost in a sandy desert at night, he must be a sagacious guide who can again find it. I perceived that Pepe turned off from his course at right angles. He had been steering by a star. If the road were not to the right, it must be to the left; for, independently of our astronomy, we had kept the wind in our right eye. Pepe did not speak, but I intuitively understood his movements. When he had gone some distance to the right, he wheeled about, volte-face, head to tail, and recrossed his original track. I followed him closely. The Colonel was impatient, and rated Pepe rather roundly. Presently he dismounted, and putting his face close to the ground, he took up some of

the sand and smelt it. He then put his hands into the hollows of the sand, to determine if they were the tracks of beasts. How much necessity sharpens our wit! If one of our Indians, I reflected, can discover a trail, why should not our *vaquiano* detect a track? I had great faith in Pepe, but yielded to despair, and talked about passing the night on the sand, in the hollow of a *medano*. The guide was a man of reticence, and said nothing. Whilst he was alighted, his horse moved round him, and I saw at once that his bearing was lost. To preserve this, I took special care to keep the head and tail of my macho bearing at right angles to our former course. Pepe had been steering, he said, by a star; and he was, doubtless, a Chaldean of the Pampa. But the stars were rising to the zenith, and he might mistake his *cynosure*. I therefore preserved a point of departure. The aspect of the desert and sky is singular. You are in the centre of a circle, with a horizon around you. No where else than at sea, had I ever observed this phenomenon. *Undique cœlum et undique æquor*. In every direction we were hedged around with palpable darkness.

Pepe had not read Plato; but he "reasoned" better than the Athenian would have done, in a Pampa. When all signs of dung and dirt had failed him, he quietly said, "*esperen vms,*" stand still, gentlemen! and off he whirled into the darkness visible. We were thus a *point d'appui* for the guide, for he could fall back upon us, by halloing pretty sharply. Away he rode, clattering in the distance. He, evidently, was making a circle, to judge by the sounds which floated upon the breeze. The direction in which we had been steering, thus far, kept the wind in our right eye. As we now stood, it was in our back. Presently we heard a shout from Pepe, and knew at once that he had discovered the trail. We soon joined him, and resumed our journey.

The Colonel told me that it was not uncommon for the *vaquianos* to lose the track, and to pass the night on the Pampa. By day, the heat is most intense, and Indians on foot not unfrequently perish. He had led a company across this desert not long before, and lost six men.

The night was wearing away. *Que hora?* (what o'clock is it?) I asked of Pepe. He looked at the southern constellation of the cross, and said it was past midnight, for the cross begins to bend downwards. Humboldt says that midnight was often announced to him by the Indians who watched the Holy Cross. I too have watched this constellation with all the devotion of a Chaldean worshipper, in the "plain of Shinar." I have felt the "sweet influences of the Pleiades," and gazed on the "bands of Orion." In the land of Canaan, as on the Pampas of Peru, I have bowed in humility and grateful admiration to Him who established these ordinances of the skies.

We had reached the second range of the Cordilleras, when the moon rose above the wavy ridges of the sierra, and threw her silver light upon our path. In the gorges of the mountain we passed tinkling *requas*, that had set out from the Tambo thus early for Arequipa, to cross the Pampa before the extreme heat of the day. A little before three o'clock we reached the Tambo. I hastily left macho to the care of Pepe, and threw myself upon a pallet, with my clothes and boots on, and slept till five o'clock.

Two hours was an unrefreshing modicum of sleep, after sixty miles ride. I was aroused to renew my labors. "We must get through the Quebrada," said the Colonel, "before the heat of the day renders it impassable." I protested, and proposed to follow on to Arequipa in the evening. But there was no guide to accompany me, and the city was thirty miles distant. I saw my position, and with grace yielded to necessity.

Tambo is a *Qichua* or Peruvian word, corresponding to *caravanserai* in Persian. When Pizarro conquered the country, he found royal Tambos on the road from Quito to Cuzco. Our Tambo was established and is maintained by the merchants of Arequipa for the convenience of commerce. Water and all provisions for men and beasts, are brought from Arequipa by night. It is here that one may utter the jeremiad, "our water is bought, and our wood is sold unto us." My bill, I think, amounted to two dollars, of which one dollar was for water, for macho and myself. A medio (six cents) the bottle, is the fixed price. A poor borrico, or ass, will get only two bottles of water between Arequipa and Islay. This allowance is a law of the *regua*.

Our host had our *chupe* ready at five o'clock. *Chupe* is a composite dish of eggs, potatoes and cheese, and very savory it is! The inmates of the Tambo, were our host and his "*asistente*," or *help*, who officiated chiefly as cook. Pedro, the "*help*," recognised in R. his former commandant. After an interchange of kindly expressions, Pedro said, with a cunning expression of eye, "*Senor Coronel, ¿md no ha hecho todavía, una revolución?*"—"Colonel, have you not yet got up a revolution?" R. replied by a shake of the head and a spoonful of *chupe*. To me, who affected not to notice the question, it was full of meaning. It fully illustrated the character of the military men of this devoted country. One of our public agents was ordered to leave Buenos Ayres, because he used to ask, every morning, *who was President?* I have heard officers in Peru, when complaining of their grievances, exclaim, "*Caramba! yo me haré Presidente*"—by Jove! I'll make myself President. The Presidency is a sort of panacea for every ill.

"Pedro!" I said, "are not you and Gregorio very lonely here in this desert?"

"Yes!"

"Do you never quarrel?"

"*A veces*"—sometimes!

"What do you do then?"

"*No le hablo mas, tampoco, no lo veo*"—why then I neither see him, nor speak to him.

The doctrine of Hobbes was rather sustained in this case of two isolated men in a desert.

The quebrada, which opened our road through the second range of the Cordilleras, was six leagues in extent. We reached its debouché at meridian, upon the extreme summit of a sierra. The Pacific was visible from this point, eighty miles distant. The edge of the sierra was here very sharp and narrow, and it sloped down on either side most precipitously. The wind blew strongly; and whilst I was looking down the mountain into the deep vallies below, vertigo seized me, and I sunk to the ground. To avoid a recurrence of this malady, I walked down to the next valley, whilst Pepe led my mule. I should infer, from comparison, that the Cordillera at this point is 10,000 feet above the level of the sea.

The ravine which we had just passed was literally strewn with skeletons of beasts. It is a valley of dry bones. Now and then we passed a solitary borrico, which had been left behind to die, having been unable to keep up with the *tropa*. Poor beasts! as we passed them by the road side, standing listlessly, with their long ears drooping, they attempted to bray—perhaps they addressed our humanity. Their death is here at least undisturbed by birds or beasts of prey—for across this desert "the fowl findeth not a path."

The smoky crater, and the snow-capped summit of the volcano, were now before us, and the town of Arequipa could not be far distant. We had ascended the last ridge of the sierra by a precipitous, zigzag path, when suddenly the valley of Arequipa fell upon the admiring and astonished vision. A meandering stream of limpid waters thridded a plain of emerald verdure. The green fields were dotted with white and sparkling cottages, embosomed among umbrageous trees, whose leaves were playing with the lambent breeze. Beautiful picture! as it was first painted upon my enchanted view. In the deserts of Arabia, the sensual prophet could promise no greater attractions to his followers, in their Paradise, than "*gardens, through which run rivers of water*." An earthly paradise is the valley of Arequipa to the weary traveller of the Pampa! We plunged into the green fields; and at the first *azequia* or aqueduct for irrigation, we slaked our thirst in the glancing stream. Under the shade of a weeping willow, by the murmurs of the purling, laughing waters, I found an intensity of enjoyment, which sprung from recollections of the Sahara, which I had just passed. This moment will be among the most enduring and pleasurable recollections of my life.

We rested at the village of Tiovaya. A Cholo farmer prepared us a *chupe*, and his pretty daughter served us with a *picante* and *chicha*. A *picante* is a sauce of cayenne pepper, which increases the taste for *chicha*.

At a later hour of the evening we set off for the town of Arequipa, into which we proposed to enter at night. It had thus far been concealed from us by a low range of hills. Whilst winding round their base, the town gradually expanded to our view, the loveliest picture of imagination. Its white and sparkling houses were nestling at the foot of the volcano, and sportively reflecting back the last rays of the sun. The green, emerald fields smiled in freshness and abundance, presenting a pleasing contrast to the brown hills which walled in the happy valley. It was a scene for the daguerroscope to seize its fitting lights.

Amidst this scene of surpassing beauty, I forgot my fatigue; our beasts, strange to say, went over the last miles of the road, at a hand-gallop, with astonishing vigor. By twilight we crossed a stone-bridge over the river Chile, and entered the town. I alighted at the residence of J. Moens, Esq., United States Consul, to whose hospitalities I was warmly invited; whilst R. proceeded to embrace his lovely wife, the *Senorita Tomasita*.

Arequipa being the first stage in my journey across the Andes, I will also make it the first stage of my narrative. The passage of the Cordilleras, the Pampas and Quebradas, has been attended with so many difficulties and adventures, that I could scarcely be expected to think of statistics or history, moral and political. When

the journey is ended, the Poncho and spurs thrown off, and when the traveller has refreshed himself with a bath, these subjects may be quietly treated in his cabinet.

I cannot omit one fact, for the benefit of the Anglo-Saxons, the "greatest land-robbers of the human race," that land sells for twelve hundred dollars the acre in the valley of Arequipa. They may, therefore, abandon all idea of sliding down upon Peru. The valley of Anahuac is more feasible. This fact, learned by travel, is rather more important than Lord Charlemont's snake.

To-morrow I shall cross the Andes, by the region called "*despoblado*," the *unpeopled*. Another desert!

Cras, ingens iterabimus aequor.

Fluvanna county, Va.

W. B. H.

THE FIRST POLAR VOYAGE.

A BALLAD.

BY S. M. JANNEY.

In the year 1553, the merchants of London fitted out three vessels under the command of Sir Hugh Willoughby, to seek a passage to India by passing around the continent of Europe to the North-East.

High were thy hopes, brave Willoughby,
And gay thy gallant crew;
When like a sea-bird, to the gales
Thy vessel spread her snowy sails,
And o'er the waters flew.

For never yet had vessel sped
On that adventurous way,
When valiantly ye ventur'd forth,
Around the bleak and frozen north,
To seek the fam'd Cathay.

How oft had ye in Fancy's dreams,
Beheld that region fair,
The clime for which Columbus sought,
The land from whence de Gama brought,
His treasures rich and rare.

Onward towards the Northern Sea
The gallant vessels fly;
And now fair Albion's island green,
So long, so fondly watch'd, is seen
Fast fading from the eye.

Methinks on that dear spot they cast
Their last long lingering gaze,
And while it dimly fades away,
How oft does memory backward stray,
To scenes of former days.

For as the haze-encircled shore
Looms loftier to the sight,
So through the gathering mist of years,
Each pictur'd scene of youth appears
A vision of delight.

But onward still their course they steer,
Near Norway's rocky shore,
Where many a craggy isle is found,
And where the mighty Maelstrom's sound
Is heard with ceaseless roar.

Emerging from that dangerous coast,
More gaily do they steer;
But soon the sky is overcast,
And o'er the wave the northern blast,
Sweeps with a wild career.

Rushing and roaring thro' the shrouds
The mighty tempest comes,—
No gleam of light can they descry,
Save where in surges toss'd on high,
The sparkling ocean foams.

'Twas then the great commander show'd
His high and dauntless soul:
"Brave consorts follow on,"—said he;
"Keep off the shore upon your lee,
"And steer towards the pole."

But ah! what dangers gather round,
The valiant Willoughby,
His consorts gone, his reck'ning lost—
Bereft of hope, and tempest toss'd,
He roams the polar sea.

Hark now! that long and dismal howl,
Amid the tempest's roar—
'Tis from yon ice-encircled bay,
Where wolves are howling round for prey,
On Nova-Zembla's shore.

That ice-bound barren coast they leave,
And westward steer their way;
Round Russian-Lapland cold and bleak,
They coast along, and vainly seek,
A safe and sheltered bay.

But now the storms of sleet and snow
Are round them gathering fast;
Dread Winter here has fixed his throne,
And o'er these icy regions blown
His wild terrific blast.

The sun scarce rising to their view,
Has shed a glimmering light;
But now succeeds the wintry gloom,
And day, no more for months to come,
Shall dawn upon their sight.

Oh! cold and dreary is that clime,
Beneath the polar star;
And through that long and tedious night,
How oft does Fancy wing her flight,
To home and friends afar.

But never more brave Willoughby,
Shall home or kindred claim—
Death's icy hand is on him now,
Cold as the marble is his brow,
And stiff his manly frame.

His gallant crew, around their chief
 Like icy statues stand;
 And with their lives have passed away,
 The golden dreams that led astray
 That bold adventurous band.

'Tis ever thus with human hopes,
 How bright soe'er they be;
 If bounded by the present life
 Our course must be with dangers rife,
 On time's tempestuous sea.

But ah! there is, to cheer the soul,
 A region more sublime,
 Brighter than India's fairest day,
 And richer far than fam'd Cathay,
 Is that perennial clime.

To guide us to that destined shore
 Truth's polar star is given;
 Conscience, our compass, points to this—
 And for our chart, the Bible is
 A precious boon from Heaven.
Occoquan, Va. 1839.

THE SPANIARDS;

THEIR CHARACTER AND CUSTOMS.

Spain, the land of chivalry and romance, and the country of the Cid, of Cortes and Pizarro, has always been a subject of interest and inquiry to the scholar and the traveller. And yet, after all that has been said and written about the country, and after the numerous visits that have been made to it, Spain still seems to be a region unexplored; the genius and character of the inhabitants are not generally understood; and the notions entertained in regard to their manners and customs, are often vague and inconsistent. The fact is, that till the beginning of the present century there has been but little intercourse, at least in a philosophic point of view, between the Spaniards and the rest of Europe. The want of good roads and accommodations, and the risk of falling a prey to the ruthless banditti of the mountains, were circumstances that fully justified, at one time, the reluctance of travellers to a journey into Spain. The jealous and despotic spirit of the government, and the little knowledge there was then abroad of the Spanish language, now so much studied and admired, increased that reluctance, and effectually checked all the impulses of curiosity. It was not to be expected that these difficulties would be removed by a people who seldom stirred from home, and whose intercourse with foreigners was, till of late, so rare, that a Spanish traveller might have been considered a phenomenon. Nor is it a matter of surprise that even within their own territory the excursions of this people should have been so limited as we know they were; for certain it is that at no very distant period a journey from Madrid to Cadiz, was an undertaking of not less consideration, expense and danger, than a voyage at the present day from New York to Liverpool. Under these circumstances, and isolated as they have been for a long time, what wonder that the Spaniards, in a mo-

ral sense, should have attracted so little attention, or that they should retain in full relief those peculiarities and shades of character which distinguish them as a nation?

This fact is singularly exemplified by their adherence not only to their ancient customs and dress, but to their ancient feelings and inclinations.

The village Hidalgo of La Mancha is to be found in that province with the same dress, and in the observance of the same habits, as are described by the inimitable Cervantes. Many a Sancho, too, may be still seen there with his montera cap on one side of his head, sitting on the rump of a donkey, and ever and anon tossing to his mouth the leathern *bota*, or bottle, full of Yesses or Valdepenas.

[The native of Asturias, though poor and oppressed, is still proud of his descent from that brave and hardy race who never suffered foreign foe to set foot within their territory, and who so successfully bade defiance to the Roman eagle and the Moorish crescent. The exploits of Pelayo and the glories of Covadonga are themes which he yet dwells upon with pleasure. But with all this, and with the privilege of giving a title to the heir of the Spanish monarchy, the Asturian is the most humble and patient of his countrymen. He comes to Madrid while a youth, and adopts the profession of a water carrier, or a porter, as his fathers have done before him from time immemorial. After some years, and by dint of economy, he finds himself master of three or four hundred dollars, which to him is a world of money. He then retires to his province, buys a cow and a pig, gets a wife and a cottage, and settles down for life.]

The gay and reckless Andalusian, has not yet relinquished his taste for smuggling and bull-fighting, nor his abhorrence of every thing like vulgar industry and labor. And as he only wants money to squander it on his mistress, he generally selects the easiest and most expeditious mode of accomplishing his object, without much regarding the propriety of it. He has recourse to contraband, or he exhibits in the *plaza*;* or, if these resources fail him, he takes to the road, and subjects the unwary passenger to involuntary contribution. An intelligent observer can easily discover vestiges of the oriental origin of the Andalusians. The amorous and chivalrous disposition of the native of this province, his taste for dress and finery, and the multitude of Arabic idioms which occur in his dialect, are all strong indications of a Saracen extraction. The construction of their houses, with inner courts, refreshed by fountains and adorned with flower pots, and the narrow winding streets of their towns, also evince the truth of this remark. And to say nothing of the large black eye and swarthy skin of the peasant, how is the handkerchief he wears constantly on his head to be accounted for unless it be considered as a relic of the Moorish turban? In speaking of the Andalusians, a Spanish writer says, that they are *ni bien Moros ni bien Cristianos*; not exactly Moors, nor yet in reality Christians.

Jealous of his independence, and proud of his advantages, the Biscayan affects to look upon himself as belonging to a different nation from the Spaniards, and only gives to the king of Spain the title of Lord. Woe to the minister that should attempt to impose taxes on him, or to raise a conscription there; he might as well

* In the bull-fights.

beard a lion in his den. Trade, navigation, the accumulation of wealth, and the preservation of his liberties, are the objects which absorb the faculties of the Biscayan, who, to his credit be it said, is frank, hospitable and courteous.

The native of old Castile is perhaps the most amiable character of all. He is still remarkable for that gravity and dignified manner, and that delicate sense of honor, that *pundonor*, for which the inhabitants of his province were proverbial; and the appellation of "old Castilian" is even now assumed with pride, and admitted with complacency.

The Spaniards not only differ in a wonderful degree from the rest of Europe, as a nation, but are remarkable for the difference which exists among themselves as natives of separate provinces. It may be asserted with confidence, that there is less similarity between an Andalusian and a native of Asturias, than between a Frenchman and an Englishman. This discrepancy is strikingly apparent in the existence among them of a variety of dialects; for, while the Castilian speaks the Spanish in all its purity, the Biscayan expresses himself in a language as unintelligible to his neighbors as the Irish is to a Londoner. The Valencians and Catalonians have, in like manner, a dialect of their own, consisting of a medley of French, Latin and Spanish words, which it is as difficult to understand as it is impossible to learn. The same may be said of the Andalusian, who speaks a Spanish corrupted by a multitude of Arabic idioms, and whose accent has something in it peculiar and perhaps graceful, which he is supposed to have derived from his conquerors, the Moors.

There are in the Spanish character certain fine points, certain distinguishing features, which are highly honorable to the nation. That chivalrous spirit which shone with so much lustre in the days of Ferdinand and Isabel, is not entirely extinguished. They are a people susceptible of great enthusiasm; and when influenced by religious motives, or by national pride, their exertions are prodigious. If there were a head to direct, there would be no want of hands to execute; and had Napoleon had one hundred thousand Spaniards to command, he might to this day have been Emperor of the French. But these brilliant qualities are, to a certain degree, neutralized by defects too obvious to be overlooked. The energies of a Spaniard are not easily awakened. There is a listlessness and apathy of disposition about him, in ordinary circumstances, which lie like a dead weight upon his faculties, and often disappoint the most flattering expectations; there is an aversion to every thing like innovation, an adherence to old practices and old ideas, and a baneful spirit of procrastination, which are a clog to his progress in civilization, and retain him, as respects the useful arts, far in the rear of every other nation.

In point of education, that of a Spaniard generally approaches one of the two extremes of great ignorance or great learning. And even this learning, great as it is in some branches, is often attended by a singular want of knowledge in others. A profound theologian, a doctor of laws, or a man deeply versed in the dead languages, will sometimes be found so ignorant of geography, as to ask whether Philadelphia is in Europe or America, and perhaps to doubt whether the English language is that of the citizens of the United States.

It cannot be denied, however, that of late the diffusion of knowledge in Spain has made some progress; and it is possible, that under the present more liberal order of things, this country may in a few years raise herself to a level with the rest.

The education of females in Spain is of course still more limited than that of the men; but it is also a fact that they can do with less instruction than any other women in the world. Introduced into society almost from childhood, a Spanish girl, while yet in her teens, can assume, when she pleases, all the formality and sedateness of a matron, will do the honors of the house in the absence of her elders, receive a visit, and return a compliment, without being embarrassed. There is a natural grace and good breeding, an intuitive sense of decorum, about a Spanish lady, which supplies the want of a refined education. Nature seems to have done every thing for her; to art her obligations are but few. The Spanish ladies possess also a talent for conversation; and the ease and volubility with which they maintain it, is surprising. This perhaps is owing to the richness of the language, which, like that of the orientals, is figurative and diffuse in a high degree. With a Spanish lady an idea conceived is an idea expressed; there is no study or affectation in the choice of phrases; and with the aid of an animated countenance and an eye glowing with expression, she imparts an interest to trifles, and is pleasing and even fascinating. Dancing and music, are accomplishments which, in Spain, many young ladies acquire of themselves. Drilling and dumb-belles, and masters of *marche et tenue*, are things which they have no idea of, and which will never give to the girls of other countries the graceful walk and carriage of a Spanish girl. The women of Spain possess lively imaginations with but little sentiment; they love ardently, but not long; a broken heart is a very rare thing with them; and if in other countries girls die of love, they certainly never do so in Spain.

One observation more is necessary before finishing this brief sketch of the character and manners of the Spaniards, which is, that their national characteristics are to be sought for among the peasantry and the middling classes in the interior. In the sea-ports and at the capital, their intercourse with foreigners has rendered them quite a different people; and so wide is the difference in the state of society between the two classes, that in passing from Madrid to Toledo, a distance only of forty miles, the transition is like the lapse of a hundred years.

G. W. M.

LIFE.

The life of an ordinary man presents but few events of magnitude: it is a succession of details—and our happiness is to be sought for at home, not abroad—in the common course of every-day life, not in affairs of "great pith and moment"—in the book, the companion, the work and the recreation of to-day, and not in the golden dreams of romance.

Petersburg, Va

CURRENTE-CALAMOSITIES;

TO THE EDITOR OF THE MESSENGER.

BY THE AUTHOR OF "THE TREE ARTICLES."

NO. VIII.

ANOTHER SUMMER-DAY IN THE WOODLANDS.

The Palisades on the Hudson! Taking up our books,—your books, WILLIAM and MARY HOWITT!—where we laid them down, at the close of that beautiful day in June,—and beginning with the "Boy's Country Book,"—we will go on with our readings. But first a song from "Birds and Flowers," Mary! Sing this, called "Morning Thoughts."

"The summer sun is shining
Upon a world so bright!
The dew upon each grassy blade,
The golden light, the depth of shade,
All seem as they were only made
To minister delight!

"From giant trees, strong-branched,
And all their veined leaves;
From little birds that madly sing,
From insects fluttering on the wing,
Aye, from the very meanest thing,
My spirit joy receives!

"I think of angel voices
When the birds' songs I hear:
Of that celestial city bright
With jacinth, gold and chrysolite,
When, with its blazing pomp of light,
The morning doth appear!"

A good beginning: and now for a look around us! When William penned the following lines, he must have had *clairvoyance* of the scenes in whose very midst we now stand.

"As I followed my father silently up the ascending road on my gray pony, such scenes opened before me as I had never dreamed were to be seen in this world. The rocks on one hand went stretching away, till they made a sudden turn, at one which resembled exactly an old castle tower; and at their feet there appeared a broad walk of natural grass between them and the river, so green, and soft, and smooth, no king's garden ever looked so pleasant; and the river was so clear, and sent up such a softened murmur, that it was both like a picture, and like music!" THE PALISADES.

Why is it, my friends, that the content, the delight, the charm, the pleasure, the joy, with which we look abroad, upon such a scene as this, is never unmingled with melancholy? You answer truly enough, Mary, it is because we sympathise with our kind. We are so constituted, that the woes, the sorrows, the misfortunes, nay, the very mistakes of our fellow beings interest us almost as keenly as if they were all our own. Here, surrounded by so much that is beautiful and inspiring, we are looking, "from the loopholes of retreat," upon that busy, bustling world from out of which we have just now come. There it lies before us. There; in yonder city, whose lofty spires, and glittering roofs are dimly seen through the summer sky,—there, absorbed in hurrying anxious occupation, is going on the noisy chase for wealth. The politician is fastening his wily threads around the hearts of the people, and enmeshing therein their honors. The statesman, in the full flush of encouragement, which the promises of the strong, and the wealthy, and the influential, have superinduced, is towering in his pride,—firm as the earth his onward step,—his eye, eagle-like,

bright with the confident hope of victory! Alas! what multitudes of the disappointed! How solitary is success! "The race is not to the swift, nor the battle to the strong, nor understanding to men of skill!" And it were well, if it were only the aspirants to the various forms of greatness who are blasted in their hopes. But Disappointment goes down into the humble and innocent vales of life. The Poor sees but one destiny with the Rich. When forest oaks yield, on the mountains, to the violence of the storm, the reaper sighs over his wasted labor on the plains!

But a few, my friends, succeed! And, William, benign as are your teachings, I will count pain for pain, and sigh for sigh, in the Palace and in the Cottage. Man tires of possession: he desires change: he prefers all he is not, all he has not, to what he is and has. Each blessing he gets, great as it may be, is less than it seemed to the eye of Hope. And why is this? Is it true, as "the wisest man" has said, that "All is vanity?" No!

It was true, to him, in a sense. All was vanity, when viewed without its legitimate end and object,—*moral improvement, culture, and upward advancement!* In this view, nothing is vain,—every event of life, dark as it may seem to those who are of the "earth, earthy," is mercy. Thus, what will prove but a shadow to him who extends his arms to embrace it, not actuated by the proper and only legitimate motives that should impel him, is full of substantial joy to him, whose eye is fixed upon the true goal. Life is never vain to those by whom it is understood. As a period within which to erect plans for permanent rest, it is as vain as a hair would prove, tried as a link to chain together and to support a system of planets. As a sphere for the effort of mind it is vain, for its measure is finite and very uncertain. Nor is it the proper home of the Affections. Our loves drop, like lead, from our embrace, when loveliest, and there an end!

We want,—*we will have*,—something more! Asking this more of life, we find it has it not to give! But we have not these desires for nought? Where shall we go to obtain their gratification? The tendency of our souls' desires is upward. Heaven opens before them. It expands to satisfy them. Our spirit spreads its wings to obtain the fruition of it, out of this bleak world, as yonder noble bird, Mary, on his sublime flight for these warm, happy, summer skies, sings joyfully there, "at Heaven's gate."

Life belongs to the Man no more than the vapor that hangs over that city belongs thereto: And just as surely will it seem to him, one day or other, to be as vain a show. But take we up the book, again!

That day, William Howitt, you stole away from Ackworth school, with Harry Webb, to go visit Ned Tunstall, was such a day as this,—its counterpart! Read from page 244 of the "Country Book."

"If ever there was a day of splendor and rejoicing beauty, it was that day. It was towards the latter end of June, the foliage was in its utmost luxuriance: the sky was of one fine transparent azure: the fields were full of flowery and odorous grass ready for the scythe; the wild rose and elder-flower waved in the breezy hedge-rows, and flung their fragrance far and wide: the lark was rejoicing in the air, the cuckoo floated from place to place, with its deepest and mellowest voice; the grasshopper raised its shivering note in the turf at our feet, and a thousand insects hummed and wavered around—a thousand creatures uttered voices of delight.

"He that knows—and who does not know?—how full of gladness, and beauty, and wonder, all creation is to the heart of childhood—how entirely and intensely it lives in the present; having no habitual acquaintance with fear, or calculations of coming weariness, and of the fleet passing

of our enjoyments—but spreads its whole heart and hope over the whole fairy-land horizon that it embraces—may judge with what exultation we turned from the dusty road, and scoured along the foot-path, through delicious fields, towards the abode of Ned; here running into the mowing-grass waist-high to where we beheld some lark arise or fall, in the hope of finding its nest; here peeping into bank and bush, here leaping along, singing some school chant, for the easing of our pleasure-laden hearts."

What a beautiful description of a true summer's day! Here is a poetical pendant for it, from the "Birds and Flowers."

"They may boast of the spring-time when flowers are the fairest,
And birds sing by thousands on every green tree,
They may call it the loveliest, the greenest, the rarest,—
But the summer's the season that's dearest to me!

"For the brightness of sunshine; the depth of the shadows;
The crystal of waters; the fulness of green,
And the rich flowery growth of the old pasture meadows,
In the glory of summer can only be seen!

"Oh! the joy of the Greenwood! I love to be in it,
And list to the hum of the never-still bees,
And to hear the sweet voice of the old mother linnet,
Calling unto her young 'mong the leaves of the trees!

"Yes! the summer! the radiant summer's the fairest!
For greenwoods, and mountains,—for meadows and bowers;
For waters, and fruits, and for flowers the rarest,
And for bright shining butterflies, lovely as flowers!"

But, Mary, you have left out the prettiest verse,—the book, if you please! Here it is,—listen! I shall sing it to the tune of "I saw from the beach"—

"Then the mountains! How fair! To the blue vault of Heaven
Towering up in the sunshine, and drinking the light;
While adown their deep chasms, all splintered and riven,
Fall the far-gleaming cataracts, silvery white!"

If Apollo, envious, Mary, contest your claim to linger in the loveliest bower upon Parnassus, sing him that verse! Or these:

"I love the sunshine, every where:
In wood, in field, and glen,
I love it in the busy haunts
Of town-imprisoned men.

"I love it, when it streameth in
The humble cottage-door,
And casts the chequered casement shade
Upon the red brick floor.

"I love it, where the children lie
Deep in the clovery grass,
To watch among the twining roots
The gold-green beetles pass.

"I love it, on the breezy sea,
To glance on sail and oar,
While the great waves, like molten glass,
Come leaping to the shore!

"And when it shines in forest-glades,
Hidden, and green, and cool,
Through mossy boughs and veined leaves,
How is it beautiful!

"How beautiful on little streams,
When sun and shade at play
Make silvery meshes, while the brook
Goes singing on its way.

"Oh yes! I love the sunshine:
Like kindness or like mirth
Upon a human countenance,
Is sunshine on the earth!

"Upon the earth; upon the sea;
And through the crystal air;
On piled-up cloud,—the gracious sun
Is glorious, every where!"

Match me this, if you can, William, out of your "Country Book." You seem confident: let us hear it!

"What a quiet yet deep delight there is, in lying, on a warm summer day, and hearing the water run with a silvery lapsing sound, and seeing it throw little circles of light on the banks and the boughs above it: And to see the little shining flies with their long legs marching about on its surface; and others, like little beetles of bright blue steel, all in one place, keeping up such a dance of mazy intricacy as is wonderful. And to see the water-rats,"—

Nay! William, you are cribbing from your wife. Fie for very shame! Let me see if it is indeed all there, in the book! I ask your pardon,—go on.

—"the water-rats come peeping out of their holes, and plop into the water: and the fish dart past like arrows; or come up out of some deep place, all unconscious of your presence, and therefore as full of a quiet laziness as possible; balancing themselves on their slowly-waving fins, and rise up to the very top of the water, in the face of the sunshine, and bask in it with an evident and intense delight, and then turn slowly down again; or, at a glimpse of you, go off with a jerk and a dart, inconceivably swift. Aye, and to see all the birds,—the blackbirds and the thrushes, that haunt such places, the little chaff-chaff, and the wren, and the kingfisher, skimming past with a quick cry, or sitting with his red breast full opposite you, on some old mud-covered bough over the brook, watching for his prey."

"Let both divide the crown,"—for both have triumphed! Out of those eight verses of Mary's, and this last description of your's, her husband! our DUOGHTY and our FISHER could make nine such pictures! CHAPMAN shall illustrate each, on wood,—and what prettier gift will they show, over-sea, than this, about midsummer next?

What is this, on page 188 of the "Birds and Flowers?" It seems appropriate to the present topic, and we will have it. It is called

BIRDS.

"Oh the sunny summer time!
Oh, the leafy summer time!
Merry is the bird's life,
When the year is in its prime!
Birds are by the water-falls
Dashing in the rainbow spray;
Every where, every where
Light and lovely there are they!
Birds are in the forest old,
Building in each hoary tree;
Birds are on the green hills;
Birds are by the sea!

"On the moor and in the fen,
'Mong the wortle-berrries green;
In the yellow furze bush,
There the joyous bird is seen.
In the heather on the hill;
All among the mountain thyme;
By the little brook sides,
Where the sparkling waters chime;
In the crag; and on the peak,
Splintered, savage, wild and bare,
There the bird with wild wing
Wheeleth through the air.

"Wheeleth through the breezy air,
Singing, screaming in his flight,
Calling to his bird mate,
In a troubleless delight!

In the green and leafy wood,
Where the branching ferns up curl,
Soon as is the dawning,
Wakes the mavis and the merle;
Wakes the cuckoo on the bough,
Wakes the jay with ruddy breast;
Wakes the mother ring-dove
Brooding on her nest!

"Oh, the sunny summer time!
Oh, the leafy summer time!
Merry is the bird's life
When the year is in its prime!
Some are strong and some are weak;
Some love day and some love night;
But whate'er a bird is,
Whate'er it loves—it has delight,
In the joyous song it sings;
In the liquid air it cleaves;
In the sunshine; in the shower;
In the nest it weaves!

"Do we wake; or do we sleep;
Go our fancies in a crowd
After many a dull care,—
Birds are singing loud!
Sing then linnet; sing then wren;
Merle and mavis sing your fill;
And thou rapturous skylark,
Sing and soar up from the hill!
Sing, oh, nightingale, and pour
Out for us sweet fancies new!
Singing thus for us, birds,
We will sing for you!"

That visit of thine, in boyhood, to Spiderloft Chapel, William! How does it touch my heart; reminding me of many a summer-day of the kind, when summer-days were brighter and longer, and merrier, to me than ever they can be again! And how dost thou bring upon this cheek the blush of a shamed conscience, whilst thou art calling up to memory thy "white fibs" which procured thee that holiday. Truly say'st thou, "the conscience is a thing very tender of itself in early youth;" and well can I understand thy meaning,—"oh! sad, sad affair! I stopped my ears at these cries of conscience, but it was vain; it poured into my heart a sense of evil and condemnation; and then was still!" Yes, "still" till now, when thou hast roused the sin up again from the bottom of thy heart, whither, like lead, it was sunken, to expiate it by confession and by warning thy readers against offending in like manner!

I have often thought with what Brazen Impudence we,—I mean all mankind,—hourly infract the Golden Rule. The author of that rule will be content, if we but mind ourselves of it, with only the highest standard of Honesty. What we expect of others, with reason, is just the measure of what it is incumbent on us to perform; is it not? And yet, from that standard of regulating our conduct, so numerous are the departures, that there is not a man living who can be acquitted of this general charge. For instance; can you tell me of any man who *desires* to be the object of other folk's jealousy,—the butt of their wit,—to be depreciated in the esteem of friends,—to have his words misinterpreted; every advantage taken of him; his honor wounded; his faults betrayed; his virtues overlooked; his motives misrepresented? And yet, you and I know well enough—(?) too well! that this is all daily done by men whose pride is in their strict integrity.

I bethink me of an example. It happened a few weeks since in yonder bustling city, and is not yet removed from before the public eye, as a matter of legal investigation. It is an instance of that fraud, which a diseased state of public sentiment has rendered almost a creditable,—at all events,

a venal,—offence;—a fraud against the revenue laws. Now, what are laws good for? What made for? Are they not the protectors of the life and property of this very individual who has evaded them? They keep the bandit from his blood, and the plunderer from his chest. Whoever *justifies* an evasion of *one* of these laws, *authorises* the evasion of *others*,—upon which depend all that he is, and has; and resting upon precisely the same authority.

Hypocrisy,—and who is not occasionally hypocritical?—is a most palpable violation of the Golden Rule. We all feel that we have a right to expect our fellow-men to deal openly and above-board with us,—do we not?—Q. E. D.

And did it never strike you, Mary, how great an alloy of downright dishonesty there is mixed with what we call **POLITENESS**? Flattery! Affected Smiles! Pretences to great interest in others! False encouragement to hope for what we never will do! And so in what we call **PROPER PRIDE**! Pride, which forces us to recede from the place that of right belongs to us, and demands for us what we have no right to claim.

I tell you what it is,—and you know it as well as, and better than, I do,—my dear companions, we are, none of us, "any better than we should be!"

But the shadows of evening are beginning to fall. The last glimmer of sunshine is rapidly fading from the yellow spires of the distant churches; the reflection of these woody hill-tops is lengthening upon the bosom of the river; and it is time for us to wend our steps homewards. As Mary says so prettily,

"We have sat in the shade of the mighty trees,
While the summer noon was glowing,
And have heard, in the depth of their undergrowth,
The pebbly waters flowing.
We have quenched our thirst at the forest-well,
And ate of the forest-berry,
And the time we have spent in the good green-wood,
And our talk, and our song, were merry!"

And now, we'll home,—to pleasant dreams and treasured hopes of many more SUMMER DAYS, TOGETHER, IN THE WOODLANDS!

J. F. Q.

New York, July 31st, 1839.

THE MOCKINGBIRD AND FAIRY.

The Mockingbird particularly selects the hawthorn or sweet-brier to build his nest in, and during the months of June and July, sings both night and day. But during the night his notes are entirely different from his varied day song. They consist more of a shrill whistle and chirping, excepting when attracted by some passing sound, which he will imitate with singular nicety, even to the cock's crowing at midnight.

A Fairy wrapt in a tulip cup,
Which the night breeze gently was rocking,
Was roused from her dreams by the noisy chirp,
From a sweetbrier bow'r
Overhanging her flower,
Where a bird was incessantly mocking.

Oh! I'm cruelly teased by that chattering bird—
My rest is destroyed by his whistle.
Attend me, sweet Minion! this night, on my word,
He shall find his shrill shake;
From my bower he must take;—
Wake my band from the down of yon thistle.

Fairy bell! coral trump! silver drum! pearl guitar!
 Raise a din in his ears, that his clamor will drown;
 Drive him off, 'till his noise and himself are so far
 That I ne'er will again
 Be awoke by the strain
 Of my troublesome, boisterous, chattering clown.

But alas! even plots laid by fairies, may fail,
 And their hopes and their pleasures be blighted;
 Such a clamor now rose, that the fairy turn'd pale—
 Bell, trump, drum and horn,
 Each the bird mocked to scorn—
 In such music he vastly delighted.

Sweet Minion! I'll die if I longer remain
 In this place. Sure by furies 'tis hunted.
 Under thorn or sweetbrier, I vow ne'er again
 Will I seek for repose,
 Rock'd in tulip or rose;
 Ev'n the grass by their shade shall be stunted.

F.

LETTERS FROM NEW YORK.

NO. I.

Behold me, my dear Messenger, seated quietly and cozily in my attic, with books and papers strown around me "in most admired disorder," inditing my first epistle of a series intended for the especial delectation of your many fair and gentle readers! I would fain, here upon the brink and threshold of my better acquaintance with them, win their kind prepossessions and favorable regards. Though far away from their warm southern hearts, I would bring mine into genial communion with theirs, and draw, as it were, by the magnetic power of sympathy, to my distant nook, a portion of that generous good-will, which is so bountifully dispensed to those who are near them. I shall write with a rapid and flowing pen, concerning the changes and chances of this "great Babel;" for, in the loophole of my retreat, I can mark all its ongoings and not feel its crowd.

Seldom is there ever a wonder here which can boast so respectable a duration as that of "nine days;" the most important event would be forgotten in less than a week, were it followed by no continuing consequences, and it is never talked about for more than two revolutions of this sublunary sphere. A circumstance that would convulse a small town for months, passes over us in a single hour, leaving no more traces than the cloud which poured out the summer shower. We see the lurid flash of the lightning, hear the deep muttering of the thunder, feel the copious downfalling of the rain: but soon it is all over, and people come forth from their shelter, and, at most, observe "Quite a shower!" If another were to occur in ten minutes afterwards, there is every probability that the first would be forgotten. We are a thoughtless, hurrying race—we live only in the present—the past and the future are alike unregarded.

Take, as an illustration of my remarks, the state of effervescence into which our community was stirred a little more than a year since, by the success of Atlantic Steam Navigation. That was an event of the vastest

importance; probably nothing mightier could have happened than this linking together of two great realms—this bridging of the ocean—this approach to an annihilation of space and time—this stupendous triumph of human skill. And yet what was its effect? Did it agitate the river of commerce or change its course? Did it break up any great deep in social existence? No! it was simply averred that "a new era" had commenced. True enough—but what an era! Yet, so far as could be observed on the surface of affairs, there was some pitching and rolling, some tumbling of the billows, some foam—an effervescence, as we not too disparagingly called it—and then the usual smoothness succeeded; that is, if a tide which is perpetually ebbing and flowing can be smooth. Men talked about Atlantic Steam Navigation; and editors wrote about it; and the Mayor and Corporation and the ladies visited the "Steamers;" and crowds pressed upon the Battery railings to observe their arrival and departure; and, after no great length of time, no more curiosity seemed to be entertained on this absorbing subject! Now, the coming and going of the "regular line" of steam ships is no more noticed than those of the packets.

I might go on and tell you of "the late commercial embarrassments"—(as the most terrible sequence of catastrophies that ever jarred the fabric of society is blandly designated,)—I might speak of the effects of "the great fire," and show, from the influence of such occurrences on the world that moves before my eyes in this city, how transitory are the convulsions that follow the mightiest shocks! But I am too much of a New Yorker to dwell upon "hackneyed themes;" and, with a feeling of self-reproach at having alluded at all to a past, that is older than yesterday, I turn me to the living and glowing present!

Yet think not that I mean to put fetters upon my humor. If I so choose, I will muse over broken columns, prate of the ivy wreath that clingeth about old ruins, and moralize over the sad fate of departed empires. With the author of "Behemoth or the Mound Builders," I will, if my mood so prompts, explore the vast cemeteries of ante-Columbian nations, delve into decayed charnels, disinter the fossil monuments of a gigantic race; heap flesh, thaws, sinews and impenetrable hide on the bones of the devouring mastodon, making him taller than "the mast of some high admiral;" or, I will, in the balloon of my fancy, take an aeronautic excursion to the gray tops of the Rocky Mountains, and return with a series of "Views" like Sir William Stewart, or with the fins of stranded fishes, which, when beheld through the telescope of comparative anatomy, shall appear by the side of the whale's, like the whale's in juxtaposition with the minnow's. Being relieved of that sentence, grandiloquent as its theme demands, I proceed to say briefly, I shall go

"From gay to grave, from lively to severe,"

with heedless rapidity, and step from the sublime to the ridiculous, as often as it pleases me. I shall be pre-eminently discursive, and never digress—having no subject, I cannot digress, if I would—and I am glad of it, for I look upon digression as a piece of outrageous insolence on the part of an author, that the reader is bound to resent.

Incidentally I have referred to the "Views" of scenes

among the Rocky Mountains, brought to New York by Sir William Stewart. The worthy Baronet was so good as to permit of their exhibition upon the walls of "the Appelles Gallery of Painting and Sculpture." They were fourteen in number, and executed with wonderful power and spirit, though by no means entitled to the estimate of *finished* productions. The artist's name is Miller; he is of Baltimore; I am not certain whether he did not accompany Sir William to Europe, whither he has lately gone, and taken his pictures with him. He will feel great pride as well as pleasure in showing such evidences of his journeys, in the far wild West, to his English friends; and well he may, for two reasons. The first of these is, that the artist has made the Knight, with his long nose, a prominent figure in each scene; always mounted on the same noble looking steed. This is permissible, and no more to be carped at than that Phidias should have chosen to chisel his name on the base of his statue of Jupiter. To make our simile correct, Mr. Miller should have been the person introduced; but it matters not, a genius like his is secure of its ascendancy. A second reason for great inward satisfaction to Sir William Stewart, while displaying these fine paintings, must be the proofs, which they afford, of that remarkable enterprise and lofty spirit, which led him to undergo the fatigues and perils of a journey to those royal dominions of Nature. He is said to be possessed of a very large fortune and to have elected to expend it in this novel way—certainly much more striking than if he had made Lord Elgin his "illustrious predecessor," and broken noses and arms and legs from every statue that the Goths and Vandals had spared for a more ignoble sacrilege. Instead of indulging his love of the beautiful among objects of virtue in Italy and Greece, he chose to obey the dictates of a grander taste; and in the manifestations of Nature's works, he experienced a more elevated delight than he could have derived from the discovery of the finest specimens of ancient Art. It is said that Sir William returned to England, deeply impressed with the grandeur and magnificence of American scenery, as well as imbued with a respect for our institutions and national character. The testimony of one true gentleman, like Sir William Stewart, is worth a thousand books by your Halls, Hamiltons and Fiddlers; and if we are not greatly mistaken, the result of his excursion will be to stimulate others, like himself, to tread the same strange and wild regions of adventure. It is now becoming more and more fashionable for English ladies and gentlemen of rank to visit our shores; and the desirable consequence must be to ameliorate and refine our customs and manners, and to produce that interchange of pleasant thoughts and kindly sentiments which is the best bond of national as it is of social friendship. Within the past year, the Countess of Westmoreland has been residing for many months in New York, and she has moved freely and unostentatiously in our elegant circles, and been treated with that deference which is due to the station she occupied in her own country, and which can always be extended without servility, or any compromise of that republican simplicity which is justly regarded with us as the surest indication of good breeding.

As I mean that my letters shall possess one unquestionable claim at least to the attention of your readers,

viz. that of brevity, I cannot, my dear Messenger, so dilate on the topics that rise to my mind, as I could wish. You will not, however, expect me on one occasion to take you to all the attractions of amusement, which are now offered both to citizens and sojourners in this goodly Gotham. But I will speak of some, and if you opine that it will confer pleasure upon yourself and your friends, to resort to them in my poor society, I shall be very happy in a subsequent number to play the chaperon.

Sully's full length portrait of Victoria, in her coronation robes, ascending the steps of her throne, is now on exhibition in Broadway. This is a copy, the property of the artist, and displayed for his own private emolument. The original, belonging to the St. George's Society of Philadelphia, is in Boston, and the receipts from visitors there are to be appropriated in aid of the funds of the Society, the benevolent aim of which is to assist destitute Englishmen. You cannot have failed to notice the long account of an arbitration given on a dispute, which arose between Mr. Sully and the members of the St. George's Society, as to the ownership in the copyright, patent or invention of this picture. It appears, that had not the artist been introduced by the petition of the members to her majesty, the portrait never could have been taken. Two of the arbitrators seem to have decided in favor of Mr. Sully; the third gives very cogent, and so far as I am able to decide from a cursory investigation of the matter, sufficient reasons for his dissent. It seems to me that the members of the St. George stand towards Mr. Sully precisely in the relation of publishers to an author. The author has a right, if he so wishes, to preserve a copy of his manuscript for his own use; but he has no right to sell that manuscript, already disposed of, to a second publisher. The value of the picture of the Queen consists in its singleness, so far as the public are to pay for seeing it. If Mr. Sully shows his for money, or so as to prevent the payment of money to the owners of the original, he clearly infringes their right and destroys the very purpose which they had in view in engaging and remunerating his services. It is no answer to this to say that the price given was inadequate. The time for such an objection went by with Mr. Sully's acceptance of the commission. Moreover, it should be considered that he enjoyed the opportunity of acquiring a distinction, which, to an artist, is more valuable than fortune. The picture is said to be a likeness; but fault is found with its design as well as execution. Its parts are said to be out of harmony with each other—the upper part of the figure not to correspond with the lower. Dignity and repose mark the head and bust, while haste and a hurried step are displayed by the little lady's unmentionables and feet. But I will say nothing further, till we go together, to see the original picture—which will soon be exhibited by the Society.

Stout's statue of the Queen, to be seen at the Stuyvesant Institute, is universally spoken of as a work of considerable merit. It is probably correct in proportion and stature—the feet do not appear so exquisitely small as those of its illustrious archetype. Of Catlin's Gallery of Indian portraits, costumes, scenes, &c., in the same building, I may give you, by and by, a detailed account, although I am no connoisseur in art. It will be better for Mr. Catlin that I am not. He has

been absent from the city with his collection for a year past, and has recently returned, advertising that he has made numerous additions. He is a man of real genius and large knowledge, and should not condescend to emblazon himself after the style of medical empiricism. Many months ago, I read a letter from Mr. Spring Rice, Chancellor of the Exchequer, giving permission to Mr. Catlin to enter his collection in England, free of duty, provided that they were not sold in the United Kingdom. Of this permission it would have been wisdom in Mr. Catlin to have availed himself.

There is one display now in the city, which, *horribile dictu*, is said to be of a place altogether shocking to "ears polite." Of all climates, during the hot weather which is about to ensue, it may be supposed that that of "The Infernal Regions" would be the most disagreeable to a non-resident. Yet, such is the name held up to attract "loafers" during the summer solstice! It has been wisely remarked that "the worst use you can put a man to is to hang him;" yet it seems hardly less cruel to exhibit his skeleton, afterwards, in the mimicry of a situation, supposed to be occupied by his soul. Among the pleasant concomitants of "The Infernal Regions," *real* skeletons of malefactors executed in Ohio are pleasingly enumerated! "Oh, tempora! Oh, mores!" What will be, what can be, man's lower invention, to torture money from the pockets of fools! Don't imagine for a moment, Mr. Messenger, that I have been or intend to take you to a place like that! Heaven forbid! Such sights are splendid and sublime only in poetry. It is very thrilling to read of

"Blue flames dancing on a dungeon floor."

Or of that Stygian lake

"Whose every wave breaks on a living shore,
Heaped with the damned like pebbles,"

but extremely objectionable in reality or in representation to gentlemen, who, like printers, know what it is to have "the devil to pay."

In literature, New York is rapidly becoming the London of the United States. Authors now visit this metropolis in search of patronage and subsistence, as Crabbe went up to London. He must indeed be poor in capacity who cannot find sufficient literary employment to keep him from starving. The "gray goose quill" is at best a poor instrument, with which to carve out a man's way in this hard and noisy world; but that it can be wielded to better advantage here than in other cities of the union, the number of new books which emanate from our presses, abundantly testify. I have left myself but scant room, in which to dilate on this prolific theme; it is too capacious to be included in the concluding segment of a letter. In the course of our correspondence I shall have much to say about books and authors. You may anticipate also some sketches of the most prominent personages, directing the periodical press. I believe the Editors are all at their desks, at present, with the exception of Col. Webb, who went to England in the Great Western. The *Courier & Enquirer*, however, does not seem to suffer the slightest paralysis in his absence; for by the talents of his coadjutor, Mr. John O. Sargent, it is sustained with admirable vigor. The country, indeed, does not contain a more luminous, forcible and correct writer upon political subjects than Mr. Sargent. His

style is formed upon the noblest models of the English school, and he has transfused into his manner not only the energy but the ease of such masters as Burke and Mackintosh. His wit, also, is as keen and brilliant as a Damascus blade and of as good a temper. But let me not anticipate my proposed sketches.

As I am about to finish my rambling epistle, I hear the booming of cannon. Does it announce the arrival of the Liverpool? It must—for this is Sunday evening, and no other event could cause such big-mouthed explosions. Hark! I hear another sound of more portentous omen. The bells are ringing for fire! I look from my window. The sky darkens and grows lurid with the ascending smoke, and the shooting flames. I must descend into the street and inquire the news.

* * * * *

Up in my attic once more, most excellent Messenger, to furnish you with another illustration of the rapidly shifting panorama of events, beheld by "the lookers on here, in Vienna." I met a gentleman of my acquaintance, who but a little more than two months since departed for England, *Voici!* returned in "the Liverpool." She brings good news about cotton—and tomorrow all Wall street will be delighted. The fire! it still rages—it has already destroyed the beautiful "Church of the Ascension"—(the church ministered to by Dr. Eastburn—him who was lately elected to and declined the Bishoprick of Maryland)—and many dwelling houses are crumbling into ruin beneath the rage of the destructive element. A friend, who was present, told me that he saw a small library of choice old books thrown pitilessly from the windows of a burning house! This loss excites my liveliest sympathies. Nothing can replace it. How I mourn for the poor owner! He has perhaps spent many days of his life in collecting these rare treasures, and now they are deluged in water and trampled under rude feet—all, all, even to the precious little missal in silver clasps that he doated upon!

Addio! You see that I have chosen a simple title to these, my papers; I might have fallen upon a stranger one, but not one which more plainly and directly told the truth. I "trust that I have a good conscience;" nay, more—with uncle Toby I know that I have a good conscience. Therefore, with truth and without ostentation, I may sign myself by a Latin name, expressive of that honesty which every man may modestly claim, and entreat you in your orisons to remember all the sins of

Your faithful

PROBUS.

June 30, 1839.

HINTS.

We are admonished to "be swift to hear and slow to speak." Young people oftentimes reverse the rule—and are slow to hear, but swift to speak.

It is well to be a good talker, but it is better to be a good listener. You can hardly please a man better than to listen to what he has to say.

We may always find occasion to utter what we have to say—and it is generally more acceptable after we have heard out what others have to say.

Compliments are more dangerous than censure.

Petersburg, Va.

c. c.

To the Editor of the Southern Literary Messenger :

Mr. White,—The following article was written for, and indeed published, some years ago, in another journal; that journal, however, being a distant one, I think it likely that very few, if any of your readers, have ever before seen it, and I therefore send it to you for reprint in the Messenger. Yours, * * *

WINDOWS, CONSIDERED FROM WITHINSIDE.

The other day a butterfly came into our room and began beating himself against the upper panes of a window half open, thinking to get back. It is a nice point—relieving your butterfly—he is a creature so delicate! If you handle him without ceremony, you bring away on your fingers something which you take to be down, but which is plumes of feathers; and as there are no fairies at hand, two atoms high, to make pens of the quills, and write “articles” on the invisible, there would be a loss. Mr. Jeremy Bentham’s ghost would visit us, shaking his venerable locks at such unnecessary-pain-producing and reasonable-pleasure-preventing heedlessness. Then, if you brush him downwards, you stand a chance of hurting his antennæ, or feelers, and of not knowing what mischief you may do to his eyes, or his sense of touch, or his instruments of dialogue; for some philosophers hold that insects talk with their feelers as dumb people do with their fingers. However, some suffering must be hazarded in order to prevent worse, even to the least and most delicate of Heaven’s creatures, who would not know pleasure if they did not know pain—for pleasure springs from contrast; and perhaps the merrier and happier they are in general, the greater weight of pain they can bear. Besides, all must have their share, or how would the burthen of the great blockish necessity be equally distributed: and finally, what business had little Papilio to come into a place unfit for him, and get to bothering himself with glass? Oh, faith! Your butterfly must learn by experience as well as your Bonaparte.

There was he, beating, fluttering, flouncing—wondering that he could not get through so clear a matter, (for so glass appears to be to insects as well as to men,) and tearing his silken little soul out with ineffectual energy. What plumage he must have left upon the pane! What feathers and colors strewn about, as if some fine lady had gone mad against a ball room door for not being let in!

But we had a higher simile for him than that. “Truly,” thought we, “little friend, thou art like some of the great German transcendentalists, who in thinking to reach at Heaven by an impossible way, (such at least it seemeth at present) run the hazard of cracking their brains and spoiling their wings forever; whereas, if thou, and they, would but stoop a little lower, and begin with earth first, there, before thee lieth open Heaven as well as earth; and thou may’st mount high as thou wilt, after thine own happy fashion, thinking less and enjoying all things.”

And hereupon we contrived to get him downwards—and forth, out into the open air, sprang he—first against the trees before our window, and then over them into the blue ether—as if he had resolved to put our advice into practice.

We have often had occasion to notice the fret and fury into which the common fly seems to put himself against a window. Bees appear to take it more patiently, out of a greater knowledge, and slip about with a strange

air of hopelessness. They seem to “give it up.” These things, as Mr. Pepys said of the humanities at Court, “it is pretty to observe.” Glass itself is a phenomenon that might alone serve a reflecting observer with meditation for a whole morning—so substantial and yet so airlike—so close and compact to keep away the cold, yet so transparent and facile to let light in, the gentlest of all things—so palpably something, and yet to the eye and the perceptions a kind of nothing! It seems absolutely to deceive insects in this respect, which is remarkable, considering how closely they handle it, and what microscopic eyes we suppose them to have. We should doubt, (as we used to do,) whether we did not mistake their ideas on the subject, if we had not so often seen their repeated dashings of themselves against the panes, their stoppings, as if to take breath, and then their recommencement of the same violence. It is difficult to suppose they do this for mere pleasure, for it looks as if they must hurt themselves. Observe in particular the tremendous thumps given himself by that great hulking fellow of a fly, that Ajax of the Diptera, the blue-bottle. Yet in autumn, in their old age, flies congregate in windows as elsewhere, and will take the matter so quietly as sometimes to stand still for hours together. We suppose they love the warmth, or the light; and that either they have found out the secret as to the rest, or

“Years have brought the philosophic mind.”

Why should Mr. Fly plague himself any longer with household matters, which he cannot alter? He has tried hard in his time, and now he resigns himself like a wise insect, and will taste whatsoever tranquil pleasures remain for him, without beating his brains or losing his temper any longer. In natural lives, pleasure survives pain. Even the artificial, who keep up their troubles so long by pride, self-will, and the want of stimulants, contrive to get more pleasure than is supposed out of pain itself, especially by means of thinking themselves ill-used, and of grumbling. If the heart (for want of better training,) does not much keep up its action with them, the spleen does, and so there is action of some sort: and whenever there is action, there is life; and life is found to have something valuable in it for its own sake, apart from ordinary considerations either of pain or pleasure. But your fly and your philosopher are for pleasure too, to the last, if it be harmless. Give old Musca a grain of sugar, and see how he will put down his proboscis to it, and dot and pound, and suck it in, and be as happy as an old West India gentleman pondering on his sugar canes, and extracting a pleasure out of some dulcet recollection.

Gamblers, for want of a sensation, have been known to start up from their wine, and lay a bet upon two rain-drops coming down a pane of glass. How poor are those gentry, even when they win, compared with observers whose resources never need fail them! To the latter, if they please, the rain-drop itself is a world—a world of beauty and mystery and aboriginal idea, bringing before them a thousand images of proportion and reflection, and the elements, and light, and color, and roundness, and delicacy, and fluency, and beneficence, and the refreshed flowers, and the growing corn, and dew-drops in the bushes, and the tears that fall from gentle eyes, and the ocean, and the rainbow, and the origin of all things. In water we behold one of the old primeval mysteries of which the world was made. Thus, the commonest rain drop on a pane of glass becomes a visitor from the solitudes of time.

A window, to those who have read a little in Nature's school, thus becomes a book, or a picture, in which her genius may be studied, handicraft though the canvass be, and little as the glazier may have thought of it. Not that we are to predicate ignorance of your glazier now-a-days, any more than of other classes. The glazier could probably give many a richer man information respecting his glass, and his diamond, and his putty, and let him into a secret or two, besides, respecting the amusement to be derived from it.

But a window is a frame for other pictures than its own. Sometimes for moving ones, as in the instance of a cloud going along, or a bird, or a flash of lightning; sometimes for the distant landscape, sometimes the nearer one, or the trees that are close to it, with their lights and shades; often for the passing multitude. A picture, a harmony, is observable even in the drapery of the curtains that invest it, much more in the sunny vine-leaves, or roses or woodbine that may be visible on its borders or that are trailed against it, and which render a poor casement so pleasant. The other day we saw that beautiful plant the nasturtium trained over a very humble cottage window on several strings, which must have furnished the inmates with a screen, and at the same time permitted them to see through into the road, thus constituting a far better blind than is to be found in many great houses. Views like these give a favorable impression of the disposition and habits of the people within—show how superior they are to their sophistications if rich, and how possessed of natural refinement, if among the poorer classes. Oh! the human mind is a fine graceful thing every where, if the music of nature does but seize its attention, and throw it into its natural attitude. But so little has "the schoolmaster" yet got hold of this point, or made way with it, and so occupied are men with digging gold out of the ground, and neglecting the other treasures which they toss about in profusion during the operation, (as if the clay were better than the flowers which it produced,) that few make the most of the means and appliances for enjoyment that lie round about them, even in their very walls and rooms. Look at the windows down a street, and generally speaking, they are all barren—whereas the inmates might see through roses and geraniums, if they would; but they do not think of it, or not with loving knowledge enough to take the trouble. Those who have the advantage of living in the country or the suburbs, are led in many instances to do better, though their necessity for agreeable sights is not so great. But the presence of Nature tempts them to imitate her. There are few windows any where which might not be used to better advantage than they are, if we have a little money, or can procure even a few seeds. We have read an art of blowing the fire. There is an art even in the shutting and opening of windows. People might close them more against dull objects, and open them more to pleasant ones, and to the air. For a trifle of money, they might have beautiful colors and odors, and a pleasing task, emulous of the showers of April, beneficent as May; for they who cultivate flowers in their windows, (as we have before hinted,) are led instinctively to cultivate them for others as well as themselves; nay, in one respect they do it more so; for you may observe, that wherever there is this "*fenestral horticulture*," (as Evelyn would have called your window-gardening,) the flowers are turned with their faces towards the street.

But "there is an art in the shutting and opening of

windows." Yes, for the sake of air, (which ought to be had night as well as day, in reasonable measure, and with precautions,) and for the sake of excluding, or admitting, what is to be seen out of doors. Suppose for example, a house is partly opposite some pleasant, and partly some unpleasant object; the one a tree or a garden; the other, a grog-shop or a squalid lane. The sight of the first should be admitted as constantly as possible, and with open window. That of the other, if you be rich enough, can be shut out with a painted blind, that shall substitute a beautiful object for the nuisance; or a blind of another sort will serve the purpose; or if even a blind cannot be afforded, the shutters may be partly closed. Shutters should always be divided in two, *horizontally* as well as otherwise, for purposes of this kind. It is sometimes pleasant to close the lower portion, if only to preserve a greater sense of quiet and seclusion, and to read or write the more to yourself; light from above having both a softer and stronger effect than when admitted from all quarters. We have seen shutters, by judicious management in this way, in the house of a poor man who had a taste for nature, contribute to the comfort and even elegance of a room in a surprising manner, and, by the opening of the lower portions and the closure of the upper, at once shut out all the sunshine that was not wanted, and convert a row of stunted trees into an appearance of interminable foliage, as thick as if it had been in a forest.

A window, high up in a building, and commanding a fine prospect, is a sort of looking out of the air, and gives a sense of power, and of superiority to earth. The higher also you go, the healthier. We speak of such windows as Milton fancied, when he wished that his lamp should be seen at midnight in "some high lonely tower;" a passage justly admired for the good nature as well as loftiness of the wish, thus desiring that wayfarers should be the better for his studies, and enjoy the evidence of their fellow-creature's vigils. But elevations of this kind are not readily to be had. As to health, we believe that a very little lift above the ground floor, and so on as you ascend, grows healthier in proportion. *Malaria*, in the countries where a plague of that kind is prevalent, is understood to be confined to a certain distance from the earth; and we really believe, that even in the healthiest quarters, where no positive harm is done by nearness to it, the air is better as the houses ascend, and a seat in a window becomes valuable in proportion. By and bye, perhaps, studies and other favorite sitting rooms will be built accordingly; and more retrospective reverence be shown to the "garrets" that were once so famous in the annals of authorship. The poor poet in Pope, who lay

" ————— high in Drury Lane,
Lulled by soft zephyrs through the broken pane,"

was better off there than if he had occupied the ground floor. For our parts, in order that we may save the dignity of our meditations, and at the same time give evidence of practising what we preach, we shall finish by stating, that we have written this article in a floor neither high enough to be so poetical, nor low enough for too earthly a prose, in a room made healthy by an open window, partly screened from the observation of passers-by, by the thick foliage of various trees, overlooking which, our eye is presented with at a distance, the tops of cottages and other dwellings, and, still further off, the tower of a church. Some kindness of this sort, Fortune has hitherto never failed to preserve to us, as if in return for the love we bear both to nature and art. And now that the sincerity of our good will has become known, let none dispute the account to which we may turn it for others, as well as for ourselves. *

LOVE UNCHANGING.

And is it just or kind, my mother,
To break my heart to soothe your own?
And would you give me to another
Than him I love and love alone?
Shall I be false to every feeling,
To every plighted word untrue—
And with poor smiles my thoughts concealing,
Bestow this wedded heart anew?

I never loved but once—no, never!
And when a heart like mine is given—
It fondly loves and loves forever,
Unchanging as the truth of Heaven.
Before the sacred marriage-altar,
With him alone, hand linked in hand,
Sustained by trust that cannot falter,
Dear mother, will your daughter stand!

Then deem not that such love will perish,
By any change, or time or chance,
Or I can ever cease to cherish
The thoughts you vainly call "romance."
Undimmed will glow my true devotion,
Now rendered to his dearest name;
Unfaded bloom each sweet emotion,
Through life, through life—the same, the same!

PARK BENJAMIN.

THE CONTRAST—A SKETCH.

THE INFIDEL'S DEATH-BED.

'Twas a dark and gloomy night in the depth of winter; the ground was covered with snow, and but few dared to brave the bitter coldness of the midnight hour. In a wretched hovel, in one of the most infamous parts of New York, reposing on some musty straw, over which was spread a tattered blanket, lay the *Infidel*. A few coals, with which some charitable hand had filled his fireplace, shed over the scene a dim and gloomy light: by his bedside was placed a rude table, on which were some bottles of medicine; a few torn garments lay scattered about the room, everything indicated the most squalid poverty. Near this sufferer, dying from dissipation and want, sat a woman who had undertaken to nurse him. She often shivered and drew her cloak more closely around her, as the cold wind poured through the crevices of the crazy walls.

There is something in the whistling of the wintry blast melancholy to all; it reminds the poor man of the hardships, the privations, and the sufferings he must undergo, ere the genial warmth of spring returns—it reminds the merciful rich man of the unhappy fate of the many who are exposed to its violence without a shelter for their heads; it reminds the rich sensualist, as he calls for more blankets and a hotter fire, of future at-

tacks of rheumatism and gout. With that soothing and delicate attention, so peculiar to woman, the nurse was bathing his feverish forehead; but he heeded not—yet he was soon to appear before the judgment seat of that God whom he had insulted, whose followers he had reviled, whose religion he had scoffed, whose vengeance he had set at defiance, whose very existence he had denied. He was in a delirium; and his mind was wandering back to those happy days of childhood, when, free from guile, he had lived under the fostering care of a kind and religious mother. Later in life, when he had become more familiar with the world, and had begun to mix with young men of his own age, he had been ridiculed for his religious impressions. At first he was astonished and shocked to hear their impious blasphemy, but soon his ear became familiar with it, and at last he was one of the most profane among them. But his thoughts were now in far happier days: he was talking with his mother and receiving her holy instruction; he heard her uplifting her silvery voice to Heaven in behalf of the wretched; he heard her whispering the words of consolation into the ear of the afflicted, and as she directed their thoughts to Heaven, asking them in the simple eloquence of scripture, "Is there no physician in Israel? Is there no balm in Gilead?" This dream was pleasant. In sickness, in sorrow, even in the hour of death, the memory of a mother's love, of a mother's kindness, of a mother's anxiety, can drive away the mists of sorrow from the soul, with their cheering ray.

His thoughts now reverted from those blissful scenes to the hours spent with his infidel companions—ravings and blasphemies the most impious, poured from his lips; now he was in a public assembly, advocating infidelity, ridiculing, and (such is the vanity of man,) as he thought, disproving the holy faith of his fathers; now he recalled the time when he dared even to trample on the sacred volume of God; and his dim eye saw the maddened populace follow his detestable example. Well might its remembrance convulse his frame with fresh agonies;—he clenched his hand—he tore his hair, he exhibited all the gestures of despairing anguish, until wearied by excitement he sunk into a troubled repose.

The morning dawned, dark, gloomy and cold; a fit time for him to yield up his soul. The physician came, inquired how he had spent the night, felt his pulse, shook his head, and announced to him that his last hour was nigh. The sinner now, for the first time, became sensible of his condition, and in vain endeavored to drive away his awful emotions. "What is death?" said he; "'tis but a release from this miserable world—there is no hell,—I have proved it—there is no hell—but if there is—Oh God! what is the fate of the sinner; he lives unhappy, he dies miserable, and the flames

of hell torture his sight even in the hour of death." The nurse, rude as she was, saw his mental torture with pity, and urged him to look to Him who alone can save from destruction. But the name of his offended and injured God, only increased his blasphemies, and sunk him still deeper in the slough of despond.

The door opened, and a companion who had first led him into the paths of vice, entered. The Infidel recovered himself for a moment: with a bitter smile he said, "Behold thy work! thou hast done this." The wretch approached, and began to pour into his ear his sophistical arguments. But the arguments of Infidelity, however efficacious in health and prosperity, lose all their virtue when life is drawing to a close. The dying man became pale with rage: "Leave me!" he cried. "Begone! you have poisoned my existence; you have directed my soul to hell; and dare you, in *this* hour, torture your victim!" The man slunk away rebuked, perhaps soon to die the same miserable death. The Infidel's delirium increased—he raved, he swore, he blasphemed, until the nurse unable longer to bear the horrid scene, fled, and left him alone to die!

Tongue cannot tell the agonies of his last moments—no friend to smooth his dying pillow, none to pay him "even the poor tribute of a tear." Suffice it to say,

"He cursed his God—and died."

The physician returned in the course of the day; he was dead—yet still his clenched hand, his convulsed limbs, the unearthly expression of his countenance, and the distortion of his features, showed how fierce had been the conflict before his spirit left its earthly tenement—

Truly, "The way of the transgressor is hard."

THE CHRISTIAN'S DEATH BED.

'Twas a beautiful morning in the month of May, the vernal breeze was wafting the delicate perfume of the rose and the orange-flower, through the window of the sick man. The sun had scarce begun to pour down his ardent rays, and the invalid's feverish eye, wandering over the green plains, beheld at a distance the laborer slowly following his plough. All was peace and loveliness;—the wren, with his subdued melodious voice, was soothing the ear; and from the topmost branch of a neighboring tree, the mocking-bird was pouring forth his inexhaustible stream of varied song. The clear whistle of the partridge was heard from the neighboring field; the hen with anxious solicitude was calling her tender brood around her. The house dog, wearied by his watch during the night was enjoying a tranquil repose under the shade of a large aspen. In the clear blue expanse of Heaven, unobscured by a cloud, the lazy vulture of

the south was sailing in monotonous rounds. The admirer of our lovely world, standing at the window of the sick man, beholding the beautiful prospect—the James dying away in the distance, its silver bosom occasionally dotted by a white sail, or obscured by the thick smoke of a steam-boat—would unconsciously exclaim, "How beautiful is nature!"

All these met the view of the dying man—the fields whose culture he had superintended, the garden whose flowers he had planted; the river on whose grassy banks he had so often strayed in pleasurable meditation; the birds to whose songs he had listened with so much pleasure in health, and whose nests and tender young he had preserved from the rude hand of the school-boy; old Cæsar, whom he himself had reared, who had followed and defended him in many perils—all these met his eye, and conspired, by their calming influence, to soothe his dying hours. He looked at his old friend, stretched out his emaciated hand to him, and whispered in the low tone of disease, "Here, Cæsar;" the noble animal sprang through the open door in a moment, and licked his master's hand. The old man was affected, he patted his favorite's head, and turning to his daughter said, "Fanny, you will not leave old Cæsar to starve, when I am gone?" She spoke not, but an eloquent flood of tears answered the question. The dog seemed to perceive that something sad was going on, and lying on the floor wagging his tail, he looked wistfully in the face of his master—a master, whom he should never more follow, except to the grave. Yes, his last hour was come; his family were all assembled at his bed-side, and his eye often rested with a fond look on his affectionate wife, and lovely daughter, holding in her arms her first born; neither did he spare a look of regard on his faithful body servant, giving vent, in a corner of the room, to his grief, in a sincere flood of tears. His mind was composed—he had partaken for the last time, of that holiest of rites, and his soul awaited but the mandate of the Mighty One, to wing its way to scenes of far purer bliss. Yet one grief disturbed his dying hour—his son—his only son, was not there. He had, a year before, despite the entreaties of father, mother and sister, taken what property the liberality of his father had bestowed on him, and gone to one of the most dissipated Southern cities, whence many a sad account of him reached his family. They had hoped that the seeds of religion, so early implanted in his heart, might still spring up; and had written him numerous letters assuring him of entire forgiveness, if he would return. The old man's health sunk; and when he saw the hour of death was nigh at hand, he besought him in the most affectionate terms to come to him, that his eyes might not be closed forever, without one last fond look on his only son. They heard nothing from

him, and his coming was despaired of by all; yet still his father seemed to expect him,—and often as he felt that life was fast ebbing away, he would cast an anxious look down the noble avenue which led to the house. “Frank, my son,” muttered he, “will you not comply with the last request of your dying father?” A cloud would settle on his brow for a moment, but it would be immediately dissipated when he beheld his little grandson playing in childish glee with his mother’s dark ringlets. Again would he look down the avenue and heave a deep sigh. Not a word was spoken: they were all overwhelmed with grief. But now his anxious eye catches a glimpse of a horseman rapidly approaching—joyously he shrieked, “’Tis Frank,” and, overcome by the violence of his emotion, fainted. When he recovered, he found his son pale and toil-worn beside him—the instructions of those fond parents had not been lost; kneeling before his father, to beg forgiveness, he could only sob out, in the words of the prodigal son, “Father, I have sinned against Heaven, and before thee, and am no more worthy to be called thy son.” The face of the dying man lighted up—he laid his trembling hand upon his son’s head—“Bless thee, my boy,” said he. He fell back—exclaimed in a low voice, “now Lord let thy servant depart in peace”—a placid smile overspread his countenance—a slight shudder—and he was dead.

“Let me die the death of the righteous, and let my last end be like his!”

H. A. L.

Richmond, July, 1839.

SCRAPS FROM MS. DRAMAS.

BY PARK BENJAMIN.

THE BEST CONDITION.

Save me from riches! for the toil to keep
Accumulated wealth embitters thought.
And let me be preserved from poverty—
Sometimes the teacher sage of wisest maxims,
Bettering the life, raising the perilled soul—
Oftener a scourge, whipping men on to crime.
That state is best wherein is competence,
Peaceful acquirement of sufficient gain
To feed and clothe the body and supply
Necessities of knowledge; store of books,
Scanty but well-selected, garden flowers
Fresh to the sense, a little plot of ground—
Green, daisied ground, just large enough
For children to disport in—and a something left,
A tithe of all incomings, at the close
Of every term to give unto the poor.
The man who can have these and nought beside,
Nor yearns for golden mockeries, is blest—
Blest in repose of mind that surely brings
Contentment, length of days, and quiet sleep!

CLOSE OF A PROLOGUE.

As some lone traveller, whose searching eye
Views on a cliff a rose of beauteous dye,
Boldly resolves the cliff’s rough wall to scale,
And bring the floweret to the lowly vale;
So has our author spent his dearest might
To win your favor on this festal night—
Oh then, sweet friends, let your approving smile
His toil compensate and his care beguile:
Thus will the rose its balmy fragrance give,
And in his heart your memories ever live.

LOVE’S REMONSTRANCE.

Oh, chide me not, sweet mother!—It is true
I deemed I loved Fredrico;—for you praised
His manly virtues with untiring speech,
And urged me take his proffered heart and hand.
He was kind, gentle, pleasant in his bearing—
Told me he loved me—though his voice was cold
And had no music in’t. He kissed my brow,
But ’twas a kiss that seemed like one of blessing,
Not of love. I ne’er smiled or trembled when
I heard his footstep fall:—His eyes to me
Ne’er shone with the sweet light of quenchless love;
He’s gen’rous, and will pardon when he hears
My sad, sad story—and he would not take
My hand without my heart, though wealth were mine
Like Cleopatra’s—and surpassing charms!
My heart is wedded to young Augustine—
I know no duty loftier than the vows
I plighted unto him—I will be his,
Or, like a nun in convent cell immured,
Live lonely with my sorrow till I die!

EARLY LOVE.

The love of early youth—oh! how unlike
The selfish passion of maturer years!
The heart is all devotion—and the thrill
A seraph feels while gazing on the shrine
Of Heaven-revealing radiance in our own.
Nothing above, around, appears too fair
For a resemblance of the maid we love.
Morn’s smile is pale to her’s—the latest star
That melts into the sunlight is less pure!

KNOWLEDGE.

The more knowledge one attains, the more sensible
he becomes of his ignorance; as the higher a traveller
ascends a mountain, the more extensive prospect he
sees, of regions beyond, which he has never explored.
Pleasure is a shadow; Wealth is vanity, and Power
a pageant; but KNOWLEDGE is extatic in enjoyment,
perennial in fame, unlimited in space, and infinite in
duration. In the performance of its sacred office, it
fears no danger, spares no expense, omits no exertion.
It scales the mountain, looks into the volcano, dives
into the ocean, perforates the earth, enriches the globe,
explores sea and land, contemplates the distant, as-
cends to the sublime; no place too remote for its grasp;
no heavens too exalted for its reach. *Anon.*

"RICHELIEU"—BY E. L. BULWER.

Agreeably to notice, we now give scene the last of this play. The image and sentiment so beautifully expressed in the concluding lines, are, the author tells us, borrowed from a passage in one of the writings attributed to the Cardinal :

SCENE. III.—Manent Richelieu, Mauprat and Julie, the last kneeling beside the Cardinal; the officer of the guard behind Mauprat. Joseph near Richelieu, watching the King. Louis. Baradas at the back of the King's chair, anxious and disturbed. Orleans at a greater distance, careless and triumphant. The Secretaries. As each Secretary advances in his turn he takes the portfolios from the sub-secretaries.

First Secretary. The affairs of Portugal, Most urgent, Sire;—One short month since the Duke Braganza was a rebel.

Louis. And is still.

First Secretary. No Sire, he has succeeded! He is now Crown'd King of Portugal—craves instant succor Against the arms of Spain.

Louis. We will not grant it Against his lawful king. Eh, Count?

Baradas. No, Sire.

First Secretary. But Spain's your deadliest foe; Whatever can weaken Spain must strengthen France. The Cardinal would send the succors;—(solemnly,)—balance, Sire of Europe!

Louis. The Cardinal!—balance!—We'll consider. Eh, Count?

Baradas. Yes, Sire;—fall back.

First Secretary. But—

Baradas. Oh! fall back, Sir.

Joseph. Humph!

Second Secretary. The affairs of England, Sire, most urgent; Charles The First has lost a battle that decides One half his realm—craves money, Sire, and succor.

Louis. He shall have both. Eh, Baradas?

Baradas. Yes, Sire.

(Oh that despatch!—my veins are fire!)

Richelieu, (feebly, but with great distinctness.) My liege, Forgive me; Charles' cause is lost! A man, Named Cromwell, risen—a great man! your succor Would fail—your loans be squander'd! Pause—reflect.

Louis. Reflect. Eh, Baradas?

Baradas. Reflect, Sire.

Joseph. Humph!

Louis, (aside.) I half repent! No successor to Richelieu!

Round me thrones totter! dynasties dissolve!

The soil he guards alone escapes the earthquake!

Joseph. Our star not yet eclipsed! you mark the king? Oh! had we the despatch!

Richelieu. Ah, Joseph! Child,—Would I could help thee.

Enter GENTLEMAN, whispers JOSEPH, they exit hastily.

Baradas, (to SECRETARY.) Sir, fall back.

Second Secretary. But—

Baradas. Pshaw, Sir!

(*Third Secretary, mysteriously.*) The secret correspondence, Sire, most urgent,—

Accounts of spies—deserters—heretics—

Assassins—poisoners—schemes against yourself!

Louis. Myself! most urgent! [*Looking on the documents.*]

Re-enter Joseph with Francois, whose pourpoint is streaked with blood. Francois passes behind the Cardinal's attendants and sheltered by them from the sight of Baradas, &c., falls at Richelieu's feet.

Francois. O! my Lord!

Richelieu. Thou art bleeding!

Francois. A scratch—I have not fail'd! [*Gives the packet.*]

Richelieu. Hush! [*Looking at the contents.*]

Third Secretary, (to KING.) Sire, the Spaniards Have reinforced their army on the frontiers.

The Duc de Bouillon—

Richelieu. Hold! In this department, A paper—here, Sire, read yourself—then take The Count's advice in't.

Enter DE BERINGHEN hastily, and draws aside BARADAS.

(*RICHELIEU, to Secretary, giving an open parchment.*)

Baradas, (bursting from DE BERINGHEN.) What! and left it from thee!

Ha!—hold!

Joseph. Fall back, son,—it is your turn now!

Baradas. Death!—the despatch!

Louis, (reading.) To Bouillon—and sign'd Orleans. Baradas too!—league with our foes of Spain!—

Lead our Italian armies—what! to Paris!

Capture the king—my health require repose—

Make me subscribe my proper abdication—

Orleans, my brother, Regent!—Saints of Heaven!

These are the men I loved.

[*BARADAS draws, attempts to rush out—is arrested. ORLEANS, endeavoring to escape more quickly, meets JOSEPH'S eye, and stops short. RICHELIEU falls back.*]

Joseph. See to the Cardinal!

Baradas. He's dying! and I yet shall dupe the king!

Louis, (rushing to RICHELIEU.) Richelieu!—Lord Cardinal!—'tis I resign!

Reign thou!

Joseph. Alas! too late!—he faints!

Louis. Reign, Richelieu!

Richelieu, (feebly.) With absolute power?

Louis. Most absolute!—Oh, live!

If not for me, for France!

Richelieu. FRANCE!

Louis. Oh! this treason!

The army, Orleans, Bouillon, Heavens! the Spaniard! Where will they be next week?

Richelieu, (starting up.) There,—at my feet!

To the First and Second Secretary. Ere the clock strike!

The Envoys have their answer!

(*To Third Secretary, with a ring.*) This to De Chavigny; he knows the rest—

No need of parchment here—he must not halt

For sleep, for food. In my name,—MINE! he will

Arrest the Duc de Bouillon at the head

Of his army!—Ho! there, Count de Baradas,

Thou hast lost the stake!—Away with him!

[*As the Guards open the folding-doors, a view of the ante-room beyond, lined with Courtiers. BARADAS passes thro' the line.*]

Ha!—ha! [*Snatching DE MAUPRAT'S death warrant from the Officer.*]

See here, De Mauprat's death-writ, Julie!

Parchment for battledores!—Embrace your husband!

At last the old man bleases you!

Julie. Oh joy!

You are saved, you live—I hold you in these arms.

De Mauprat. Never to part?

Julie. No—never, Adrien—never!

Louis, (peevishly.) One moment makes a startling cure, Lord Cardinal.

Richelieu. Ay, Sire, for in one moment there did pass Into this wither'd frame the might of France!

My own dear France—I have thee yet—I have saved thee!

I clasp thee still! it was thy voice that call'd me

Back from the tomb! What mistress like our country?

Louis. For Mauprat's pardon—well! But Julie,—

Richelieu,

Leave me one thing to love!

Richelieu. A subject's luxury!

Yet, if you must love something, Sire,—love me!

Louis, (smiling in spite of himself.) Fair proxy for a young fresh demoiselle.

Richelieu. Your heart speaks for my clients. Kneel, my children, And thank your king.

Julie. Ah, tears like these, my liege,
Are dews that mount to Heaven.

Louis. Rise—rise—be happy.

[RICHELIEU beckons to DE BERINGHEN.]

De Beringhen (falteringly.) My Lord—you are—
most—happily—recover'd.

Richelieu. But you are pale, dear Beringhen:—this air
Suits not your delicate frame—I long have thought so:
Sleep not another night in Paris. Go,
Or else your precious life may be in danger.
Leave France, dear Beringhen!

De Beringhen. I shall have time,
More than I ask'd for, to discuss the *paté*. [Exit.]

Richelieu, (to ORLEANS.) For you, repentance, ab-
sence, and confession!

To FRANÇOIS. Never say *fail* again. Brave boy!

To JOSEPH. He'll be—

A Bishop first.

Joseph. Ah, Cardinal;

Richelieu. Ah, Joseph!

[To LOUIS, as De Mauprat and JULIE converse apart.]

See, my liege; see thro' plots and counterplots;
Thro' gain and loss; thro' glory and disgrace;
Along the plains, where passionate Discord rears
Eternal Babel; still the holy stream
Of human happiness glides on!

Louis. And must we

Thank for that also—our prime minister?

Richelieu. No; let us own it: there is ONE above
Sways the harmonious mystery of the world
E'vn better than prime ministers.

Alas!

Our glories float between the earth and heaven
Like clouds which seem pavilions of the sun,
And are the playthings of the casual wind;
Still, like the cloud which drops on unseen crags
The dews the wild flower feeds on, our ambition
May from its airy height drop gladness down
On unsuspected virtue; and the flower
May bless the cloud when it hath pass'd away.

The Harper's have published an edition of this play
in connection with three odes by the same author.
They are entitled, "The Last Days of Queen Eliza-
beth," "Cromwell's Dream," and "The Death of
Nelson." They fully double the value of the book.
From the first we make the following extracts:

Call back the gorgeous past!

Lo, England white-robed for a holyday!

While, choral to the clarion's kingly blast,
Peals shout on shout along the virgin's way;

As through the swarming streets rolls on the long array.

Mary is dead! Look from your fire-won homes,

Exulting martyrs! on the mount shall rest

Truth's ark at last! th' avenging Lutheran comes,

And clasps the Book ye died for, to her breast!*

With her, the flower of all the land,

The highborn gallants ride,

And, ever nearest of the band,

With watchful eye and ready hand,

Young Dudley's form of pride!†

* "When she (Elizabeth) was conducted through London
amid the joyful acclamations of her subjects, a boy, who per-
sonated Truth, was let down from one of the triumphal arches,
and presented to her a copy of the Bible. She received the book
with the most gracious deportment, placed it next her bosom,"
&c.—Hume.

† Robert Dudley, afterward the Leicester of doubtful fame,
attended Elizabeth in her passage to the Tower. The streets,
as she passed along, were spread with the finest gravel; banners
and pennons, hangings of silk, of velvet, of cloth, of gold, were
suspended from the balconies, musicians and singers were sta-
tioned amid the populace, as she rode along in her purple robes,
preceded by her heralds, &c.

Ah, ev'n in that exulting hour
Love half allures the soul from power,
And blushes, half-suppressed, betray

The woman's hope and fear;

Like blooms which in the early May

Bud forth beneath a timorous ray,

And mark the mellowing year,

While steals the sweetest of all worship, paid

Less to the monarch than the maid,

Melodious on the ear!

Call back the gorgeous past!

Where, bright and broadening to the main,

Rolls on the scornful river;

Stout hearts beat high on Tilbury's plain,

Our Marathon for ever!

No breeze above, but on the mast

The pennon shook as with the blast.

Forth from the cloud the day-god strode,

O'er bristling helms the splendor glow'd,

Leap'd the loud joy from earth to heaven,

As, through the ranks asunder riven,

The warrior-woman rode!

Hark, thrilling through the armèd line

The martial accents ring,

"Though mine the woman's form, yet mine

"The heart of England's king!"*

Wo to the island and the maid!

The pope has preached the new crusade,†

His sons have caught the fiery zeal;

The monks are merry in Castile;

Bold Parma on the main;

And through the deep exulting sweep

The thunder-steeds of Spain.‡

What meteor rides the sulphurous gale?

The flames have caught the giant sail!

Fierce Drake is grappling prow to prow;

God and St. George for victory now!

Death in the battle and the wind;

Carnage before and storm behind;

Wild shrieks are heard above the hurtling roar

By Orkney's rugged strands and Erin's ruthless shore.

Joy to the island and the maid!

Pope Sixtus wept the last crusade;

His sons consumed before his zeal

The monks are woful in Castile;

Your monument the main,

The glaive and gale record your tale,

Ye thunder-steeds of Spain!

Turn from the gorgeous past;

Its lonely ghost thou art!

A tree, that, in a world of bloom,

Droops, spectral in its leafless gloom,

Before the griding blast;

But art thou fallen then so low?

Art thou so desolate? wan shadow, No!

Crouch'd, suppliant by the grave's unclosing portal,

Love, which proclaims thee human, bids thee know

A truth more lofty in thy lowliest hour

Than shallowest glory taught to deafen'd power,

"WHAT'S HUMAN IS IMMORTAL!"

* "I know I have but the body of a weak and feeble woman,
but I have the heart of a king, and of a king of England too."

Elizabeth's harangue at Tilbury Camp.

She rode bareheaded through the ranks, a page bearing her
helmet, mounted on a war-horse, clad in steel, and wielding a
general's truncheon in her hand. Nothing in Napoleon's
speeches excels the simple and grand eloquence of her impe-
rishable address to her soldiery.

† "Sextus Quintus, the present pope, famous for his capacity
and his tyranny, had published a crusade against England, and
had granted plenary indulgences to every one engaged in the
present invasion."—Hume. This pope was nevertheless Eliza-
beth's admirer as well as foe, and said, not very clerically, "If
a son could be born from us two, he would be master of the
world."

‡ "Steeds of the sea" was the poetic synonyme for ships with
the old Runic bards.

We cannot resist the temptation to quote the Ode entitled "Cromwell's Dream" entire, nor do we think that our readers will find fault with us for doing so. With this we close our extracts.

CROMWELL'S DREAM.

[The conception of this ode originated in a popular tradition of Cromwell's earlier days. It is thus strikingly related by Mr. Forster, in his recent and very valuable Life of Cromwell: "He had laid himself down, too fatigued to hope for sleep, when suddenly the curtains of his bed were slowly withdrawn by a gigantic figure, which bore the aspect of a woman, and which, gazing at him silently for a while, told him that he should, before his death, be the greatest man in England. He remembered when he told the story, and the recollection marked the current of his thoughts, *that the figure had not made mention of the word king.*" Alteration has been made in the scene of the vision and the age of Cromwell.]

The moor spread wild and far
In the sharp whiteness of a wintry shroud,
Midnight yet moonless; and the winds ice-bound,
And a gray dusk—not darkness—reign'd around,
Save where the paleness of a sudden star
Peer'd o'er some haggard precipice of cloud.
Where on the wold, the triple pathway cross'd,
A sturdy wanderer, wearied, lone, and lost,
Paused and gazed round; a dwarf'd but aged yew
O'er the wan rune its gnome-like shadow threw;
The spot invited, and by sleep oppress'd,
Beneath the boughs he laid him down to rest.
A man of stalwart limbs and hardy frame,
Meet for the antique time when force was fame,
Youthful in years—the features yet betray
Thoughts rarely mellow'd till the locks are gray;
Round the firm lips the lines of solemn will
Might warn the wise of danger in the smile;
But the blunt aspect spoke more sternly still
That craft of craft, **THE STUBBORN WILL:**
That which, let what may betide,
Never halts nor swerves aside;
From afar its victim viewing,
Slow of speed, but sure pursuing;
Through maze, up mount, still bounding on its way,
Till it is grimly couch'd beside the conquer'd prey!

II.

The loftiest fate will longest lie
In unrevealing sleep;
And yet unknown the destined race,
Nor yet his soul had walk'd with grace;
Still, on the seas of Time
Drifted the ever-careless prime;
But many a blast that o'er the sky
All idly seems to sweep,
Still while it speeds may spread the seeds,
The toils of autumn reap:
And we must blame the soil, and not the wind,
If hurrying passion leave no golden grain behind.

III.

Seize, seize, seize!*
Bind him strong in the chain,
On his heart, on his brain,
Clasp the gyves of the iron sleep.
Seize, seize, seize,
Ye fiends that dimly sweep
Up from the cloudy deep,
Where Death holds ghastly watch beside his brother,
Ye pale impalpables, that are
Shadows of truths afar,
Prophets that men call DREAMS;
The phantom birth of that mysterious mother,
Who, by the Ebon Gate,

* Ἀῖδέ, λαλέ, λαλέ, λαλέ, (seize, seize, seize).—*Æschyl. Eumen.*, 126.

Beyond the shore where daylight streams,
Sits, muttering spells for mortal state,
Young with eternal years, the Titan sibyl FATE!
Prophets that men call Dreams!

IV.

Seize, seize, seize,
Bind him strong in the chain,
On his heart, on his brain,
Clasp the gyves of the iron sleep!
Awakes or dreams he still?
His eyes are open with a glassy stare,
On the fixed brow the large drops gather chill,
And horror like a wind stirs through the lifted hair.*
Before him stands the thing of dread,
A giant shadow motionless and pale!
As those dim Lemur-vapors† that exale
From the rank grasses rotting o'er the dead,
And startle midnight with the mocking show
Of the still, shrouded bones that sleep below:
So the wan image which the vision bore
Was outlined from the air, no more
Than served to make the loathing sense a bond
Between the world of life and grislier worlds beyond.

V.

"Behold!" the shadow said, and lo,
Where the blank heath had spread, a smiling scene;
Soft woodlands sloping from a village green,
And, waving to blue heaven, the happy cornfields glow:
A modest roof, with ivy cluster'd o'er,
And childhood's busy mirth beside the door.
But, yonder, sunset sleeping on the sod,
Bow labor's rustic sons in solemn prayer;
And, self-made teacher of the truths of God,
The dreamer sees the Phantom-Cromwell there!
"Art thou content, of these the greatest Thou?"
Murmur'd the fiend, "the monster and the priest?"
A sullen anger knit the dreamer's brow,
And from his scornful lips the words came slow,
"The greatest of the hamlet, demon, no!"
Loud laugh'd the fiend, then trembled thro' the sky,
Where haply angels watch'd, a warning sigh;
And darkness swept the scene, and golden quiet ceased.

VI.

"Behold!" the shadow said; a hell-born ray
Shoots through the night, up leaps the unblest'd day,
Spring from the earth the dragons armed seed,
The ghastly squadron wheels and neighs the spectre-
steed.

Unnatural sounds the mother-tongue
As loud from host to host the English warery rung;
Kindred with kindred blent in slaughter, lo
The dark phantasma of the prophet-we!

A gay and glittering band!
Apollo's love-locks in the crest of Mars;
Light-hearted Valor, laughing scorn to scars;
A gay and glittering band,

* ἰς ὄρεα

Ἀσίπ' ὑπὸ λῶε κρατὸς φόβαν.

Soph. *Œdip. Col.*, 1463.

† The Lemures or Larvæ, the evil spirits of the dead, as the Lares were the good. They haunted sepulchres—"loath to leave the bodies that they loved."

† The farm of St. Ives, where Cromwell spent three years, afterward recalled with regret, though not unaffected with dark hypochondria and sullen discontent. Here, as Mr. Forster impressively observes, "in the tenants that rented from him, in the laborers that served under him, he sought to sow the seeds of his after troop of Ironsides. . . . All the famous doctrines of his later and more celebrated years were tried and tested in the little farm of St. Ives. . . . Before going to their field-work in the morning, they (his servants) knelt down with their master in the touching equality of prayer; in the evening they shared with him again the comfort and exaltation of divine precepts."—*Forster's Cromwell*.

Unwitting of the scythe, the lilies of the land!
 Pale in the midst, that stately squadron boast
 A princely form, a mournful brow;
 And still, where plumes are proudest, seen,
 With sparkling eye and dauntless mien,
 The young Achilles* of the host.
 On rolls the surging war, and now
 Along the closing columns ring,
 "Rupert" and "Charles," "The Lady of the Crown,"
 "Down with the Roundhead rebels, down!"
 "St. George and England's king."

A stalwart and a sturdy band,
 Whose souls of sullen zeal
 Are made by the Immortal Hand,
 Invulnerable steel!
 A kneeling host, a pause of prayer,
 A single voice thrills through the air
 "They come. Up, Ironsides!
 For TRUTH and PEACE unsparing smite!
 Behold the accursed Amalekite!"
 The dreamer's heart beat high and loud,
 For, calmly through the carnage-cloud,
 The scourge and servant of the Lord,
 This hand the Bible, that the sword,
 The Phantom-Cromwell rides!

A lurid darkness swallows the array,
 One moment lost; the darkness rolls away,
 And o'er the slaughter done
 Smiles, with his eyes of love, the setting sun.
 Death makes our foe our brother;
 And, meekly, side by side,
 Sleep scowling Hate and sternly smiling Pride,
 On the kind breast of earth, the quiet mother!
 Lo, where the victor sweeps along,
 The Gideon of the gory throng,
 Beneath his hoofs the harmless dead,
 The sunlight glory on his helmed head,
 Before him steel-clad Victory bending,
 Around, from earth to heaven ascending,
 The fiery incense of triumphant song.
 So, as some orb above a mighty stream
 Sway'd by its law, and sparkling in its beam,
 A power apart from that tempestuous tide,
 Calm and aloft behold the phantom-conqueror ride!
 "Art thou content, of these the greatest Thou,
 Hero and patriot?" murmur'd then the fiend.
 The unsleeping dreamer answer'd, "Tempter, nay,
 My soul stands breathless on the mountain's brow,
 And looks beyond!" Again swift darkness screen'd
 The solemn chieftain and the fierce array,
 And armed glory pass'd, like happier peace, away.

VII.

He look'd again, and saw
 A chamber with funereal sables hung,
 Wherein there lay a ghastly, headless thing,
 That once had been a king;
 And by the corpse a living man, whose doom,
 Had both been left to Nature's quiet law,
 Were riper for the garden-house of gloom.*
 Rudely beside the gory clay were flung
 A broken sceptre and an antique crown,
 So, after some imperial tragedy
 August alike with sorrow and renown,
 We smile to see the gauds that moved our awe,
 Purple and orb, in dusty lumber lie;
 Alas, what thousands, on the stage of Time,
 Envi'd the baubles and revered the mime!

* Prince Rupert.

† Henrietta Maria was the popular watchword of the Cavaliers.

* The reader will recall the well-known story of Cromwell opening the coffin of Charles with the *Aid of a private soldier's sword*, and, after gazing on the body some time, observing calmly that it seemed made for long life.

Placed by the trunk, with long and whitening hair
 By dark-red gouts besprent, the severed head
 Up to the gazer's musing eyes, the while,
 Look'd with its livid brow and stony smile.
 On that sad scene his gaze the dreamer fed,
 Familiar both the living and the dead;
 Terror, and hate, and strife concluded there,
 Calm in his six feet realm* the monarch lay;
 And by the warning victim's mangled clay
 The Phantom-Cromwell smiled, and bending down
 With shadowy fingers, toy'd about the shadowy crown,
 "Art thou content, at last, a greater thou
 Than one to whom the loftiest bent the knee,
 Brand to the false, but banner to the free—
 Avenger and deliverer!"

"Fiend," replied
 The dreamer, "who shall palter with the tide?
Deliverer! Pilots who the vessel save
 Leave not the helm while winds are on the wave.
 THE FUTURE IS THE HAVEN OF THE NOW!"
 "True," quoth the fiend; again the darkness spread,
 And night gave back to air the doomsman and the
 dead!

VIII.

He look'd again; and now
 A lofty senate stern with many a form,
 Not unfamiliar to the former strife;
 An anxious passion knit each gather'd brow;
 O'er all, that hush deep not serene, in life,
 As in the air, prophetic of wild storm.
 Uprose a stately shape with dark-bright eye
 And worn cheek lighted with a feverish glow:
 It spoke, and at the aspect and the sound
 The dreamer breath'd a fierce and restless sigh;
 An instinct bade him hate and fear
 That unknown shape, as if a foe were near;
 For, mighty in that mien of thoughtful youth,
 Spoke fraud's most deadly foe—a soul on fire with
 Truth;

A soul without one stain
 Save England's hallowing tears; the sad and starry
 Vane!

There enters on that conclave high
 A solitary man;
 And rustling through the conclave high
 A troubled murmur ran;
 A moment more—loud riot all—
 With pike and morion gleam the startled hall:
 And there, where, since the primal date
 Of Freedom's glorious morn,
 The eternal people solemn sate,
 The people's champion spat his ribald scorn!
 Dark moral to all ages! Blent in one
 The broken fasces and the shatter'd throne;
 The deed that damns immortally is done;
 And FORCE, the Cain of nations, reigns alone!
 The veil is rent, the crafty soul lies bare!
 "Behold," the demon cried, "the *Future Cromwell*,
 there!

Art thou content, on earth the greatest thou,
 APOSTATE AND USURPER?" From his rest
 The dreamer started with a heaving breast,
 The better angels of the human heart
 Not dumb to his: the hell-born laugh'd aloud,
 And o'er the evil vision rush'd the cloud!

"Had Nature been his executioner,

He would have outlived me!"—*Cromwell*, a MS. tragedy.

* A whole epic was in the stern epigram of the Saxon when asked by the rival to his throne "What share of territory wilt thou give me?" "Six feet of land for a grave!"

† When Cromwell came down (leaving his musketeers without the door) to dissolve the Long Parliament, Vane was in the act of urging through the last stage the bill that would have saved the republic. See Forster's spirited account of this scene, *Life of Vane*, 152.

PHILOSOPHY OF COMMON SENSE.*

So much has our country abounded in "Hints," "Advice to the Young," "Advice to a newly married pair," &c. &c. that we had begun in sober truth to think, notwithstanding the intrinsic excellence of many of the works of the kind, that those who had read them attentively, were pretty much in the condition of the ass between the bundles of hay—not knowing exactly which course to pursue and consequently at a stand.

In the work before us, from the pen of the venerable Mathew Carey, we have, laid down in a plain unpretending manner, the relative duties of husband and wife, parent and child, employer and subordinate, and master and servant.

From the various topics discussed, it is not to be supposed that we could well enter into a *regular* review of its contents; but under the heads of the different subjects treated upon, we have been struck with the sound reasoning as well as the excellent *moral* contained therein.

After introducing various simple and comprehensible rules for the "promotion of domestic happiness," he thus expresses himself:

"Perhaps the whole art of happiness in the married state, might be compressed into two maxims: "Bear and forbear,"—and "let the husband treat his wife, and the wife her husband with as much respect and attention as *he* would a strange lady, and *she* a strange gentleman."

And again, in alluding to a subject which we hope—nay, which we believe—no sensible person of either sex would indulge in, viz. 'the disgusting practice of *flirting*,' he speaks in this admonitory way:

"I trust much caution is scarcely necessary against flirtations, well calculated to excite uneasiness, doubts and suspicions, in the heart of the husband or wife of the party who indulges in them, and to give occasion to the censorious to make sinister observations. It is unfortunately too true, that the suspicion of misconduct often produces full as much scandal and evil as the reality."

'Trifles light as air

Are to the jealous confirmation strong
As proofs from Holy Writ.'

"It is a good rule of reason and common sense, that we should not only be, but appear to be, scrupulously correct in our conduct. And be it observed, that however pure and innocent the purposes of the parties may be at the commencement, flirtation too often leads to disastrous results. It imperceptibly, but almost certainly, breaks down some of the guards that hedge round innocence. The parties in these cases are not inaptly compared to the moth fluttering around a lighted candle, unaware of the impending danger. It finally burns its wings and is thus mutilated for life. 'He that loveth the danger shall perish therein.' 'Lead us not into temptation,' is a wise prayer—and while we pray not to be 'led into temptation,' we

* Containing Practical Rules for the Promotion of Domestic Happiness; Rules for the conduct of Husbands and Wives; Of Masters and Mistresses, and Domesticity; Of Parents and Children; and of Young Men entering into Business, &c. By M. Carey, M. A. P. S. Philadelphia—Lea & Blanchard, and Carey & Hart; pp. 212.

most assuredly ought not to lead ourselves into it. I know these remarks will be charged to the account of prudery—but at the risk of that charge, I cannot withhold them.'

Speaking in relation to the practice of Economy, he says, "If you be disposed to economise, I beseech you not to extend your economy to the wages you pay to *seamstresses* or washerwomen, who are too frequently ground to the earth by the inadequacy of the wages they receive. Economise if you will, in shawls, bonnets, and handkerchiefs; but never, by exacting labor from the poor, without adequate compensation, incur the dire anathemas pronounced in the scriptures against the oppressor of the poor."

The benevolence of this philanthropist, confines itself, it would seem, to no particular class or condition, and the fertile resources of his valuable pen, (as well as the liberal bestowment of his coffers,) are ever at the service and command of suffering humanity. In the foregoing paragraph, we behold a plea for the poor seamstress and washerwomen—subjects which too unfrequently employ the pens (*or purses*) of our influential men—bearing upon its face the eloquence of earnest appeal as well as the premonitory whisper of a future retribution.

Under the head of "Rules for Masters and Domesticity," he furnishes us with sundry reasons why there are so many bad servants—which, though written for a different meridian, might well be pondered by many a master or mistress in "Old Virginia." Indeed we cannot refrain, having the good of housekeepers at heart, from extracting the whole article, under the head of "Rules for Masters and Mistresses," and would insist—at least from those most interested we presume—our female friends—giving it a studied perusal.

"The first cardinal rule, the dictate of common sense, reason, and religion, is, to treat domestics as you would wish to be treated yourselves, were you domestics. I am persuaded that the adoption of this single rule would remove one-half of the current complaints against domestics.

Be deaf, and blind, and dumb to small faults. This is a rule too frequently disregarded even by masters and mistresses otherwise excellent and amiable. There is no error in family management that more frequently occasions the loss of good domestics, or produces more discomfort in the intercourse between the heads of families and their domestics.

Do not govern too much. Let the reins of government hang somewhat loosely.

Do not exact too severe service of your domestics—as little as possible out of the ordinary tour of duty.

When they perform any service beyond their proper line of duty, they ought to have some *douceur*.

Oblige your children, if you have any, to treat domestics with uniform civility. Never allow them to order or command domestics, particularly in an imperious tone, which ought not to be tolerated for a moment. One master and one mistress are enough in a family.

Never allow your children to bring tales out of the kitchen, where, in fact, they ought not to be allowed to go, except rarely.'

Do not attempt to confine your domestics too much to the house. Let them have reasonable and stated times of absence.

* There are various reasons for this advice. Man is an imitative animal. He catches involuntarily and imperceptibly the manners of those with whom he associates; and it is obvious, that the manners of domestics are not exactly the kind to be copied by the children of their masters. There is, moreover, in many kitchens a slang, a sort of *double entendre*, with occasional oaths and curses, to the hearing of which children ought not to be accustomed, but which, if they hear, they will be apt to repeat.

Never let the mistress of a family censure or remonstrate with a domestic, whether cook or housemaid, in the kitchen. So surely as she does, so surely will she, in all probability, receive a tart and saucy reply; and probably altercation will ensue, which may cause the loss of a good domestic.

When the mistress has any fault to find, or any admonition to give, let her call the domestic to the parlor door; deliver her reproof or command in as few words as possible; and have the door closed without reply.

If possible, postpone animadversion till after you have had time to cool—and let it be as brief and sober as possible. Avoid long preachments. They are a great nuisance.

When you are hiring domestics, be explicit in stating what you expect them to perform, taking so wide a range as to embrace whatever ought to be required on the one hand, or performed on the other.

Give your directions in a mild but firm tone.

Whatever orders you may have to give a domestic, particularly if they be in any respect unpleasant, deliver them in *propria persona*, not through the medium of another domestic. In the latter case, it is three to one that they will be delivered with some addition or something offensive in the tone, which may be the cause of heart-burning.

On the subject of victuals it is unnecessary to dwell. It is presumable that you will give them a sufficient supply of good, sound wholesome food.

When you have good domestics, cherish them as you would the apple of your eye. They are invaluable.

Shun a too common error; that is, to animadvert as severely on a fault of inadvertence or omission, as if it were the result of contumacy. While the latter deserves severe reprehension, the utmost that ought to take place in the case of the former, is, a gentle admonition.

When your domestics do their duty to your satisfaction, give them their meed of praise. It will encourage them to continue that course. Some masters and mistresses avoid this, lest it might render domestics saucy and insolent!

Allow no broils nor quarrels among your domestics, nor one to assume authority over another. Crush all such attempts in the bud, as you wish family comfort.

In his "Advice to a Young Man," after laying down several important rules for his conduct in business and his moral duties, he says:

"Shun the despicable character of a political brawler. But let nothing, except being bed-ridden, prevent you from exercising that inestimable privilege, the elective franchise. Never disgrace yourself by an absence from the polls, under the unjustifiable, fallacious plea, that your single vote is of no consequence. Some of the most important measures of legislative bodies, here and elsewhere, have been carried by majorities of one, two or three. The vote on the abdication of James II., and the elevation of William and Mary to the throne of Great Britain, was carried by a majority of two—51 to 49!!! Let this be an unceasing warning to you of the importance of a vote or two. Never have to reproach yourself, that a profligate man has been elected, or a bad measure adopted, through your absence from this sacred duty."

But to these "devilish fine fellows," as some take pride in being called, who feel it a drudgery to attend to the minutiae of business, and earning by patient industry and economy a competency, and finally a fortune, who conceive it ignominiously vile to be thought mere plodding spirits—he says:

"But, perhaps, you may regard these rules as musty and too humdrum for a man of spirit and taste—a character of which, for aught I know, you may be ambitious. Perhaps you may prefer 'cutting a dash,' like so many of the young gentlemen of the day, at the risk, nay with the certainty, of 'making a splash,' and 'taking the benefit of the act.' If so, I can suit you with a *vade mecum* still more infallible than the former one. I say 'more infallible'—for this has never failed, and never can fail; whereas it is unfortunately too true, that, though a due exertion of care, prudence, and economy, will, nine times in ten, insure success, yet misfortunes, against which no human prudence can guard, occasionally mar their effects.

Marry as soon as possible—and choose a splendid wife, a regu-

lar belle, brought up in luxury, with a refined taste, and elegant accomplishments and liberal propensities. Let her always be in the pink of the fashion. By all means let her start with at least half a dozen embroidered handkerchiefs, at forty, fifty, or sixty dollars each, and every other article in proportion.

Let her, four or five times in the season, see company in grand style—a complete squeeze—in a handsomely-furnished saloon.

If you can procure it on credit, purchase—if not, hire—a country residence, within three or four miles of the city, for the convenience of your friends and acquaintance; for whom, to support your character for hospitality; you ought to keep open house. There you may retire on a summer afternoon, from the cares of business, enjoy the company of your friends, sip your champagne, and crack your walnuts at leisure.

Provide yourself with a handsome curriculo, and a horse that trots at least twelve or fourteen miles an hour.

Purchase goods largely, and always on the longest possible credit, even if the price should be thereby immoderately enhanced.

By a great show of business and appearance of prosperity, procure extensive credits at bank.

Stock your cellar with three or four kinds of wine, madeira, cherry, claret, and champagne.

Purchase a share in one or both of the theatres, and attend with your wife two or three times a week.

Attend all the fancy balls in splendid costume.

Purchase your furniture and clothing on credit, regardless of the enhancement of price.

Speculate largely in the stocks. By a lucky hit you may realize a handsome fortune.

Take an occasional stroll into a gambling house—and be on the watch for an opportunity to "take the flats in."

When you are pressed for money, purchase large quantities of goods, on pretence of sending them to your customers in the western country; but despatch them clandestinely to New York or Baltimore, to be sold by auction.

Frequent the bars of the large hotels, under the idea of seeking customers. You may there refresh yourself, and enliven your spirits, by occasional mint-slings, and other exhilarating potations.

Attend all horseraces and foxchases, and bet largely on the former.

When you fail—as fail you must—take care of "number one." Reserve at least ten thousand dollars to begin the world anew, as an agent. He is "worse than a heathen or a publican," who does not take care of his own family.

By pursuing this system for three or four years, you will crowd into those years as much of what is commonly called "enjoyment," as might be spread over your whole life;—you will, at the close of that period, be cleared of the cares and anxieties of business, by a failure for thirty, forty, or fifty thousand dollars, as so many are occasionally—pay your preferred creditors ten or twelve cents in the dollar—your other creditors not a single cent—rob and plunder those who have trusted you with labor or property, of whom some will probably be totally ruined—clear yourself by the insolvent law—and you will have the honor to belong, for the remainder of your life, to a large "committee of ways and means,"—billet your wife and children on your father-in-law in his old age—and henceforward pass through the world with a tarnished character.

"Utrum horum mavis—accipe."

His "Advice to a friend about to commence the publication of a newspaper," are both wholesome and sound; and we cannot help thinking, that if very many of our political, yea, and some few of our literary editors, would paste them up in their sanctum sanctorum for consultation, there are times when their publications would be void a great deal of ascerbity and of much of that billinggate slang, which too often disgrace a portion of the press in our land.

We trust our brethren of the press will take it in good part, if we recommend it as a kind of *vade mecum* for their especial use, not doubting but that a majority of them practice the principles and act in accordance with the spirit that prompted the excellent advice.

"You are, my friend, about to enter on as arduous, as thankless, but, at the same time, as useful an occupation, when properly conducted, and as pernicious, when otherwise managed, as any other in the wide range of human industry. I say, 'as thankless,' with the most perfect conviction of the justice of the epithet; for do what you may, you cannot escape censure and abuse. And unless you be more fortunate than the great majority of your collaborators, your remuneration will scarcely be adequate to compensate the labor, the time, the talent, and the unceasing care and anxiety the office of editor imperiously demands. Under this view of the case, were your course not finally determined on, and could you derive a comfortable maintenance in any other occupation, I would use all my endeavors to dissuade you from embarking on the perilous ocean of politics as editor: But the die being cast, and your purpose immovably fixed, I shall not waste remonstrance in vain, nor wantonly trespass on your patience. I shall pursue a course more suitable to the circumstances of the case, by furnishing you with hints that may enable you to accomplish your object in the most useful manner to the public, and the most satisfactory to yourself.

So far as experience qualifies a man for the office of Mentor, I have some pretensions to assume it in the present case, having been three times proprietor and editor of papers; and having necessarily, in that capacity, devoted much time and attention to the duties, the rights, and the privileges of the station. Do not, however, let this consideration have any undue influence on your career. Weigh well my advice, and so far as they are supported by reason and common sense, adopt them as rules of conduct—and no farther. Subject them to the strictest ordeal of investigation.

The types, the presses, and the paper of your journal having been purchased with your money, the journal is, therefore, your property, and subject to your control. But "prescription,"—that is, "custom, continued," according to the lexicographic explanation, "till it has the force of law,"—subjects this control to some salutary restrictions. One of these, and the main one, is, that your fellow-citizens have a clear and indefeasible claim—not as a favor or kindness, but as a right—to the use of your paper, for the discussion of moral and political subjects, calculated to improve their morals, refine their manners, and promote their prosperity and happiness, provided the discussions be managed with decorum and propriety, and not protracted to an unreasonable length. This right, like your control, has its limits, some of which follow:

While the remuneration for your painful labors will greatly depend on your advertisements, you cannot be expected to exclude them for long-winded essays, particularly on subjects of inferior importance. When long essays on vital topics cannot with propriety be excluded, and their insertion would interfere with the room devoted to advertisements, let them be divided, and continued.

When you are requested to publish any article likely to give rise to a demand for satisfaction, either legal or otherwise, insist on the author's allowing you to give up his name, should it be necessary. No man has a right to make you a scape-goat to be responsible for his acrimony. Without such a stipulation, it has been generally and justly regarded as base and unworthy, to betray the name of an author.

Parties are inevitable under any form of government, where the people have the right of deliberating for themselves;—they result, as a necessary consequence, from the diversity of opinion which exists on all subjects.

As you propose to publish a political paper, you will have to choose your party, if you have not done so already, as I presume you have.

It would be of inexpressible advantage, were the public papers open to decorous discussions on both sides of all questions, so as to enable their readers to make fair comparisons, and duly weigh the merits of the parties. But such a plan would be frowned down by zealots on both sides, and would involve the failure of any man who should undertake it. An attempt was made in this city, some years since, to carry on a paper on this plan. It was conducted with considerable ability; had a sickly existence for a few months; and then perished for want of support.

Parties are frequently led astray by ultra men, for their own particular purposes and advancement. They [the parties] aberrate from their known and established principles. This is a case

of extreme difficulty for conscientious editors. They are expected blindly to follow their leaders; and unless they comply, their support is too often partially withdrawn, and rivals patronized against them. Hence a severe conflict between interest and duty. I trust I need not say that you ought not, and I hope will not, so far violate your duty as to advocate measures which your conscience disapproves, however urged on you by partisans—"Fiat justitia, ruat cælum."

While you fearlessly, but candidly, discuss the public conduct of public men, I hope you will exclude from your columns all personal slander against them or any other citizens, and never invade the sacred sanctuary of private life.

Let all your energies and zeal be devoted to excite a national spirit, the want of which, wherever it prevails, produces the most pernicious consequences on the general welfare and prosperity. Were the angel Gabriel to descend from Heaven, and propose a plan calculated to produce the greatest possible good to the country, too many of our citizens would regard it through a party medium, and support or oppose it, as it coincided with or tended to counteract the views of their party! On this point the English stand proudly pre-eminent. Their parties are full as violent as ours on all local subjects—but all unite on great questions involving the national prosperity. "Go, and do thou likewise."

Let no temptation of profit or friendship, ever induce you to disgrace your paper by puffs of worthless books. Let your commendation be known to be the result of conviction, and it will have its due weight with the reading world. But the indiscriminate eulogiums, too frequently bestowed on the republications of British works, many of them of little or no merit, are nauseous.

It is not enough for you to keep your paper open for the lucubrations of correspondents on important topics—more is required at your hands. As you possess the faculty of writing with facility, it is your incumbent duty to aid in the discussion of such topics. From this duty you can claim no exemption.

A fair analysis of foreign intelligence; of the proceedings of congress; and of the state legislature, stripped of the verbiage in which they are commonly enveloped, is a grand desideratum, to which our editors generally do not pay sufficient attention. There is a peculiar knack in this operation, which a man accustomed to the use of the pen, may easily acquire. Two editors of the old school, long since gone to that "country from whose bourne no traveller returns," William Goddard, formerly of this city, and Isaiah Thomas, the proprietor and editor of the *Spy*, published at Worcester, in Massachusetts, were distinguished in this department. Either of them was wont to compress into half a column the essence of half a dozen packets.

Avoid the tone of exaggeration which pervades too many of our newspapers. According to their statements, a stranger might be tempted to believe that our orators are at least equal to those of Greece and Rome. It cannot, in fact, be doubted that in our deliberative bodies there is a very great display of talent occasionally; and that we have orators who might advantageously compare with some of the shining lights of the British parliament. But they are not all Burkes or Sheridans, or Pitts, or Foxes, as might be supposed from the elaborate panegyrics bestowed on them. Be on your guard also against the same spirit of exaggeration which prevails respecting the numbers assembled in town-meetings. They are almost all "the most numerous," and "the most respectable," that ever were seen. Cases have occurred of dozens being magnified into hundreds, and hundreds into thousands, to dazzle people at a distance. This spirit of exaggeration belongs equally to both political parties.

Contaminate not your paper with details of revolting or unmentionable offences, which, through inadvertence, occasionally offend the eye in some of our papers. And be rather sparing of the record of the murders, assassinations, and suicides, which have so greatly and so lamentably increased of late years, to the dishonor of our country.

Be on the look out, and blazon forth, in the strongest light, every straggling instance of honor, liberality, generosity, gratitude, self-devotion, &c., that you find in any of the papers of the United States, to excite a laudable spirit of imitation; a spirit, so far as liberality is concerned, that unfortunately slumbers so much as to require great exertions to excite it. Copy also the most remarkable cases of foreign liberality. Bear always in mind the admonitory lines of Shakspeare:

"One good deed, dying tongueless,
Slaughters a thousand, waiting on that;
Your praises are our wages."

A good feature in a newspaper would be occasional brief law cases, involving important principles. Some of the police reports are highly exceptionable.

A poet's corner in your fourth page, would be an improvement. Besides gratifying the ladies, to whose taste sufficient attention is rarely paid by our editors, it would afford the advertisements in that page a chance of being seen; whereas they are now too commonly overlooked.

A corner for anecdotes, bon-mots, repartees, &c., would furnish an agreeable variety, provided they did not savor too strongly of Joe Miller Redivivus.

Some of our news printers have an aversion to copy articles from the papers of their neighbors. They pride themselves on their matter being "*all original*." This is truly absurd. I appeal to the most enlightened men in the nation, the Clays, the Websters, the Storys, the Sergeants, &c., to decide whether a good article copied from a rival print, be not preferable to an inferior original one. The question between two articles ought not to be, which is original or which copied—but which is best calculated to answer the objects which an editor ought to keep in view—to instruct and delight—according to the rule of Horace—

"Omne tulit punctum qui miscuit utile dulci,
Lectorem delectando, pariterque monendo."

Avoid the fatal error of neglecting the regular collection of your subscriptions. By this neglect many an editor has been straitened in his circumstances during his whole career, and finally died in poverty, while his books exhibited thousands to his credit. There is but one mode of effectually guarding against this pernicious result, and that is, stopping the paper as soon as the time for which the subscription has been paid has expired. There is not, I believe, any debt whatever, about the payment of which many of our citizens are so indifferent, as debts due for newspapers and advertisements; and, of course, there is scarcely any debt about which the creditor should be more on the *qui vive*.

But we must draw this brief notice to a close. Our object was not to enter into a regular review, which from the desultory character of the work would be impossible, but merely to call attention to some few of its prominent features. Many of the essays, have been published before in the form of communications to various newspapers in Philadelphia and elsewhere—each essay containing in itself much to instruct, amuse and entertain. We commend it for what it purports to be—and in conclusion, remark, with a correspondent of Poulson's American Daily Advertiser.

"I have no more to say except, that if the venerable author had been silent all the rest of his life, and not blessed by his labors, as he has done, all the departments of life, political, social, moral, &c., this little book would have been to his name and memory, what the star is to the morning and the evening—a brilliant which all see, and all delight to behold."

THE TUCKAHOE COLONY OF VIRGINIA.

My attention has been called to a publication in your Messenger, for the month of April, 1837, under the above title, which contains so many historical inaccuracies, as to induce me to correct them. Where the writer of the article referred to, obtained his account of the above named colony, I am at a loss to know. Smith, in his second voyage up the Chesapeake, found a tribe of Indians called Tockwoghes, on the river Tockwogh.

It is stated in the above article, that in 1605, "Capt. Smith came over, and remained three years." Now Smith, page 150, states that "on the 19th of December, 1606, we set sail from Black Wall, with the first supply in Virginia."

Under the head Huguenots, it is stated that they settled in South Carolina in 1502. Now the term Huguenot had its origin in 1560. See Rees' Encyclopedia, 9th vol. It is also stated by Rees, (article Carolina,) that no permanent settlement seems to have been made in Carolina, until after the restoration of Charles II., who, by his first charter, dated 24th of March, 1662-1663, granted to Edward, Earl of Clarendon, and seven others, all the lands lying between the 31st and 36th degrees of north latitude, and extending westerly to the South Seas. Under the head, Newfoundland, it is stated that that place was discovered by Sir Humphry Gilbert in 1583. Now Marshall, in his American Colonies, (page 13,) states, that in May, 1496, John Cabot sailed from Bristol, and discovered the islands of Newfoundland and St. John's.

Uttamussack.—The author locates this place twelve miles above Richmond, near the James River. Now, Smith, (page 138,) locates it at Pamaunkee; and at page 117, says that fourteen miles northward from the river Powhatan is the river Pamaunkee. Smith says, that near Uttamussack is a temple, or place of Powhatan's. I think that this temple, was Orapakes. On his map you will find it near the head of Chickahomony, not far from Pamaunkee, in the direction of Cold Harbour, in Hanover.

COLONIES.

Under this head the author states, that "James Town sent out two colonies." One he locates six miles below Richmond. Now according to Smith, (page 236,) West's colony was seated "*by the Falles*," "in a place not only subject to the river's inundation, but round environed with many intolerable inconveniences." The author locates Kiquotan, near Norfolk; whereas, reference to Smith's map will show that Kiquotan includes Hampton and Old Point.

The author says that Williamsburg was laid off in the form of a W. It was not. Governor Nicholson proposed it; but it was not done. Secretary Nelson's house in York Town was demolished by the artillery of the combined armies; and not Governor Nelson's, as the author states. The latter is still in good preservation.

The author, in his rude remarks on the country gentlemen who "have eaten up their estates; their property has gone down their gullets;" was unmindful of the old adage, *nil nisi*, &c., and must have forgotten that his maternal ancestors were included in his philippic. Chelsea, in the olden time, was a very hospitable mansion; and may have been "more generous than just." But I cannot agree with the author, that they were among those of whom he says, "fools make feasts, and wise men come to eat them."

My sole object in making this communication proceeds from a desire to correct the errors of the author of the Tuckahoe Colony. False statements, often published, will injure your valuable periodical. For all my historical corrections, I have given references;—these I consider indispensable.

Chelsea, 1st June, 1839.

THE COPY-BOOK—NO VIII.

ATOMS.

Don Quixotte was humane, generous, brave, learned, eloquent; yet withal he was worse than a cypher: a cypher would indeed have done no good, but Don Quixotte, by the want of a little common sense, has made the good ridiculous.

Wisdom is more conspicuous when surrounded by folly, as foxfire shows best in the dark.

There are two ways of 'getting up' in the world: the one is to raise one's self, the other to pull down others: the latter is the more easy. Some avail themselves of both.

Historians commonly err in respect to causes and motives. They look for causes adequate and proportionate to the magnitude of the event; whereas the greatest events are often owing to circumstances the most insignificant.

Ignorance is the mother of conceit, but modesty is the child of wisdom.

The world seems some vast complex machine, continually revolving, and each day turning up some new event, to gladden or confound the insects on its surface called men.

If there is a planet inhabited only by women, the first article in their *Magna Charta* is to secure the freedom of speech.

The Persians are termed by the traveller Rich, a nation of dandy-assassins; Voltaire called the French monkey-tigers; the two epithets amount to the same thing, for a dandy is a monkey, and an assassin is a tiger.

Lying is cumulative: one generates another, and that another still, in an infinite series,—a geometric progression of falsehood. A falsehood is like a stone in an arch, each one requires many others to support it.

Truth, like the air, is the most precious of all things, and the least regarded.

Extremes meet—as volcanoes vomit fire amid eternal snow.

The difference between politeness and rudeness, is this: rude people speak ill of you, to your face—polite people wait till you are gone.

If when two particular friends meet in company, all the worst things that they had said of each other were exposed, what droll looks would sometimes be seen.

If a man contends that there is no such thing as truth in the world, I will admit it—at least as far as he is concerned.

Power, wealth, and fame, are sweepstakes usually taken by the best jockey, not by the best horse.

'Barking dogs don't bite.' This adage seems to imply that 'unbarking dogs do bite.' The dogs then in the polar regions must be very fierce, for they never bark.

Liberty is like a rope, in which (according to a superstition of the Laplanders,) the winds are tied up in three knots; loose the first, the wind is favorable; loose the second, it is still more favorable; loose the third, and there is a tempest.

While Sancho Panza was governor of the island of Barataria, one of the courtiers said to him "I am amazed how your worship is able to make such wise decisions, being so illiterate as you are; for I believe you do not even know your letters."

If you put peas into a pan of water, the light and rotten ones come to the top, and this is the way that little great men rise in the world.

When two clouds meet in the heavens, they produce rain; so when two emotions meet in the mind they produce tears.

In some hearts there is a continual war between avarice and liberality, but avarice generally proves victorious in the contest.

It would be a safe speculation, to buy vain men for what they are worth, and sell them for what they think they are worth.

When I behold a lovely woman, I can well conceive, that "man was created little lower than the angels."

Wit produces a smile,—humor laughter.

When a writer asks your candid opinion of his works, you must know he will be very indignant at you if your candid opinion does not coincide with his own.

The best way, sometimes, to keep a secret, is to tell it.

It is very unfortunate some people mistake your wit for rudeness and their rudeness for wit.

The surest way to win the parent is to caress the child.

Books and dogs are friends you may count upon with certainty.

Plagiarism among authors, is like stealing among the Lacedemonians—the criminality is not in the taking, but in the being caught.

Politeness is like a pole that wagoners insert between their horses' heads, which serves at once to keep them together and to prevent them from coming too close together.

We can believe nothing without evidence, and we can disbelieve nothing with evidence.

The metal which wont bend will break.

If the Greenlanders were invaded, they might adopt for their motto, 'pro aris et focis.'

There is but one step from the demagogue to the courtier.

Farmers have been so long complaining of bad crops, it is strange they should still be expecting good ones.

A rotten tree may stand erect while the winds are in their caverns, but the hurricane discloses the secrets of the forest.

Houston has executed what Burr first planned.

Poetry consists in the idea—verse may be prosaic, and prose may be poetic. The poet is like the maker of porcelain, who creates forms of beauty out of sand and clay.

One reason why the ascent of mount Olympus is so difficult, is, that those who fail to get up themselves always confederate to obstruct the progress of others.

An encyclopedia is fit only for a nation of Brobdingnags.

Some cows give good milk, but have a trick of kicking the pail over.

If we cannot have what we love, let us love what we have.

We live not as we wish, but as we can.

It is better to read a small book through, than not to read a big one at all.

Life is a masquerade, and hypocrisy the domino.

Oratory is employed only on great occasions, but good sense is needed every day.

He who buys what he doth not need, will need what he cannot buy.

This life seems like a ship on a voyage across a sea: the crew are variously occupied, but they are all advancing each hour to their destination; their course is direct, the winds invariable, their progress incessant; the sails once set, never for a moment slacken, until the close of the voyage, when they are furled forever.

Petersburg, August 1, 1839.

BIOGRAPHICAL SKETCHES

OF LIVING AMERICAN POETS AND NOVELISTS.

NO. VI.

MARIA BROOKS.

(*Maria del Occidente.*)

The term, "infancy of poetry," as applied to the American muse, has neither force nor intelligible signification; yet the phrase is constantly on the lips of both Englishmen and Americans—by the one used apologetically—by the other in a sense of lofty superiority—when with truth it can be applied only to the rude poetical compositions of a nation just merging from a savage state—for instance, perhaps, to the didactic and lyrical muse of the Sacs and Foxes, or the fierce song of the ancient Goths. Nevertheless, England is reluctant to give us credit for any thing better than the crude effusions and irregular compositions alone, which marked the earliest era of her own demi-savage state, when her untaught ancestors gave vent to their warlike enthusiasm and fierce passions in bursts of wild verse—extemporaneous compositions, as savage and unpolished as their savage composers. This arises, doubtless, from her habit of forgetting, in her jealous maternal anxiety to keep us in remembrance of our political childhood, that, as members of the social compact, we are not a whit less civilized or less instructed than herself.

It is true, as a nation we are but an infant; but an infant, which, like Minerva, sprung into being in full armor, noble in stature, godlike in wisdom, and clothed with the glory of perfect strength and beauty. America is indeed young; but the members which compose this infantile empire are coeval in civilization with the oldest nations of the earth. Equal with them, and behind them in nothing—whether in religion, philosophy, science, or the literary arts. It is quite time that our literary friends the other side of the Atlantic, should cease to seek among us for the first rudiments alone of poetic composition, as if we were just emerging from a

primitive state of ignorance and knew nothing of the arts of poetry. They should cease to reject our muse, because a thousand years have not elapsed since our national birth—when our poetry has no more to do with our existence as a nation than christianity has itself. Man is by nature a poet, and poetry is alone the language of enthusiasm and passion, or of a lively fancy and brilliant imagination. These—other things being equal, which in the present case we contend they are—must certainly be independent of length of political existence; their dependance being solely on the degree of cultivation of the mind. The scale of mental culture is full as high in America as in England; and save that the revolutionary war has laid the foundation for a distinctive national character, which has ever since been gradually forming, and turning into channels diverging from that which originally burst from the maternal fountain, the current of American thought and genius, we are still one and the same people, and subjects of the same broad empire of mind.

Two people who have the same literature, language, and religion, between them, cannot certainly present any strong points of difference, which can influence their letters. Truly, there is not *such a wide* difference between an intelligent and well educated Englishman, and an intelligent, well educated American. They must think and express themselves on most points, (out of politics,) very much alike. If they do not differ widely in talking prose, neither will they, it is inferable, in writing it. Why then should they in their poetry? The truth is, that the literature of both countries is one and indivisible. We are one people, one tongue, one kindred. The forms of governments may differ, but of the thought, never. The time is already passed, when the superiority of the English mechanic over the American, was a part of the latter's craft—creed: indeed, invention, if not also manual dexterity in giving shape to the cunning images of the inventor's brain, now holds the superiority on this side of the water. The notion should be exploded, that assumes the English poet's brain to be of a substance more ethereal than the American's—assigning the brain, soils and climates, as if it were a cauliflower. Until it can be proven that Lord Byron, Tom Moore, nay, Milton, Scott, and all the glorious company of British poets, would not have had the same identical brains, if their first breath had been drawn in the United States, we shall believe, and so must modest Jonathan, and roaring John Bull, that America can produce as good a poet as England. What our poets want—and we have several who rank with the best English poets—is only a posterity to do them justice! Not six of your British poets, Mr. Bull, were known, as now they are known, till death had sealed their greatness. A poet's fame is peculiarly posthumous. In very truth, our country is so young, that nearly all its poets are still living. There are now seven American poets, who only want the sod to lie twenty years upon their noble breasts, to be universally known and ranked with the greatest poets of Great Britain. This is the true cause of your assertion, that we have no poets—they are all living. Verily it is, because they are and are not.

Having been led, not inappropriately with our subject, into the foregoing remarks, by the recent perusal

of an uncandid article in a late English Review, touching American poetry, we now proceed, in conformity to the plan we have laid down in these hasty sketches, to say something of the fair poetess, whose graceful numbers form the subject of the present paper. Mrs. Maria Brooks, better known under her poetical name of Maria del Occidente, is of Welsh extraction, both of her parents having been born of Cymrian families. Her grandfather emigrated to this country prior to the revolutionary war, and settled in Charlestown, where, being a man of affluence, he constructed a stately mansion, which for many years was the seat of hospitality and refinement. But the war of the revolution suddenly burst out, and with the ashes of Charlestown was mingled those of his abode. The subject of the present sketch was born in Medford, a few miles from Harvard College; the professors of which visited intimately at her father's; and, doubtless, from their conversation, her young mind first imbibed its literary tastes. Thus it was, that before she was nine years of age, she had committed to memory large portions of Pope's *Messiah*; Milton's *Comus*; Addison's *Cato*; portions of Homer, Virgil, Ovid, and some of the translated tragedies of Racine; while those of Shakspeare and Otway were listened to by her with rapture. Many of these passages were committed to memory long before their meaning could possibly be understood. Indeed, before she could read—for learning to read was a painful and difficult task to her—she could recite numerous pieces from the most popular poets of the day. So completely and thoroughly was her mind, at length, imbued with poetry, that on being asked in her ninth year what she most wished for, replied, "to be a poetess." Her childhood was passed during a dark reverse of fortune, which was soon afterwards followed by the death of her father. At the early age of fourteen she was betrothed, and married as soon as her school education was thought finished. The few first years of her womanhood were passed in that sort of commercial affluence, which seldom, in this country, lasts long. The loss of several vessels at sea, in which her husband was concerned, was followed in succession by other losses on land, and these combined converted prosperity to misfortune. At this gloomy period the cultivation of poetry, begun in infancy, was again resorted to as an amusement and consolation. But the idea of writing it was not thought of, though at that time every periodical was full of the imitations of the metrical delineations of Sir Walter Scott—every piano accompanied the exquisite songs of Moore; the poems of Southey and Campbell were read with avidity; and the bitter and sweet of Byron were making their first impressions.

Original composition, however, was the natural fruit of so long and ardent companionship with the works and minds of the best poets, and at the age of twenty, a poem in seven Cantos, *octosyllabic*, was speedily composed, but never published. Many smaller pieces of a light and lyric character followed, which were published anonymously; and in 1820, a small volume of poems appeared, after having been looked over and criticised by some of her literary friends, who were professors in Harvard University. The reception of this volume was sufficiently flattering to its writer, though for the want of some person to do the necessary

business, its circulation was limited. We have come across a Baltimore Review of that day, which declares some of the stanzas to be "the best ever written by any female poet." Five years after its publication, the London Literary Gazette also passed on it a handsome encomium. With this little volume, began the literary existence of our poetess. It is entitled, from its two leading pieces, "*JUDITH, ESTHER, AND OTHER POEMS; By a Lover of the Fine Arts,*" with a graceful and exceedingly appropriate Italian motto, from *METASTASIO*. In the two first poems, the authoress seems to have attempted the description of two females differing entirely in mind and person, yet equal in excellence; choosing only so much of their respective histories as exhibit the most prominent traits of their characters, while they offer her the most striking pictures of each. In *Judith*, she has delineated prudence, fortitude and decision, softened by a tincture of feminine sensibility. In *Esther*, a soul painfully alive to every emotion; a noble elevation of mind struggling with constitutional softness and timidity. The fugitive pieces appear, most of them, to have been written under the influence of vivid impressions. We will extract here and there a stanza from the principal poems, leaving our critical discussion of the character of the writer's mind, when we come to consider her more elaborate work "*Zophiel*."

From *Judith*.

DESCRIPTION OF JUDITH.

With even step, in mourning garb arrayed,
Fair Judith walked, and grandeur marked her air;
Though humble dust, in pious sprinklings laid,
Boiled the dark tresses of her copious hair.

DESCRIPTION OF HER SON.

Softly supine his rosy limbs reposed,
His locks curled high, leaving the forehead bare;
And o'er his eyes the light lids gently closed,
As they had feared to hide the brilliance there.

The above stanzas are not only remarkable for their descriptive beauty, but for a certain concise vigor which in a few words impresses strong and vivid pictures upon the mind. This conciseness, it will be seen, is a striking peculiarity of our poetess.

DESCRIPTION OF HOLEFERNES, &c.

In languid posture the proud victor lay;
Gem-broidered purple canopied his bed,
Soft Pleasure's breath had warmed th' inactive day
But light-winged slumber fluttered o'er his head.

When thus the youth, "rise mighty conqueror, rise!
For more than thou can'st dream of beauty bright
Is blooming for thee! Hero, open thine eyes!
Oh, sun, the loveliest moon is suing for thy light!"

He slowly raised him at the gentle sound—
"Surpassing fair—Bagoas—dost thou say?"
"Fairer than pearls."

* * * *

All unadjusted from his couch he rose;
While borne before him lamps of silver flame,
As 'twere alike, of beauty or repose,
With leisure step indifferent he came.

So many bowed beneath his conquering arms,
So many lonely captives wait his sigh,
Unmoved he wanders through a world of charms,
And scarcely raises his fastidious eye.

* * *

But firm at his approach, the stately dame
 Stood, like a graceful column, and with cheek
 Crimsoned by scorn—when near the Pagan came
 She slowly fell before him proudly meek.

To those who know—which embraces every reader—the story of Judith and Holofernes, the connection of the above stanzas with the narrative will be understood, and the beauties of the poetical narration better appreciated. Seated at the feast, she is thus described :

Above her forehead, fair, mid many a tree,
 Her graceful head a bright tiara wore,
 Yet seemed, so much was there of loftiness,
 As it disdained the ornaments it bore.

While holy scorn and detestation high,
 Oft as the treacherous stream she bows to sip,
Fires the bright convex of her jetty eye,
And curls the living vermil of her lip.

The chief beheld her heightened beauties glow,
 And his devoted temples ached to rest—
 Temples, which oft dark ire's suffusion show—
 On the smooth arch of her majestic breast.

A striking union of strength and beauty constitute a marked peculiarity of our poetess. Her images are chaste and appropriate and nervously expressed ; yet by aiming at too much vigor and terseness, she occasionally becomes obscure and often difficult to be understood. The poem from which the above extracts are made, is, as a whole, a production of great merit ; and when we remember the youthful age and sex of the writer, we cannot withhold from her the praise due to a high order of genius. Its defects proceed from inexperience, and in no instance from deficiency of taste, of which throughout all her productions the poetess evinces the possession in a highly cultivated degree.

From the poem of Esther we have space for but one or two extracts. The measure is the same with that of the preceding. The reader will please to recall the beautiful story as recorded in the Bible, and then peruse the following description of queen Esther's preparations for appearing before the king :

"Take ye, my maids, this mournful garb away,
 Bring all my glowing gems and garments fair ;
 A nation's fate impending hangs to-day,
But on my beauty and your dulcious care."

Prompt to obey, her ivory form they lave ;
 Some comb and braid her hair of wavy gold ;
 Some softly wipe away the limpid wave
 That o'er her dimpled limbs in drops of fragrance rolled.

Refreshed and faultless from their hands she came,
 Like form celestial clad in raiment bright ;
 O'er all her garb rich India's treasures flame,
 In mingling beams of rainbow-colored light.

On her smooth brow, soft ringlets left to flow,
 Played twinkling o'er the turban's stainless white,
 As lingering sunbeams beautifully glow,
 Blue Caucasus, around thy snowy height.

Graceful she entered the forbidden court,
 Her bosom throbbing with her purpose high ;
 Slow were her steps, and unassumed her port,
 While hope just trembled in her azure eye.

Light on the marble fell her ermine tread,
 And when the king, reclined in musing mood,
 Lifts at the gentle sound his stately head,
*Low at his feet the sweet intruder stood.**

* The lines are italicised by the writer of this sketch.

There is an elegance of diction and graceful ease of expression in this poem, which has seldom been surpassed by the sweetest of our female poets. With an extract or two from the fugitive pieces of this little volume, we will conclude our notice of this first book of our accomplished authoress. There is a charming little ballad contained in it, which we regret we have not room to extract entire, and we will not mar it by presenting a fragment. The few passages we shall give, will serve to show the versatility of her genius and the varied sweetness of her numbers. The first extract is the three leading stanzas from a poem, headed "Obituary."

Lone in the desert drear and deep,
 Beneath the forest's whispering shade,
 Where brambles twine and mosses creep,
 The lovely Charlotte's grave is made.

But though no breathing marble there
 Shall gleam in beauty through the gloom,
 The turf that hides her golden hair
 With sweetest desert-flowers shall bloom.

And while the moon her tender light
 Upon the hallowed scene shall fling,
 The mocking bird shall all night
 Among the dewy leaves and sing.

The images in this little poem are natural and appropriate, and the versification smooth, while the sentiments are characterised by that graceful turn of expression which is a pleasing feature in the compositions of this poetess. The following stanza exhibits the poet of nature as well as of sentiment—that is to say—an observer of the beauties of nature as well as portrayer of the emotions of the heart.

Ah ! whither can my Errol stray ?
 The jonquille bud is seen ;
 Soft beams among the dew-drops play—
 The infant-leaves are green.

The violet opens her azure eye,
 The willow waves her locks,
 The bonied columbine on high
 Hangs blushing from the rocks.

Few modern poets abound so much with similes, most of which are beautiful, and all highly graceful and appropriate. Perhaps, however, her comparisons may be considered by many too uniform and of too frequent recurrence, sometimes burdening the line and interrupting the flow of expression.

The following "Morning Hymn" is replete with figures ; yet they are introduced with judgment and managed with much skill and taste. The whole poem is full of grace, and is altogether a pleasing composition.

MORNING HYMN.

Floods of radiance streaming,
 Herald forth the star of day,
 Lucid night tears trembling, gleaming,
 Drop from every tender spray ;
 Buds unfurling,
 Tendrils curling,
 Murmuring meet the love-fraught breeze,
 Music thrilling,
 Brooklets trilling,
 Mingle 'midst the blossomed trees.

Oh! 'tis sweet when such a morning
 Charms us from the couch of rest,
 But a fairer day is dawning
 O'er the desert of my breast.
 Soft assurance
 Of endurance,
 Friendship to my soul has given;
 Hope streams flowing,
 Joy beams glowing,
 Soothe her with the calm of Heaven.

God of mercies! I adore thee,
 Pouring out my raptures' tide;
 Let the coward bow before thee
 When there's nought to seek beside.
 Still improve me,
 Let me love thee
 Dearer when thy bounties flow;
 And when strictest
 Thou afflictest,
 Uncomplaining meet the blow.

It should not be forgotten that the foregoing hymn, as well as the following stanzas, was written at a very early age—this will readily account for several points against which just criticism might level a shaft. Nevertheless, they are not destitute of merit, and are quoted in attestation of the superior poetic talent of the fair authoress. The following is extremely graceful and musical:

Earth her snowy vest uncloses,
 Spring advances soft and fair,
 Coronet of opening roses,
 Blushing in her sunny hair.

Dimpled loves around her flying,
 Sweets to every blossom bring;
 Zephyr hovers o'er and sighing,
 Soothes her with his purple wing.

But my heart ungrateful beating,
 Heedless of the hopeful year,
 Wastes its fervor in repeating
 All that's distant, all that's dear.

Still contentless, wishing, burning,
 Loving what it may not share,
 Every vernal breath returning,
 New regret awakens there.

The death of friends, change of circumstance and country, and the arduous duties of educating orphan children, became very soon enough to impede the progress of an artist laboring merely for amusement, and encouraged by no immediate circle. Ardent indeed must have been the love of poetry, which could continue unimpaired under such circumstances. Born in the decline of the fortunes of her family, the writer of *Zophiël* might have said with her own *Egla*,

"———my infant ears
 Were opened first with moons, and the first ray
 I saw, came dimly through my mother's tears."

The first Canto of "*Zophiël* or the Bride of Seven," was commenced four years after the publication of the first volume of poems, and finished in Cuba, whither, about this period, the poetess removed. In the autumn of 1825, it was published in Boston. The continual warmth, the eternal verdure, the fragrant air, and the leafy retreats of that delightful island, were, it seems, favorable to the continuance of a favorite pursuit, and five other Cantos of the same poem were there conceived and executed.

A work, however, of the length and subject of "*Zophiël*," required much preparation before it could be put to press. The writer, therefore, brought it with her to the United States, and while one of her sons, (now an officer in the United States army,) was pursuing his studies under a professor of Dartmouth College, she found an opportunity of copying the whole; and we ourselves being then a student there also, recall now with pleasure the time when its accomplished authoress deigned to submit occasional passages of it to our youthful criticism. In preparing its numerous and interesting notes, she was much assisted by old and valuable books in the library of that institution; besides which assistance, several of the professors courteously gave such aid as was necessarily required. In the autumn of 1830, the poetess visited France, and had an opportunity of adding other notes to the MS. poem, from curious volumes in the *Bibliothèque du Roi* at Paris. The poem was afterwards taken to London, where Washington Irving, (then attached to the United States legation,) with characteristic courtesy, perused it with a high degree of gratification, and placed it in a publisher's hands. The following extract from a letter addressed to a sister of the authoress, by this distinguished writer, may not be uninteresting, while, at the same time, it contains a very just criticism upon the poem in question.

"I have barely had time to give a hasty glance at those parts pointed out by your sister, in her letter, but I saw enough to convince me that it (*Zophiël*), is no ordinary production. It appears to me to show great brilliancy of imagination and a command of the splendid and even gorgeous in language and illustration. It has the stamp also of originality, which is greatly in its favor. I apprehend the faults that may be found in it are on the side of exuberance as to ornament, and amplification as to narrative. These faults, however, are on the right side, and may be remedied by a little pruning."

This frank opinion, from such a source, was no doubt gratifying to the author of *Zophiël*. That she must always have had confidence in her own powers, is manifest from the pains she bestowed upon this poem. Every inward assurance, however, became more strongly confirmed by the concurrence of other distinguished persons. Among these was the poet laureate Mr. Southey. During the childhood of the subject of this sketch, his poem, "*Madoc*," was dispersed, in numbers, about this country. Some of the scenes of that work, laid in Wales, which are charming for their tenderness and simplicity, readily found an answering chord in the bosom of one who never thought of her Cymrian descent, without calling to mind the bards of ancient Mona, with their "sky-blue robes and silver crescents on their arms," who

"Called from their solemn harps such lofty airs,"

as completely subjected the imaginations of the wild but noble beings around them. These harps, be it observed, were not, as at present, mere figures of speech, but of material "wood and strings;" and the bards or Druids who struck them, possessed, or were supposed to possess, the same powers as those who are now called "improvisatori."

Mr. Southey, therefore, became very early an idol in

the imagination of our fair poetess, and a correspondence with that gentleman began in 1825, shortly after the printing of the first Canto of Zophiël. The last notes of the poem were written at Keswick, Cumberland, where Southey not only gave the authoress access to his curious and extensive library, but kindly offered his assistance in making any translations required, though the varied knowledge of languages possessed by her, rendered her, in this respect, almost wholly independent of his proffered assistance. This was during the spring of 1831. The last French revolution had taken place but a few months before, and all England was agitated by the "reform question." Many obstacles, therefore, arose to defer the publication desired; but the MS. was left in the care of Mr. Southey, who, two years afterwards, saw it through the press, correcting the proof-sheets himself, previous to its appearance in London, where, in 1833, it was first published. It is on this work that the subject of the present paper mainly lays her claim to rank as an American poetess. Having now given a brief sketch of the life and movements of the writer, a few extracts from the work itself are given in preference to any comment that can be made upon it; though the story, if related in prose, would be entertaining as a tale of "Arabian Nights."

The title of this work is "ZOPHIËL; or, the Bride of Seven—By Maria del Occidente." It is in six Cantos, and comprises two hundred and fifty pages, including copious notes. The dedication is in the form of an ode, addressed to Robert Southey, Esq. We extract the first, sixth, and concluding stanzas.

Oh! laurel'd bard, how can I part,
Those cheering smiles no more to see,
Until my soothed and solaced heart
Pours forth one grateful lay to thee?

* * * *

Soft be thy sleep as mists that rest
On Skiddaw's top at summer morn;
Smooth be thy days as Derwent's breast,
When summer light is almost gone!

* * * *

And treasured shall thine image be
In memory's purest, holiest shrine,
While truth and honor glow in thee,
Or life's warm quivering pulse is mine.

Keswick, April 18, 1831.

In the composition of the poem of Zophiël, the writer, it seems, has endeavored to adhere entirely to that belief, once prevalent among the fathers of the Greek and Roman churches, which supposes that the oracles of antiquity were delivered by demons or fallen angels, who wandered about the earth, formed attachments to beautiful mortals and caused themselves in many places to be adored as divinities. In endeavoring to give authority for the incidents of the story, we observe that all quotations from the sacred writings have been judiciously avoided; and the beings introduced are therefore to be considered only as Phœbus, Zephyr, &c. under fanciful names. "Most of the systems of ancient philosophy, either western or oriental," continues the preface, "suppose beings similar to the angels of the fathers, and differ from the Mosaic account only in being more full and explicit. Justin Martyr, and others, supposed that even Homer borrowed from Hebraic records and traditions, and hence are found in his wri-

tings an account of the creation of the world, of the tower of Babel, and of the angels cast out of Heaven." Hesiod's beautiful allegory of "Love calling order from Chaos," may, doubtless, be traced to the same source.

We will transcribe the argument of the poem, which in itself forms a spirited and most charming story, instead of attempting a garbled account of its plot. Zophiël is a fallen angel, and having fallen before the creation of man, is supposed to know nothing of the immortality of the human soul.

CANTO I.

GROVE OF ACACIAS.

Argument.—Invocation; Birth and description of Eglâ; Eglâ, alone in her grove of Acacias, is visited by Sephora, and relates an event that took place in her childhood, and reluctantly consents to receive Meles in marriage; Zophiël sees Eglâ asleep and becomes enamored of her; Eglâ is wedded to Meles, and retires to the bridal chamber; Zophiël presents himself to Eglâ, offers her jewels, declares himself her lover, and accuses Meles of crimes; Eglâ becomes afraid, and refuses to listen to Zophiël, who disappears; Meles enters, approaches the couch, and dies suddenly.

CANTO II.

DEATH OF ALTHEITOR.

Argument.—Sardius, in his pavilion, alone with Altheitor; description of the pavilion; Sardius sends a detachment of his guards in search of Meles; Eglâ and her parents are brought before the king, to answer for the murder of Meles; Eglâ relates the manner of Meles' death, is retained at the palace, and invited to banquet with Sardius and his Princes; Sardius determines to espouse Eglâ, but delays his purpose at the entreaty of Idaspes; Eglâ is commanded, on pain of the death of her father, to receive, as bridegroom, whomsoever the king may appoint; Alcestes, Ripheus, Philomars, and Rosanes, seek her chamber, and die in succession; sickness and death of Altheitor; sorrow of Zophiël; Eglâ and her parents sent back to their home.

CANTO III.

PALACE OF GNOMES.

Argument.—Midnight; Zophiël and Phraëriôn sit conversing together near a ruin, on the banks of the Tigris; Zophiël laments his former crimes, speaks of a change in his designs, dwells on the purity of his love for Eglâ, and expresses a wish to preserve her life and beauty beyond the period allotted to mortals; Phraëriôn is induced to lead the way to the palace of Tahathyam; Palace and banquet of Gnomes; Zophiël, by force of entreaty and promise, obtains from Tahathyam a drop of the elixir of life.

CANTO IV.

THE STORM.

Argument.—The gloom that precedes a tempest near Carthage; Zophiël and Phraëriôn returning from the palace of Gnomes; Zophiël loses the piece of spar which contains his invaluable elixir, and narrowly escapes being engulfed by a whirlpool. Zophiël and Phraëriôn emerge from the sea, and rest a moment in the deserts nearest Carthage—they attempt to pursue their course towards Media; the storm increases; Zo-

phiël meets a spirit who detains and reproaches him; Phraërión seeks shelter; Zophiël and Phraërión return to Media.

CANTO V.

ZAMEIA.

Argument.—Morning; Helon and Hariph travelling along the banks of the Tigris; Helon is sorrowful, in consequence of a dream of the preceding night; receives a box from Hariph; Helon and Hariph see the princess Zameia; Neantes relates the story of Zameia, her appearance in the temple of Mylitta; her love for Meles; the falsehood and dereliction of Meles; her sufferings; her escape from the garden of Imlec.

CANTO VI.

BRIDAL OF HELON.

Argument.—Twilight; Eglâ alone in her grove of acacias; Zophiël returns wounded and dejected, and sits watching her invisibly; a being, who wishes to preserve Eglâ, perceives that she is beset with dangers; Zameia dies in attempting the life of Eglâ; Eglâ is reproached by a slave, faints, and is supported by Helon; Helon and Hariph bear her home; Eglâ, about to destroy herself, is saved by Helon, who receives her in marriage, and puts Zophiël to flight, by means of a carnelian box; Hariph discovers himself to be the angel Raphaël; seeks Zophiël in the deserts of Ethiopia, and speaks to him of hope and comfort.

The first introduction of Zophiël, the principal character of the piece, made during the sleep of Eglâ, the heroine of the story, is thus described by the poetess:

Sephora held her to her heart, the while
Grief had its way; then saw her gently laid,
And bade her, kissing her blue eyes, beguile
Slumbering, the fervid noon. Her leafy bed
Breathed forth o'erpowering sighs; increased the heat;
Sleepless had been the night; her weary sense
Could now no more. Lone in the still retreat,
Wounding the flowers to sweetness more intense
She sank. Thus kindly nature lets our woe
Swell till it bursts forth from the o'erfraught breast;
Then draws an opiate from the bluer flow,
And lays her sorrowing child soft in the lap of rest.
Now all the mortal maid lies indolent,
Save one sweet cheek, which the cool velvet turf
Had touched too rude, though all with blooms besprent
One soft arm pillowed. Whiter than the surf
That foams against the sea-rock, looked her neck
By the dark, glossy, odorous shrubs relieved,
That close inclining o'er her, seemed to beck
What 'twas they canopied; and quickly heaved,
Beneath her robes' white folds and azure zone,
Her heart yet incomposed; a fillet through
Peeped softly azure, while with tender moan,
As if of bliss, Zephyr her ringlets blew
Sportive; about her neck their gold he twined,
Kissed the soft violet on her temples warm,
And eyebrow just so dark might well define
Its feble arch; throne of expression's charm.
As the vexed Caspian, though its rage be past,
And the blue smiling heavens swell o'er in peace,
Shook to the centre by the recent blast,
Heaves on tumultuous still, and hath not power to cease;
So still each little pulse was seen to throb,
Though passion and its pain were lulled to rest;
And ever and anon a piteous sob
Shook the pure arch expansive o'er her breast.
Save that, a perfect peace was, sovereign, there
O'er fragrance, sound, and beauty; all was mute;
Only a dove bemoaned her absent phere,
Or fainting breezes swept the slumberer's lute.

Zophiël first catches a glimpse of the captive thus described, after singing in a remote part of the grove the following song to his harp:

"Woe to thee, wild ambition! I employ
Despair's low notes thy dread effects to tell;
Born in high Heaven, her peace thou could'st destroy;
And, but for thee, there had not been a Hell.
Through the celestial domes thy clarion pealed;
Angels, entranced, beneath thy banners ranged,
And straight were friends; hurled from the shrinking field,
They waked in agony to wail the change.
Darting through all her veins the subtle fire,
The world's fair mistress first inhaled thy breath;
To lot of higher beings learnt to aspire;
Dared to attempt, and doomed the world to death.
The thousand wild desires, that still torment
The fiercely struggling soul where peace once dwelt,
But perished; feverish hope, drear discontent,
Impoisoning all possess. Oh! I have felt
As spirits feel,—yet not for man we mourn,
Scarce o'er the silly bird in state were he,
That builds his nest, loves, sings the morn's return,
And sleeps at evening; save by aid of thee.
Fame ne'er had roused, nor song her records kept;
The gem, the ore, the marble breathing life,
The pencil's colors, all in earth had slept,
Now see them mark with death his victim's strife.
Man found thee, death: but death and dull decay,
Baffling, by aid of thee, his mastery proves;
By mighty works he swells his narrow day
And reigns, for ages, on the world he loves.
Yet what the price? With stings that never cease
Thou goad'st him on, and when too keen the smart,
His highest dole he'd barter but for peace,
Food thou wilt have, or feast upon his heart."

A description of Sardius in his pavilion, at the opening of the second Canto, and of the death of Altheitor are finely conceived and executed, and might form a subject for the pencil of a Girodet, whose Endymion and Atala now in the Louvre at Paris, it would seem, are the models on which she has formed the personal aspect of these imaginative characters. It may here be observed, that four of the Cantos introduce personages entirely new, and though subservient to the plan of the whole, seem, each of them, like a separate poem. The third and fourth Cantos are the most extraordinary, and therefore may be called the best. A writer in *Frazer's Magazine*, in a well written critique, gives preference to the fifth Canto, *ZAMEIA*, probably because it is more in the beaten track, and might well form the subject for an interesting tragedy. The appellation of "Gnome," in the third Canto, had better, perhaps, have been laid aside, as it immediately brings to mind the "Rosicrucian system; and though Pope founded on that system his admirable "Rape of the Lock," but few except regular poets are conversant with its phantasies.

The account given by Tahathyam, in the third Canto, of his own birth and condition, is simple and eloquent, and in conformity with the rest of the piece. His possession of the elixir of life, and the emotion of Zophiël on receiving a drop of that elixir, are among the best conceptions of the poem; while the grief of the fallen Zophiël, at losing the "precious drop," before he could apply it to the preservation of a favorite mortal, is such as must make an impression on every one capable of entering into the feelings portrayed. In the fourth Canto, the meeting of Zophiël with the being who caused his fall, is thus depicted:

“A form before him stood
 In gloomy majesty. Blacker than night
 A flowing mantle fell in cloudy fold
 From its stupendous breast; and as it trod
 The pale and lurid light, at distance rolled
 Before its princely feet receding on the sod.
 ’Twas still as death; save that the thunder spoke
 In mutterings low and far; a look severe
 Seemed as preluding speech; but Zophiël broke
 The silence first: “Why, spirit, art thou here?” &c.

From the foregoing copious extracts, the reader may get some idea of the principal poem of Maria del Occidente, as well as of her miscellaneous writings, and form a judgment of the character of her mind and the order of her genius. The copiousness of her ideas and the wide field of thought which her mind ranges, cannot be unnoted by the most indifferent. It is the province of the poet to conceive, in a degree, of every thing in earth and Heaven; and scarcely an object within the range of poetic vision has escaped her comprehensive eye. Passages appropriate for extracts or mottoes, may be found in almost every page of *Zophiël*; the theologian, the cosmogonist, the philosopher, the alchymist, the historian, the painter, the sculptor, the novelist, the musician, and the “petit maitresse,” may find stanzas savoring of the taste of each.

In epic poetry, *Zophiël* is destined to hold a distinguished rank. It is brilliant with images, finished in its diction, graceful and flowing in its numbers. Its main fault, which may be rather termed a characteristic of style than a fault, consists in too frequent use of ellipses and the transposition of words, thereby giving to her lines a sort of Latin strength and condensation, which the genius of the English tongue will not bear; and any attempts to give it this conciseness, by the omission of particles, invariably lead to obscurity, while the arrangement is both to the ear and eye unpleasing. The opposite to this is to be preferred even at the risk of diffuseness. This is the main fault in the style of our poetess. There are minor ones of manner and expression, which the professed critic will detect without our aid; our province in the progress of these sketches not being so much to criticise as to lift the drapery and draw attention to the exhibition the muses have already prepared. The descriptive powers of our poetess are of a superior order. Notwithstanding the occasional stiffness in style and want of perspicuity and ease, all will admit, who peruse *Zophiël*, that Maria del Occidente is a fine delineator. She has a warm and glowing imagination and a feeling heart, with an ardent love for the beautiful, combined with strong sensibility to the beauties of nature. She transmits freshly to her readers the impressions glowing, as she receives them, and imbues their minds with the ideas and feelings which fill her own soul. Throughout her writings numerous passages of fine description may be found, clothed in diction not less polished than the thoughts are beautiful. She is seldom found languid or giving us words for ideas; and though occasionally exaggerated, her style is simple, and in *Zophiël* tastefully appropriate to the subject. Although she sometimes rests on a single circumstance a little too long, and occasionally dresses her sentences in richer drapery of words than they can well bear, yet for this, the opulence of strong images and gorgeous metaphors that sparkle and blaze throughout *Zophiël*, more than

atone. She never fails to imprint upon the mind a distinct image—this we think a remarkable talent in our poetess—we refer for instance to the descriptions of Judith, Esther, and Holofernes, and to other like passages in our extracts from *Zophiël*.

Considered with respect to its subject, its moral aim and the entire and complete action of the poem *Zophiël*, it is purely epic. It has all that unity of epic action, the “beginning, middle and end,” which Aristotle demands in a poem of this class, and possesses a splendor and dignity commensurate with the magnificence of the apparatus which the poetess employs. The subject is well chosen and skilfully conducted, while the plan is so conceived and managed that a great variety of affecting and striking incidents are introduced. Without aiming constantly to delight us by the brilliancy of her fancy and surprise us with numerous changes in the graceful costume in which she clothes her thoughts, without seeking to excite our wonder and dazzle with the actions of supernatural beings, she aims to touch the heart, and succeeds in the difficult task of enlisting human sympathies in the hapless fate of a spirit. Often sublime and awful, she is also tender and touching; pleasingly contrasting the strange and appalling scenes of the supernatural world with those of earthly love and affection.

Our poetess, in attempting an epic poem, which is the first in order and dignity in poetry, has shown a moral confidence in her powers, that is a strong mark of true genius. That she possesses genius will not be denied. She has succeeded in producing a composition, which with some faults, is a superb production, and entitles her to a rank among the best poets of the day. Why has it been so little known, and its authoress so seldom heard of, may be asked? *Zophiël* was first published in London, and not republished in this country for a long period afterwards, when a limited number of copies was printed in Boston; but whenever it chanced to fall in with one of them, it was spoken highly of by the press. In England, Marie del Occidente is far better known than in her native country. It is due to herself and to her own literature to remain no longer in the retirement which she courts. For the last sixteen years, moreover, she has resided for the most part in the island of Cuba, devoted to the education of two sons. She has never written under her own proper name; but with the modest diffidence of genius, assumed that of Maria del Occidente. Lastly, she has never written for pecuniary profit—nor made interest with publishers or editors for the circulation of her works. These are the reasons why so little is known of a poetess whose pen reflects honor on her sex and the country of her birth. To show that she is known and appreciated abroad, we quote a passage from “*The Doctor*,” which, in connection with other circumstances, be it mentioned in passing, goes far to prove Mr. Southey to be its author. For several years, Mr. Southey and Maria del Occidente have been correspondents. He read the proof sheets of *Zophiël*, which also is dedicated to him. He was also a warm personal friend of the poetess. Now, on the supposition that Mr. Southey is the author of “*The Doctor*,” let us read the following extract from chapter 54, p. i. page 221.

“To set about seeking a wife, is like seeking one’s

fortune, and the probability of finding a good one in such a quest, is less, though poor enough, Heaven knows, in both cases.

The bard has sung, God never form'd a soul
Without its own peculiar mate, to meet
Its wandering half, when ripe to crown the whole
Bright plan of bliss, most heavenly, most complete !

But thousand evil things there are that hate
To look on happiness ; these hurt, impede,
And leagu'd with time, space, circumstance, and fate,
Keep kindred heart from heart, to pine and pant and bleed.

And as the dove to far Palmyra flying,
From where her native founts of Antioch beam,
Weary, exhausted, longing, panting, sighing,
Lights sadly at the desert's bitter stream ;

So many a soul o'er life's drear desert faring,
Love's pure congenial spring unfound, unquaff'd,
Suffers, recoils, then thirsty and despairing
Of what it would, descends and sips the nearest draught.*

So sings Maria del Occidente, the most impassioned and most imaginative of all poetesses."—[*The Doctor.*]

The friendship existing between Mr. Southey and the poetess, the dedication of *Zophiel* to him and the coincidence of this quotation from *Zophiel* in "*The Doctor*," is, we think, presumptive evidence enough to establish the authorship of this mysterious book.

Mrs. Brooks, at present, resides at West Point, where her son, a lieutenant in the Army, is stationed. Her rural residence in that delightful place, environed by some of the most magnificent scenery on the globe, is well suited to the graceful character of her poetic mind, and has a tendency to keep alive the spirit of poesy, which soon expires in a crowded and densely populated city. If Mr. Bryant and Mr. Halleck lived in the country, they would become voluminous writers, instead of tantalizing us as they now do, with glittering fragments from mines which are rich with entire diamonds. The abode of the poetess is the seat of unpretending elegance and of cultivated literary tastes. Soirees are held in her drawing room almost weekly, where assemble all the literature, scholarship, chivalry, and beauty of the place. The mother of two young gentlemen, she still retains the charm and vivacity of youth. She converses with ease and fluency, and with unaffected simplicity ; while her language is characterized by the natural elegance of diction, which is the result of a cultivated mind and taste ; her manners are marked with the elegance and ease of a high-bred woman, and in society she appears at all times rather as the accomplished woman than the literary lady ; but in the retirement of her own elegant study, she can talk both learnedly and interestingly, and range with the scholar through the wide and varied fields of literature and science. In sincerity of heart, in amiability of nature, and in all the nobler relations and duties of mother and friend, the authoress of *Zophiel* has no less distinguished herself than by her genius and talents.

At present Mrs. Brooks is engaged on a poem of an epic character, which after undergoing the test of her jealous and most critical scrutiny, will doubtless by and by be put to press. A remarkable attribute of our poetess is patience united with an absence of all that feverish anxiety to be seen in print, so characteristic of

**Zophiel.*

the *genus irritabile*. *Zophiel* remained on hand several years before it was published, and was re-written with her own hand, the meanwhile, no less than seven times ; and then, it has been seen, her diffidence would not let her put it to press until she had submitted it both to Washington Irving and Mr. Southey. As a prose writer, Mrs. Brooks is equally careful of her style, and has copied for the sixth time a beautiful story, the size of Chateaubriand's "*Atala*," called "*Idomen*," which we believe, it is her intention to publish when she has made it as perfect as she is capable of making it. This story will be a *bijou* in our American literature. That it must, aside from its rich style, please most readers, is plain, inasmuch as the beautiful descriptions and pleasing sentiments with which it abounds are copied from nature and reality.

THE BRIDGEWATER TREATISES.*

Mankind, in general, have very erroneous ideas of the structure and character of the universe. There is among us much of that feeling which induced the English king to declare, that the length of his arm should be the basis of all measures. Our notions of force, of time, of motion, and of extent, are all drawn from circumstances immediately surrounding us, or from events in which we are the actors. We persuade ourselves, that the changes and vicissitudes which can be crowded into the brief period of the life of a man, are numberless ; we look upon this vast globe which we inhabit, as a mass of inconceivable magnitude and unspeakable importance in the fabric of the universe. A thousand years seems to us well fitted to mark off epochs in eternity, and we turn in disgust from the philosophy that would tell us, that our native earth, which has been the scene of all our loves and all our hopes—to which we have been endeared by the fairest recollections of pleasure, and even by the remembrance of sufferings—from the dust of which we were taken, and to whose bosom we are hastening to return—is nothing more than a little—a very little—star, among the great fires of the firmament.

But Nature knows nothing of individuals. All the laws by which her operations are conducted, are of the most general character ; they are not intended for solitary operation. A stone that is cast from the hand of a child, falls to the ground, not through any specific agency to meet one particular case, but in virtue of the general action of a general law ; a law, which is independent of place and of time. In her periodic motions, the earth revolves in obedience to the same force ; but that force was not called into existence for the guidance of the revolutions of this globe, any more than to direct the accidental fall of a stone. It was to infuse motion into myriads of worlds—to produce organization and life in the midst of silence and death—to direct the gyratory wanderings of star around star, and sun

* *Geology and Mineralogy, considered with reference to Natural Theology, by the Rev. William Buckland, D. D., Canon of Christ Church, and Reader in Geology and Mineralogy in the University of Oxford. In two volumes. Philadelphia—Carey, Lea & Blanchard, 1837.*

around sun—to maintain in an eternal dance, gigantic systems, in the presence of which our earth and our sun, and all that we see, would shrink into an imperceptible speck. The magnificent machinery of the heavens, may well rebuke our presumption and folly: we are not the lords, but only obscure members of the republic of the universe; and the laws which bind us, are not alone for our good, but for the general benefit of the ten thousand orbs which we see, and for millions which *we know* are far in the abysses of space—the tokens of whose existence our eyes have never beheld, and our telescopes cannot reach.

There is nothing at rest in the world. A system of perpetual change is incident to every thing. The notes of music degenerate into silence, the etherial pulses of light have their shadows, rest succeeds to motion, and death is the allotted portion of all living things. Yet the same heavens that shine upon us, shone upon the first man; the same returning summers bring us the fruits of the earth; we feel pleasure in the same fragrant blossoms, which brought gladness to him; and like him we still hear the same solemn moaning of the sea. And these are things which we think are eternal, and we try to persuade ourselves that they were made for us. But the records of philosophy show, that every thing is in mutation, even in the remote and tranquil skies, where we might hope to look for repose; nor ought we to repine at the brief space of our existence, when even more than one of those enormous worlds have been blotted out:

"Why! who shall talk of thrones and sceptres riven?
Bow'd be our hearts to think of what we are,
When from its height afar,
A world sinks thus, and yon majestic Heaven,
Shines not the less for that one vanished star."

Though our lot has been cast on a little atom that floats amidst myriads of worlds, yet the conditions of our organization is such, that we determine with certainty events which have happened ages ago, and events which are to happen in the coming eternity. We disentangle from the mazy revolutions of the planets, the movements of our earth; we determine her size in yards, and her weight in pounds; we assign the distances and the masses of the bodies of our own system, and track the comet on his pilgrimage of ages, and he returns faithful to our word. We can say in how many seconds a wave of light can reach us from the sun; and that the temperature of the great vacuum, in which the bodies constituting the solar system move, is fifty-eight degrees below the zero of Fahrenheit's thermometer, or a little under the freezing point of quicksilver. We can affirm, that the specific gravity of the planet Saturn is about the same as that of Cork, and that there is no fixed star within one hundred millions of millions of miles. Descending from the remote and great, down to the minute, we can show that the breadth of a wave of red light, is the two hundred and sixty-sixth ten millionth part of an inch; and that a particle of such light trembles four hundred and fifty-eight millions of millions of times in one second; or, that a wave of violet colored light, is the one hundred and sixty-seven ten millionth part of an inch in length, and that each particle of it vibrates seven hundred and twenty seven millions of millions of times in the same small interval. We know that matter is com-

posed of excessively minute atoms; and in the densest bodies the distance between the nearest particles, is almost infinitely great compared with the diameter of those atoms: and, little as they are, we can tell the relative weight of these particles, as for example that one of brimstone weighs $2\frac{1}{2}$ times as much as one of charcoal.

Such are the capabilities of the human intellect for discovery. We have been led to make these remarks, by the perusal of Dr. Buckland's excellent *Bridgewater Treatise on Geology and Mineralogy*. A strict criticism might lead us to object to the title, as a misnomer; for the book in point of fact, is not a work on Geology, much less on Mineralogy. Had it been designated as a treatise on fossil comparative anatomy, we should have been better pleased.

But it is immaterial by what names the master of a feast calls each dish, or from what district he ostensibly procures his wine, if the one is pleasant to the palate and the other unexceptionably mellow. We have here a highly interesting and most excellent work; we will not quarrel with it on account of its name.

The science of Geology may be said to have sprung into existence within the last fifty years. It is true, that we find among the writings of the earliest philosophers, speculations about the origin of the world; and even in the remotest antiquity, these speculations were incorporated with different theological systems. Thus, the Chaldeans and early theosophists of western Europe, believed in the eternity of matter at a period anterior to the institution of fire worship. At the time of the expedition of Alexander, Callisthenes found that the Chaldean priests possessed astronomical observations, reaching backwards over a period of nineteen hundred and three years. They had noticed the extreme regularity of the movements of the heavens, for they were able to reckon eclipses; and therefore knew, that under certain circumstances the moon passed through the shadow of the earth: they had detected the planets, and designated them by proper appellations, and had consecrated the days of the week to the more prominent celestial bodies, giving them names, the analogues of which, even through the vicissitudes of ages, have descended down almost unaltered to us; for, although the reason has been long ago lost, we still call the first day of the week by the name of the sun, and the second by that of the moon. The mere circumstance that they had determined the orbit of the planet mercury, is a lasting and remarkable proof of their skill. On his death bed, it was a subject of regret to the immortal KEPLER, one of the greatest astronomers, that in all his watchings of the heavens, he had never been able to see this star.

The regularity and precision with which the movements of the heavens are accomplished, led these ancient sages to many of their theological opinions; they had already recognised the position of the earth as a member of the solar system, and had determined the length of the year, and the fact of her rotation on her axis. In all their motions, no evidences could be traced of imperfection,—no indications of retardation,—both magnitudes and velocities were unchanged; and hence it was natural to infer that all those orbs were incapable of dissolution or even of decay; and the same reasons which would give to any of them an eternal

duration, would give it also to the earth; and thus the eternity of matter became an established dogma.

It is very remarkable, that in all ages so deeply have mankind been engaged in the study of these bodies—bodies, with which in some sense we have no concern—that astronomy has almost become a perfect science. It is a boast, that there is no movement of the stars, no matter how small or insignificant it may be, the true reason of which has not been discovered. In the early times, when the religion of the leading nations was purely astronomical, we can perceive a reason for this. The remarkable fictions which were based upon the movements of the skies—light which was taken as the representative of OMNIBUS or the good deity, and darkness of Ahriman the evil one—their contests and battles, which were typified by the alternations of the day and the night—the passage of the sun through the signs of the zodiac, the six spring and summer, and the six wintry signs—the respective emblems of the even balancing of good and evil in the world—the powers of darkness, whose resplendent representatives nightly spangle the blue vault, and exercise their influences on the earth beneath them—their vanquished and inferior condition, indicated by their disappearance each morning, at the coming up of the sun—these, and all the mythological machinery of antiquity, amply show how such studies came to be cultivated. It is, we repeat it, a remarkable fact, that whilst men were thus determining the constitution of the heavens above them, and founding their philosophical and religious opinions on their scientific discoveries, they remained in utter ignorance of all the evidence contained in the bosom of the earth, and left it for the last generation to found the science of geology.

In the work before us, the first feature that strikes us is the position which the author at once takes, in reference to one of the most interesting questions of physical geology. Dr. Buckland is a clergyman of the established Church of England, and holds a distinguished office in the ancient University of Oxford. Combining a profound knowledge of the department he more specially cultivates, with other collateral branches of science, whatever opinion he deliberately adopts, will command at once our most serious consideration. He has abandoned as an untenable hypothesis, the doctrine of the recent formation of the earth—and in this able treatise, seeks to harmonise a creation almost indefinitely remote with the contents of the first chapter of the pentateuch.

For many centuries an opinion has prevailed throughout Europe, that the creation of the earth took place at an epoch about six thousand years ago: the precise time is not insisted on, as different calculations made from analogous data, do not exactly coincide—the calculations themselves being based on the Jewish records, and depending mainly on the possibility of marking off series of years, from data found in the Holy Scriptures. On the other hand, the united testimony of almost all oriental pagan nations, asserts an extremely distant period for the civilization of man, and the foundation of many ancient empires; and therefore assigns a still more remote time for the creation of the earth. We have been accustomed to explain these things, by referring to the known habits and genius of Eastern nations, which delight in asserting the antiquity of

their foundation; thus, the Chinese, the Hindus, and the Egyptians, bring forward catalogues of kings and even whole dynasties, which would carry us back to an inconceivably ancient era. In this position of things, the rapid advances of several of the sciences have cast very great doubt in the minds of those most competent to judge, whether the doctrine of a recent creation is really correct,—the question, more from its peculiar position than from its intrinsic value, has assumed an aspect of the deepest interest.

And here we cannot help remarking, that for long it has seemed to us that an entire change is imperiously demanded in the education of modern theologians. Look at any of the great universities in Europe, many of them expressly founded for the purpose of theological education—the very same course of study is now followed, that was adopted two or three centuries ago. At that time it was of importance to be able to understand the Scriptures in the original tongues, to refer to the opinions of old writers, and put down the caviller by dint of superior literary attainments. But the state of things is utterly altered; the disputations of eighteen centuries have settled all the leading points, and he is regarded as an ingenious man who can find a new and plausible interpretation. And what is of infinitely more importance, the ground of attack is changed. Who thinks now, of making war on christianity by bringing forth a passage in the Greek? Does any man in his senses expect to break down the national faith, by a knowledge of Latin or Hebrew? But if Adanson brings from Senegal a section of a tree, and bids the plainest farmer in the land count more than five thousand annual rings in it, there is no classical quotation, no pleasant casuistry, which will binder that man from believing, that the tree was five thousand years old. If the French astronomers point out the principle of the conservation of the solar system, or if HERSCHTEL shows the young student the position of the earth in the universe, he will inevitably be led to consider his own position among the countless myriads of species, and speculate on the comparative importance of his own world. And the arguments with which these things are backed, are irrefragable, unless a man can distrust the plain evidence of his own senses, or doubt the first principles of arithmetic.

And, now, these are the kinds of weapons with which christianity has been assaulted within the last fifty years. It is in vain that we seek any longer to avoid the contest, or shift the ground of attack. An appeal has been made to the works of Nature, and before her tribunal the case must be tried. Astronomy, chemistry, anatomy, geology, and the whole range of the sciences, are giving in their evidence. Even in our own affairs, and in a cause that we may deem most righteous, we subject each witness to a searching cross examination, and do not trust ourselves except to such counsel, as we believe are learned in the law. How much more then, in a case which like this is of inexpressible importance to us, should we be careful to see, that our counsel are well informed of the position of our antagonists, and the exact character and bearing of the testimony to be objected to us.

Dr. Buckland has cast the die, and passed the rubicon;—many of the high church dignitaries have gone with him. In America, some of our leading philoso-

phers have followed. In London, the President of the Geological Society has written a treatise to prove, that all mundane changes have been brought about by the *slow* operation of the causes that are now in existence, involving thereby a pre-existence of thousands of centuries. It is the shame of the Catholic Church, that the nineteenth century was a witness of their edicts, still existing in full force against Galileo and the Copernican system. To this day, in the university of Salamanca, once a leading university of Europe, the Newtonian system of the world is repudiated. Scarce ten years have elapsed, since Cardinal Toriozzi, under the auspices of Pope Pius 7th, proposed in the congregation "that they should wipe off this scandal from the church." But the infallibility of the church and the fulminates of the conclave, have never retarded the universal adoption of the truth. The system of Copernicus, the laws of Kepler, and the works of Newton, have steadily advanced in defiance of the priesthood. It is a striking and an useful lesson.

Shall we for a moment suppose, that the universe is such a crazy machine, that some of its wheels cannot perform a single revolution, before all comes to a stop? Shall we presume to imagine, that it constantly requires botching, and tinkering, and starting again? In a work of art, we admire the regular and steady movement which keeps on undisturbed, when the engineer who made it and set it in motion has gone away—this is the perfection of mechanism—and we characterise that as a miserable failure, which requires the continued tampering of the artizan. Though James Watt, that Hercules of intellect, is dead, his iron children still keep on their incessant motion—their massive arms still pump out oceans, or drive the steam ship over the sea, or speed with the wind from one end of the continent to the other.

The structure, the purposes, the mode of action, and even the probable duration of any machine, may be understood by inspecting its several parts. Let us for awhile pass over the evidence which these geologists furnish us, and see whether we can obtain any indications that enormous periods of time are necessarily consumed, in effecting the revolutions and changes of the heavens. A man who had never seen a watch, would be unable to determine its use by merely considering the vibrations of its balance wheel; nor if he were told that it was for the purpose of effecting the mensuration of time, could he form any idea whether it answered the purpose or not, until he had observed that one of its hands made two revolutions in a day. It is by studying the slow motions of the solar and other systems, that we may be able to indicate how they stand in relation to our measures of time.

It would require a period of more than two hundred thousand years, for the major axis of Jupiter's orbit to accomplish one sidereal revolution, and a period of almost twenty-three thousand years to perform its tropical revolution; the nodes of the orbit of the same planet, revolve in a period of thirty-six thousand years. If, as some of the ancient fathers of the church supposed, all the great planets were in conjunction on the day of creation, there must elapse during each succeeding repetition of that astronomical occurrence, a period of more than seventeen millions of millions of years.

Leaving these distant worlds, let us come nearer

home, and see if in the case of our own earth such inconceivable periods are demanded for the accomplishment of any of her motions. It is so. It requires one hundred and fifteen thousand years for the major axis of the earth's orbit to pass through one sidereal revolution, and twenty-one thousand years to complete its tropical motion. The eccentricity which is slowly decreasing, will not vanish in less than thirty-seven thousand years. The maxima and minima of heat and light, which the earth receives from the sun, have secular epochs, accomplished in a period of about ten thousand years. The return of spring and the other seasons, undergoes a slow but unceasing change—a complete revolution not being accomplished in less than twenty-five thousand years. Taken together, spring and summer occupy at this time a period nearly eight days longer than autumn and winter. This difference is slowly abating; and hence it comes to pass, that for ten thousand five hundred years the northern hemisphere of the earth is more heated than the southern, and then for ten thousand five hundred, less heated.

But some may suppose, that in the perpetual movements and wanderings of the earth, among the mighty bodies that surround her, these slow motions may be disturbed, or the system be destroyed by its own reaction, or by some sudden shock. It would greatly detract from the Architect of the universe, could such events happen; and it is the glory of modern astronomy to prove, *that they are impossible*. All these perturbations, and even all the accumulations of them, begin at zero, and increase during an inexpressible lapse of time, up to unity, and then decrease back again to zero, to increase once more; just as a pendulum descends to the lowest point of its motion, and at that instant begins to ascend, and stops, to redescend; these perturbations run through a series of similar oscillations. It is indeed the glory of modern science to show, that this universe contains in itself no principle of decay, and that without a direct interposition of its Maker, it can continue its own existence, and keep up its own motion THROUGH ETERNITY.

We have said, that all the ideas of mankind in relation to time and space, are drawn from circumstances most nearly concerning them. Were we the inhabitants of another planet, how strangely would all these have been altered. If we had been born in Saturn, our year would have been thirty times as long as it is, or if in Uranus more than eighty times as long. To come nearer home—were we confined to the polar regions of our own earth, our day would have been six months long, and our night six months. An inhabitant of one of the stars, γ , Virginia, would count six hundred and twenty-nine years but as one; and the annual period of Σ , Bootis, is sixteen hundred of our years. If we keep these things in our minds, we may understand how little it becomes the insect that dies in a day, to judge of what is long and what is short.

It is a magnificent sight to stand on the sea shore and watch the breakers dashing among the rocks—we are overwhelmed with awe when we think that this mighty deep, stretches from continent to continent for thousands of miles—we look upon it as a fit emblem of Omnipotence. But when we reflect, that an average depth of three or four miles, is all that science will allow us to assign for "this great and vast sea," and

that the diameter of our earth is eight thousand, we can hardly credit the conclusion to which we are compelled to come, that the varnish on a common globe, bears much the same relation to its mass, that the ocean does to the earth.

The flight of a cannon shot is amazingly rapid, but it would take a cannon shot twenty-two years to pass from the earth to the sun—a distance of almost one hundred millions of miles—yet, in our planetary system, there are bodies more remote than the earth from the sun—the diameter of the orbit of Uranus is almost four thousand millions of miles; a distance utterly inconceivable. Now, if we could imagine a line to be drawn across space, in any part of our system, and to be two hundred millions of miles in length, that line would be *too short* to be seen from the nearest fixed star.

The fixed stars are suns like our earth, shining by their own native light; along with our sun, the larger and brighter of them constitute a special family or assemblage of stars, the number of individuals amounting to many millions; and between each of them, most probably there intervene distances, on the average as great, as those between our sun and any one of them—this countless assemblage, expanded thus over immensity, performs all their evolutions in obedience to the general laws of gravitation, and are probably each one accompanied by lesser and darker globes, which shine only by the reflected light of their principals, and are imperceptible to us, just as our earth and the great planets are imperceptible from the nearest star.

But this magnificent picture, the boundaries of which we cannot understand, must shrink into a speck. Far away, in the depths of space, we catch the pale milky light of brother systems of stars, like our own. The hand of a man would shadow them in their remoteness, and the faint beams which reveal them to us, must take thousands of centuries to cross the great vacuum, although light may fly almost a quarter of a million of miles in one second. With these systems, the firmament seems studded, nor can we number them; for each improvement of the telescope, brings into view others, the faint blush of whose beams had been before imperceptible. And such is the system of the world; what then is man?

Let us therefore beware, how we apply our paltry and pitiful measures of space, or of time, to the fabric of the universe; or how we dare to criticise the works of the Great and Unknown Maker of us all.

It thus appears, from a brief investigation of the mechanism of the world, that the lapse of long periods of time, in the accomplishment of certain events, is a phenomenon by no means of unusual occurrence; and that moreover, there is no reason to suppose it derogatory to the attributes of the Creator, that all the parts of this perfect machinery, can keep on their destined motion, for a period of which we cannot form any conception.

So much for probabilities; but further—philosophers may perhaps show, that as far as the earth is concerned, the matter is capable of *absolute physical proof*. On all hands it is admitted, that the temperature of the earth in high latitudes, was formerly much more exalted than now. This is proved by the abundant occurrence of tropical fossils in those places—remains, both of animals

and plants, now only occurring in the hottest regions. Some writers, not well informed of the leading propositions of mechanics, have endeavored to account for this, on the supposition that the axis of rotation of the earth, underwent a change at the deluge, being tilted from its former position, and that before that event, the ecliptic had no obliquity, and that there was a perpetual summer all over the earth, as old traditions and classical writers attest.

But the stanza of a Roman bard, weighs nothing against a mathematical demonstration. All writers on analytical mechanics agree, that in any solid body whatsoever, be its form or magnitude what it may, "there are at least three axes, at right angles to one another, round any one of which, if the solid begins to revolve, it will continue to revolve forever, provided it be not disturbed by any foreign cause;" and should any cause produce a rotation in any other axis, that rotation would not be permanent for an instant, but the revolving body would at once commence a wriggling oscillation, and directly return to one of the forementioned axes of equilibrium. It is therefore *absolutely impossible*, that the earth could have revolved permanently on another adjacent axis, than that on which her motions are now accomplished.

Moreover, the rocks of the oldest geological epoch, are all rocks of fusion. If a plain man were presented with a cannon ball, and asked his opinion how it was formed, can there be any doubt as to the nature of his answer? The chemist, has just the same, or *even more cogent* evidence, to convince him that the whole family of granites were produced by the action of fire, nor can he be more certain of his own identity, than he is that these rocks have existed in a molten condition, and that their crystalline form is the result of a slow cooling. Once grant this fact, and the hypothesis of the antiquity of the globe, follows as an irresistible consequence.

There is but one process by which the earth's temperature could *fall*, and that is by radiation of its caloric into space. Now, we can find very nearly, the degrees at which granite or syenite will enter into fusion, and we know the present mean temperature of the earth. The whole problem therefore resolves itself into this, "*to find the rate, and therefore the time of cooling, of a spheroidal mass of the magnitude and conducting power of the earth, by radiation into a vacuum through a given number of thermometric degrees.*" Upon these principles, Baron Fourier solved the proposition, and showed, that so nearly had an equilibrium of temperature been gained, in the enormous period of time that has intervened since the fusion of the granite, that it would take hundreds of centuries for it now to descend through a fraction of a degree of Fahrenheit's thermometer.

Leaving these chemical principles, let us now see how they tally with acknowledged astronomical results. We will imagine, that at some former period the temperature of the whole earth was at the melting point of granite, and it has descended more or less rapidly. Bodies, as they cool, contract in all their dimensions; hence a refrigeration of the globe could not happen, without its bulk becoming less and less. But, mark the mechanical result of this! If a sphere which is rotating on its axis, with a certain velocity, becomes less and less in bulk, its speed of revolution must become greater and greater. If the earth had once a higher

temperature than at present, it *must* have been of greater bulk, it *must* have revolved more slowly, and the *day must* have been longer; but it can be proved, that if the length of the day had decreased the three thousandth part of one second, since the Greek astronomer Hipparchus lived, two thousand years ago, the secular equator of the moon would have been diminished by four seconds and a half; an event which has not happened. This remarkable conclusion, which shows the power of physical science, in determining thermometric measurements, thousands of years before the thermometer itself was invented, shows also, that during the last twenty centuries the mean temperature of the earth has not perceptibly fallen; and, therefore, if it has ever been so high as is here supposed, two thousand years was nothing in comparison with the time which must have elapsed.

We have been induced to follow this course of argument, that our readers may be enabled to see the true position of this question. They will at once perceive, that the exact point is not whether the earth is six or sixty thousand years old, but whether certain rocks are really rocks of fusion;—the decision turns upon that point. And there are parts of evidence which should not here be overlooked; the action of gravity being estimated from the centre of the earth, causes all bodies the nearer they are to that centre, to be more and more dense; so it is stated, that at a depth from the surface short of four hundred miles, water would be as dense as quicksilver. But we know, that the aggregate specific gravity of the *whole earth*, is only about five times that of water, instead of being so vastly high, as this would make it; and hence we draw the inference, that this consideration is overcome by a dilatation, resulting from a very exalted temperature, still existing in the interior. A phenomenon, which volcanic eruptions, hot springs, and the temperature of deep caverns, and mines, seem to attest.

Such we suppose are some of the reasons which have decided Dr. Buckland in the course he has taken. For ourselves, before coming to a final conclusion, we should like to hear the case argued by those who doubt the correctness of his opinion. We should moreover wish to know, whether it be the opinion of oriental scholars, that violence is done by such opinions to the *plain meaning of the first chapter of Genesis*. It is for accomplished linguists *alone*, to settle this difficult point.

Mr. Lyell in his inquiry how far former changes of the earth's surface are referable to *causes that are now in operation*—taking the very ground that Dr. Buckland stands upon, of a very ancient creation—has endeavored to show, in a most elaborate way, that we need not look for miraculous causes to account for the structure of the crust of the earth. Whilst we are open to these arguments, and feel how cogent they are, we must nevertheless remember, that even the discoveries of Geology itself, have demonstrated that *new causes* have made their appearance on the earth—causes which in some cases, bear little or no resemblance to any that preceded or were contemporary with them. The united testimony of all geologists goes to show, that the appearance of man took place in the most recent geological epochs, long after the newer Pleiocene period of Mr. Lyell. Regarded simply as a physical agent, the powers of man are by no means contemptible.

The great Saurian reptiles, the mastodon, the megalonix, had, it is true, vast physical energy, compared with the frail frame of the two handed savage in his helpless infancy; but human intellect would have been an overmatch for them all. To the pterodactyle and the fowls, had been given the realms of air—the great whale and the sea monsters were masters of the ocean—innumerable tribes of wild beasts roamed the face of the earth; but to the human intellect alone, was committed the custody of the most powerful of all elements—Fire. It is to this gift that we trace human ascendancy all over the globe. No created thing can break the laws of its Creator,—Thou shalt be born—thou shalt die: these are the rules for man, and over them he has no control. The half reasoning elephant looks on the cheerful blaze of the camp-fire in the forest, but nature has forbidden him to touch it, and he never dreams of replenishing it. If the sea and the air and the earth have their tenants, although all corporeal organizations cease to exist far below a red heat, yet man is lord of the fire—with it, he is enabled to live beneath the poles—with it he has put all things under his feet—a single spark gives him omnipotence, and the wild beast flees before him—and cities sink down at the play of his artillery. There are but few epochs in human history—the creation of man—his discovery of the properties of fire—the invention of the printing press—gunpowder—and the steam engine.

It would afford matter of curious inquiry to ascertain how much of the intellectual superiority of man, is due to his control of this extraordinary element. Unlike the air or the water, he could not live in it, but it was committed to his care, to be created when he chose—vast charter of power—his curiosity has led him to subject all sorts of bodies to its action, and to the fund of knowledge he has thence derived, almost all his comforts and all his power are due.

If geologists will have their periods—if they tell us that the sea tribes first make the appearance, and then the tribes of the earth and the air—let them add thereto the most astonishing of all, the creation of a creature having the control of fire.

As an example of our author's method of description, we shall select parts of his account of the plesiosaurus, an extinct animal:—

"We come next to consider a genus of extinct animals, nearly allied in structure to the ichthyosaurus, and coextensive with it through the middle ages of our terrestrial history. The discovery of this genus, forms one of the most important additions that geology has made to comparative anatomy. It is of the plesiosaurus, that Cuvier asserts the structure to have been the most heteroclit, and its characters altogether the most monstrous, that have been yet found amid the ruins of a former world. To the head of a lizard, it united the teeth of a crocodile; a neck of enormous length, resembling the body of a serpent; a trunk and tail having the proportions of an ordinary quadruped, the ribs of a chameleon, and the paddles of a whale. Such are the strange combinations of form and structure in the plesiosaurus—a genus, the remains of which, after interment for thousands of years amidst the wreck of millions of extinct inhabitants of the ancient earth, are at length recalled to light by the researches of the geologist, and submitted to our examination, in nearly as

perfect a state, as the bones of species that are now existing upon the earth.

"The plesiosaurs appear to have lived in shallow seas and estuaries, and to have breathed air like the ichthyosaurs, and our modern cetacea. We are already acquainted with five or six species, some of which attained a prodigious size and length; but our present observations will be chiefly limited to that which is the best known, and perhaps the most remarkable of them all, viz. the plesiosaurus dolichodeirus.

HEAD.

"The head of the plesiosaurus dolichodeirus, exhibits a combination of the characters of the ichthyosaurus—the crocodile, and the lizard, but most nearly approaches to the latter. It agrees with the ichthyosaurus in the smallness of its nostrils, and also in their position near the anterior angle of the eye; it resembles the crocodile, in having the teeth lodged in distinct alveoli, but differs from both, in the form and shortness of its head, many characters of which approach closely to the iguana.

NECK.

"The most anomalous of all the characters of the plesiosaurus dolichodeirus, is the extraordinary extension of the neck, to a length almost equalling that of the body and tail together, and surpassing in the number of its vertebræ (about thirty three) that of the most long-necked bird, the swan: it thus deviates in the greatest degree from the almost universal law, which limits the cervical vertebræ of quadrupeds to a very small number.

EXTREMITIES.

"As the plesiosaurus breathed air, and was therefore obliged to rise often to the surface for inspiration, this necessity was met by an apparatus in the chest and pelvis, and in the bones of the arms and legs, enabling it to ascend and descend in the water after the manner of the ichthyosaurs and cetacea; accordingly the legs were converted into paddles, longer and more powerful than those of the ichthyosaurus, thus compensating for the comparatively small assistance which it could have derived from its tail.

"Comparing these extremities with those of other vertebrated animals, we trace a regular series of links and gradations, from the corresponding parts of the highest mammalia, to their least perfect form in the fins of fishes. In the fore paddle of the plesiosaurus, we have all the essential parts of the fore-leg of a quadruped, and even of a human arm: first, the scapula, next the humerus, then the radius and ulna, succeeded by the bones of the carpus and metacarpus, and these followed by five fingers, each composed of a continuous series of phalanges. The hind paddle also, offers precisely the same analogies to the leg and foot of the mammalia; the pelvis and femur are succeeded by a tibia and fibula, which articulate with the bones of the tarsus and metatarsus, followed by the numerous phalanges of five long toes.

"From the consideration of all its characters, Mr. Conybeare has drawn the following inferences, with respect to the habits of the plesiosaurus dolichodeirus: 'That it was aquatic, is evident from the form of its paddles; that it was marine is almost equally so, from the remains with which it is universally associated; that it may have occasionally visited the shore, the re-

semblance of its extremities, to those of the turtle may lead us to conjecture; its motion, however, must have been very awkward on land; its long neck must have impeded its progress through the water; presenting a striking contrast to the organization which so admirably fits the ichthyosaurus to cut through the waves. May it not therefore be concluded (since, in addition to these circumstances, its respiration must have required frequent access of air,) that it swam upon or near the surface; arching back its long neck like the swan, and occasionally darting it down at the fish which happened to float within its reach. It may, perhaps, have lurked in shoal water along the coast, concealed among the sea-weed; and raising its nostrils to a level with the surface, from a considerable depth, may have found a secure retreat from the assaults of dangerous enemies; while the length and flexibility of its neck may have compensated for the want of strength in its jaws, and its incapacity for swift motion through the water, by the suddenness and agility of the attack which they enabled it to make on every animal, fitted for its prey, which came within its reach.'

"We began our account of the plesiosaurus, with quoting the high authority of Cuvier, for considering it as one of the most anomalous and monstrous productions of the ancient systems of creation; we have seen, in proceeding through our examination of its details, that these apparent anomalies consist only in the diversified arrangement, and varied proportion, of parts fundamentally the same as those that occur in the most perfectly formed creatures of the present world.

"Pursuing the analogies of construction, that connect the existing inhabitants of the earth with those extinct genera and species, which preceded the creation of our race, we find an unbroken chain of affinities pervading the entire series of organised beings, and connecting all past and present forms of animal existence, by close and harmonious ties. Even our own bodies, and some of their most important organs are brought into close and direct comparison with those of reptiles, which, at first sight, appear the most monstrous productions of creation; and in the very hand and fingers with which we write their history, we recognise the type of the paddles of the ichthyosaurus and plesiosaurus.

"Extending a similar comparison through the four great classes of vertebral animals, we find in each species a varied adaptation of analogous parts, to the different circumstances and conditions in which it was intended to be placed. Ascending from the lower orders, we trace a gradual advancement in structure and office, till we arrive at those whose functions are the most exalted; thus, the fin of the fish becomes the paddle of the reptile ichthyosaurus and plesiosaurus; the same organ is converted into the wing of the pterodactyle, the bat, and the bird; it becomes the fore foot or paw in quadrupeds, that move upon the land, and attains its highest consummation in the arm and hand of rational man."

Let us take again another example;

THE PTERODACTYLE.

"The structure of these animals is so exceedingly anomalous, that the first discovered pterodactyle, was considered by one naturalist to be a bird, by another as a species of bat, and by a third as a flying reptile.

"This extraordinary discordance of opinion, respect-

ing a creature whose skeleton was almost entire, arose from the presence of characters, apparently belonging to each of the three classes to which it was referred. The form of its head, and length of neck, resembling that of birds; its wings approaching to the proportion and form of those of bats; and the body and tail approximating to those of ordinary mammalia. These characters, connected with a small skull, as is usual among reptiles, and a beak furnished with not less than sixty pointed teeth, presented a combination of apparent anomalies, which it was reserved for the genius of Cuvier to reconcile. In his hands, this apparently monstrous production of the ancient world, has been converted into one of the most beautiful examples yet afforded by comparative anatomy, of the harmony that pervades all nature, in the adaptation of the same parts of the animal frame, to infinitely varied conditions of existence.

"In the case of the pterodactyle we have an extinct genus of the order saurians, in the class of reptiles, (a class that now moves only on the land or in the water,) adapted by a peculiarity of structure to fly in the air. It will be interesting to see how the anterior extremity, which in the fore leg of the modern lizard and crocodiles is an organ of locomotion on land, became converted into a membraniferous wing, and how far the other parts of the body are modified so as to fit the entire animal machine for the functions of flight. The detail of this inquiry will afford such striking examples of numerical agreement in the component bones of every limb, with those in the corresponding limbs of living lizards, and are at the same time so illustrative of contrivances for the adjustment of the same organ to effect different ends, that I shall select for examination a few points from the long and beautiful analysis which Cuvier has given of the structure of this animal.

"We are already acquainted with eight species of this genus, varying from the size of a snipe to that of a cor-morant.

"In external form, these animals somewhat resemble our modern bats and vampires: most of them had the nose elongated, like the snout of a crocodile, and armed with conical teeth. Their eyes were of enormous size, apparently enabling them to fly by night. From their wings projected fingers, terminated by long hooks, like the curved claw on the thumb of the bat. These must have formed a powerful paw, wherewith the animal was enabled to creep or climb, or suspend itself from trees.

"It is probable also that the pterodactyles had the power of swimming, which is so common in reptiles, and which is now possessed by the pteropus pselaphon or vampire bat of the island of Bonin. Thus, like Milton's fiend, all qualified for all services and all elements, the creature was a fit companion for the kindred reptiles that swarmed in the seas, or crawled on the shores of a turbulent planet.

'The Fiend,

O'er bog, or steep, through strait, rough, dense, or rare,
With head, hands, wings, or feet, pursues his way,
And swims, or sinks, or wades, or creeps, or flies.'

"With flocks of such-like creatures flying in the air, and shoals of no less monstrous ichthyosauri and plesiosauri, swimming in the ocean, and gigantic crocodiles and tortoises crawling on the shores of the primeval

lakes and rivers, air, sea, and land, must have been strangely tenanted in these early periods of our infant world.

"As the most obvious feature of these fossil reptiles is the presence of organs of flight, it is natural to look for the peculiarities of the bird or bat, in the structure of their component bones. All attempts, however, to identify them with birds are stopped at once by the fact of their having teeth in the beak, resembling those of reptiles; the form of a single bone, the os quadratum, enabled Cuvier to pronounce at once that the creature was a lizard; but a lizard possessing wings exists not in the present creation, and is to be found only among the dragons of romance and heraldry; while a moment's comparison of the head and teeth with those of bats, shows that the fossil animals in question, cannot be referred to that family of flying mammalia.

"The vertebræ of the neck are much elongated, and are six or seven only in number, whereas they vary from nine to twenty-three in birds. In birds, the vertebræ of the back also vary from seven to eleven, whilst in the pterodactyles there are nearly twenty; the ribs of the pterodactyles are thin and thread-shaped, like those of lizards; those of birds are flat and broad, with a still broader apophysis, peculiar to them. In the foot of birds, the metatarsal bones are consolidated into one; in the pterodactyles all the metatarsal bones are distinct, the bones of the pelvis also differ widely from those of a bird, and resemble those of a lizard; all these points of agreement with the type of lizards, and of difference from the character of birds, leave no doubt as to the place in which the pterodactyles must be ranged, among the lizards, notwithstanding the approximation which the possession of wings seems to give them to birds or bats.

"As an insulated fact, it may seem to be of little moment, whether a lizard or a fossil pterodactyle, might have four or five joints in its fourth finger, or its fourth toe: but those who have patience to examine the minutiae of this structure, will find in it an exemplification of the general principle, that things apparently minute and trifling in themselves, may acquire importance when viewed in connexion with others, which, taken singly, appear equally insignificant. If we examine the fore foot of the existing lizards, we find the number of joints regularly increased by the addition of one, as we proceed from the first finger, or thumb, which has two joints, to the third, in which there are four; this is precisely the numerical arrangement which takes place in the three first fingers of the hand of the pterodactyle. Thus far the three first fingers of the fossil reptile agree in structure with those of the fore foot of living lizards; but as the hand of the pterodactyle was to be converted into an organ of flight, the joints of the fourth or fifth finger were lengthened, to become expansors of a membranous wing.

"As the bones in the wing of the pterodactyle thus agree in number and proportion with those in the fore foot of the lizard, so do they differ entirely from the arrangement of the bones which form the expansors of the wing of the bat.

"The total number of toes in the pterodactyles is usually four; the exterior or little toe being deficient; if we compare the number and proportion of the joints in these four toes with those of lizards, we find the agree-

ment as to number to be not less perfect than it is in the fingers; we have in each case two joints in the first or great toe, three in the second, four in the third, and five in the fourth. As to proportion also, the penultimate joint is always the longest, and the antepenultimate, or last but two, the shortest; these relative proportions are also precisely the same as in the feet of lizards. The apparent use of this disposition of the shortest joints in the middle of the toes of lizards, is to give greater power of flexion for bending round and laying fast hold on twigs and branches of trees of various dimensions, or on inequalities of the surface of the ground or rocks, in the act of climbing or running.

"All these coincidences of number and proportion, can only have originated in a premeditated adaptation of each part to its peculiar office; they teach us to arrange an extinct animal under an existing family of reptiles; and when we find so many other peculiarities of this tribe, in almost every bone of the skeleton of the pterodactyle, with such modifications, and such only as were necessary to fit it for the purposes of flight, we perceive unity of design pervading every part, and adapting to motion in the air, organs which in other genera are calculated for progression on the ground or in the water.

"If we compare the foot of the pterodactyle with that of the bat, we shall find that the bat, like most other mammalia, has three joints in every toe, excepting the first, which has only two; still these two in the bat are equal in length to the three bones of the other toes, so that the five claws of its foot range in one straight line, forming altogether the compound hook by which the animal suspends itself in caves, with its head downwards, during its long periods of hybernation: the weight of its body being divided equally by this contrivance between each of the ten toes. The unequal length of the toes of the pterodactyle, must have rendered it almost impossible for its claws to range uniformly in line, like those of the bat, and as no single claw could have supported for a long time the weight of the whole body, we may infer that the pterodactyles did not suspend themselves after the manner of the bats. The size and form of the foot, and also of the leg and thigh, show that they had the power of standing firmly on the ground, where, with their wings folded, they possibly moved after the manner of birds; they could also perch on trees, and climb on rocks and cliffs, with their hind and fore feet conjointly, like bats and lizards."

These extracts will serve to show the excellent descriptive powers of our author, and his method of explaining in a popular way the results of the labors of the ablest comparative anatomists. Passages like these, cannot be read by those who have little acquaintance with geology, without agreeable surprise; they will at once readily see that there is a minute exactitude in these researches, for which perhaps they were not prepared—an exactitude belonging only to such sciences as are far advanced beyond the regions of mere speculation,—and that carries with itself the very stamp and impress of truth.

(Page 157.) "When we see the body of an ichthyosaurus, still containing the food it had eaten just before its death, and its ribs still surrounding the remains of fishes, that were swallowed ten thousand or more than ten times ten thousand years ago, all these vast inter-

vals seem annihilated, time altogether disappears, and we are almost brought into as immediate contact with events of immeasurably distant periods, as with the affairs of yesterday."

Speaking of the tracks of animals, one of the most remarkable discoveries of geologists, he says—

(Page 198.) "Scotland has recently afforded evidence of the existence of more than one species of these terrestrial reptiles (tortoises,) during the period of the new red or variegated sandstone formation. The nature of this evidence is almost unique in the history of organic remains.

"It is not uncommon to find on the surface of sandstone, tracks which mark the passage of small crustacea, and other marine animals, whilst this stone was in a state of loose sand at the bottom of the sea. Laminated sandstones are also often disposed in minute undulations, resembling those formed by the ripple of agitated water upon sand.

"The same causes, which have so commonly preserved these undulations, would equally preserve any impressions that might happen to have been made on beds of sand, by the feet of animals; the only essential condition of such preservation being, that they should have become covered with a further deposit of earthly matter, before they were obliterated by any succeeding agitations of the water.

"The nature of the impressions in Dumfriesshire, may be seen by reference to Pl. 26. They traverse the rock in a direction either up or down, and not across the surfaces of the strata, which are now inclined at an angle of 38°. On one slab there are twenty-four continuous impressions of feet, forming a regular track, with six distinct repetitions of the mark of each foot, the fore foot being differently shaped from the hind foot; the marks of claws are also very distinct.

"Notwithstanding this absence of bones, from the rocks which are thus abundantly impressed with footsteps, the latter alone suffice to assure us both of the existence and character of the animals, by which they were made. Their form is much too short for the feet of crocodiles, or any other known saurians; and it is to the testudinata, or tortoise, that we look with most probability of finding the species to which their origin is due.

"The historian or the antiquary may have traversed the fields of ancient or of modern battles, and may have pursued the line of march of triumphant conquerors, whose armies trampled down the most mighty kingdoms of the world. The winds and storms have utterly obliterated the ephemeral impressions of their course. Not a track remains of a single foot, of all the countless millions of men and beasts, whose progress spread desolation over the earth. But the reptiles, that crawled upon the half finished surface of our infant planet, have left memorials of their passage, enduring and indelible. No history has recorded their creation or destruction; their very bones are found no more among the fossil relics of a former world. Centuries and thousands of years may have rolled away, between the time in which these footsteps were impressed by tortoises, upon the sands of their native Scotland, and the hour when they are again laid bare and exposed to our curious and admiring eyes. Yet we behold them stamped upon the rock, distinct as the track of the passing animal upon the recent snow, as if to show that thousands of years

are but as nothing amidst eternity ; and, as it were, in mockery of the fleeting perishable course of the mightiest potentates among mankind."

We have spoken of the exactitude and minuteness of geological research. Were we disposed we might draw abundant arguments from other collateral sources. On a footing with these fossil tracks, we might place fossil insects of many varieties,—spiders from the Jura limestone, scorpions from the carboniferous rocks, coleopterous insects in ironstone, the hard wing covers of beetles from the oolite slate,—and some of these so well preserved, that even the hairs on them are as distinct as in their living successors,—the ink bags of the loligo or cuttle fish, in such excellent preservation that the author has made drawings of *extinct* species, with their own sepia,—of so excellent a color as to deceive an expert painter, who begged to know by what colorman it had been prepared. We might also cite the *unhatched* eggs of birds, and a thousand varieties of the soft and delicious fruits of the tropics, converted by the slow process of petrification into stones so hard that they may be used to strike fire.

The Flora of this old world is not of less interest than its Fauna. Our author remarks, (p. 341.)

"If we take a general review of the remains of *terrestrial* vegetables, that are distributed through the three great periods of geological history, we find a similar division of them into groups, each respectively indicating the same successive diminutions of temperature upon the land, which have been inferred from the remains of the vegetation of the sea. Thus, in strata of the transition series, we have an association of a few *existing* families of *endogenous* plants, chiefly ferns and equisetaceæ, with *extinct* families, both *endogenous* and *exogenous*, which some modern botanists have considered to indicate a climate hotter than that of the tropics of the present day.

"In the secondary formations, the species of these most early families become much less numerous, and many of their genera, and even of the families themselves, entirely cease ; and a large increase takes place in two families that comprehend many existing forms of vegetables, and are rare in the coal formation, viz. *cycadeæ* and *coniferæ*. The united characters of the groups associated in this series, indicate a climate whose temperature was nearly similar to that which prevails within the present tropics.

"In the tertiary deposits, the greater number of the families of the first series, and many of those of the second, disappear ; and a more complicated dicotyledonous vegetation takes place of the simpler forms which predominated through the two preceding periods. Smaller equisetaceæ also succeed to the gigantic calamites. Ferns are reduced in size and number to the scanty proportions they bear on the southern verge of our temperate climates ; the presence of palms attest the absence of any severe degree of cold, and the general character marks a climate nearly approaching to that of the Mediterranean."

In relation to the vegetable origin of the coal deposits, (p. 344.)

"A similar abundance of distinctly preserved vegetable remains, occurs throughout the other coal fields of Great Britain. But the finest example I have ever witnessed, is that of the coal mines of Bohemia, just men-

tioned. The most elaborate imitations of living foliage upon the painted ceilings of Italian palaces, bear no comparison with the beauteous profusion of extinct vegetable forms, with which the galleries of these instructive coal mines are overhung. The roof is covered as with a canopy of gorgeous tapestry, enriched with festoons of most graceful foliage, flung in wild, irregular profusion over every portion of its surface. The effect is heightened by the contrast of the coal black color of these vegetables, with the light groundwork of the rock to which they are attached. The spectator feels himself transported, as if by enchantment, into the forests of another world ; he beholds trees, of forms and characters now unknown upon the surface of the earth, presented to his senses almost in the beauty and vigor of their primeval life ; their scaly stems and bending branches, with their delicate apparatus of foliage, are all spread forth before him, little impaired by the lapse of countless ages, and bearing faithful records of extinct systems of vegetation, which began and terminated in times of which these relics are the infallible historians.

"Such are the grand natural herbaria, wherein these most ancient remains of the vegetable kingdom are preserved in a state of integrity, little short of their living perfection, under conditions of our planet which exist no more."

There is an excellent quotation from Dr. Lindley, (p. 351,) which we cannot avoid extracting. It is in reference to the lepidodendron.

"The lepidodendra, are, after calamites, the most abundant class of fossils in the coal formation of the north of England ; they are sometimes of enormous size, fragments of stems occurring from twenty to forty-five feet long ; in the Jarrow colliery, a compressed tree of this class measured four feet two inches in breadth. Thirty-four species of lepidodendron are enumerated in M. Ad. Brongniart's catalogue of fossil plants of the coal formation.

"The internal structure of the lepidodendron has been shown to be intermediate between lycopodiaceæ and coniferæ, and the conclusions which Professor Lindley draws from the intermediate condition of this curious extinct genus of fossil plants, are in perfect accordance with the inferences which we have had occasion to derive from analogous conditions in extinct genera of fossil animals. To botanists this discovery is of very high interest, as it proves that those systematists are right, who contend for the possibility of certain chasms now existing between the gradations of organization, being caused by the extinction of genera or even of whole orders ; the existence of which was necessary to complete the harmony, which, it is believed, originally existed in the structure of all parts of the vegetable kingdom. By means of lepidodendron, a better passage is established from flowering to flowerless plants, than by either equisetum or cycas, or any other known genus."

We might greatly extend these excerpts ; enough perhaps has been done to show the high character of the work. The second volume, which consists entirely of expensive plates, with their explanation, must of course speak for itself. It appeals at once to the eye, even of those who are not conversant with the minutiae of geology and natural history. It contains, as a preface, a large and beautiful plate, several feet long, as an explanatory section of the crust of the earth, appropriately colored ;

and we may venture to assert, that more geology may be learnt from the study of this plate, than from reading *some* professed treatises on the science. Indeed, any one who will take up this second volume, and look at its plates, and remember that these are the faithful representations of fossil organic remains, he will at once understand what we have been all along laboring to impress, that GEOLOGY, so far from being a science of mere speculation, appeals at once to our eyes and to our reason, and stands forth, though the youngest, not less beautiful or less enchanting than her sisters, and proudly claims kindred with Astronomy in her perfection, and Mathematics in her exactitude.

The whole range of science is lending its aid to geological development, chemistry, comparative anatomy, astronomy, natural history, and physics. The moment a fossil plant is formed, the botanist considers it and assigns it its proper place in the Flora,—an extinct animal,—the comparative anatomist announces its functions and laws of life,—the mechanical philosopher is studying the conditions of the structure of the earth's crust, so that in this way the science increases as it were in a geometrical ratio. A few years will doubtless produce results, for which, at the present moment, we should be found quite unprepared were they announced to us. But there is that dependance of one thing on another in the natural world, that the philosopher is often able to trace effects and causes, and find symmetry and relationship where ordinary men perceive nothing but confusion. The structure of the *eye* of an extinct fossil animal, will point out to us the condition of the medium in which it lived, in relation to light; and hence we can, from a single evidence of this sort, indicate the general character of external nature at any given epoch. The eye of a trilobite, found in the transition rocks, reveals to us the constitution of the sea at that remote period, and also that of the atmosphere; we know from the conformity of these ancient organs to the eyes of recent crustaceans, that little or no change has taken place in relation to the impressions of light on these organs in the long lapse of time that has intervened; and thereby that the media in which these animals lived, has not much changed in its physical character.

And what is more, it is millions of years since these creatures lived, if we are to believe our eloquent author; and yet in all that immensity of time, and with the experience which the springing into existence of a thousand species might have given him, the Almighty has never seen proper to alter in any respect this particular species of organ; but he forms the eye of the animal born to-day, on the earth, on the very same unaltered model which he gave to those of a remote period;—surely this is no blind chance, but deliberative wisdom and forecast,—an evidence of perfect OMNISCIENCE.

Here we shall leave our author, and we rise from the perusal of his work both entertained and instructed. We have freely discussed what we consider to be the capital objection to it, if there be any objection at all, and sincerely and cheerfully recommend it to our readers. To those who would be captious, as well as to those who would be considerate, we would ask for it a fair perusal; and because the subject on which it professes to treat is yet in its infancy, and has already

done much, and promises far more, we would say to both, in the ambiguous phrase of the monarch of the Roman lyre,

"Favete lingua."

Δ.

VERSICULI—NO. III.

BY LEWIS ST. MAUR.

SONG OF THE LOVER OF PLEASURE.

Come to the banquet now,
Drain the full goblet dry,
Eat, drink, the hours are passing on—
To-morrow we must die.

Come, here are luxuries,
The fruit of every clime;
Here satisfy your appetites—
Haste! seize the fleeting time.

And here are choicest wines,
From distant, sunny hills;
You here may drown a thousand cares,
Drive off a thousand ills.

Our life is but a day,
And swift its moments fly;
What hinders that our hearts be gay?
To-morrow we must die.

And, after death, what then?
Say, is our spirit naught?
Come, come, that dampens all our joy;
In wine we'll drown that thought.
The hours are swiftly passing by,
And on the morrow we must die,

NO. IV.

TO A COMET.

What art thou, flaming visitor,
That flashest o'er the sky,
Streaming along its azure blue
Thy frightful bloody dye?
At what eternal distant fire
Dost light thy blazing torch—
Or hast thou, in thy flaunting trail,
The power to burn and scorch?

Dost thou presage some coming ill,
Or desolation dire,
Or writest on the firmament,
In characters of fire,
The dread approach of him we call
The fiend insatiate, Death,
Who breathes thro' thee, his messenger,
A hot and withering breath?

Art thou the prison-house of them—
The damned souls who dwell
In torment which we can't conceive,
But think of as a HELL?

Dost drop them into liquid fire,
To writhe in untold pain,
Then dashest to the coldest point
Of the "intense inane?"

Or art thou but a vapor-wreath,
Floating along the sky,
And coming to our sight awhile,
We know not whence nor why?
Or dost thou weave a graceful dance
Through worlds of splendor bright,
Which seem to human eyes to gem
The diadem of night?

Thou art a thing surpassing strange,
And He who made thy form
To gleam amid the light of stars,
And ride above the storm,
Who rais'd on the confines of space
A temple for thy rest,
Of all the wise, the wisest is,
Of all the good, the BEST.

POLITICAL SCIENCE;

A discourse on the questions, "What is the seat of sovereignty in the United States, and what the relation of the People of those States to the Federal and State Governments respectively," read before the Petersburg Lyceum on the 16th of May, 1839. By Judge Beverley Tucker, of William and Mary College.

Gentlemen of the Lyceum—

When I accepted the courtesy which invited me to lay before you my thoughts on such subject as I might select, it became my duty to fix on one not unworthy of the occasion. I owed it to you to choose a theme the bare announcement of which might awaken important reflections in your minds, and thus supply those deficiencies in myself, which it may, at the same time, render more conspicuous. It happens fortunately that the nature of our institutions suggests innumerable topics of this character; and the page of our history is resplendent with events worthy to be commemorated in loftier strains and to be illustrated by profounder reflections than any which I can offer.

This day, gentlemen, is the anniversary of such an event. Sixty-three years have now rolled away since, in the ancient capital of Virginia, a deed was done worthy to live forever in the memory and in the hearts of Virginia's sons. Yet may I not ask, without offence, how many of those who hear these words are aware of the event to which they allude? How many are aware that this day is at all distinguishable from other days, when the sun, in his progress round the earth, looks every where on the same events, monstrous indeed when contemplated singly, but, to the eye that beholds all things, stale and monotonous in their ever recurring atrocity? In one region indeed he views a scene, where Despotism, with his iron grasp, crushes the hearts and hopes of prostrate nations. In another the infuriate shout of lawless anarchy rises from tumultuous millions just escaped from chains, wreaking their boarded

vengeance on the heads of tyrants, and then turning their thirsty weapons on each other's hearts. In these two extremes is a summary of the every-day history of man. *Here* the dull ox bears not more tamely the master's yoke, than he submits to the exactions, the caprices, the atrocious cruelties of tyranny. *There*, the tiger roars not for his prey, with more eager ferocity than that which whets his sword against his brother's life, and proclaims "war to the knife," against him who hung with him at the same breast.

How refreshing, how consoling to the jaded spirit, to turn from the contemplation of scenes like these, to the calm, yet grand and imposing spectacle of a people but just emancipated from a degrading thralldom, and, in sober wisdom and quiet dignity, addressing themselves, as to the performance of a sacred duty, to the solemn and responsible task of SELF GOVERNMENT!

That spectacle, on this day sixty-three years, Virginia exhibited to the world, and the memory of that majestic scene it is now my task to rescue from oblivion. It was on that day that she renounced her colonial dependence on Great Britain, and separated herself forever from that kingdom. Then it was, that, bursting the manacles of a foreign tyranny, she, in the same moment, imposed upon herself the salutary restraints of law and order. In that moment she commenced the work of forming a government complete within itself, and, having perfected that work, she, on the 29th of June, in the same year, performed the highest function of independent sovereignty, by adopting, ordaining and establishing the constitution under which all of us were born. Then it was that, sufficient to herself for all the purposes of government, she prescribed that oath of fealty and allegiance to her sole and separate sovereignty, which all of us, who have held any office under her authority have solemnly called upon the searcher of hearts to witness and record. In that hour, gentlemen, it could not be certainly known, that the other colonies would take the same decisive step. It was indeed expected. In the same breath in which she declared her own independence, Virginia had advised it. She had instructed her delegates in the general congress to urge it; and it was by the voice of one of her sons, whose name will ever proudly live in her history, that the word of power was spoken, at which the chain that bound the colonies to the parent kingdom fell asunder, "as flax that severs at the touch of fire." But even then, and while the terms of the general declaration of independence were yet unsettled, her's had already gone forth. The voice of her defiance was already ringing in the tyrant's ears, her's was the cry that summoned him to the strife, her's was the shout that invited his vengeance.

"Me! me! *Adsum qui feci. In me convertite ferrum.*"

I am persuaded, gentlemen, that I should disappoint your just wishes, should I permit myself to be led away by this glorious theme into a declamatory celebration of this important event. It becomes me to suppose, that, in inviting me to appear before you, you expected that I should submit to you sober thoughts upon some subject of deep practical and enduring interest. I was bound to suppose that you wished me to select a topic illustrative of some important point in the institutions of our country. It was under this impression that I fixed on

this day, not as a theme for schoolboy declamation, but as a text for remarks, which I trust may be thought not unworthy of serious and solemn meditation.

I will not weary you by laying before you the record of the transaction to which I have adverted. Enough has been said to show that Virginia, on that occasion, standing in her own place, and in her own strength, performed for herself the highest and most unequivocal act of absolute and independent sovereignty. She then affirmed in herself the *right* of self-government; she then took upon herself the *task* of self-government. In that day she commenced the work of framing for herself a constitution, under which all the powers of government were to be exercised by the ministers of her sole and sovereign will. In that day she severed her people from all connection with any other power, from all subjection or responsibility to any authority on earth but her own. Her right to do this was indeed contested by the only country having an interest in disputing it; but the contest was finally relinquished. By the treaty of peace the sovereignty thus claimed was distinctly recognised by England, and, through her, by all the world. Thus, by the common consent of all mankind was Virginia established in the character of a free, sovereign and independent state—in the indefinite right to govern her people, to control and direct their conduct in all things, to hold them responsible to her for all their acts, and irresponsible to all the world besides.

In the contemplation of this remarkable event, questions present themselves to the mind, which will deserve our most serious thoughts. Virginia then affirmed her sovereignty, and it has since been recognised by all the world. But what is that which was thus affirmed and thus recognized? What is sovereignty; and what is the seat of that sovereignty among us?

I shall not trouble you, gentlemen, with a formal definition of the word. I am afraid I could offer none which should assign it a palpable and efficient meaning at which some who affect to stickle for the sovereignty of Virginia would not impatiently cavil. Yet even at the hands of such I will accept what shall serve me as a definition.

Define it as we may, none will deny, that where all power rightfully is, *there must be sovereignty*. And where is that? I give the answer from an authority that none can question. I give it in the language of that bill of rights which was intended to guard from misconstruction and abuse the powers which Virginia was about to confer on her own public functionaries. Its promulgation was immediately consequent on the declaration of her independence, and immediately preceded the adoption of the constitution. The three may be considered as simultaneous, and each may be taken as illustrating and explaining the other two. In that instrument it is declared, "that all power is vested in, and consequently derived from the people; that magistrates are their trustees and servants, and at all times amenable to them." Whose words are these? I answer that the bill of rights, in which they are found, was adopted *nemine contradicente* in the same convention which ordained and established the constitution. They are then the unanimous voice of the people of Virginia, proclaimed by the lips of those, who, clothed with all the authority then recognised within her borders, thus declared that they held it as the trustees and servants of the peo-

ple. They are the concurrent declaration of all concerned, both rulers and people, that to the latter all power rightfully belongs, and that the former are but their servants.

Of what people were these words spoken? Of the people of the ancient colony of Virginia, then in the act of establishing itself a free, sovereign and independent state. There was none other of whom they could be spoken. To that hour the yoke of colonial vassalage still rested on the necks of all the other North American colonies. As yet there was no political union between Virginia and the rest, nor was there any thing to draw or compel them to each other, but a common danger, and a common enemy. They were indeed invited and expected to follow the lead of Virginia. So too was Canada; and there was not one of them, which, like Canada, might not have identified herself with the common enemy, by shrinking from that decisive step of which Virginia had just set the example.

What then do we learn from these words? Do they not teach us that governments are but creatures, and the people the creator? that they, whom we familiarly call rulers, are but servants, and that the people are their master? that sovereignty cannot be rightfully predicated of government, the creature, or of magistrates the servants, but that it inheres, and must forever rightfully inhere in the people, the creator and master.

If this admits of any doubt, that doubt must vanish when we read in the same instrument the farther declaration, "that whenever any government shall be found inadequate or contrary to the happiness and safety of the people, a majority of the community hath an indubitable, unalienable and indefeasible right to reform, alter, or abolish it, in such manner as shall be judged most conducive to the common weal."

Gentlemen—in other countries men may speculate on the theory of the social compact. Here is the thing itself, in written and palpable form. In these words, *thus promulgated*, we find an authority for affirming their truth. As far as we are concerned they are true, because thus declared to be so. Elsewhere the authority of government may not be the result of universal consent, and men may elsewhere be governed by laws enacted by those whose behests they have never agreed to obey. Not so here. Here is the unanimous act of all concerned; the unanimous consent of all to live in obedience and fealty to Virginia, under any form of government that a majority of her people may prescribe to the rest, so long as it may be so prescribed, and no longer. If there be any lawful sovereignty on earth; if any where the authority of men to bind their fellows can be traced to a legitimate source, it is here.

May I not then safely affirm, that on the day when these memorable words were spoken, Virginia was a sovereign state; that her sovereignty resided in the collective body of the people, and that in that people was the seat of all power. May I not affirm, that nothing then done can be rightfully so construed as at all to derogate from this paramount supremacy thus distinctly asserted? May I not go farther and affirm, in virtue of this fundamental principle of our social compact, that nothing done then or since, and nothing to be done hereafter, can have the effect of disparaging or impairing the sovereign right here pronounced to be *unalienable and indefeasible*, but by the utter dissolution

of the society in which it is declared to inhere? Virginia may dissolve her ancient incorporation; her people may disband, or amalgamate themselves, by a sort of political fusion, with another community, but here stand the original terms of our association, that so long as she retains her individuality, so long will the right of a majority of her people to reform, alter, or abolish any form of government that they have adopted, or may adopt, remain *indubitable, unalienable, indefeasible*. Are we not at least bound to understand these words as qualifying and explaining every delegation of power made by the constitution about to be adopted? Are they not an admonition to those, whom, in conformity to the jargon of courts, we call our rulers, that they are our *servants* still—that their powers, however great, are not their own, but *ours*, exerted through them, *our instruments*.

I beg you to observe, gentlemen, that the answer to these questions is not to be affected by the *degree* of power thus conferred, or the forms used in designating and appointing those who are to exercise it. Remove all the restrictions of the constitution on the powers of government; obliterate every prohibition; surrender the freedom of religion, of speech, and of the press; abolish popular election, and let the title to office be conferred by lot or birth, for one year or for life; it will make no difference. The rights of the people will be less secure, but not less unquestionable. The ultimate sovereignty may be not so easily exerted, but it will be no less sacred. As long as the words of the people are sounding in the ears of magistrates; as long as they are admonished in the very charter of their authority, that their powers are but delegated, and may be resumed; that the constitution is but the creature of the people, and may be by them abolished; and that they themselves are servants, not masters; so long must it be confessed that the seat of sovereignty is in the people. "Be ye sure," saith the Psalmist, "that the Lord he is God. It is he that hath made us, and not we ourselves." "God spake once. Yea, twice have I heard the same. Power belongeth unto God." "He can create, and he destroy," and he "is God alone." Gentlemen, I mean nothing profane. But such is the relation in which the people stand to the *political* existence of their governments; and such is the language, modified to the nature of the case, which it becomes magistrates to apply to their creator, the master of their life, the people.

But, gentlemen, it is not my purpose to magnify this sovereignty of the people. It is not from my lips that even to this hallowed name shall be addressed that flattery which all sovereigns delight to hear. My only object is to disabuse the minds of those who are in the habit of imputing sovereignty to governments. The error is so natural that it is almost universal. In other countries it may not be error. There may perhaps be nations, where, by the consent of all concerned, sovereignty resides somewhere else than in the people. I do not know that the case is possible; but if it be, that is their concern, not ours. But, unfortunately, our lips are familiar with forms of speech more suited to foreign institutions than our own. We are taught to associate, in our minds, the idea of sovereignty with the trappings of royalty; and we look at least for the insignia of active power; the axe—the fasces, and the lictors. It demands an effort of thought and imagination for which

we are illy prepared, to look beyond the veil, to the presiding spirit of the Temple, that sanctifies the Priest, the Altar, and the Sacrifice. Like him who spoke to Moses on the Mount, it has no bodily presence by which we can identify it. It is an object of contemplation to the mind alone. The moral and intellectual faculty alone can comprehend it. What is that object? It is the *COMMON MIND*, made up of the collective intelligence and experience and virtue, and alike of the prejudices, passions and infirmities of a great multitude, bound together in one great permanent co-partnership of generation with generation; of the living with the dead, and with those who are yet unborn; in which the wisdom of each is the wisdom of all; the strength of each the strength of all; and the wants and weaknesses of each alike the care of all. He must have a very imperfect perception of this object, who does not discover in it something to be approached with reverence and awe. The idea of a common will pervading such a multitude, and acting with a power so overwhelming, is august and imposing. The sense of moral dignity must be perverted and corrupt in that man, who does not feel that it is the more august, the more imposing, because, withdrawn from vulgar gaze; "circling its throne with the majesty of darkness," it reposes quietly within the sanctuary; while they who strut the busy stage of life, and dazzle men's eyes with the trappings of authority, are but its servants, "the ministers of its will, to do its pleasure."

With us, at least then, gentlemen, government is not sovereign. And this is the truth with which I am mainly anxious to impress you. If there be no sovereignty in government, we owe it no allegiance. That sentiment; that subordination of the heart; that devotion of spirit, which accounts the surrender of life itself a cheap sacrifice, is due alone to that collective whole, of which we ourselves are part.

But is there then no sovereignty in that great central government, which, Colossus-like, bestrides the continent, and beneath which the states are sometimes invited to seek shelter for their violated rights and insulted dignity? Can there be so much active power, and yet no sovereignty? Can the thing so huge be yet a creature?

Yes, gentlemen. That central government itself is but "the Leviathan of all the creatures of the people's will. Huge as it is, and while it 'lies floating many a rood,' it is still a creature. Its ribs, its fins, its whale-bone, its blubber, the very spiracles through which it spouts its torrents of brine against the author of its existence, every thing of it and about it is from the people."

In proclaiming that ratification of the federal constitution, from which it derives all its authority over her citizens, Virginia again accompanied this new delegation of power with the same emphatic declaration, "that all power is naturally vested in, and consequently derived from the people; that magistrates, therefore, are their trustees and agents, and at all times amenable to them." In the very act of ratification itself she again declares, "that the powers granted under the constitution, being derived from the people of the United States, may be resumed by them, whenever the same shall be perverted to their injury or oppression."

Was I right, when I just now inferred from the use

of such language as coupled with the delegation of power to the functionaries of the state governments, that by that delegation the sovereignty of the people was in no wise surrendered or impaired? And shall I be wrong when I draw the like inference now? Is the sovereign right of the people to annihilate the work of their hands, to recall the powers they have granted, to abolish the government they have established, the less sacred, the less unquestionable, because the exercise of the right might be attended with greater difficulty in the latter case than in the former?

I foresee that many will be reluctant to give to these questions the only answer they admit of. Their democracy is content to exercise itself in domineering over the poor limited and feeble state government, which meekly recognises its responsibility and dependence on the people for its existence, and which is not provided with the means to purchase favor, or to overawe disaffection. At Washington things wear a different face; and men require double conviction before they will consent to adopt opinions which may not find favor in the eyes of those who dispense honors to which the loftiest ambition may aspire, and distribute revenues that might glut the rapacity of avarice. Such gentlemen will tell me, that though sovereignty is not to be imputed to the government of the United States, yet it resides in an imaginary body politic which they call the people of the United States.

To this, I answer at once, there is no such body politic, and no such people. In proof of the first of these assertions, I appeal to the record. The Journal of the Convention, by which the constitution was framed and submitted to the states, respectively, shows that it was proposed in that assembly to constitute the United States a body politic, endowed with the powers appropriate to that character; and that this proposition was either rejected or withdrawn by the proposer as inadmissible. There is then no such body politic as the United States, and therefore there can be no such people as the people of the United States. The idea of a people is not that of a mere multitude of men. It is that of men so associated as to form a body politic. Where there is no body politic there is no people; and though a number of bodies politic may associate their combined authority and force, for the accomplishment of any common purpose, the several bodies politic thus associated do but form a league, each retaining its several and distinct political individuality, without constituting a new body politic compounded of the whole.

But I do not choose to rest this proposition on an argument, which may seem too technical for the magnitude of the subject. I shall be the last to contend that the great and essential rights of men are to be determined by the niceties of special pleading. It is to the test of practical consequence that I propose to bring the question.

If the inhabitants of these United States have indeed undergone that sort of political fusion, by which states are melted down into one aggregate body politic, then in that body politic reside all the rights and powers incident to that character. A body politic owes not its authority to the government by which it is pleased to act, nor to the constitution establishing that government. These are but its creatures, and instruments. It is paramount to both, and its existence and powers

will survive the abolition of both. We are all familiar with the recent instance in which the commonwealth of Virginia, no longer satisfied with the constitution first adopted, no longer willing to have its authority represented by the functionaries appointed under that constitution, came forward on the stage, and, by one word of power, annihilated both. But was the commonwealth of Virginia annihilated? Was the arm of her authority shortened? Was the right of the collective whole to give law to itself in all its parts at all impaired? Just the reverse of this was the fact. The limited authority of the agent was exchanged for the unlimited authority of the master. A government of mitigated and restricted powers had disappeared, and we found ourselves in the presence of an authority indefinite—boundless—to which all things were lawful. Then it was that the absurdity of imputing sovereignty to governments was indeed made manifest. That beggarly counterfeit sovereignty vanished like the detected valet at the appearance of the master whose clothes he had stolen, and whose name he had assumed. That which before had seemed the source of authority was now found to be its instrument. That which before had seemed the fountain of light and heat, now proved to have been but a screen to soften the intensity of its rays. It was removed, and we stood at once in the unmitigated blaze of a sovereign power, to which none might say "What doest thou?" From the government existing under the constitution, men were safe in life and liberty and property, save only their responsibility for crimes previously defined and known. The rights of conscience, the right to bear arms, the privilege of speech and of the press, all were safe. Bills of attainder, *ex post facto* laws, and laws invading vested rights had not been within the competency of that government. But the power which abolished it, and took its place, acknowledged no such restrictions. Supreme in all things, its will was law, without responsibility and without appeal.

Such was the effect of the abolition of the constitution of Virginia. What was it but the removal of an incumbrance, not unaptly likened to the frail covering of clay that binds down to earth the indestructible spirit of man. Strip off that worthless husk. Take away the organs of sense, through which as through loop-holes we look out dimly on the objects that surround us. What then! The soul needs them not. All eye, all ear, all nerve, it sees and hears and feels, alike in every part.

Just so of the sovereignty of the people, when, by the abolition of constitutions and governments, it frees itself from self-imposed restraints. It doffs aside the puny agency of magistrates, executive, legislative and judicial; and stands confessed in unclouded majesty, sufficient for itself in all things, combining and exercising all powers and all functions.

Gentlemen; if there be such a people, and such a body politic as the people of the United States, even such must be the effect of the abolition of the constitution of the United States. But is any one prepared to admit this? Do they err who suppose that the abolition of that constitution and the revocation of the powers delegated by the states, would but reinstate the states themselves in the exercise of those powers? Are we to be told, that instead of this, the abolition of that

instrument would abolish too the constitutions of the states, and even the states themselves? Are we to believe, that as a necessary consequence of such a measure, the ancient landmarks between the states, must instantly disappear? Is the whole organized population of twenty-six distinct states to sink down at once, into one chaotic mass, in which the *discordia semine rerum*, shall struggle for the mastery, and finally take whatever form a majority of the whole may choose to impose? Can it be that the severance of the only tie that binds us to the other states, is to be followed by a necessary complete and indissoluble amalgamation with them?

Gentlemen; I beg you calmly and distinctly to contemplate the absurdity of this idea. At present, the only right of the man of Maine, Missouri or Louisiana to meddle with any thing that concerns Virginia is derived from the constitution. By this, certain defined and limited powers are conferred on the common agents of all the states. To abolish the constitution should be to determine these powers. And shall we be told, that instead of this, the effect of such a measure must be to abolish, not the powers themselves, but all limitations on those powers. Yet this must be so, if indeed there be a body politic comprehending all the inhabitants of the United States. Whatever abuses then, whatever oppressions we may encounter, must be borne with patience, lest a worse thing befall us. We must be careful not to recall any authority, which, in the language of the ratification by Virginia, "may be perverted to our injury or oppression," lest, in the attempt, we do but make a full surrender of that and every other power whatever. Gentlemen; if the science of government admits of a *reductio ad absurdum*, this is one. If there be any proposition, which may be proved to be false, by the preposterous conclusions to which it leads, such is the proposition that affirms the sovereignty of the United States, or the existence of such a body politic or such a people.

How then, it may be asked, are we to understand the language of Virginia herself, when, in ratifying the constitution, she declares, that "the powers granted under the constitution, being derived from the people of the United States, may be resumed by them whensoever the same shall be perverted to their injury or oppression?"

I answer, that the phrase must be understood here as in the preamble to the constitution, not as technically designating a political body, but as a mere noun of multitude. For, I beg you to observe, gentlemen, the declaration is that the powers granted may be *resumed*—restored to those to whom they before belonged; not distributed, in wide and wasteful profusion to those who had never yet possessed them. The states alone had possessed these powers as separate and distinct bodies politic, and they could only be *resumed* in the same character. The grant and the resumption of power are both predicated of the same subject. Of this subject it is alike affirmed, that the powers under the constitution had been granted and were to be resumed thereby, and hence we conclude that these powers proceeded from the same source to which they were to revert. That source then was the sovereignty of the states, and not any such *body politic* as the people of the United States, whose association would be dissolved by the very act which was to restore the power to the hands that conferred it. So far then from giving countenance

to the idea of the existence of any such body politic, this very language exposes the absurdity of that idea. It shows, that the abrogation of the constitution was not to be attended with the consequences which the existence of any such body politic would render inevitable. It was not to be followed by the establishment of an absolute and unqualified supremacy in the collective whole, but the parts were to be *reinstated* in the exercise of all the powers and functions which they had delegated.

Observe then, I beseech you, gentlemen, the difference between the actual, though dormant sovereignty of the people of Virginia, and the imaginary sovereignty of the people of the United States. Take away the constitution of Virginia: the government is abolished, but the people and the commonwealth remain. The sovereignty, which before had slumbered while its servants watched, is awakened, and its authority absolute, boundless, unqualified, takes the place of the restricted functionaries it supersedes. But take away the constitution of the United States, and no such august object is disclosed. The people of the United States vanish. The body politic, if there be one, dissolves into thin air; and we see instead, twenty-six distinct and disconnected states, each under its simple republican forms, exercising its separate sovereignty by the same limited and responsible agents as before. Virginia may abolish her constitution, and, by the original terms of her social pact, a majority of her people may prescribe to the rest what form they will. But let the constitution of the United States be abolished, and the authority of the central government expires, and can never be restored but by the unanimous consent of each one of the several states. None would have power to bind the rest in any thing.

The government then, is but the outward covering of the body politic—the fleshly vesture of the spirit within. Through this indeed it performs the functions of sovereignty, and, in the exercise of these functions, are the evidences of its living energy. And here, gentlemen, is the proof of a self-inherent power, original and indestructible. *The State has power to lay down her life; and she has power to take it up again.* Not so the Union. Let the spirit once depart from the government of the United States, and it sleeps in eternal death. The master of life—the same power which first created may restore it; but the act will not be the act of the people of the United States, acting by any authority in a majority, or in any other portion to bind the rest, but the free and voluntary act of sovereign and independent states completely dissociated, and coming together again by a new league, in forming which each must act for herself alone.

The occasion does not admit that I should trace out in detail all the results of this argument. Nor have I a right to weary you by conjecturing the answers and objections to it which will doubtless be eagerly urged by those who bow the knee to the Baal of federal supremacy. Such will be shocked and scandalized at being told that their God is no God. I cannot stop to soothe their offended superstition; but I will take leave to say what must be the legitimate result of the doctrine which denies the sovereignty of the states, or affirms that of the government or people of the United States.

If the government be sovereign, then all our ideas of

the sovereignty of the people are erroneous. If the government be sovereign, then are magistrates no longer the servants of the people, but their masters. But, gentlemen, if they are our masters, it must be because Virginia has made them so. She once was sovereign, and her's was once the only voice which spoke in tones of authority to her children. If her sovereignty be impaired, it must have been by her own act, when she commanded her people to render obedience to the authority of the officers of the federal government. Had she not done this, we should have owed them none. But she commanded it, and her command was law to us. But what did she command? Was it that we should obey them as *our masters* and *her's*? No, gentlemen: she commanded us to obey them as her *trustees* and *agents*, as the ministers of her will. In the very act of commanding our obedience she declared them to be so, and as such, as persons authorised to speak and act in her behalf, in their appropriate spheres, she required us to submit to her authority represented by them. Over us, at least, the government of the United States is not sovereign.

But the people of the United States!!! Gentlemen; I will admit, that if there be a body politic consisting of the whole population of the United States, that body politic is sovereign, and the sole sovereign over us. And not only is that body politic sovereign over us, but it is sovereign over the government of the United States, consisting of its agents and servants, and over the constitution, its creature. What then becomes of the reserved rights of the States? Of what value to us are all constitutional limitations on the powers of the central government? Why were they imposed? Was it not because Virginia did not mean to assign to any authority, acting on behalf of the whole Union, power to legislate for her people in *all things*? And why not? Was it not because it was clearly foreseen that such an authority, having no control but the will of the collective majority, must become, in the hands of that majority, an instrument for the plunder and oppression of minorities? Has not the event proved the wisdom of this apprehension? Are we not sensible, that they who struggle to free the government of the United States from the restraints of the constitution, do so only that they may give free scope to a system of plunder and oppression, of which we are to be the victims? In this danger we look to the constitution as the safe-guard of our rights. But of what value is that safe-guard, if, after all, it is but the creature of that very majority against which it should protect us? Constitutions cannot give law to the sovereignty that creates and may abolish them. They are but the instruments by which the sovereignty makes known and enforces its will; instruments that the sovereignty may at any moment cast away, if unsuited to its purposes.

Gentlemen—if the ideas I have presented are not utterly false, they should lead you to perceive, that they who talk to you of *divided* sovereignty, talk of that which is absurd and can have no existence. *There can be but one Supreme. There is no god but God.* The officers of the federal and state governments, said Mr. Madison, in his exposition of the constitution, are alike the agents of the people of the several states; the one set acting in the name, and for the behoof of one state alone, the other acting for all alike. The state acts

through both, *surrendering* nothing of its sovereignty to either, but *delegating* an authority to exercise some of the *functions* of sovereignty to one set, some to the other.

Gentlemen—in this view of the subject I see nothing but harmony and consistency; and in this view I see the only security for our covenanted rights. The conclusion to which it conducts is rational and safe. It shows the sovereignty, which the states once possessed, and which they never have surrendered in terms, still abiding in them; and it establishes you in the comfortable assurance, that your relation to the federal and state governments alike is that of a master to servants; not that of servants to a master.

But I may perhaps be asked, why I urge, with so much earnestness, what no one denies. Who among us questions the sovereignty of Virginia, that I should argue it as if it were disputed? I admit, gentlemen, that it has not been my fortune to meet with any one among us disposed to deny it. But while it is thus universally admitted, I have been concerned to see that men seem strangely afraid to affix any distinct meaning to the word. I am doubtful whether, in the mouths of most men, it stands for any thing more than a mere vague compliment paid in the same spirit in which the subject of a king imputes *majesty* to the crowned puppet that he despises. A sovereign should command the fear and love, the respect and reverence of his subjects. Their allegiance should be an affair of the heart, not mere lip service. His personal qualities indeed may render this impossible; but to a people, owning no other sovereign, such qualities certainly cannot be imputed by themselves. Every citizen of a sovereign state should be expected to recognise in that state an object at once august and lovely, before which all that is evil in man should stand rebuked, and to which all the better affections of the heart should cling with humble but proud devotion. And is it thus that the citizens of Virginia are affected to her at this day? It should be so. The memory of her old renown is still our inheritance. The men who made her name illustrious in the annals of the world are still remembered as her sons. She is still the mother of heroes and the nurse of statesmen; and the same simple integrity and self renouncing devotion to the right, which once distinguished her, are still her characteristics. She is still the mistress of our acts, the protectress of our lives and fortunes, the guardian of all our rights, the sanctuary of our honor. What has happened, that so few hearts are animated by the sentiments appropriate to this relation? Why is it that so few regard her with the eye of reverential love,

Such as is bent on sun-like majesty:
But rather drowns, and hang their eye-lids down,
Sleep in her face, and render such aspect,
As cloudy men use to their adversaries?

Why is it that her own proud banner no longer floats from her capitol? Why is it, that, with a name to live, her sovereignty is as though it were dead? Why, that while none among us deny it, none find pride in asserting it; none resent the denial or invasion of it by others?

Do I speak of that which is not? Are not you all sensible that these things are so? And why? Is it that she has stripped herself of the means of reward-

ing her children's love? Is it that the honors that tempt ambition are bestowed by functionaries who act on behalf of other states as well as her? Is it that the revenues to which the mercenary zeal of avarice looks for its reward, have been poured into the common treasury of the Union? Alas! yes. The simple badges of distinction won in her service, the laurel garland and the oaken wreath, have lost their charm. There is now no value but in gilded honors; no majesty in a diadem that does not glitter; no authority in any sceptre not of gold. Thus it is that no man cries "God bless her!" and thus it is that they who speak of her sovereignty as *any thing but a name*, provoke the rage of such as "do but crook the hinges of the knee, where thrift may follow fawning."

How else is it, that over a transaction like that of which this day reminds us, the sable pall of oblivion has already fallen? How is it that the memory of such an event has perished from our minds? What pilgrim visits the spot consecrated by that glorious act? What monument marks it to the eye? Alas! "The fire has resounded in its halls, and the voice of the people is heard no more." None summons the sons of Virginia to "build the walls of her political Zion." None "takes pleasure in her stones." The scene of so many hal-
lowing recollections is waste and desecrated;

"While Desolation, on the grass grown streets,
Expands her raven-wing; and up the wall
Where senates once the price of monarchs doomed,
Himes the gliding snake, through hoary weeds
That clothe the mouldering ruin."

Are we then indifferent to the blessings which that event brought with it? Have the rights then asserted lost their value in our estimation? Are the principles then proclaimed, and consecrated by the blood of our fathers, no longer sacred to our hearts? Have we lost that honest pride with which men cherish the glories of their ancestors; and have our minds, impatient of the debt of gratitude, hastened to shake off the memory of obligations to the men of that day, which can never be cancelled?

No, gentlemen; such is not the temper of this people. The men of that day live, and, I trust, will live forever, in the hearts of their descendants. We cherish them as the founders of our free institutions, and the champions of our rights. We venerate them as our instructors in the science of self-government, and our great exemplars in all its arduous duties. We boast them as the bold defenders of the rights of an infant people, against the power of the most formidable nation upon earth. Not a year passes over that the fourth of July is not hailed as the birth day of American Independence. Never does the sun rise on that day, that his advent is not welcomed with the roar of artillery, while the sound of jubilee rises up in grand and harmonious accord from the lips and hearts of grateful millions. Never does it pass, that the hymn of grateful praise, the choral song, the voice of eulogy, does not ring through the land, celebrating the glories of the illustrious men who acted and suffered and triumphed in the scenes which the return of that day recalls. And well may this be so. The annals of mankind may be searched in vain for examples more illustrious of virtue, wisdom and ability. Above all we contemplate, with admiring wonder, the intrepid boldness, the self-devoted magnanimity,

which manned the hearts of thirteen feeble, disunited colonies to defy a power accustomed to give law to Europe. We remember, that of their own strength they as yet had no experience. Their sufficiency had seemed all derived from her. And now the sword which had so long flamed before them, guarding, like that of the angel of the Lord, their forest paradise, was to be turned against them. Without armies, without navies, without revenue, without resources of any kind, but such as a good cause, a clear conscience, a strong will, and a firm reliance on Providence, suggest to impotence itself, they stood, like the son of Jesse, confronted with the mailed and giant form before which the stoutest hearts had quailed. Like him indeed they were not unfamiliar with the taste of danger. Like him they had grappled successfully with a savage foe, and learned that the path to safety often leads through the midst of peril. The red man of the forest had been to them the lion and the bear; and they had learned to trust for their defence against this new enemy, in the same gracious power who had delivered them from their former foes.

Of such noble confidence glorious success is the appropriate fruit. To this the instincts of our nature teach the heart to give its highest admiration, and thus instructed, we learn that boldness in extremity of danger is the part of prudence.

This wise and just and salutary sentiment is nobly taught in the example before us. Whenever we shall learn to look on it with that cool and calculating and self-seeking wisdom, which measures the strength of the adversary we should defy, and balances consequences and counts the cost of any struggle in defence of our rights, our freedom will be well nigh gone. Thus it is, that in celebrating the virtues and achievements of our ancestors, we perform a duty, not only to the illustrious dead, but to ourselves and our posterity. It is a duty which brings its own reward in its chastening, purifying, and humbling, yet elevating and ennobling influence on our hearts. It teaches us to prize our rights at the full value of the sacrifice they cost: it renews the love of liberty in our bosoms; and, above all, we are encouraged to feel, that all obstacles to success in a good cause must go down before the concentrated energy of a people resolved to live free or die.

Such, gentlemen, is the lesson taught us by the history of our revolutionary struggle, and well does it deserve that we should keep it fresh in our memories, and warm in our hearts. By no passage in that history is this lesson so strikingly inculcated, as in that which records the event of which this day reminds us. Was it glorious for the Congress of the United States, that on the fourth day of July, 1776, they adopted the bold and hazardous resolve which established their independence? Was it glorious that the representatives of three millions of people, new to the tasks of government, unprovided with the organization, the implements, and the resources of war, thus naked and defenceless, dared defy the wrath of a nation armed to the teeth in all the panoply of war; a nation whose power encircled the globe; whose flag floated over every sea; whose arms had triumphed on every shore, and whose coffers overflowed with contributions from the commerce of the whole earth? Was this an act to be remembered with wonder, and with grateful praise by us? Was

this an act which should fill our hearts with pride while we trace our descent from its illustrious authors? Oh, yes! And happy he, who, on the records of that day, can point to some time-honored name, and say, "Thus my father spoke, and thus he acted; here he fought, and here he fell."

What then, gentlemen, should be our pride of heart in remembering, that it was not on the 4th of July, 1776, but on the 15th of May in the same year; not by the concurrent voice of three millions of people, but by that of one fifth of that number; not by the unanimous resolve of thirteen colonies, but by her own sole and separate act, that Virginia took her independent stand among the nations of the earth.

We do injustice to the dignity of this theme, we do wrong to our fathers and to ourselves, when we permit the memory of this event to fade from our minds. It well deserves to be remembered, and commemorated, not as a topic of vague and empty declamation, but as an occasion for sober thought, and serious self-examination. It calls upon us, as in the presence of the sacred dead, to look into our own hearts, and estimate the value which we set at this day on the heritage purchased by the blood of our fathers. That heritage is the *independent sovereignty of Virginia*, and the inquiry to which I have invited your thoughts, is to lead you to a just sense of its importance, and a wise choice of the means of preserving it. It is a question on which depends the value of all those charters to which you look as the monuments of your liberties. You owe it to yourselves to understand all these aright, that you may transmit unimpaired to your children the blessings which they have so far secured to you.

No people should ever permit themselves to feel secure in the enjoyment of their rights. They are always in danger from some quarter. The rights of men are always the natural prey of the worst passions of the human heart, whether aspiring or base. Ambition, in its eagle-flight, is ever hovering over them, and ready at any unguarded moment, to pounce upon them. The serpent-guile of avarice, that creeps upon its belly, and eats the dust, is always seeking to invade the nest where all our dearest blessings lie. If we mean to preserve them, we must watch over them; we must learn to know and number them; we must study the tenure by which we hold them; we must qualify ourselves to scent afar off the dangers that threaten them; to trace the serpent by his slime, and to know the eagle by his portentous scream.

The rights of Virginia have been more than once invaded, and the assault has always been on the same quarter. The device of the enemy has always been to question her sovereignty; to deny her right to self-government, and to establish a claim to hold her, (always, as it has been pretended, for her own good,) in a state of pupillage. Whether the object were to bring her under the dominion of a low-bred tyrant in a distant land, the murderer of his king, and the felon usurper of his country's rights; or to lay open her resources to the plundering rapacity of a foreign parliament, claiming the right to give what was not their own; or to transfer her very heart's blood, by a sort of political suction-pipe, to fertilize the barren shores of a neighboring state; in each and every instance, the device of the adversary has been to deny and to deride her claim of

sovereignty. Here they saw was her tower of strength, and all their art has been employed to wile her from it, and to tempt her to put her trust in other defences, and to rely on the justice and benevolence of those who offered protection in the words and tones of friendship. Happily for her, she has been always no less sensible than they of the consequences of such reliance, and has always, in her hour of need, sought safety behind the bulwark of her sovereignty. Therefore it is that I have been thus careful to lay bare to you its foundations; to remove the rubbish that conceals them, and to show that it is built upon a rock.

Gentlemen—if I have so far succeeded in embodying the idea of the sovereignty of Virginia, that it is palpable to your understandings, that your minds "can lay hold of it by faith"—then I say to you, "Consecrate it in your hearts: establish it in the hearts of your children: set it up among your household gods: hang it out on your banners, with the true and appropriate motto, *In hoc signo vicimus; in hoc signo vincemus.*" If any man shall persuade you to exchange this sacred right of a people constituting a community within themselves, to govern themselves in all things, and to decide for themselves, in the last resort, in all that pertains to their welfare, for the plighted faith of other communities, or for any other security under Heaven, distrust him. He would tempt you to the league of the sheep with the wolf. Consent to part with that jealous guardian of your rights, under whose wakeful care you may sleep secure from all external danger, and every thing you can ask will be promised you. But put away from among you that sanction to your rights, which unfettered and irresponsible sovereignty alone affords, and you will find that all your covenants are but a paltering juggle, "that keeps the word of promise to the ear, but breaks it to the hope."

THE SISTER OF CHARITY.

Sister of Charity, whose pious care

Smooths with soft touch the wrinkled couch of woe;
Whose sacrifice, more sweet than sounding pray'r,
Ascends, a grateful tribute from below,
Rich incense of the heart, whose fragrant breath
Is redolent of Heaven's unfading wreath.

Thy ceaseless office is the work of love—

T' assuage the anguish of the sons of pain—
With holiest fervor kindled from above,

To sympathise with grief—with soothing strain
To whisper to the troubled bosom rest—
Child of benevolence, thy deed how blest!

With brow inclined, and mildly-melting eye,
I see thee bending o'er the sufferer's head,
And each bland art of solace fondly try

To pluck the thorns that o'er his couch are spread—
While tears of pity flow adown thy cheek,
And love divine glows in thine aspect meek.

And when all earthly hope forsakes the heart,
When mortal mists, like evening shadows roll,
Amid the gloom, thine angel tones impart

Peace to the breast and courage to the soul—
Pointing, with eye of faith, beyond the grave,
To Him, who in that hour alone can save.

How enviable is thy blameless lot—

How gentle is thy calm, unruffled way—
Life's vexing cares, unknown, at least, forgot,
No lowering clouds deform thy cheerful day ;
Whose eve, as was its morn, serenely bright,
Is but the dawning of eternal light.

Wise virgin, thou, whose lamp is duly trimm'd
And kindled by a ray of love divine,
Tho' Hymen's torch, by youths and maidens hymn'd,
Blaze not for thee, a heavenly spouse is thine :
For thee the Bridegroom hath prepared a feast
Ambrosial, in the mansions of the blest ;

Where thou—who here dost walk with lowly pace,
Mid pain and penury, disease and woe—
Arrayed in living light, shalt take thy place
With the bright throng, fast by the throne, whence
flow
The streams of life, watering that blissful shore—
And quaff youth, beauty, joy, forevermore.

Washington, D. C.

J. L. M.

LECTURES ON PHRENOLOGY AND ITS APPLICATION.

BY GEO. COMBE, ESQ.

Reported for the New Yorker.

LECTURE III.

In order that we may successfully investigate mental powers by means of organization, we must be able,

I. To discover the mental qualities of individuals from their actions.

II. To ascertain the size of the brain during life. Let us see whether these things are practicable.

It is worthy of remark, that men familiar with human life and conduct have ever had much practical knowledge of the philosophy which we teach, while metaphysicians have been floundering in the dark. They have observed that one person is very covetous, another cruel, another benevolent, another proud, another vain ; that some have a passion for poetry, some for music. In their intercourse with society they have tried to produce the same course of conduct by very different appeals. To the covetous they would describe the profitableness of the course ; to the benevolent its kindness ; to the vain its praise-worthiness. They felt assured, too, that these dispositions are natural, uniform, and permanent, and never expected that a man prone to covetousness to-day will to-morrow become very benevolent ; that to-day an individual may be deaf to the voice of censure or of fame who yesterday was tremblingly alive to every breath that was blown upon his character.

As to intellectual endowments, these cannot be simulated. To produce a Catalani's burst of melody, you must be a Catalani ; to send forth the splendid eloquence of a Chalmers, you must be gifted with his ideality. In surveying the wonderful performances of some men, you know that they must possess certain extraordinary powers, and that by no ordinary man can their performances be equalled or even successfully imitated. To fathom, like Newton, the profundities of science ; to soar, like Shakespeare and Milton, beyond the boundaries of sublunary space, requires a mind far different from that which can scarcely grope its way through the daily occurrences of life, or which sees no glory in the heavens, and no loveliness on earth. 'He has a genius for music,' 'he had a genius for painting,' 'he has a genius for nothing,' are common expressions, and express the conviction of what experience has produced. Men believe, doubtless, that education may improve any faculty—but not that it can produce genius ; whereas great genius cannot be wholly hidden by any accumulation of difficulties. It is observed, doubt-

less, that one who seems a dullard at ten, may be a genius at twenty—because the child has not the full-grown powers of a man. But it is not imagined that every body may be made a genius by any education or in any length of time. We acknowledge that different individuals may follow a line of conduct, the same in external appearance, from different internal motives ; and that seemingly virtuous deeds are often performed under the influence of selfishness and cunning. For example, there were two girls, Mary and Jane, walking in an orchard, and they saw two fine apples lying on the grass. Mary was about to run pick them up, give one to her sister and eat the other herself. But Jane checked her and remarked that as the orchard belonged not to their father but to his tenant they had no right to the apples, and it would be wrong to take them. Such conduct would be considered as indicative of a nice sense of justice, and rare strictness of moral conduct. But mark these little girls : they go home, and as soon as Mary has set down to work, Jane steals out, picks up the apples, and eats them both herself. Now her conduct wears a very different aspect, and indicates a disgusting combination of cunning, dishonesty and selfishness. Had you formed your opinion of her character from a partial knowledge of her conduct, that opinion would doubtless have been very erroneous. You need therefore to exercise a rigid scrutiny in forming your opinion, but from such scrutiny few indeed are able to tell their true dispositions ; and if there be persons who do possess this power of discrimination, it forms the predominant feature in their mental constitution ; and, as will afterward be shown, is indicated by a particular form of organization.

I venture to conclude, then, that the first point is established in favor of Phrenology. Let us now inquire whether it be possible to discover the true form of the brain by observing the form of the head.

In forming animals, Nature seems to have proceeded with as much uniformity as in forming the solar system. We find animals continually increasing in intelligence, and as we proceed up the scale, 'the brain,' to use the words of Dr. Conolly in the *Edinburgh Review*, 'is observed progressively improved in its structure, and, with reference to the spinal marrow and nerves, augmented in volume more and more, until we reach the human brain.' And it is a remarkable fact, that man seems to pass through every gradation of animal existence. His heart at first is a mere salient point, like that of an insect ; then a sack like that of a fish ; then two sacks like that of an amphibious animal ; then a regular double heart. So the human brain, according to Sumner, has no convolutions till the sixth or seventh month of gestation, being in this respect like the brain of fishes and birds in which convolutions are never found. Convolutions then begin to appear and gradually enlarge to adult age.

Atheists have taken advantage of these facts to maintain that man is merely an improved edition of an animal. Now this is not correct ; for beside having all that the animal possesses, he has parts which it does not possess : he is endowed with moral sentiments and reflective faculties ; and it would be just as correct to say that a locomotive steam-carriage is an improved edition of a wheelbarrow because both have two sides, a bottom and a wheel.

The brain comes to maturity at different ages in different persons ; seldom before the age of twenty, and sometimes, according to Gall, not before forty. My own observations prove that it generally continues spontaneous growth to twenty-three years of age, and sometimes to twenty-eight.

A good-sized, mature brain in man weighs 3 lbs. 8 oz. ; in woman 3 lbs. 4 oz. The brain of distinguished men is often very heavy ; Cuvier's weighed 3 lbs. 10 oz. 4½ dr.

The brain is a mass of soft matter, incapable of feeling pain on being injured. It consists of two hemispheres or halves, which are separated from each other by a membrane called the falx-form or scythe-shaped process ; each hemisphere is divided into three lobes, the anterior, middle and posterior. This last division is to some extent artificial ; for though the divisions partially exist, as you perceive on looking at the base of this cast ; on the superior surface you see no such divisions. Then there is the cerebellum or little brain, situated beneath the posterior part of the cerebrum or true brain, and separated from it by a membrane called the tentorium. There are in fact two brains, just as there are two eyes or two ears, each hemisphere being capable of independent action, but united to its fellow at the bottom of the medial cleft by a commissure or connecting part. On the surface of the brain, as you perceive, there are waving lines : these

are called convolutions. They vary from half an inch to an inch in depth. I have said that in the lowest animals convolutions do not exist. We do not find them in fishes, nor in birds, nor in the lowest of the quadrupeds, such as the rat and mouse. As we proceed up the scale, convolutions commence and increase in size and number. Every one must have been struck with the difference as to docility between dogs and cats. Accordingly Desmoulins estimates the convolutions of the dog to exceed by six or eight times those of the cat. The ape has more large and numerous convolutions than the dog, though some dogs are scarcely inferior to the higher order, even of apes, in this respect. The most marked superiority exists in the apes of the old world over those of the new, as is well known; and there is a corresponding difference in the convolutions. It was stated by M. Bérard that none of the gentlemen present at the dissection of Cuvier's brain remembered to have seen one so complicated, or with convolutions so numerous and compact, or with such deep arefractuosities: these last were stated as an inch deep. Atrocious criminals and idiots have been noticed to have very small, narrow and shallow convolutions.

According to Haller, the brain is supplied with one fifth of all the blood in the body; according to Dr. Monro, with one tenth. In either case the supply is very great. Each hemisphere has its own arteries or bloodvessels of supply; but the venous blood is carried away by a common canal.

The substance of the brain is composed of a white matter in the interior, called the *medullary* portion, and of a gray or *cineritious* matter forming the outside or bark, which lies down with the convolutions, and forms the dark substance seen between the folds. It does not blend gradually with the white or medullary matter, but, on the contrary, the line of demarcation is abrupt. The supply of blood seems to be greater than in the medullary portion.

The convolutions appear intended for the purpose of increasing the superficial extent of the brain, without enlarging its absolute size—an arrangement analogous to that employed in the eye of the eagle, and in which, as I before remarked, the retina does not form a simple concave surface, as in man, but is presented in folds to the rays of light, whereby the intensity of vision is increased proportionately to the increase of nervous surface exposed to their influence.

It is often asked, whether in the brain there are distinct lines of separation observable between the organs. We answer no. We presume that in the brain such distinctions do exist, though our present means of observation are too imperfect to detect them; but, as I have before stated, this objection lies against the distinct formations of the different parts of the spinal column, as well as against the distinct functions of the different parts of the brain.

Sir Charles Bell remarks, that "whatever we observe on one side, has a corresponding part on the other; and an exact resemblance and symmetry is preserved in all the lateral divisions of the brain." This statement is not rigidly correct. There is a general correspondence between the parts on the opposite sides of the brain, but not an "exact symmetry." But the symmetry is as great as between corresponding parts in any part of the body, as between the bloodvessels of the left and right arms, for instance, or between the muscles of the two opposite sides. On talking over this matter with Dr. Conolly, he remarked, that as the convolutions were nothing but folds, and as the folding was for the sake of packing, a little difference in the folding probably has no influence on the cerebral functions.

I have said that we cannot point out the exact line of demarcation between any two organs in the brain. It must not be inferred from this that no difference can be discovered between various parts, for the convolutions of the propensities are much larger than those of the sentiments, and these last are much larger than those of the intellect, so that if you were to cut out a convolution from an adult brain and present it to a skillful phrenologist he would have no difficulty in telling from what part of the brain it had been cut.

The different parts of the brain are brought into communication with each other by means of a number of commissures. At the base of the cleft between the two hemispheres of the brain is a large body which consists of fibres passing from one hemisphere to the other, and uniting them: this is called the *corpus callosum*. Ten years ago I pointed out a convolution of the brain lying above the corpus callosum, extending from the bottom of concentrativeness to the organs of the intellectual fa-

culties. This convolution Mr. Solly has recently shown to be a commissure uniting the posterior and anterior portions of the brain.

Mr. Solly describes nine commissures—six transverse, two longitudinal, and one oblique. The commissure which unites the anterior and posterior of the brain, I showed to a number of physicians both in this city and Philadelphia. Dr. McClellan of Philadelphia confessed that before my arrival in that city he used to deride Phrenology, mentioning in particular to his class that no communication was found to exist between the anterior and posterior portions of the brain. He found, however, that he had been laughing at his own ignorance. But he had the rare magnanimity to confess it to his medical students.

The capital or top of the spinal marrow is called the *medulla oblongata*. Here we notice three bodies on each side, constituting what are called the *corpora pyramidalia*, the *corpora olivaria*, and the *corpora restiformia*.

The *corpora pyramidalia* are in continuation of the anterior or motory tract of the spinal marrow. They are fibrous, decussate at their lower extremity, proceed upward through the *pores varolii*, escape from its upper border, and the greater number pass still upward, from the anterior and external bundles of the *crura cerebri* and exterior part of the *corpora striata*, and ultimately expand into the inferior, anterior, and exterior convolutions of the anterior and middle lobes of the brain. A number of fibres of the *corpora pyramidalia* pass into the posterior lobes and a number into the cerebellum. We shall immediately see how beautifully this arrangement of the motory fibres corroborates phrenological doctrines.

The intellectual faculties are situated in the anterior lobe of the brain. They enable man to perceive objects that exist, their qualities and relations, and when acting together they constitute *will*. We have seen that the intellectual organs spring from the *corpora pyramidalia*, which are at the top of the motory tract of the spinal marrow. Here, then, is a direct relation between the convolutions which manifest *will*, and the motory tract which executes *will*.

The *corpora olivaria* and *corpora restiformia* spring from those columns of the spinal cord which are devoted to sensation. The former pass upward into the pores varolii, and form the posterior and anterior parts of the *crura*; thence through the great posterior ganglion, and expand partly into the convolutions of the anterior lobe lying on its upper surface, toward the mesial line, partly into the superior convolutions toward the mesial line of the middle lobe; but chiefly into the convolutions of the posterior lobes. The latter ascend and form the chief part of the cerebellum, but a portion enters into the composition of the posterior lobes of the brain. The distribution of these fibres is also in beautiful harmony with the doctrines of our science.

The convolutions of the middle and those of the posterior lobes of the brain, manifest the feelings. These, as we have seen, spring chiefly from the *corpora restiformia*. The function of the cerebellum is to manifest the instinct of reproduction, which is also a feeling; and the cerebellum springs, as I have just said, from the *corpora restiformia*. Now these bodies constitute the top of the sensory tract of the spinal marrow.

We see, then, that while the intellectual organs are formed of fibres connected with the motory tract, the organs of the feelings are formed of fibres connected principally with the sensory, but partly with the motory tract.

The arrangement of structure by which the organs of feeling are supplied with fibres in direct connection with the motory tract, is another manifestation of that harmony which subsists between Phrenology and Anatomy, rightly understood. Each feeling manifests itself by means of the muscular system. Thus fear, rage, or any other feeling, communicates great energy to the muscles of voluntary motion. Again, each feeling impresses certain peculiar motions, called its language, on the muscular nerves: thus self-esteem, when predominant, gives the tendency to carry the head and body reclining backward. Hence, again, we see the necessity of a direct communication between the feelings and nerves of motion.

We now come to the question—Can the size of the cerebral convolutions be ascertained by inspection of the head during life?

The brain is embraced by three membranes: the *pia mater* and *tunica arachnoidea*, both very thin, which sink down into its furrows, and *dura mater*, which is thin but strong, and adheres strongly to the inner surface of the skull. The brain enclosed

in these membranes so exactly fills the interior of the skull that a cast in plaster of the interior of the skull is a *fac simile* of the brain covered by the dura mater.

The skull is the bony case: this is composed of three layers—a very compact one internally, a less compact one externally, and a cellular layer between, called the diploë. Now the external surface of the skull corresponds almost exactly, except in a few points, which I shall mention—the skull is almost equally thick throughout. The departure from perfect parallelism, where it occurs, is limited to one-tenth or one-eighth of an inch. Again, the integuments or coverings of the skull lie close to its surface, and are so uniform in thickness as to exhibit its true figure. Thus, then, there is in general no obstacle to the discovery of the form of the brain by the form of the skull or head.

The skull is very thin at the orbital plates, and at the sphenoidal portion of the temporal bone; it is thick at the ridges of the frontal and occipital bones, but this is always the case, and therefore presents no difficulty.

One part of the brain, however, does sometimes present a difficulty. I refer to a cavity called the frontal sinus. It lies above the nose and is formed between the external and internal surfaces of the skull. The size of this sinus varies. But recollect that it only interferes with five organs—form, size, weight, individuality and locality. Again, below the age of 12 it does not exist: and as the five organs before mentioned are generally very active before that age, the sinus cannot interfere with our observation of them before that period. After this age it appears, gradually enlarges, and after 20 may present some difficulty to the observer.

Look at this skull for yourselves. You see that the parallelism of the outer and inner surfaces is almost complete. You will observe the same in this, and this, and this—in short, in all healthy skulls. Observe this skull—it is that of a boy 12 years old—you see the sinus does not exist. In this we have it of average size; and, when of this size, no difficulty is presented.

Recollect, Phrenologists pretend not to tell the power of an organ when the brain or skull is diseased. They make their observations on healthy individuals in the prime of life. It is therefore utterly futile to bring against us morbid specimens. In disease of the brain the inner table of the skull recedes, and not the outer, the space between being filled up with bone, rendering the skull very thick—sometimes enormously so. Here is a skull as irregular on the surface as the sea ruffled by the wind; but then it is the skull of a very old man. I knew a gentleman in Bath 86 years of age, in whose skull a like change has taken place. Such cases are not uncommon, and I am at a loss to account for them, since they seem not to result from disease, as the faculties of the gentleman I refer to are healthily manifested. This skull is very thick and irregular: it belonged to a dragoon in the British service, who became insane, and nine months afterward killed himself. In suicides we often find the frontal sinus very wide—sometimes half an inch.

Dr. Sewall of Washington, to whom, when on there, I was indebted for many acts of kindness, has published a work against Phrenology, almost entirely taken up with a description of diseased skulls. Now, as I remarked to him, his work is no more Anti-Phrenological than it is Anti-Geological or Anti anything else. To the frontal sinus I shall again allude when I come to the range of faculties which may be interfered with by its size. In the meanwhile, however, bear in mind, that there is a great difference between the possibility of discovering the functions of an organ and of applying this discovery practically in all cases, so as to be able, in every instance, to predicate the exact degree in which every particular mental power is present in each individual. Now we have seen that before 12 no impediment to its observation exists. Again, in after life, if the skull be depressed in this part, no error can be committed in stating the subjacent organs as small; for if the sinus be larger than it seems, the error will be on the side of the Phrenologist. The only cases which at any time can be productive of error are those in which the sinus causes a protuberance without, to which the brain does not correspond within. But even here, it is possible, in general, to distinguish between external appearances produced by a large development of the frontal sinus and those indicating large development of the organs. In the first, they are generally abrupt and ridgy; in the second, they present a rounder swell, and follow the direction of the organs as delineated on the busts.

We may be asked how it is that such a skull as the one I hold

can be enlarged to the size of an adult skull. The explanation is this: Two processes are ever going on in the system—deposition and absorption—by the first of which new particles are laid down, and by the second old ones are taken up. The skull, then, is a strong, but not an adamant barrier. It shields the brain by its powerful structure, yet forever changes to accommodate itself to the size of its noble occupant; for it is worthy of remark, that throughout organized nature the hard parts yield to the soft. Thus large lungs produce a large chest—not a large chest large lungs. So the skull is formed to the brain—not the brain to the skull. At first the brain is covered by a mere membrane, in which bone at length begins to be deposited. The deposition commences at particular points, and bony rays shoot out in all directions, just as you have seen in the formation of ice. It is not till some time after birth that ossification is complete. The skull is formed into eight bones, which unite at their edges, and become dovetailed together. The lines of union are called *sutures* or *seams*.

The extent to which the head may be enlarged is seen from this enormous skull, which belonged to an individual whom I saw at St. Thomas's Hospital, who was troubled with water in the brain. His faculties were sound, but his head was so heavy that he could not support it.

In commencing the study of Phrenology, individuals generally become very diligent feelers of their own heads. They search about, and finally they rest upon this large protuberance behind the ear. They are in amazement at the size of the 'bump,' as they are pleased to call it. Then they wonder whether it is a good bump or a bad one. Now this protuberance is a mere bone called the mastoid process, and is for the attachment of muscles. It has no relation whatever to the brain, and may therefore be not unaptly styled the Aes's Bridge, over which incipient Phrenologists have to pass.

With regard to this word 'bump,' which has long been supposed to contain a whole volume of wit within itself, allow me to remark, that I think its use is sanctioned by neither correctness of language nor sound philosophy. It is often used, too, in a low, contemptuous sense. It is evident to me that the brain is the work of God, and eminently displays His goodness and wisdom. In talking of it, we ought, therefore, to use philosophical and respectful language. What would you think of a man's taste who, before speaking of the functions of the eye, should say—"Come, let us say something about the blinkers?"—or as an introduction to a conversation about the functions of the stomach, should say—"Come, let us talk about the bread-basket?" Yet such expressions are on a par with—"Come, let us talk about the bumps."

In concluding this part of my subject, let me show you how unimportant a difference of one-tenth or one-eighth of an inch is in the thickness of the skull. This is the head of Joseph Hume, M. P.; this of Dr. Chalmers. The general size is the same in both; yet, in the region of ideality, Chalmers' head is an inch and a quarter wider than Hume's. Contrast this head of General Wurmser with that of the Hindoo in the regions of destructiveness and combativeness. Contrast these three heads in the region of firmness: there is a difference of more than an inch. Contrast this head of an idiot with that of Dr. Gall: how vast the difference! We evidently need not trouble ourselves about very minute shades.

As to authority, the best is on our side. Magendie says, that "the only way of estimating the volume of the brain in a living person is to measure the dimensions of the skull. Every other means, even that proposed by Comper, is uncertain." Sir Charles Bell, Cuvier, Monro, Blumenbach, and others, hold similar language. That the form of the brain can be ascertained by the form of the head may then be considered as established.

But it has been objected that the whole method of Phrenologists is empirical, and that we cannot weigh or measure either an organ or its manifestation. We plead guilty to the charge, and freely admit that the two elements in our method of investigation are both in their own nature *estimative*. But then we affirm, that if an observer possess an average endowment of the observing and reflecting faculties, he may, by due practice, learn to estimate both development and manifestation with sufficient precision to lead him to positive conclusions. Phrenology rests on the same kind of evidence as the practice of Medicine. Diseases are judged of by their appearances or the symptoms which they present. The knowledge of what organs are affected, the degree to which they are affected, and of the extent to

which medicines act on them, depend entirely on *estimative* evidence.

The same general laws of evidence must necessarily apply to the study of Phrenology as of Medicine. The mental manifestations are neither ponderable nor measurable any more than the capacity for pain or pleasure, or the powers of hearing or sight. We *estimate* the degree to which these susceptibilities and capacities are possessed by different individuals, and regard our knowledge as substantial; we *estimate* the force of mental manifestations by the exercise of observation and reflection, and must necessarily do so, or remain forever ignorant of mental science. Again, I have just demonstrated that differences between the forms of particular organs, and between their sizes, when large and small, are so palpable that to deny the possibility of distinguishing them, in favorable cases, is perfectly absurd; and in *proving* science, we are not only entitled but bound by the dictates of common sense to select the simplest and most striking cases as best calculated to bring truth to light. Those individuals, therefore, who object to the evidence on which Phrenology is founded, appear to me completely to misunderstand the nature of the inquiry. To deny the possibility of estimating the size of the cerebral organs and mental manifestation is as absurd as to deny that we can estimate whether any feature of the body be large or small, or whether a person be blind, near-sighted or sharp-sighted.

I shall now proceed to describe the particular organs, premising that the faculties are divided into two orders—*Feelings* and *Intellect*; the feelings into two genera—*Propensities* and *Sentiments*. Of the Propensities I shall now treat:

AMATIVENESS.

To find the situation of this organ, feel on the middle line toward the base of the skull at the back part of the head, and you will feel a small bony projection. Amativeness is situated below that point and between the mastoid processes. The size of the organ is indicated by the extension of the inferior surface of the occipital bone backward and downward, or by the thickness of the neck at these parts between the ears. Its large size gives great peripheral expansion to the neck from the ears backward. In infants, the cerebellum is the least developed of all the cerebral parts. At this time it forms but from one-thirteenth to one-twentieth of the weight of the brain, whereas at adult age it weighs from one-eighth to one-sixth. In infants, the part of the neck corresponding to the cerebellum appears attached to the middle of the base of the skull; towards puberty the neck begins to expand behind. This part is generally more developed in males than in females.

The function of the cerebellum is to manifest the sexual feelings. In this bust of Dr. Hette the development is very small, as you perceive, and the manifestation of feeling corresponded. Compare the bust of Hette with this of Mitchell and this of Dean—how enormous the development in these last!—both of whom were executed, Mitchell for murdering a young woman whom he had seduced, Dean for murdering a child without any rational motive, and undoubtedly under the influence of diseased cerebral action, occasioned by disappointed love. You see here the head of the Rev. Mr. Martin, in which it is very small. This is the head of Linn, the parricide, in which it is very large. The head of Gall, as you perceive, shows a very large cerebellum—and it seems to have been the only faculty in him which he abused.

The faculty exercises a very great influence on the character. Boys before the age of puberty are generally undifferentiated and even rude toward the other sex, but after that age they become kind and attentive. It softens all the harsh feelings of our nature, and increases the force and activity of all the kindly and benevolent affections.

It is thought by many that the functions of this organ cannot be approached. But it appears to me that "to the pure all things are pure," and that there is no function which does not present an aspect in which it may be made to manifest the great goodness of the Creator.

Some think it best that young people should be kept in entire ignorance of the function of this organ. This is an opinion to which I can by no means subscribe. The organ of Amativeness is the largest of all the mental organs, and being endowed with natural activity, it fills the mind spontaneously with emotions and suggestions, the manifestation of which may be directed and controlled, but which cannot be prevented from arising,

even though you shut youth out entirely from the world. The question is not, therefore, whether the feeling shall arise or not—over that we have no control—but whether it shall be placed under the guidance of an enlightened understanding or be withdrawn from the eye of reason and allowed to riot in all the fierceness of a blind animal instinct. The former course appears to me the only one consistent with reason and morality, and the one which should be invariably adopted in education.

Messrs. Flourens and Magendie think they have discovered, by inflicting injuries on the cerebellum, that it serves for the regulation of muscular motion. But from these experiments no certain conclusions are deducible. The infliction of injury on one part of the nervous system deranges other parts—and hence it is not the way to determine the functions of any. Again, Mr. Solly has discovered a column of fibres which passes from the motory tract of the medulla oblongata to the cerebellum. Now when these experimenters sliced this part, they commenced at the distant extremity of the motory fibres and destroyed them to the medulla oblongata. By thus injuring and irritating the motory tract, no wonder that convulsions followed! The cerebellum is composed, as I have before said, of fibres connected with the motory as well as the sensory tract of nerves. It is an organ of feeling, but also influences voluntary motion by instinctive impulses. Injuries of the cerebellum may therefore cause irregular or convulsive muscular movements without being the regulator of such movements. That the cerebellum may manifest other functions than that of Amativeness is not, however, impossible; but that this faculty occupies the largest part of it is unquestionable.

TO A VERY LITTLE CHILD.

BY GODFREY UNDERWOOD.

When I see you, dear Bunny,
So lively and funny,
Just budding on life's verdant tree;
I cannot but pray,
That the sunbeams may play
Still brightly, as ever, on thee.

But should care make its nest
In the boughs of thy breast,
It may soften the shade of thy brow,
To turn to the hour,
When infancy's bower
Thy young bosom pillow'd, as now.

So I'll gallop along
With my bit of a song,
And endeavor to pluck from Parnassus,
A leaf, that, in rhyme,
Shall tell of the time
When your idol was—bread and molasses.

You are gay as a lark;
By fits, cross as a shark;
And rather too fat to be nimble;
And so little, I trow,
That, indeed, you might go
To bed in your grandmother's thimble.

Your hair is like flax;
Your complexion, like wax
Tinted o'er with the hue of the rose;
And, already, I deem,
Of your beauties you dream,
From the way that you pout at the beaux.

When you're thus in a pet,
The most finished coquette
Might envy your innocent arts;
For, as oft as you pout,
The beaux always give out,
And away you run off with their hearts.

But your glee and your glory
Lie most in the story
Of the monkey that rode on a staff;
Bless my soul how you roar
When the story is o'er,
And we tell you, "Now, Bunny! now laugh."*

I would I might know
Half the fancies that flow
Through thy breast, like the rivulet's dance;
When thine eye lightens up,
Like a full, flashing cup,
And thy soul sparkles forth in its glance.

Oh! merry and wild
Is the heart of a child;
And sorrow that Time, on his flight,
In memory's cell
Should leave nothing to tell
Of infancy's dreams of delight!

But keep thy young heart
From time's follies apart—
And the dreams that enraptur'd thee, then,
The same rapture will give;
And, each day, wilt thou live
Thine infancy over again.

* In allusion to a domestic incident of frequent recurrence.

A VIRGINIA COMEDY.*

This is certainly something new under the sun. A Virginia Comedy! Long as the Old Dominion has been celebrated for some things,—long as her sons have been distinguished for following certain paths,—great as her career of glory has been in law, politics, war, eloquence, and even general literature,—this is the first time, we believe, and if not the first—assuredly one of the very few attempts ever made within her borders, in the field of dramatic writing. Well, why should not a Virginian try his skill in that department, as well as other folks? American comedies, tragedies, and farces without number, have been manufactured north of Mason's and Dixon's line, and there is nothing in the Constitution, that we know of, which prohibits a Southern man from entering the arena, if he thinks proper. Let it not be said by those who are opposed to theatrical exhibitions, that the dramatic writer necessarily encourages the stage. Far from it; for besides that there are some plays altogether unsuited to scenic representation, it frequently occurs that no other kind of writing is so effective in illustrating national or individual character and manners. Nothing is frequently so vivid, natural

*Whigs and Democrats, or Love of no Politics; A Comedy in three acts.—"To show the very age and body of the time—his form and pressure."—*Shakspeare*.—Richmond: Printed and published by T. W. White: 1839.

and impressive, as that species of composition which represents *present action*, and does not depend for effect upon mere description. Hundreds have read, and will read again, Shakspeare, Joanna Baillie, Goldsmith and Sheridan, (to say nothing of the great Greek dramatists,) whose scruples might disincline them to visit the theatre—even to witness the highest efforts of histrionic genius. Our present purpose, however, is not to decant upon the comparative merits of dramatic writing, whether in Tragedy or Comedy—but rather to put some of our more scrupulous readers on their guard, lest they should confound things, which, in themselves, are altogether distinct,—or, lest they might suppose that a good story, in the form of dialogue, may not be as innocently read, as the same story told in the shape of descriptive narration.

When we sat down to give the work before us a dispassionate reading, we confess, from its title and other circumstances, we were apprehensive it might wear a political party tinge, which would deprive us, in consequence of our neutral attitude in politics, from even considering its claims to literary justice; but we are gratified in assuring our readers, that upon an attentive examination, we see nothing in it to justify such fears. Whatever may be the author's political bias, it is evident that he has indulged in nothing like party rancor. His aim, on the contrary, seems to have been a nobler one,—reaching at the gradual and mild reform of certain objectionable practices in society, which the good and intelligent of all parties unite in condemning—and which, *as practices*, do not exclusively belong to any particular branch of the church political. The author contends, in his preface, that Demagoguism, as he terms it, or that system of deception, by which the passions, prejudices and frailties of the multitude are flattered, in order to win their confidence and gain their suffrages—no matter by what party it is employed—is calculated, in the end, to subvert free government, by poisoning its fountains;—and, surely, this is a truism, which all who are capable of reflection, will duly acknowledge. He illustrates too, in the action of the Comedy, we think, with considerable skill, the incompatibility of ultra-professions of equality, with the laws of social organization; and clearly shows, that a man may perform all his obligations, as one of the equal political sovereigns of the country, without relinquishing that just rank in the scale of society, to which virtue, intellect, and refinement may entitle him. In another respect, the author is entitled to our sincere thanks, for rigidly excluding from his pages every thing of an immoral tendency—especially profane jesting and coarse inuendo. The purest female mind may read, and read with satisfaction, without the least shock to its delicacy. This alone, if the example were generally followed, would be a great improvement in dramatic composition. There is another task, and one of some difficulty, in which it strikes us the author has been successful,—and that is, in imparting considerable interest to his scenes, from the commencement to the *dénouement*, without any deviation from the simplicity of nature. The whole action seems to be in good keeping—preserving sufficient variety of character, without any startling contrasts,—and presenting a continued display of agreeable humor, without broad farce or coarse caricature.

We do not know precisely how the play would suit

the stage—the gentlemen of the “sock and buskin,” are the best judges of that. We speak of it as a work for the closet exclusively,—and we are altogether deceived, if it does not afford an hour or two’s most agreeable reading. Of one thing we feel strongly assured, without absolutely knowing the fact, that the author has revealed in the performance itself, the possession of higher capabilities than those he has thought proper to exert. He states in his preface, that it was the composition of “a few leisure hours,”—and, if so, we are confident if he would repeat the effort, and bestow “many” leisure hours upon a new work, he would be amply rewarded for his labor—in the public approbation. We intended to have made some quotations from the book, as specimens of the style—but forbear doing so, on reflection,—because, of all descriptions of writing, the Drama is best judged of as a whole; and least appreciated, if its parts be separately considered. In the execution of his task, the author has faithfully observed the dramatic unities as they are called, of time, place and action. His female characters appear to us to be well sustained; and we were almost as much interested in the bustling, scolding, maternally-affectionate Mrs. Roundtree, as in her sprightly yet sentimental daughter,—or, in the noble, high-souled Miss Worthington. Such characters as General Fairweather and Major Roundtree, are often seen in society. We do not say that their portraits have been drawn from actual originals—but we think, that no intelligent reader could study them, without perceiving a strong resemblance to living models. It is probable, that in sketching *Supine*, the author had Dr. Pangloss in his mind’s eye,—but we well remember to have seen some pedantic schoolmasters in our own country, very much like him. Upon the whole, we hope the author will pluck up literary courage, if indeed he lacks it, and delight the public again with some kindred display of his powers.

In conclusion—we take the liberty of remarking, with some reluctance and delicacy, that we hope no one will be so uncharitable, as to suppose that the foregoing brief notice of a new native literary work, has been, in any respect, biassed or influenced by the accidental circumstance, that the pamphlet itself issues from our press. When we are mean enough to sacrifice the free and independent expression of our sentiments—it shall be for *something*,—but not for the contemptible consideration of a very small job—which might have been done elsewhere,—and which, no matter where done, should have received the same notice at our hands. As printer and editor, we stand altogether upon different grounds.

CEREMONY, EXPERIENCE AND LIFE.

Ceremony is the language of respect—and the rule is *‘De non existentibus et non apparentibus eadem est ratio;’* respect which is not expressed is thought not to exist.

Experience teaches us that a certain degree of ceremony and etiquette is to be kept up, even between near relatives and intimate friends.

Life is a tassellated pavement—dovetailed mosaic—here black acre and there white acre,—clouds to-day, sunshine to-morrow;—it is a series of lessons.

Petersburg, Va.

TO THE AMARANTH.

BY MRS. SEBA SMITH.

Thou art not of earth, thou beautiful thing,
With thy changeless form and hue—
For thou in thy heart hast ever borne
A drop of that living dew
That nourished thee, when earth was young,
And the music of Eden around thee rung.

Thou art not of earth: no change is thine—
No touch of death or decay;
And the airs that fann’d thee in Paradise,
Seem over thy leaves to play;
And they whisper still of fadeless bowers,
Where never shall wither the blooming flowers.

Thou art not of earth: thou changest not
When the wintry blast is high,
Tho’ thy scattered leaves are wildly toss’d
On the wind as it rushes by;
For even then, in that hour of dread,
Not a hue of beauty hath left the dead.

I deem that Eve, when in sorrow forced
From her Eden home to part,
Must have sadly look’d on those fadeless bowers,
And she clasp’d thee to her heart—
And thou in thy exile still dost tell
Of a changeless home where the good shall dwell.

“MAN WAS MADE TO MOURN.”*

[Selected.]

Oh! man is like the leaves of spring
The time of many flowers,
When all at once, the glowing sun
A brighter lustre pours.

Like them, youth’s passing flowers delight
This child even of a day,
Whom Heaven, through good and ill, hath left
Darkling to grope his way.

The fates grim-low’ring near him stand,
Whose life is but a breath;
One points to peevish, cheerless age,
And one to gloomy death.

Short lived the fruit of lusty youth!
’Tis like the sunny ray,
That warms the teeming earth—and then
Full quickly fades away.

And when youth’s gladsome hours have fled,
And flowers all withered are,
To die, is better than to live,
Yea! surely, better far.

Oh! many, many are the woes
The heart of man that tear,—
Domestic sorrows, and the pangs
Which poverty must bear.

One longs for children:—childless still
This man of sorrow dies:
No child to bear him to the grave,—
No child to close his eyes.

’Mid heart-corroding, fell disease,
Another’s life is spent:
Oh! lives not one whom angry Heaven
Hath not much sorrow sent!

ŒDIPUS AT COLONOS

FROM THE CHORAL PIECE OF SOPHOCLES.

Thou hast come to the land of the steed !
Oh stranger—to homes of the blest !
To the clime that is fairest indeed ;
To Colonos, the silvery drest !
Where the voice of the nightingale ever
Is heard in the green-growing vale ;
Where she dwells with the ivy, that never
Hath moved its dark leaves to the gale ;
Where the sun never shone thro' the groves of the God ;
Where the fruits of the trees over-teem ;
Where never the foot of the traveller trod,
Nor star shot a wandering beam ;
Where Bacchus still roves through the blissful abode,
And woos the young-nymphs by the stream.

Thou hast come where the Narcis, each day,
With its clusters, doth burst into bloom ;
Where the dew-drops bespangle the ray
Of the crocus, all gold, and perfume :
Where flowerets their colors display,
That crowned the fair goddess of old ;
Where the fountains unceasingly play,
That down to Cephissus are rolled.
Thou hast come to the clime where the muse
Never spurned, with her chorus, to dance ;
Where ever the mother of beauty doth choose
To kindle young love by her glance ;
To the clime of bright stars and sweet dews,
To the land of the spear and the lance !

Thou hast come where there groweth a tree,
Unplanted, and darkly up-sprung !
None such by the Dorian sea,
Or the land of the east, hath been sung ;
'Tis the fear of our foes,—and shall be
Forever the nurse of our young !

'Tis the azure-leaved fountain of oil,
Aye watched by the Morian Jove ;
'Tis the olive—that none shall despoil
Of the blue-eyed Athené above !
Yet more may we sing of our soil,
Of the motherly land that we love !

Our land is the queen of the sea !
Our land is the land of the steed !
And such 'tis our glory to be,—
To the god who gave all, be the meed !
Posidon, thine own be the praise,
For the boast of our song, and our lyre !
He only to heights of such glory could raise
Who curbed the steed's spirit of fire,
And launched the light car o'er the ways
Of the wave-footed Nereids' sire.

Highlands of the Hudson, July, 1839.

VOL. V.—73

RECENT AMERICAN POETRY.*

Thirty years ago, it was an easy task, in our country, to make a poetical reputation. A few metrical compositions, thrown together into a thin mis-shapen volume, were quite sufficient to form a halo, or weave a garland, for the brows of any infatuated young person, who, like Gray's 'moping owl,' took solitary satisfaction in complaining to the moon. In those days there was a plentiful lack of 'the vision and the faculty divine ;' and when, occasionally, it chanced to shine upon the upturned, wondering eyes of mortals, they almost looked to behold the dispenser of fanciful splendors,

Bestride the lazy-pacing clouds,
And sail upon the bosom of the air.

To the fact we assert, bear witness the names of many who, never having perpetrated verses enough to eke out a volume, were destined to an immortality of preservation in the amber of Mr. Samuel Kettell's 'Specimens of American Poetry.' Were it not for the existence and assistance of that illustrious compendium, we have some doubt whether we should ever have been aware of the brilliant sparkles which those meteors emitted in their time. Even under the supposition that their glories had burst through the obscurity of our researches, we should hardly have deemed them fixed stars in the firmament of fame, had they not so appeared to the telescopic observation of Mr. Kettell.

* We have before us a work entitled "The Ruins of Athens ; Titania's Banquet, a mask ; and other Poems ;" of which we intended to publish a review. But the above article, from the Democratic Review, having fallen under our eye, containing a notice of Mr. Hill's volume, among others, we have concluded to substitute it for the intended review. We do not say that we are prepared to adopt all the opinions of the writer set forth in the above. There will be a difference of opinion, perhaps, among our readers—which will be decided by each individual agreeably to his own taste—as to whether Mr. Bryant is entitled to the topmost seat among our American poets. Of this we are certain, that his *Thanatopsis* and his *Lines to the Evening Wind*, are powerful claims to that high honor. We say *high honor*, for, although, as the reviewer well remarks, "thirty years ago it was an easy task in our country, to make a poetical reputation," and the chief of such poets, *then*, would, perhaps, *now* be harping his measures to the dull waters of Lethe—still, at the present day, he who wins the palm must indeed be one of whose work it can be said, that "from the library of English poets it would be difficult to select a more freshly pleasing volume." There are lyres of glorious tone strung all along on the heights of our Parnassus, and twined with wreaths wet with the dews of Helicon, and he who touches the most cunning chord of all, must use a master-hand and draw out all the sweetest music of his instrument. We are gratified to find that Halleck and Sprague are placed so high in the list. But we ask, where is the name of him who wrote the "Coral Grove?" Where is the name of "Percival?" We do not see it among the number. Surely, when our choicest spirits are mentioned he deserves a place?

We have already inflicted quite an article upon the reader in the form of a note, and we hasten, therefore, to relieve him of our "talk," by urging him to partake of the banquet culled for him among the rich dainties of the Democratic Review.

[Editor So. Lit. Messenger.]

This gentleman has generously provided us with the names of some hundreds of American poets, and of each one in particular has framed a brief biographical notice, which must be extremely consoling to the friends of the departed. Should this resurrectionist of the dry and crumbling remains of defunct poetasters, philanthropically set himself to digging at this day, he would find a hundred subjects where he found one before, all fitted to adorn his museum of decayed specimens.

We fear that we have fallen into a little metaphorical confusion, in expatiating on the labors of Mr. Kettell; but it cannot be greater than that of his 'poets.' If the appellation of 'poets' were awarded to most of the metre-ballad-mongers, whose twattle has been thus resuscitated, we are right in the asseveration that the bays of poetic renown must, at no very distant period, have been of facile attainment. At present, it is a task of some magnitude, and we assert this in the face of any merely fictitious reputation which some self-deceiving rhymers may fancy that he enjoys. Your mere poetaster now is not distinguished from the herd of common men; no one turns to mark his abstracted air, or the fine phrenzy of his rolling eye; he may write 'till his ink be dry,' and unless he can excel most of the 'specimens,' he must confine his 'wild love of fame' to the perusers of the journal, through which his sentimental slip-slop is drizzled on to the public. And why is this? What has wrought this change in the public estimation of verse-making and verse-makers? We reply, unhesitatingly, the large quantity of excellent poetry, really, intrinsically excellent, which has been published within these last thirty years.

It is by no means our intention to attempt, within the judicious boundaries prescribed to a paper in a Democratic Review, (where many voices may claim audience) an investigation or exposition of all the good verses which have appeared within the specified period of time. Far from it. We propose simply to set down

"A chosen tally of that singular few,
Who, gifted with predominating powers,"

have worthily achieved, and are worthy to bear, the name and fame of 'poets.' Besides these, we shall confine our remarks to the few authors whose books have been published so lately as to authorize their selection as texts to a cursory dissertation on recent American poetry.

We would state fairly in the outset, that we are about to express our own honest opinions, not those of the public; and the reason that we consider these opinions worthy to be expressed is, because they are formed not hastily or with prejudice, but reflectingly and with judgment. We shall not draw rein upon our pen, but let it race freely and merrily over the whole course; thus shall we the more speedily attain the goal, and be watched with more excited gratification by our goodly crowd of spectators. Some of our notions will be found to agree wonderfully well with those entertained by his majesty, the many; while others will differ so entirely, that they will be pronounced queer and paradoxical. We commence our career from one point of general agreement, which is this: Mr. William Cullen Bryant is the best poet in America. As it is quite needless to enter upon the

proof of a fact which is strikingly evident, we shall not undertake to adduce the testimony which is so abundantly afforded by many of his long-published pieces. We have examined this testimony again and again, and always with increased delight. It is rich and copious. From the library of English poets it would be difficult to select a more freshly pleasing volume than Mr. Bryant's. It administers welcome nurture to the contemplative mind. It contains but little to excite the joyous and merry-hearted to louder mirth, but much to soothe and soften the elated spirit into a quietude that more nearly approaches true happiness. 'Thanatopsis' is not so sublime as 'Coleridge's Hymn in the Valley of Chamouni,' but its effect on the imagination of the reader is scarcely less grand. It is not so perfect a production as the 'Elegy in a Country Church Yard,' but its strains Æolian sweep through the mind with a power equally subduing, for it breathes the same 'sad, sweet music of humanity.' Its concluding lines fall upon the ear as if uttered by some warning angel.

"So live, that when thy summons comes to join
The innumerable caravan, that moves
To that mysterious realm, where each shall take
His chamber in the silent halls of death,
Thou go not, like the quarry slave at night,
Scourged to his dungeon; but sustained and soothed
By an unfaltering trust, approach thy grave,
Like one who wraps the drapery of his couch
About him, and lies down to pleasant dreams."

Next, scarcely inferior to this, comes the 'Hymn to the Evening Wind.' Either would of itself be enough to stamp its author as a man of high poetical genius. These two, and the 'Song of Marion's Men,' are as common and as popular in the United States as many of the oldest lyrics of the British bards.

Had Mr. Bryant stopped with the volume which comprises, with many others scarcely less admirable, these three fine poems, we should have been equally free to grant him the place which he now holds by general consent; but we should have done so with less lively gratification than we now experience—arising, as it does, from our appreciation of his late pieces, given to the public in the pages of this Review. The pieces to which we allude are not familiar alone to the readers of this journal; their transfer to the columns of nearly every journal from the disputed territory to the seat of the Florida war has made them equally familiar to our countrymen in general. They have been rightfully designated by a Northern critic as 'not only acquisitions to American literature but additions to the English language.' They emanate from the same rich source of genius, which has so abundantly proved that their author is destined to occupy an enduring rank among the authors of the age. There is but one other man in existence who could have created such lines, on such a subject, as those that flow like living streams of beauty from 'The Fountain.' No known living poet but Wordsworth could have originated the glorious thought in four lines, which we shall presently quote. They occur in the magnificent stanzas entitled 'The Battle Field,' printed a year since in this magazine. In reading the whole poem, they did not so break away from the entire chain of melody as to produce the single and startling effect which they afterwards did, upon our

encountering them casually in Mr. Forrest's oration, on our last anniversary of national independence. There is a Shakspearean grandeur in the idea, and a Miltonic dignity in its expression. Read aloud.

"Truth crush'd to earth, will rise again;
Th' eternal years of God are hers;
But Error, wounded, writhes in pain,
And dies amid her worshippers."

To Mr. Halleck, we are willing to assign a rank inferior only to that occupied by Mr. Bryant in the scale of those who have so elevated the standard of American poetry during these latter years. If a man were to be judged by the quantity, not by the quality of his works, then would Mr. Halleck's laurels be few and faded. As it is,

"Few have worn a greener wreath,
Than that which binds his hair."

To use an expressive mercantile phrase, he has done a very small business on a large capital. In this respect he excels every modern poet, except Gray. His taste is quite as fastidious as Gray's or Campbell's; there is the same intense polish in his lines, and the same exquisite nicety in his versification. We wish that he had imitated their sobriety. They never indulge in antics or cut pirouettes at the conclusion of a poetical movement, as stately and graceful as a minuet. The fair form of 'Alnwick Castle' is spoiled by its mean and miserable ending. If this be wit, we beg to be spared its infliction. Mr. Halleck's finest poem are his lines in memory of Burns; they were probably suggested by Wordsworth's *Rob Roy*, but are none the less attractive on that account.

Equal to Mr. Halleck, and superior—in that he has written so much more—is Mr. Charles Sprague. It is curious that both these gentlemen should be the curators of extensive money concerns. That the mind of one at least has received no sordid taint, we may infer from this distich:

"The fool who holds it heresy to think,
And loves no music but the dollar's clink."

Mr. Sprague has wrought rich treasures from every vein that he has struck. He has been so successful in all, that we are doubtful in which he has best succeeded. He displays the same singular felicity in sarcastic, pathetic, and spirited verse. His 'Curiosity' is a noble poem; the language has scarcely a more splendid lyric than his Shakspeare Ode, and we know of few strains of deeper tenderness than those on the Death of a Sister, the Family Reunion, and others of the same tone. The arrow that would find a chink in Mr. Sprague's bright armor, must be more adroitly aimed than ours; he is impervious to our criticism.

In thus cursorily speaking of three of our best poets, we have sufficiently proved our postulate; as long as they, and others like them, live to write, (we wish that they wrote to live,) there will be little danger of our tolerating that which is in itself indifferent, because it is comparatively good. Before passing, however, to speak of those writers whose more recent works immediately invite our observations, we would name one, to whom may, with singular fidelity, be applied Pope's expressive line:

"How sweet an Ovid was in Murray lost!"

George D. Prentice, of the Louisville Journal, a rabid opposition paper, has all the richest endowments of genius. He deserted 'the muse's bower,' to fight and scuffle on the dusty arena of politics. He flung aside his golden-voiced lute for the brazen-throated trumpet. Some of his earlier effusions are 'beautiful exceedingly.' His lines by his mother's grave, written at the age of fourteen, are more remarkable than any other juvenile production we ever saw. They breathe the very soul of sorrow; nothing could be more irresistibly touching and plaintive. His latter pieces, especially those which tell of love, seem flushed with the rosiest hues of passion, pervaded with a glow like old Anacreon's. His fault is too lavish a profusion of imagery, the use of too many spangling epithets, which despoil his thoughts of their simplicity and beauty. Practice would have amended this—but he has not practiced—he probably never will again practice poetry; he is a politician. Some of the most valuable contributions to American poetry have been made by those who have never yet had ambition enough to collect their scattered effusions into volumes. To convince the reader how sincerely this is to be regretted, we need mention no other names than those of the two last mentioned writers, Sprague and Prentice. We would that they could be persuaded to do so at this time, and we would that every writer upon whose efforts public approval has set its seal could be induced to follow the example.

Mr. Dawes' 'Athenia of Damascus,' Mr. Willis's 'Bianca Visconti,' and Mr. Epes Sargent's 'Velasco'—a tragedy which was successfully brought forward at the Park theatre, in New York, and which has met with considerable praise from the periodical press—have all appeared within the last six months. Neither of these dramas have extraordinary merit; that by Mr. Sargent is by far the best as a whole, although those of Mr. Dawes and Mr. Willis contain finer passages of a fanciful description. We shall now speak of these dramas, though not with the particularity to which their defects as well as merits entitle them. That of Mr. Dawes has appeared in a separate form as well as in his volume. It legitimately claims our attention among his other poetical works—which will be last treated in this paper, since they are the most important under notice. We would premise our remarks on the other two dramas, with the mention of the fact, that they are the only native productions of merit, which have been given to the public in readable form, after their representation at the theatre. Dr. Robert M. Bird, of Philadelphia, author of *Calavar*, *The Infidel*, &c., was the first of any eminence who came forward as a dramatist. His 'Gladiator,' and 'Broker of Bogota,' never found their way to the publishers, less, as we imagine, through fear of their being submitted to the test of literary criticism, than from apprehension of diminishing their attractiveness on the stage.

Mr. Willis has published three dramatic works. The first was the tragedy which lies in a very neat garb before us, and is called 'Bianca Visconti, or the Heart Overtasked.' It was written two years since, with a view to the acting by Miss Clifton of the principal female character. This is the way in which all American writing for the stage has been elicited. Mr. Dawes' 'Athenia' was written for a Mrs. George Jones, (a woman, like Miss Clifton, of fine appearance, and

it has been stated of superior histrionic power) and Mr. Sargent's 'Izadore,' the heroine in 'Velasco,' for Miss Tree. The effect of this must be to direct the author's attention to one bright point, from which he trusts to diffuse a radiance over the whole piece. Other matters are merely auxiliary—and the consequence is an inferior development of character, and no very skilful management of plot. This criticism applies to Mr. Willis's performances rather than to those of the other two writers.

After the somewhat equivocal success of 'Bianca Visconti,' Mr. Willis was betrayed into the perpetration of a comedy, which was (to use the common phrase) 'damned' silently on the second night of representation. It is said to have been so broadly farcical and so outrageously absurd, that it proved impossible, even for an audience fully determined on being delighted, to endure it. Nothing daunted by this rebuff, Mr. Willis steps like a stalwart knight again into the lists. If we were to credit the daily journals, we should believe that he had rent the laurel from Shakspeare's bust to adorn his living temples, and that in 'Tortosa, or the Usurer,' the world beheld a comedy, such as no age since that of good Queen Bess can boast. The truth is, that there is little or no dramatic power displayed in the piece. It is like Bianca Visconti, to which it is decidedly inferior in stage effect—a graceful poem running over with sparkling conceits and glittering fancies, which bubble up and burst on the surface like the air-jewels in a beaker of rosy champagne.

It has been remarked of the plays of Sheridan Knowles, that in no one of them is there an allusion which would call a blush to the cheek of purity. This is a high degree of praise which cannot be awarded to the dramas of Mr. Willis. There is an indelicacy on the second page of 'Bianca Visconti,' and there are several in the comedy of 'Tortosa.' When will authors learn that filth is filth, though it be wrapped in a web woven from the costliest looms of Cashmere? We will not detain the reader with an analysis of the tragedy before us. The plot is poor in incident, but managed so as to stimulate and increase the interest of the reader the more as he approaches toward the catastrophe. It is tragic enough to suit the taste of one who would 'sup full with horrors.' It hinges upon the high dramatic circumstance of a sister being accessory to the murder of a young and innocent brother, who stands in the path of her lover's ambition. But we leave the plot, which we do not like, for the poetry, which we do like—and with which it is our duty to deal in this paper. Here is a beautiful passage, expressive of Bianca's joy at the fruition of her long cherished hopes of happiness with her bridegroom, Sforza—beautiful, though it trenches on the 'isle' in Moore's 'Blue summer ocean far off and alone.'

"Oh, I'll build

A home upon some green and flowery isle
In the lone lakes, where we will use our empire
Only to keep away the gazing world.
The purple mountains and the glassy waters
Shall make a hush'd pavilion with the sky,
And we too in the midst will live alone,
Counting the hours by stars and waking birds,
And jealous but of sleep!"

"I remember

The fair Giovana in her pride at Naples.
Gods! what a light enveloped her! She left
Little to shine in history—but her beauty
Was of that order that the universe
Seem'd governed by her motion. Men look'd on her
As if her next step would arrest the world;
And as the sea-bird seems to rule the wave,
He rides so buoyantly, all things around her—
The glittering army, the spread gonfalon,
The pomp, the music, the bright sun in Heaven—
Seemed glorious by her leave."

Here is something musical that will be deemed exquisite, till one endeavors to get at the meaning, and perceives that it begins with a hypothesis, very like a bull.

"If the rose

Were born a lily, and, by force of heart
And eagerness for light, grew tall and fair,
'Twere a true type of the first fiery soul
That makes a low name honorable. They
Who take it by inheritance alone—
Adding no brightness to it—are like stars
Seen in the ocean, that were never there
But for the bright originals in Heaven!"

The finest scene in the piece—and it is, poetically, very beautiful—is that in the fifth act, of an interview between Sforza, the hero, Bianca, and her young brother Giulio. We should like to give it as the fairest specimen of Mr. Willis's dramatic as well as poetic powers; but the limits, to which the number of matters treated in this article restrains us, forbid. The final melancholy madness of Bianca is so like Ophelia's, that we are ready to award to it the praise of successful imitation.

Mr. Willis's dramas will hardly keep even short-lived possession of the stage, but they will maintain a more respectable rank in imaginative literature than his formerly published poems. They are less disfigured by affectations, and are pervaded by a more masculine tone of sentiment. They show that the author has of late conceived a nobler ambition, than to be the Waller of modern court circles—a *preux chevalier*, a sort of Sir Piercio Shafton, enrapturing the intellects of boarding schools misses with metrical euphuisms and elaborate fooleries. He seems to have learned to reflect more upon his art, and less upon himself. Such reflection may not be so agreeable, but we will find it far more beneficial; the famous Greek precept, and Pope's scarcely less famous line, to the contrary notwithstanding.

Mr. Sargent is the author of several fugitive poems of considerable merit. He writes with scrupulous correctness, rather than remarkable power. He is guided rather by nice taste than bold ambition. He never startles his reader, nor shocks him; he is never venturesome, never 'in wandering mazes lost;' the path he treads lies smooth, and plain, and verdant before him, and he is sure that he has answerable skill to pick his steps. He never walks blindfold, or with his eyes behind him. Had he been Icarus, he would never have attempted to fly, even had his wings been made of feathers instead of wax. He is not wanting, however, in self-confidence, for he is sure of success by never over-estimating his own powers. He will take a permanent, though not very brilliant, position among our writers. Were he more daring, he might reach a higher

point; but as there is no danger of his aiming beyond his reach, so there is none of his not reaching his aim. Of this we are certain;—in his future course he will culminate, and not decline. His modesty, no less than his abilities, entitles him to our most favorable consideration. His play, 'Velasco,' was quietly issued from the prolific press of the Harpers with little or no flourish of trumpets. It was read and liked. It was acted, and succeeded. The newspapers puffed it as they do every thing else, *ad nauseam*. This set the author's fame afloat, and a strong voice of judicious approval has kept it sailing on bravely ever since. We shall not swell the gale, but keep it blowing.

Since to Mr. Sargent has been accorded the praise of being the best dramatist in the country—a praise it would be difficult to gainsay—we should be glad to exhibit his pretensions by liberal quotations. This would also prove the justice of our other remarks; but we must rest content with simply showing, from this play, that he is a poet of no inferior merit. We could do this more efficiently from his first dramatic attempt, called 'The Genoese.' It has not been published; but should be, were it unredeemed, except by certain beautiful passages. Though it was horribly mangled at the Park theatre, we saw and heard enough to make us prefer its story, plot, and incidents, to those of 'Velasco.' In the play before us, we regard the choice of all these as unfortunate; the melo-dramatic termination of the third act is decidedly bad. But to the poetry. Here is a subject for the pencil of Weir:

"Our routed troops were flying in dismay
Before the turban'd Moors, when from the gloom
Of a green thicket rushed a mounted knight!
His charger white as snow—his battle-axe
Poised in his right hand, while his left upreared
The Christian ensign, blazoning the cross!"

Here is an exquisite figure; the last line is eminently good.

"Oh! ne'er did mariner, long toss'd at sea,
With no benignant star to point his course,
Hail with more rapture the first gleam of land,
Than I from War's seam'd visage and wild glance,
Turn to the blue eyes of maternal peace!"

These words of parting between a brother and sister, when the latter is about to be wedded, remind us, by their pathos, of certain touches in 'Ion.'

JULIO.—"Alas! I never yet have parted from thee
With the sad thought, that ere we met again
Thou wouldst be all another's—never more
The gay, free-hearted, fond, and careless girl,
Whose laugh in bower and hall was sweetest music.
Is not the thought well worth a casual tear?"

IZIDORA.—Why should I be less happy or less fond?
The influence of all outward things—
The sky; the sunshine, and the vernal earth,
Beauty and song—will they not be the same?
Ah! there are spirits in this fretful world
Which grow not old, and change not with the seasons!

JULIO.—Oh, let not that assure thee! Time, my sister,
Is not content with marring outward charms;
His deepening furrows reach the spirit's core."

The following, exhibiting the rage that pervades the breast of an old Castilian, who has been insulted by a blow, and is impotent to avenge the injury, is full of force and spirit:

DE LERMA—(taking up his sword.)—"Thou treacherous steel! art thou the same, alas!
Of yore so crimson'd in the Moorish wars?
Methinks there should have been a soul in thee—
The soul of victories and great achievements,
To form a living instrument of vengeance,
And, in the weakness of thy master's arm,
To leap spontaneous to his honor's rescue.
Go! 't is a mockery to wear thee now.

[Throws down his sword.

Struck like a menial! buffeted! degraded!
And baffled in my impotent attack!
Oh Fate! oh Time!—Why, when ye took away
From this right arm its cunning and its strength—
Its power to shield from wrong, or to redress,
Did ye not pluck from out this swelling heart
Its torturing sense of insult and of shame?
I am sunk lower than the lowest wretch!
Oh, that the earth might hide me!—that I might
Sink fathoms deep beneath its peaceful breast!"

We are willing to rest our assertion, that this piece contains evidences of decided poetical genius, on one more extract:

SCENE III.—*A glen near the castle of Gonzalez. A storm is raging, with thunder and lightning. Enter Velasco from the rocks in the back-ground.*

VELASCO.—"I lay my brow against the marble rock,
I hold it throbbing to the dewy grass;
There is no coldness in the summer rain!
The elements have lost their attributes.
The oaks are shiver'd round me, in the blaze
Of the near lightning, as it bursts the folds
Of its black cerements; but no gracious bolt
Blasts me or scathes! A wilder storm is here!
The fiery quiver of the clouds will be
Exhausted soon—the hurricane will sink;
And, through the vista of the western clouds,
The slant rays of the setting sun will stream;
And birds, on every glistening bow, will hail
The refulgent brightness and the fresher'd air;
But when will pass away from this sad heart
The cloud of grief—the tempest of remorse?
When will the winged hopes, that glanced and sang
In joy's melodious atmosphere, return,
To welcome back the gladness of the soul?"

In bidding adieu to Mr. Sargent, we greet the appearance of a writer who differs from him in every essential characteristic, as much as it is possible for one person to differ from another. The author of the 'Ruins of Athens' is evidently a man of taste, feeling, fancy and imagination, and yet we are free to say that he is not destined to be a poet. The present work has been before the public some years; and if it has not made his name particularly familiar as a poet, the present republication—for it bears neither the name nor the semblance of a second edition—is not likely to increase the small acquaintance that now exists. It is composed of a number of exemplifications of rhythm and metre, which have very much the air of exercises. Some will do, and others will not. Mr. Hill has courage enough, but lacks strength. He is evidently a disciple of Byron and Shelly, and all those whom the author of Philip Van Artevelde wisely classes as 'the Phantastic School.' These are they who behold Nature by torchlight instead of daylight and starlight. They delight in the glare of strong radiance, and the gloom of deep shadow. Yet we are perhaps wrong in supposing that Mr. Hill is more an admirer of such volcanic effulgence than of the serene glories of poets like Wordsworth; for he is a thorough imitator of them

all. He lays little claim to original talent, and we find even more in his avowed 'Imitations,' than in other portions of his handsome, but very badly printed volume. The first long piece, 'The Ruins of Athens,' is in the Childe Harold stanza, and very Childe Haroldish. The second, 'Titania's Banquet,' is pretty, but is rather the effluence of a mind where there had been a mingling up of Shakspeare's 'Midsummer's Night Dream,' Tom Hood's 'Plea of the Midsummer Fairies,' and Dr. Drake's 'Culprit Fay,' in 'most admired disorder.' Mr. Hill is not, however, without merit conspicuous and commendable in his class. He is an excellent versifier, and chisels out his poetical statues with laudable assiduity. If he does not produce a Laocoon, or a Venus, it is not his fault. He is, therefore, entitled to the credit of considerable success, particularly in his descriptive pieces, imitatory of Wordsworth. He chose a good master there—much better than Tom Moore, and other worthies, whose manners and dress are elsewhere assumed.

There are, nevertheless, as we have said before, displayed throughout this volume much both of taste and feeling; and it is only in the severe impartiality of criticism, adjudicating the formidable claims of a poet and his volume, to be connected with our permanent literature, that we have been compelled to use a single word of disparagement. As contributions in the magazines to our monthly anthology, as the offerings of a man of refinement and education to the enjoyments of social life, these poems would win for their amiable author all the praise and distinction of which a delicate and susceptible mind need be ambitious. We shall be willing, and even rejoiced, if the public voice, in investing him with the bays of the poet, will do more; and we cheerfully lend our aid to that great consummation of book-making, by copying the following excellent stanzas:

TO A FLOWER FROM THE ATHENIAN ACROPOLIS.

"Frail, withered leaf! thy tints are shed,
Thine odor scents a distant air;
No spirit here survives the dead,
And seems to say, 'The relic spare!'
Around me flowers in sunshine sleep,
Whose dewy sweets arrest the bee,
Or blushing at my window peep;
Yet do I turn from them to thee.

"For thou wast cradled—nurtured, where
The men, whose birth was Freedom's, rose;
There still survive their trophies; there
The bones of heroes—gods, repose;
Memorial of feelings high
As met the mount my awe-struck gaze,
Whose relics, though in dust they lie,
Bespeak the pride of former days.

"Prized, in remembrance of a spot,
Whose time-worn image haunts me still;
For who has marked, and e'er forgot,
The trophies of that glorious hill?
Still, though in shattered pride, elate,
But soon to perish, like the flower
Sprung from the dust that strews the seat,
The monuments of human power."

We now approach the most serious portion of our task. Mr. Rufus Dawes is a genuine poet. He has an eye quick to distinguish the beautiful, and an ear

sensitively alive to the delicate music that pervades the air, and yet comes from no visible instrument. He is much inclined to philosophical musing, and addicted to refined abstractions. His mood is wild and speculative, yet study has imparted to him good taste. Sometimes, however, he goes sadly astray. He has done so in the book before us; and were it not for an occasional

dash of purity and brightness,

Which shows the man of sense and of politeness,

we should have guessed every new poet to be the writer of 'Geraldine,' before Rufus Dawes. We protest against the nondescript style therein displayed—against the unnatural blending of the bold and strong with the frail and feeble. That splendidly vicious poem, Don Juan, was, if not the first, the principal source of the popular taste for this incongruous intermixture of high and low ideas in poetry. Hostile as it is to every precept of a correct, critical taste, this style continues to find its imitators. We regret to censure Mr. Dawes as one of them. His 'Athenia of Damascus,' and many of the miscellaneous effusions collected into this volume, evince his capacity for purer and better things, and make us certain that he can touch the finer chords of sentiment, and wake the deeper melodies of nature. 'Geraldine,' the leading production of this volume, is an exaggerated specimen of the villainous style of Don Juan. Its rhythm is the same, and the resemblance is pretty exact in all respects, save the number of lines in each stanza. Its versification is like that of Mr. Halleck's 'Fanny,'—than which no equal number of verses were ever more egregiously overrated—and its efforts at wit are something similar, though more vulgar and less comprehensible. 'Fanny' was famously liked in its day, and the Gothamites chuckled over it, because they entered fully into the spirit of its local jokes and personal allusions. If we remember aright, there are no stanzas in it worthy of preservation, except those often-quoted ones commencing—

"Weekawken! In thy mountain scenery yet!"

We challenge any stranger to account for the great popularity with which it was originally attended, and which its remembrance now maintains. The author, of course, is not at fault; his object was to amuse the town, and he succeeded. He probably never dreamed that 'Fanny' would be more than the belle of a single season; if her many admirers are now clamorous for her re-appearance in a new attire, he is not to be reprehended for acceding to their wishes, provided they are willing to pay him roundly for the trouble of a second bringing out. No similar apology can be made for the chaperon of 'Geraldine.' She makes her debut in all the pride and splendor of an elegant dress—by no means an unpretending aspirant for admiration. We are ungallant enough to pronounce the lady a fright, and to recommend her speedy consignment to the shades of quietest obscurity.

The critic can have a no more unpleasant duty to perform than one of condemnation, even where he feels perfectly indifferent to the subject of his strictures. This duty becomes peculiarly irksome when he takes up the work of an author, in whose favor he had been agreeably prepossessed, and finds nothing but stubble where he looked for little else than flowers. Were we

equally disposed, with his warmest friends, to extol Mr. Dawes' poetry, (and that we are, he has but to know us to feel assured,) we could not, if we simply regarded the author and not the public, avoid an exemplary, though brief, exposure of the gross demerits of the production which gives a name to this volume, and which is made first and most distinctly to demand the reader's attention. To do this in as few words as possible, and with the fewest possible citations, shall be our earnest endeavor. The choice of metre was the author's first misfortune. It is both feeble and common, and should have been rejected on both accounts. Yet, in the opening stanzas, the author puts it to its very best use, giving it all the tone and swell of which it is susceptible. The strain first assumes tenderness, in description, and then draws near to sublimity, in invocation. Afterwards it glides off into a metaphysical flourish, at the beginning and end of which a father and daughter are introduced—the first being surnamed 'Wilton,' and the latter christened 'Geraldine.'

Now the story runs that this young lady, as heroines always do in poems, falls in love with a good-for-nothing, 'ne'er-do-weel' sort of a scape-grace. His name is Waldron, and he loves Geraldine to distraction, as he takes pains to evince by killing a rival, and running away with an improper female, who is called Alice Acus, so as to rhyme with 'make us.' Previous to this delicate piece of attention on his part, he turns pirate—a regular out-and-out Corsair, and rushes, in the maddest spirit of desperation, to sea, in a 'long, low, black-looking schooner.' Geraldine, as is becoming under the circumstances, goes into a galloping consumption, looks pale and hectic, and cries pretty much all the time, because the cruel fates have separated her from her amiable admirer. Old Wilton, her papa, judiciously determines to carry his sick daughter to a warmer climate. They depart in a ship; which is of course attacked by the pirate Waldron; and the upshot of the whole matter is the indiscriminate demise, in the most horrible way, of the entire party. This rigmarole is more ridiculous in the author's verse than in our prose; it occupies, however, but a small portion of the poem, the chief part being the most irrelevant digression. Herein it resembles Don Juan most manifestly. There is a light mingling of coarse humor and affected pathos, a similar use of slang terms and vulgar expressions, the same striving after oddity of rhyme, with equally shocking success. There are, moreover, repeated attempts at the tender, the devotional, and the sublime, which, unlike those of Don Juan, are bombastic failures.

If the following commissions are not enough to send to the tomb of the Capulets any poem by any poet, then are slang, silliness, and smut, 'tolerable, and to be endured.'

"The goose that has the largest share of stuffing."

"And very often went to bed a beast."

"And many, who to ruin are turned over,
But 'go to grass,' to roll themselves 'in clover.'"

"Who awes the great menagerie of fops,
In admiration at his whisker crops."

"Alphesibanus might renounce his jumps,
To see *sallantes satyros* in pumps."

"Throw off your modesty, and damn your eyes."

"Suppose you have some half a dozen daughters,
From four feet high to five, with some odd inches,
But cast your bread, you know, upon the waters,
And save the shoe from telling where it pinches.
Throw open wide your doors—burn spermaceti,
And never more despair of Bell or Betty."

"And so the city Fair of matrimony
Blazes for ever, and the bids run high.

"What's offered, ladies, for this matter o' money?—
A hundred thousand in the stocks! who'll buy?—
Going!—who bids?—going!—he's good as Rothschild—
Gone!—and Miss Wilhelmina rocks the Goth's child."

"Poor devil that was married for his Bentons,
And having lost them, shares his rib's repentance."

"But now-a-days instead of wasting pearls,
They have a way of melting down the girls."

"Pope Alexander always had his followers,
As Alexander Pope has had his swallows."

"May rob the very altar of a horn,
'Sprinkling with rosy light the dewy lawn.'"

"Now there are many different kinds of lions,
As there are wares, from porcelain to 'Brummagen';
Some manufactured by the curling-irons,
And others, the museums, should you rummage 'em."

"While o'er the blue, MacAdamised rotundo,
Flectit equos, curruque volans, dat lora secundo."

"At length they heard the dipping of the oars,
And Wilton saw at once the frightful cause."

These four last are the most shocking violations of Nick Bottom's rule we ever heard of; though the sense can hardly be said to be sacrificed to sound. They are infinitely worse than the Yankee distich—

There goes our old mill down the water,
A darn sight faster than it ought to."

We shall cheerfully bid adieu to this ridiculous performance with the quoting of certain passages which read, not as if they were imitations, but as if they were 'scissorized' out of the whole cloth of Don Juan:

"—gently raised
Her dimpling hand of snow, where one warm kiss
Thrilled to her heart with love's delicious bliss."

"The morn is up again—the dewy morn!
Fresh from the bed of night, in matron bloom,
Weeping to see so many take a 'horn'
And walk out rosy from the soda-room."

"Not that there's any pleasure in the danger,
More than being shot at with ounce bullets.
'T is sweet to seem to be to fear a stranger,
The while we wish that we were feeding pullets.
Most men can fight a duel to the letter;
Yet when a man survives, he feels the better."

"Long did the combat last, till only five
Were left within the Vulture. They at length
Were overpowered by numbers yet alive—
Faint with the loss of blood, and without strength.
But while the pirate was of plunder thinking,
He found both vessels filling and fast sinking."

"The hot sun blazed upon their naked heads,
And boiled the blood within them—till some grew
Mad, and blasphemed and tore their flesh in shreds,
While others, starving, helped the deed to do—
Then, weeping in wild mirth, drank the dark gore,
And cried aloud to God, and shrieked for more."

"Arm locked in arm, they turned them from the crowd,
And gazed upon each other"—

Like the Irishman's portrait, each one of the preceding may be said to be more like than the original.

Turn we now, with a feeling as grateful as 'the cool plashing of a plangent wave' to one who is travel-sore, and nearly stifled with the dust of the desert, unto 'Athenia of Damascus.' Here is a delightful dramatic poem, the flow of whose lines, like that of a palm-shaded rivulet, is pure, limpid, and sparkling.

The subject is too lofty for the modern stage, although with judicious curtailment, it can doubtless be represented with effect. The beautiful thoughts and language, with which it is rife, would be lost in recitation; yet it has a sufficiency of incident to keep alive a pleasant interest.

It is deep tragedy. We are trespassing beyond our limits, and can gratify our reader with but one charming extract.

ACT II.—SCENE I. *A pleasure ground in Damascus.*
(ATHENIA alone.)

ATH.—I will not pluck thee from thy parent tree,
Sweet rose of beauty! while the rain-drops hang
O'er thy clear blush their modest ornaments—
Another hour shall glory in thy smile,
And when the day light dies, the queen of heaven
Shall fold thee in a silver veil of love,
Forgetting her Endymion. Foolish heart!
As if I loved!—Yet truly, as I live,
I fear I love the very thought of love!
Oh, childish joy—indefinite delight!—
That I should dream so sweetly—and at morn
Find my eyes wet with tears!—

Enter CALOUS.

CAL.—[Embracing her.] Athenia!

ATH.—Thank thee, Heaven!

CAL.—What kind indulgent power
Has smiled on Calous, that so much bliss
At once should dissipate his darkest gloom,
And make a noon of midnight!

ATH.—Thank thee, Heaven!

CAL.—Say, then, thou lovest me still, Athenia?

ATH.—Love thee! Indeed I know not if I love.
When thou art nigh, I fain would be alone—
And when away, I'm sad and desolate:
Beset this maiden fickleness of thought!
I would not give the treasure of my love
For all the wealth that earth or ocean covers:
And thou wilt save our altars, Calous!
The holy cross, and every dear remain
Of sainted martyr, still inviolate!
So shall we wander in our hours of joy,
On the green margin of life's sunny stream,
With more delight than ever—shall we not?

CAL.—What grief can throw a shadow o'er our way,
When love is cloudless?—let thy heart be still,
Young Halcyon, on its marble resting place!
There is no fear, Athenia, that the foe
Can harm Damascus: though his arm is strong,
The arm above is stronger. Even now
The victory is ours.

ATH.—Alas, Damascus!

CAL.—Chase these vain fears!—and dost thou, maiden,
think

The soil where Adam trod in majesty—
The land Jehovah guarded, when the fiend
Drove Saul to persecute—and where the light
And breath of God softened his heart of steel,
Turning his thoughts to pity and to love;
Think'st thou this consecrated place can yield
While He is with us, as He e'er has been?

ATH.—His ways are dark and deeply intricate:
When Heaven was kindest, innocence was lost,
And Paradise gave birth to misery.

CAL.—Let not such thoughts plant lilies on thy cheek,
My own Athenia! All will yet be well.
Come, let me bind a chaplet of fresh flowers
To deck thy temples: I will steal an hour
From anxious care, and sacrifice to love
The hopes and wishes I have nursed for thee.
Not always thus shall be our wayward lot,
To wander here and steal from love's rich store
These precious moments of sweet ecstasy!
Not always thus, my girl! When dove-eyed peace
Spreads her white wings again, the sacred tie
Shall bind our wedded hearts: till then, my love,
Thy smile shall cheer me on in peril's hour,
With its dear influence!

After 'Athenia' comes 'Lancaster,' a poem that has many excellences, and is worthy of the genius of the writer. It is, however, upon his miscellaneous pieces that Mr. Dawes' reputation as a poet mainly depends. The melody of their versification is truly enchanting. The ideas, too, are worthy of such exquisite expression. The public are aware of the beauties of all these productions, for none have been more liberally transferred to our literary journals. We have space for the shortest only:

ART THOU HAPPY, LOVELY LADY?

Art thou happy, lovely lady,
In the splendor round thee thrown?
Can the jewels that array thee
Bring the peace which must have flown?
By the vows which thou hast spoken,
By the faith which thou hast broken,
I ask of thee no token
That my heart is sad and lone.

There was one that loved thee, Mary!
There was one that fondly kept
A hope which could not vary,
Till in agony it slept.
He loved thee, dearly loved thee,
And thought his passion moved thee;
But disappointment proved thee
What love has often wept.

Had Mr. Dawes been a common-place poet, or simply a new claimant for distinction, we should have been more prodigal of commendation, and more niggard of blame. Bind up this volume without 'Geraldine,' and you have an admirable collection of poetry, fit to appear worthily, if not the first, in a 'Library of American Poets.'

Some asinine individual, who must have been as partial to paradoxes as his long-eared archetype to thistles, has taken upon himself to remark, that there are few or no materials for romance in America. This critic must be nearly related to the observing person of whom Wordsworth remarks:

'A primrose by the river's brim
A yellow primrose was to him,
And it was nothing more.'

It would, perhaps, not be too extravagant to say that the poetical resources of our country are boundless. Nature has here granted every thing to genius which can excite, exalt, enlarge, and ennoble its powers. Nothing is narrow, nothing is confined. All is height, all is expansion. Cliffs throw aloft mighty bastions; mountains lift impregnable parapets to the sky; rivers 'roll in majesty;' lakes spread abroad like seas; and prairies meet the wide horizon all around with undula-

tions of magnificent verdure. Here, too, are forests, in whose vast dim cloisters, the mind may feel a sense of loneliness and an overwhelming awe, which no fabrics of human rearing could impart; for here, in ancient days, man came to build his altars and to worship. These trees are glorious columns; these leaves are gorgeous tracery; here is a 'majestical roof, fretted with golden fire;'

'The groves were God's first temples!'

In America, too, are diversities of climate, yielding diversified delights. Here Winter erects his palaces of glittering ice, while there Spring displays her flowery avenues and her green arcades; here Summer shows her silver fountains and her billows of golden grain, when in another region of our vast domain, Autumn pours from her exhaustless horn the copious harvest and transmutes, with a subtle alchemy, the emerald of the woods into ruby and topaz, and

'All the hues that mingle in the rainbow.'

Our history, too, is poetical. Let Time but wrap it in his mighty shadows, and what were the fables of old compared to our familiar story! How inspiring, how sublime the contemplation of those few brave hearts who, led by one greater than Leonidas, dared to cast themselves into the rocky defile of freedom, opposed advancing armies, died not, but conquered! The blood tingles and rushes through our veins as we trace these words. Dull, cold, critical as we are, we are almost incited to the utterance of burning thoughts. Shall there, then, be no more poets, in our 'dear, dear country?' Shall there not be one great poet? That man whose eye can roam over the borders of our land, and see these things of which we have spoken, needs not the spirit of prophecy to answer, "Yes!"

THE MOTHER'S RAINY DAY.

BY MRS. SIGOURNEY.

When the soft summer-shower, whose herald-drops
Stirr'd the broad vine-leaves, to an answering joy
Swell to protracted rain,—soothing the mind
With sense of leisure,—Mother, haste to call
Thy little flock around thee. Let them hail
The rainy day as one when tenderest love
Brings forth for them its richest stores of thought.
Think'st thou the needle's thrift, or housewife's lore,
Yields richer payment? Mother! thou may'st stamp
Such trace upon the waxen mind, as life,
With all its swelling floods, shall ne'er blot out.
So, take thy bright-eyed nursling on thy knee,
And tell him of the God, who rules the cloud,
And calms the tempest—and the glorious sun
Brings forth rejoicing from the rosy east,
To gild the morn.

Unlock thy treasur'd hoards
Of hallow'd lore,—how little Samuel heard
At midnight, 'neath the temple's solemn arch,
Jehovah's voice, and hasted to obey,—
How young Josiah turn'd to Israel's God
Ere yet eight summers ripened on his brow,—
And how the sick child to his father cried
"My head! my head!" then in his mother's arms

Grew pale and died,—and how the prophet's prayer
Did pluck him from the jaws of death again.
Tell too, thy little daughter, while she sits
Heedful beside thee,—how the shepherds heard
The harps of angels, while they watch'd their sheep,—
And how the infant Saviour found no bed
Save a straw manger 'mid the horned train,—
And how he rais'd the Ruler's daughter up,
When on her dead brow lay the weeper's tear,—
How at the tomb of Lazarus, he mourned
With the sad sisters—and, when the wild sea
And wilder tempest raged, stretch'd out his hand,
And saved the faint disciple on the wave,
Who pray'd to him.

Then, when the moisten'd eye
Reveals the softening soul, cast in thy seed—
And Heaven and holy angels water it!
So shall the spirit of the summer-storm
Gleam as a rainbow, when thy soul goes up
With its dread company of deeds and thoughts,
To bide the audit of the day of doom.

Hartford, Conn., July 24, 1839.

THE MISSIONARY;

By the authoress of "The Poet," "The Poet's Destiny," &c.

CHAPTER I.

It was on a mild autumn afternoon that two young men sauntered leisurely through the grounds attached to ——— university.

"This place has changed but little since I was last here," said one of them; "and yet I look on its 'old familiar' features with feelings widely different from those they suggested two years since."

"You are changed, Eugene," replied his companion; "the same two years which have left, as they found me, a student in those old halls, have made you a calm, thoughtful man, forgetful of the gay employments of boyish days, or remembering only to repent them."

"Nay, Charles, you are mistaken; I look on the pleasures of the past with no regret, save for their departure; and its friendships, I hope, will long cheer my lonely pilgrimage."

"Have you forgotten the one tenderer tie of that time?" asked the other with a smile; "or was that too relinquished with the dull studies over which it cast a charm?"

An expression of pain crossed Eugene's brow, and he paused for a moment before he said, "I can have no love hereafter but my profession; for the one you name, it is sorrow to recall, and its hopes are gone forever!"

"Forever" is a lover's word, Courtland, and means nothing as you use it. But seriously, Eugene, why do you speak so despondingly on this subject?"

"Because I have thought of it long and sadly," was the answer; "and the happiness of this tie can be mine no longer. I can offer your cousin no fair prospects; for since we last met my plans are altered, and now the church must be my bride."

"But why must your engagement be dissolved?" persisted Charles. "You are both very young; and with your eloquence in the pulpit, Eugene, you can never remain unknown and unsought."

"I have not told you my reason ; I am going abroad as a missionary !"

"Going abroad as a missionary !" repeated Charles slowly, and looking with the greatest surprise on his friend ; "you cannot be in earnest, Eugene !"

"Is this a theme for jesting ?" answered Courtland. "You know, Charles, that I studied for the ministry against the wishes of my friends ; I devoted myself voluntarily to my course, and would you have me follow it only when it leads through a pathway of flowers ?"

"But you carry your ideas of duty too far," replied Charles ; "for though you have selected a profession which in a measure debars you from the gaieties of society, it need not deprive you of what is dearer. Why leave home, friends and kindred, to seek a foreign land, when the wide field of our own country yet offers so much to improve ?"

"Here there are many engaged in the same holy work," he answered, "and my aid would avail little ; but in the distant wilderness, I may kindle a light where all now is gloom, and rear an altar of faith amid the darkness of ignorance and superstition !"

"You are enthusiastic. Courtland, you forget, in your ardor, the difficulties of the task. You must encounter dangers, sorrow, and separation from all you love, to win an uncertain end—to attain that reward which so many have toiled for in vain. You should not act rashly in an affair like this ; for remember how deeply your conduct will influence the happiness of many !"

"I have meditated long on my resolve," replied Eugene, "and I cannot change it ;—but let us leave this subject, my friend, for I would not embitter with vain regrets the few hours which yet remain for us to spend together." And in reminiscences of their college days, the friends forgot, for a time, the sad clouds which darkened the horizon of the future.

Eugene Courtland was an only child, and the recent death of his widowed mother, had made him an orphan. Moving in the first circle of society, and inheriting wealth, his choice of a profession astonished, and in a degree disappointed, the friends who had marked out for him a more brilliant destiny. Rich, handsome, and talented, it was, perhaps, singular that one so young and surrounded by so many temptations, should have devoted his life to a course which must shut him out from those pleasures and excitements, that made the joys of his younger years : but Courtland's was too pure a spirit to love such pleasures long, and he turned from the emptiness of fashion, with a feeling of weariness, and sought relief in the holy studies which had made him what he was. Without any of that ambition, which even in religion finds a place, Eugene's was the eloquence of the soul ; and the deep, calm voice that lent melody to his words, had already lured many to seek that Heaven where hope is lost in bliss. With his advantages and connexions, he could not be unsought—and even at the time of my story, his name had won interest and fame. His ardent zeal and constant anticipations of success in whatever he attempted, if exerted in any other cause, might have made him a visionary ; but his dreams were so firmly based, and his wishes so free from the taint of earth, that he might rather be deemed an enthusiast. Courtland's chief fault, was the extent to which he carried his ideas of duty—his entire

sacrifice of every personal gratification, to the great end for which he labored. And even this defect, though sometimes leading to unnecessary privations, was too nearly a virtue to be blamed. A strong example of this trait, was his decision to leave all the thousand blessed ties of friendship and love, for a stranger's dwelling and an exile's lot. That this determination cost many struggles, we cannot doubt—for in common with all of lofty intellect, Eugene felt that powerful love of home, which lingers faintly round every heart, and finds an echo in every spirit. Perhaps there were moments when sadder thoughts usurped the place of hope—when he acknowledged that the trials willingly encountered, were severe indeed ; but this conviction, while shadowing the present, had no effect on his purposes, and he ever turned with purified feelings, from his existing griefs, to look on that troubled hereafter which promises so much, to fulfil so little !

CHAPTER II.

"Of course, Gertrude, you are going to church to-day, to hear the 'farewell' of your beloved ?" said Helen Derwood, as she looked up with a smile from the letter she was writing, to address her cousin.

"Yes, I am going," answered Gertrude quietly ; and the smile she attempted to force, was lost in a tear that asked no bidding.

"What wretched taste Mr. Courtland displays," continued Helen. "I really once thought him a delightful person ; and his being a minister, I could forgive—for the dress becomes him so well—but when he chooses to act the saint so far as to be a missionary, I positively cannot pardon him. Is it not ridiculous, Gertrude, to fancy him, with his splendid beauty, preaching to a congregation of savages, who may, perhaps, take his life by way of rewarding his kindness ?" And Helen threw down her pen to laugh at the picture her imagination had drawn.

"I see nothing so ludicrous in the idea," said Gertrude, with more spirit than she generally ventured to exhibit before her gay companion.

"Mr. Courtland may carry his self-devotion farther than necessity demands, but his motives at least, should shield him from ridicule !"

"Bravo, my fair cousin !" retorted Helen sarcastically. "You are really eloquent on the subject. May I be permitted to ask how long Miss Gertrude Leslie has undertaken the defence of her lover ? She is truly disinterested, when this same lover has grown so indifferent to her attractions, as to leave them willingly, perhaps forever !"

Gertrude's eyes filled with burning tears, and attempting no answer to her laughing friend, she silently quit the room.

A smile of contempt, blended with triumph, curved Helen's haughty lip, and she resumed her pen to continue her letter. This, as it may serve to explain her motives, we will read as she writes :

"You cannot fancy, dear Caroline, how tired I am becoming of this stupid place ! For the first two or three months of my visit, I had enough to amuse me, in laughing at my aunt's visitors and plaguing my cousin Gertrude ; but now, even these resources fail me.

One cannot laugh at the same people forever, and Gertrude is so amiable, that my teasing produces no effect more entertaining than silence, and, sometimes, tears. She is a lovely little creature, but sadly deficient in energy and spirit; any person may control her wishes in trifles, though I doubt if she would be easy to rule where her feelings were deeply interested. Just at this time too, she is wrapt in the rose-colored mantle of her first love, and, as you may imagine, is no very agreeable companion, except to the gentleman of her choice. Now who do you think he is? No other than my earliest idol, the young, handsome, rich and fascinating Eugene Courtland! You remember how I used to rave concerning this same Eugene, and when he studied for the ministry, how good I, too, suddenly became! Well, this very hero of my young dreams, is the *fiancé* of my fair cousin.

"But the best of the tale you have yet to hear—for though they seem devoted to each other, and I sincerely believe they are, he in a fit of romantic enthusiasm, has resolved to leave his betrothed and go abroad as a missionary! Why, I cannot fancy—for with his celebrity he could always gain notice, and with his attractions always win admiration.

"I believe Gertrude would willingly marry him, even now, and go with him, but my aunt has other prospects for her, and I suppose she will be left to lose at the same time both her spirits and her lover. In truth I do not much pity these two, though Gertrude is my cousin and Eugene was my 'worshipped-one;' for she positively provokes me with her want of character, and I have never quite forgiven him his indifference to *mes beaux yeux*. I expect the romance will end in his dying a martyr's death among the savages, and her being led to the altar by some persecuting suitor, as a broken hearted bride. This last occurrence would not surprise me; for Gertrude's sweet, spiritless manners, please the men here, and her mother is strongly advocating a certain rich gentleman's cause. He is silent, stupid, and some twenty years older than his lady-love; but my aunt, in her worldly wisdom, has forgotten to count his follies and years, while counting his wealth. Is it not refreshing to find among the sentimentalists of the present day, one whose aims and views are so like our own, as those of *ma tante*? Gertrude's goodness tires me, and I feel relief in looking on the politic manœuvres of her mother, who, by the way, has made me promise to use my influence in changing my cousin's feelings for Courtland. When this was first proposed, I made a show of reluctance, and talked a good deal of nonsense about blighted affections, blasted hopes *et tout cela*, just to impress my companion with a due sense of my exalted disposition. After the graceful opposition had been carried far enough for my purpose, I became gradually convinced by her sound reasoning, began to discover that Gertrude's 'strange infatuation' should be discouraged, and then gave the required assent. I could not have been allotted a more pleasant task; for Gertrude, as you may see, is no great favorite of mine, and I long to be revenged on Courtland for his want of taste; so I take every possible opportunity of ridiculing him, and try to pique her into anger at his late determination. With him, I can do nothing; for even I, the proud and successful coquette of the last winter, feel abashed before the calm, holy dignity of his perfect beauty! Whether

I shall be able to make these young lovers quarrel, remains to be seen; but, if perseverance can ensure the result, I have nothing to fear."

With timid steps, Gertrude entered the church, where, it might be, for the last time, she was to hear the lofty eloquence that so long had haunted her spirit. Her cheek was pale, and looked pure as snow in the sunlight, contrasted with the dark ringlets clustering beside it. Heavy tears gathered in her eyes, and her mother and cousin, noticing her emotion, exchanged glances in silence. To Gertrude, no thought was present, save one sad anticipation of the future, and her vision was only broken by the deep, earnest voice that made her sweetest music. She trembled when those tones fell on her ear, as she remembered with how much of earthly love she approached the shrine of Heaven. "It is for the last time!" her heart whispered, even while it accused; and she did not struggle to correct a fault which might never be committed by her again.

Few were there who looked without interest on the young and gifted being standing before them, wrapt in holy devotion. Strange beauty was on his pale thoughtful brow, round which the bright hair shone like a golden halo, and in the soft, liquid eyes that were clear and placid as the Heaven he preached. The rich red lips had besought comfort for many a mourner, and the peaceful smile which parted them, reflected unshadowed the loveliness of his spirit.

Gertrude gazed almost in idolatry, as she listened to the words of unfeigned humility, uttered by one so favored among men; and when, for the last time, he invoked a blessing on his hearers, the kind hopes of many hearts were whispered in supplications for his happiness. Long and solemn was the voiceless pause that followed his parting benediction, and with a faltering step the missionary left the sacred temple he might enter no more. His pale, spiritual face, glowed with heavenly enthusiasm, and if some earthly sorrow mingled there, it served only to adorn the brow it saddened.

In silence that day the lovers met and parted, for the hearts of both were too full for expression; and after a single pressure of his loved one's hand, Courtland left her to seek consolation in solitude and prayer.

CHAPTER III.

Gertrude was alone in her room, thinking mournfully of coming days, when a letter was given her, and the single glance that showed Eugene's writing, called a bright blush to her fair young cheek.

The note was from Courtland, and contained these lines: "Gertrude, dear Gertrude! when we met yesterday, I could not speak, even to you; so many memories of scenes gone, so many thoughts of those to come, were crowding upon me—and even now I write you these hurried words because I would not risk, by a meeting, the composure we are each endeavoring to attain. I am aware, dearest, that many deem my determination to go abroad, a rash and useless one; you too, might think it argued indifference to the vows which bind us, did you not know me well enough to forbid a doubt of the love which has been yours for years. Even they who smile most scornfully at what they term my wild enthusiasm, would cease to condemn the resolve,

could they realize the heavenly aspirations which attract me onward. The self approval which I feel, I regard as a token of divine approbation—as a sign, that however unworthy the offering, the sacrifice of home and hope, will be accepted on high. The struggle will be fearful, Gertrude; but will not that very struggle purify and exalt the deed that demands it? The thought that you will suffer by this act, is my darkest memory; for I would not sully with a tear for me, the sweet eyes which so often have greeted me in kindness. But it is not to say this, that I write to you: it is to give back, if you will, the faith you pledged before my lot was changed. Think not, my dearest one, that I offer this without trembling. Too many tender hopes are clustered round the promise of your love, for me to relinquish it calmly; but it may be, it *must* be, long, Gertrude, before we are again together, and I cannot retain that promise when you hereafter may regret its gift. Act as you think best, dearest; if your decision be one which will insure our meeting after the present trial hath gone by, I will bless you from my soul; and the hope of return will go forth with me, as a joy and reward. If you deem it wisest to dissolve an engagement offering so little to tempt you, then, be it thus; I will obey that mandate also, and my prayers will ascend for the tranquillity of her whose love I treasured, and whose friendship I should prize. This evening, Gertrude, I shall hear your resolve, and meet you for the last time during many months. Ask peace from Heaven, my cherished one, and He whose eye sleepeth not, will shed a balm even over the bitterness of our farewell!"

For many hours after reading this note, Gertrude wept wildly; and when, exhausted by sorrow, she sunk into a troubled sleep, the bright tears that rested on her flushed cheek, glittered like dew-drops on the leaf of a rose.

The following letter from Helen to her friend, will serve to unfold the continuation of this story.

"You would really be amused, *mon amie*, could you see the tragedy which is every day performed here by my little cousin Gertrude! We were sitting with my aunt this morning, and she, in her usual quiet manner, began, cautiously, to speak of the wealth, amiability, and other good qualities of Mr. Mervin, the gentleman whose suit she advocates. I too, occasionally joined in his praises, though, *entre nous*, I had to manufacture virtues for him, as he has nothing on earth to recommend him but his riches. Gertrude did not notice the conversation, and sat silent, looking the very picture of despair. At length, emboldened by this indifference, my aunt spoke of Eugene, with many graceful regrets for the want of regard for his friends which his conduct evinced. But to this, even Gertrude could not listen, and she hastily left her entertaining friends. I did not see her for two or three hours after this scene, and then, on going to her room, found her asleep with a letter in her hand. As the letter was from Eugene, I took the liberty of glancing over it. The style was sad and affectionate; he offered her the choice of keeping or breaking their engagement, and as I recall his words of tenderness, I almost marvel at the disposition which causes Gertrude to submit to a separation that costs them both such suffering. Had Courtland written me such a letter, I positively believe, that with all my fondness for society and desire for admiration, I would have been silly

enough to volunteer my attendance during his expedition. But Gertrude, notwithstanding her romance, lacks the energy to take such a step. I sometimes fear that even the united skill of my aunt and myself, will fail in its intention; for though obedient in every thing else to her mother's slightest wish, Gertrude cannot be persuaded or forced into discarding Eugene, or encouraging another. She is to be pitied, and I sometimes *do* pity her, but the recollection of my unsuccessful attempt to captivate Courtland, comes back as an incentive to a perseverance which will give me a triumph over him. Gertrude must decide speedily, for the missionary leaves to-morrow. Even if she should not now retract her vows, I hope much during his absence, from continued entreaties and her own want of firmness. To be defeated now, for the second time, by Eugene, would be mortifying indeed, while to succeed, will gratify the lurking dislike that is excited by thoughts of him who passed me by to love one like Gertrude."

Some idea of Helen's character, may be gathered from these specimens of her confidential correspondence, though she was too habitually insincere to reveal all her feelings, even in such intercourse. Handsome, rather than beautiful, with brilliant powers and animated manners, Helen possessed exactly the traits which are calculated to produce, at first, a favorable impression in society; while deeper knowledge of her disposition almost always erased the earlier and gentler judgment. Where Helen wished to please, she rarely failed; and this sort of success, had given her a reliance on her attractions, which made indifference to them an offence she could not pardon. Toward those she disliked—and their name was Legion—she was haughty and satirical; for with naturally quick perceptions, she exerted the unenviable talent of turning into ridicule all who fell under the ban of her displeasure. Gay, spirited and confident, Helen's mind was well fitted to control her cousin; for Gertrude, though superior in amiability, was generally deficient in the energy and self-possession which distinguished her companion. The origin of Helen's feelings for Eugene, her letter has confessed, and amid her liveliness and pretended indifference, we may, perhaps, trace even yet some slight hidden lingering of the tenderness that once marked her opinion of the missionary. But if such were the fact, there was little noble or refined in a sentiment whose disappointment urged her to sacrifice all the earthly happiness of a being like Courtland.

CHAPTER IV.

The fair young moon hung like a silver crescent from the ceiling of Heaven, and the stars in their shadowless beauty were pure and bright as a christian's hopes. Far away reposed a few gorgeous clouds which the sunset had blest, and in gratitude they still gilded the place where their glory had been given.

Low and tender were the words that the lover breathed that night to the lady of his choice, and she listened with sad attention to the soft, modulated tones which were sweeter than the whispers of the summer wind. She knew that voice would soon be to her but a remembered melody, a sound to be heard no more save in the music of her dreams, and the deep eyes that looked on

her now, would for many years, meet hers no longer. The hand that now held hers, might clasp it not again, and the brightest star that lit her sky, was departing for another sphere. Even if they met again, both would be changed—and to those who love, what is change but sorrow? Gertrude spoke not, and Eugene was sad, but calm. He talked of resignation, of hope, and a firmer trust on that One, for whom he was leaving all.

"But, Gertrude," he said, "I know that during my absence, your love will be sought by many, and I would not bind you by vows, from which time may steal their charms. If one more worthy of your affection should ask it, consider yourself free, dearest, from a promise, which, however precious to me, I would relinquish for your happiness."

A passionate burst of tears was her only answer; and with a faltering tone, Eugene continued—

"Be calm, my Gertrude; for my sake, control these feelings; let not the thought of this last meeting be darkened by such sorrow. If you would now dissolve the tie between us, I will submit to the decision and return here no more!"

Gertrude raised her full dark eyes to his, and in the concentrated whisper of intense emotion, she answered, "I will be yours, Eugene—and yours only!"

Those words went with the wanderer to another land, and when the wild waves of the deep ocean foamed between him and home, that promise dwelt in the exile's spirit, his only hope on earth.

"I must tell you, dear Caroline," wrote Helen to her friend, "the continuation of the lovers' romance. *Adieu!* the affair has ended for the present, as I expected, in the gentleman's departure alone, and the renewal of my little cousin's vows. My efforts thus far, have entirely failed; but, though disappointed, I am not surprised, for I well knew that months of artful persuasion would lose their effect before one loving whisper from Eugene's lips. My aunt is now exerting all her powers to make a match between Mr. Mervin (the rich lover, *vous savez*,) and her daughter. Though very much doubting her success, I offer no opposition to the plan. Gertrude has appeared lately in a new character; for the once irresolute tone of her disposition has given place to a gentle, but steady reliance on her own decisions. I confess that this change has altered my views; and I sometimes think, instead of interfering with Gertrude's love, it would be wiser to practice my arts on the wealthy lover. I know my cousin would thank me for monopolizing his attentions, though my aunt might object to the exchange. What think you of this scheme? If I mistake not, the gentleman would prove an easy capture; so my only difficulty would be to reconcile my aunt to the affair. She is bent upon marrying her daughter to a rich old simpleton, but if that cannot be done, she might surely allow her niece the second opportunity. Mervin would be no contemptible prize for me, as I am not sentimentally inclined towards any one at present, and his gold is a great temptation. I had a kind, brotherly lecture from Charles, last night, on my conduct to Eugene and Gertrude, and he tried to make me promise that I would not interfere with them for the future. I would promise no such thing, just to plague Charles by opposition—and he left me really angry at my obstinacy. Did you ever hear of such an unreasonable person as this brother of mine? He fancies be-

cause he admires Eugene so highly, that I must do the same; two years ago I might have listened with more interest to his praises—but now, *tout cela s'est passé!*"

CHAPTER V.

A year had gone by since the events of the last chapter, and Gertrude had in a measure recovered her usual tranquillity. Letters from Courtland, which reached her at long intervals, taught her to look on the future with a less anxious eye, and to rest firmer trust on Him who had guided the wanderer's way.

Mrs. Leslie had ceased to combat with her daughter's wishes, when she found how much they effected her happiness—and released by Helen's marriage, from her importunities, Gertrude gradually became reconciled to her situation.

But at length Eugene's letters grew sadder; he alluded more rarely to his return and oftener urged submission to whatever might be in store for them. His words were less ardent, and his recollections of home were hallowed and painful as memories of the dead.

Gertrude felt alarmed at this melancholy; she scarcely knew why, but it was so unlike Courtland's usual cheering style, that a thousand vague fears came over her like shadows.

She fancied him sick and alone in a far off land, with no friend to comfort and soothe him. She pictured his solitary dwelling, wanting the light of a loving eye, the music of a tender voice; and for a moment she was tempted to doubt the wisdom which heaped so many trials on one so pure and good. At last came the confirmation of her apprehensions; Eugene was ill. He said he might linger long in suffering, but he bid her not hope for such a life. The writing of the letter was almost illegible, and the eye could scarcely recognise in its irregular characters, the flowing lines of Eugene's hand. For an instant, Gertrude was unable to credit the fearful tidings, but the sentences were before her which his trembling hand had traced, and she could not doubt them.

Wild and fervent was the first prayer of the betrothed for her idol's life; then came the thought of his humility, compared with her daring supplication, and with a chastened spirit, she asked mercy for him who had left all on earth to gain hope in Heaven. Silently Mrs. Leslie read the intelligence, and with sorrow for his affliction blended recollections of her own conduct toward the exile. Gertrude, too, her child, her only one, was mourning; and the mother knelt, for the first time, in true and lowly pleading for blessings on the missionary.

"Mother," said Gertrude, and her voice was low and earnest; "mother, I would not grieve you, but Eugene is sad and comfortless, and he must not die alone!" Mrs. Leslie had expected this, but she replied not as she gazed on the pale face of her child. "Do not deny me, dear mother," continued Gertrude in the same deep, passionate tone; "I would not otherwise leave you, but he is suffering. You have kind friends who will supply my place during the few months of our separation, but he has none to cheer him. Give me your blessing, mother, and let it go with me to his loneliness!" "Be it as you will, dearest!" was the faltering answer, and the parent's benediction was mingled with her daughter's tears.

LETTER FROM HELEN MERVIN TO HER FRIEND.

"How I wish you were near me, *ma chère* Caroline, that I might have some society that I could enjoy! Now, do not imagine from this introduction, I intend being sentimental, for I have no such idea; but indeed I do feel dull and desperate, shut up in this castle-like country place, away from all rational companions. Not that I am really alone, for Mr. Mervin is here with some of his friends; but I do not include either the host or his visitors among companionable people. This house itself is delightful, and its decorations are splendid; but they are nothing to me in my solitude. Besides the disagreeables of a silly husband and his still more stupid associates, I have the charming prospect of spending the next winter at this same gay establishment, instead of going, like every lady else, to the city. Dependant as I am on society for pleasure, picture if you can my gloom and anger at this sage resolution of my intellectual *mari*! I little suspected when I exerted so many attractions to win this man, that instead of spending his wealth and laughing at his follies among a brilliant crowd, I should be condemned to spend my time in the country, with him forever at my side. I sometimes wish I had made Gertrude marry him, but it is too late for repentance now. There is yet another reason for my dejection. I have just heard that Eugene is ill. My old wish for a triumph over Courtland has vanished, and I sometimes think if I ever loved any body it was him. Compare, just for curiosity, Caroline, the reality of my first love with my descriptions of Mervin; for I cannot pay him even the poor compliment of being my last love. We are not the most affectionate people in the world; for I never was intended for a quiet domestic character, and I suspect even Mervin's dull mind has discovered that fact. You recollect how I rejoiced in his conquest and prided myself on winning him from Gertrude! I begin to think my joy then was as illy founded as my wisdom; and unless I can have society, to forget in its giddy tumult the want of social sympathy, my fate will be clouded indeed.

"But enough of these sober realities; I will not tire you with my regrets; but sometimes, Caroline, I envy Gertrude her pure love for Courtland, and I too, would have undertaken the voyage before her, to meet the gentle smile and tender greeting that will be her best reward!"

CHAPTER VI.

The round moon rose high in the cloudless heavens, and a light breeze curled into tiny waves the waters of the blue ocean. A single vessel held its solitary course, and on its deck sat the maiden whose love, like the mariner's star, had guided her across the wide sea. Her eyes watched the sparkling path behind the ship, and her heart throbbed quicker, as she remembered that another sunset would find her with Courtland! By her side stood a man on whose brow years and cares had left their mingled seals, and among whose dark locks time had scattered silver. He also, was a missionary, and under his guidance Gertrude had left her home. Like Eugene, he too had come on a holy errand—but his life had lost its freshness, and in quitting his early

haunts, he quitted only the vivid memories of sorrows gone. No young heart had mourned his departure, for all who loved him, were at rest; and in seeking another dwelling, he was seeking also a peace and happiness he had not left. During their tedious voyage, he had been to Gertrude kind as a father, for her placid beauty recalled the soft eyes of his own children, whose sleep was in the grave.

He had soothed her fears, revived her hopes, and knelt with her in prayer; and under his instruction she learned a lesson of lowliness. His mission commanded her interest, and created a yet loftier reverence for those who forsake all things to go forth among strangers and do good!

Disturbed were Gertrude's slumbers during that last long night upon the ocean, and with the eagerness of a child she hailed the blue shadowy outline of land which greeted her waking glance. Until then, she had clung only to the fair side of the future; but now that her journey was closing, a throng of fears flitted before her. Eugene might be dying—might be dead—and all was forgotten in that one thought.

"Do not despond, my child," was her companion's encouragement, as he saw the large tears resting on her lashes; "our prayers have been offered in sincerity, and they will not prove in vain!"

* * * * *

The tall palm trees reared their crests above the missionary's dwelling, and the rich vines of a sunny clime, entwined its lowly roof. There was little of improvement around, but gorgeous flowers of many hues had sprung up unsown, and art was scarcely missed where nature had lavished so much. Birds of brilliant plumage fluttered among the trees and offered the sweet incense of their evening song. The sun was declining, and it cast over the dark woods the glory of its own death—giving earth, sky and water a lustre, pure and bright as the light of fame which gilds the patriot's tomb.

Beside a table within the hut, sat Eugene Courtland; a book lay open before him and a pencil was in his hand, but his thoughts were not with his studies. His cheek had parted with its early flush, and his eyes, though beautiful as ever, were calmer and sadder; his brow was pale, and placid; suffering had left there no darkness and no frown. The meditations of the solitary, were mournful; and resting his clasped hands on the expanded page, he pressed his forehead upon them in silence. Long visions of the past were with him; then came the soft dreams that concentrate years of happiness in a single thought. A shadow dimmed the sunlight; a gentle step crossed the threshold, and Eugene woke from his fancied blessedness, to realize all, in meeting the gaze of Gertrude!

LETTER FROM HELEN MERVIN TO HER FRIEND.

"Caroline, Eugene has returned, and I have seen him! I needed but this to make me wretched; for I could have borne more calmly my union with a soulless, sensual man, had I never met again the loved reality of my only pure ideal. Excluded from the world I idolize, and forbidden to mingle in its pleasures, by the caprice of a despised companion, how often have I mourned the voluntary act which sealed my misery! Gertrude and Eugene look so happy, that my heart almost reproaches

me for the part I once acted toward them. We met last evening at my aunt's, but I did not tell Mervin of his invitation, for I could not bear that Eugene should see my husband. He is already disagreeable enough to me, without needing contrast to render him more so. Gertrude's sweet, placid face, was a mirror of joy, and I think her disposition has improved, for she has overcome that want of decision which used to mark her conduct. I could almost love her now, if Charles did not plague me by holding her up as my model, and by constantly comparing her manners and acts with what he is pleased to call the 'worldliness' of my own. Courtland's health is fast recovering, and the lassitude of suffering, has given a gentler and lovelier style to a beauty that was always spiritual. His voice has no longer the strength which once distinguished it, but its low, subdued tones, have gained in melody what they have lost in power. The enthusiasm for his calling lingers still, though he has learned from experience the falseness of the hopes which carried him among strangers, and has found how little can be done even by the most unwearied, unless assisted by many. As I listened to his expressions of holy gratitude, I almost wondered at the humility which, in giving such thanks, forgets the trials and sacrifices that have won him blessings. Courtland asked after Mervin, and I fancied that I read something of pity in Gertrude's look, when she heard the question. But I answered with a smile, and she was too sincere herself to suspect the depth of sadness that gaiety concealed. I left them with a mind more discontented than ever with my self-appointed lot; and when I returned to my splendid but lonely home—watched for by no brightening eye—greeted by no tender welcome—I turned from the empty ornaments of wealth with a sickened heart and wearied spirit. I sought my own room—it was adorned with all the luxuries that gold could buy—but there, also, I was alone; and, in bitterness of soul, I deplored a destiny so different in its gilded vanity, from the peaceful, loving life of the missionary's bride!"

J. T. L.

August, 1839.

RETURN ENRAPTURED HOURS.

Return, enraptur'd hours,
When Delia's heart was mine;
When she with wreaths of flowers
My temples did entwine.
No jealousy nor care
Corroded in my breast,
But visions light as air
Presided o'er my rest.

Since I'm removed from state,
And bid adieu to time,
At my unhappy fate
Let Delia not repine;
But may the mighty Jove
Crown her with happiness—
'Tis grant, ye powers above,
And take my soul to bliss.

Now, nightly o'er my bed
No airy phantoms play,
No flow'rets deck my head
Each vernal holiday.
Far, far from the sad plain,
The cruel Delia flies—
While, racked with jealous pain,
Her wretched André dies.

B.

A LECTURE,

Delivered to the Law Class of William and Mary College, June 17, 1839, being the last of a course of Lectures on the Philosophy of Government and Constitutional Law. By Judge Beverley Tucker.*

I know not, gentlemen, whether a desire to recall some of the thoughts presented in the course of lectures which I am about to conclude, is suggested by a sense of duty to you or to myself. It may be due to both. Among you, I flatter myself, there are some whose partial friendship might dispose them to adopt my opinions with too much confidence. These, I am especially bound to guard against any evil consequences of a sentiment which so justly deserves my gratitude. On the other hand, it has been often my duty to present considerations favorable to opinions which my own mind does not decidedly adopt; and in the minds of those who reject them I may stand charged with errors from which I am free.

In the progress of these lectures, I have endeavored to guard against both of these evils. You will remember, that in the outset, I said, that I would not flatter you with a promise, that political truths which have eluded the investigations of the most candid and enlightened of all ages, should be laid open to you. These words were perhaps understood, at the moment, as the mere common-place of modesty—real or affected. But they had a far deeper meaning. They were uttered under a conviction, which all subsequent investigation and reflection have but confirmed, that researches into the philosophy of government promise, at best, but an approximation to truth; and that, to him whose mind cannot be brought to rest content in doubt, they promise nothing at all. If there be any such among you, he will be sensible that he has derived no benefit from me. The only service I could have rendered such a one, would have been to effect such a change in the temper and disposition of his mind, as to prepare him to enter, an humble and teachable pupil, in the school of experience. If I have failed in this, I have failed in every thing. With such, I fear, I am particularly liable to misconstruction. To such, every suggestion calculated to throw a doubt on any cherished opinion, might seem like the avowal of the opposite opinion. In politics, as in religion, to him whose comfort requires an infallible guide, any doubt of his infallibility seems equivalent to a direct contradiction of all his doctrines. To the bigot, all others are bigots. To doubt, is bigotry. To hesitate—to pause and reflect, is bigotry. All who are not for him, are against him, and he against them.

Against this uncandid temper—the parent of so much

* Published at the request of the Class.

error, so much faction, strife, contention, and bitterness of heart—my labors have been particularly directed. It is a temper that can serve no purpose but to make him who cherishes it the ready instrument of party, the easy tool of any who will repeat his creed, and tickle his ear with the plausible formulas which he habitually receives as compends of political truth. At the same time he is ready to denounce all who will not repeat this creed and these formulas. Hence, men distinguished for that thoughtful sobriety of understanding which reflects patiently and judges wisely, can have no place in his confidence. He has reduced the science of government to a system of maxims, and the man who hesitates to adopt any one of them, is set down in his mind as devoted to another system, the opposite of his in all things. Thus it is, that the discreet and conscientious are condemned by bigots and system makers of all parties; and thus it is, that the affairs of nations are given up to the blundering misrule of the rash and unscrupulous, while the men most competent to manage them are condemned to inaction and obscurity. Belonging to no party, they are charged with the sins and errors of all parties. Having the wisdom to perceive that they do not know every thing, they are set down by the confident and presumptuous as knowing nothing.

This is no enviable lot; yet I frankly confess to you, that the aim of all my instructions has been to dispose and qualify you to take your place among these. These are, after all, the salt of the earth. Were such men more common, mutual support might ensure them more respect, and their numbers might give them consequence and authority. To increase their number would be to render the state the most important service. Something like this is the object I have had in view. But you will see, gentlemen, that it is at your expense that I have proposed to accomplish it. I have sought to enlist you in a forlorn hope, where you may have to sacrifice every thing in a strenuous effort to serve your country, it may be, in spite of herself. But I have not sought to *beguile* you into a service so desperate. I have offered neither pay nor bounty; neither the emoluments of office, nor the applause of your contemporaries. I have not taught you to hope the countenance of any party, nor the favor of any leader. I have told you, as I tell you now, the naked and unvarnished truth, and admonished you in the outset, that if you wish to win your way to power and distinction by the arts of the demagogue and partizan, you should avoid this place.

I have been aware, that in a system of instruction adapted to these ideas, there can be nothing to make it popular. This, too, I have already told you. But it is not my business to study popularity, but truth. I am fully aware, that by him who is eager after knowledge, rash confidence is preferred as a guide before sober doubt; that to most men specious error is far more palatable than unseemly truth; and that the safest opinions are those which are most current.

Here, gentlemen, is one of the inconveniences that attends the study of political science. In physics, in mathematics, and even in morals, investigation is stimulated and encouraged by the honors which await him who discovers a new truth, or detects an established error. Such are the foundations of that fame which renders immortal the names of Bacon and Newton, and promises the same reward to the men whose researches,

in our day, have penetrated so deeply into all the mysteries of Nature. With this honor in prospect, the philosopher addresses himself to his task as one who seeks for hidden treasure. If he fails, he can but die and be forgotten. But if he succeeds, he secures for himself a name among the benefactors of mankind.

Far different is the lot of him who devotes himself to the investigation of political science. That which is immortality to others may be death to him. He follows after truth, as one who tracks an enemy that may turn and destroy him. He will do more to advance his fame by devising specious sophisms in defence of vulgar errors, than by the discovery of a new truth, which, being new, must clash with opinions consecrated by prejudice, and sanctioned by the authority of numbers.

Thus it is, that each country has its own political creed, which no man dares assail. So true is this, that, turn where you will, you will find the prevalent opinion of every people, favorable, in the main, to their own institutions. Abuses may indeed be perceived; but, for the most part, radical defects are mistaken for abuses. The spirit of revolution, too, sometimes suggests innovation and change; but, in the calm and healthy condition of every community, the *beau idéal* of a perfect government seems to each something not widely different from its own. The authority of numbers is no evidence that any of these is right; for, numbers decide one way in a republic, and another way in a monarchy. Precisely thus, at this moment, do the most enlightened men of the two most enlightened countries in the world differ from each other. Yet in each the authority of numbers supervises the researches of the political philosopher; and the love of fame, which is the incentive to all other investigations, does but awaken a more lively dread of the scourge with which public opinion stands prepared to punish the unlucky discoverer of any unpalatable truth.

You will see, gentlemen, that if, like most men, I have a zeal for my art, I take a poor way to recommend it. It might, perhaps, be thought that the ideas I have just suggested, are at the bottom of the doubting and undecided character of almost every thing that I have said to you. But though it may seem safer to doubt than to err, yet this idea is often deceptive. Error may be condemned; and truth may pass for error. But he who teaches either, will not stand alone. He will always have some to concur with and countenance him. But he who doubts has all the world against him. He is at the centre of the magnetic card, and there is no point of the compass from which he does not appear to be at the opposite edge of the horizon. He will not even obtain the praise of candor. To question the perfection of the institutions of his own country, is, at home, supposed to indicate a secret preference for a government as different as possible: while abroad, he is regarded in every nation, as having a glimmering perception of the excellence of the institutions of that particular nation, without daring to avow it.

You see, then, gentlemen, that the temper of mind which I have endeavored to inspire, is, of all, the most unfavorable to popularity and advancement. *But the end is not yet.* We do not live for ourselves, nor even for our contemporaries alone. "*Dis immortalibus sero,*" was the noble saying of the aged Roman, as his gray hairs fell over the plough, while putting in a crop which

he could not live to reap. Our country is not a thing of a day: and fame is immortal. And remember, gentlemen, that they whose speculations on government have purchased for them an interest in that immortal thing, are they whose respect for the opinions of their countrymen, did not deter them from correcting their errors and rebuking their prejudices. To those who may be disposed to accompany me in the study of political science in this spirit, I am bound, in candor, to say, in the words of the Apostle, that "if in this life only we have hope, we are, of all men, the most miserable." Our doubts, if unreasonable, will only excite contempt; if well founded they will provoke the resentment of those whose rashness and errors they rebuke. How many venture into public service, with no qualification, save only a presumptuous ignorance, unconscious of those mysteries in the science of government, which the wisest explore in vain! Deprive such men of their ill-founded confidence, by opening their eyes to see the difficulties and dangers that beset the statesman's path, and you leave them nothing. And how can we hope the forgiveness of such, who deeming themselves wise, are awakened from their delusion, but to find that they "are poor, and miserable, and blind, and naked?" Nothing, in short, can be more unthankful than the task of him who would couch the eyes of such, as, being blind, yet fancy that they see.

I have not meant to intimate, gentlemen, that every part of political science is alike involved in mystery and paradox. I have had no difficulty in teaching you, that the great principles which lie at the foundations of all free institutions, are unquestionably true. The primitive equality of man, and the right of each individual to live exempt from all human authority, to which he has not consented to submit, either by express compact, or by legitimate and fair implication, cannot be taught more unequivocally by any than they have been by myself.

But, when we trace this *primitive equality* to the inequalities which grow out of it, and furnish the measure of its value—when we begin to inquire, on the one hand, how far regulations in derogation and curtailment of these *adscititious advantages*, can be reconciled to the respect due to that principle of *original equality* out of which they grow, and, on the other, how far the ulterior preservation of *essential equality* may be endangered by the *unqualified allowance* of these advantages, we enter on questions full of difficulty and doubt.

So, too, of the right of self government. This I have affirmed; and I go farther, and affirm also, man's *capacity* for self government. But do I affirm this of *all men—every where—under all conditions—and in all circumstances?* Assuredly no! It is not true of the ignorant, the vicious, the licentious, the self indulgent. It is not true of any who are not willing to take security against themselves, by self imposed restraints on will and appetite. The man who affirms of himself, that he is capable of regulating his own conduct, and who, therefore, refuses to acknowledge the authority of any moral code, gives proof against himself of the falsehood of his pretensions. We know this to be true of individuals; and it is yet more fearfully true of men in great masses. It has been aptly said, that freedom in multitudes is power; and in multitudes not under the regulated discipline of fixed principles and self imposed

restraints, it is power in its most formidable aspect. Opinion restrains the abuse of power in an individual; but power in multitudes, makes for itself what is easily mistaken for the opinion of the world. There is nothing so ruthless, nothing so dead, alike to conscience and to shame, as a licentious crowd unrestrained by authority.

When we come, then, to inquire how far the present enjoyment of liberty may consist with those conventional and self imposed limitations on the right of self government, which may be necessary to its preservation, we enter on a task which any man may well tremble to undertake. To him who would dogmatize here, the adjustment of the balance between those powers, contending yet harmonious, on which the order of the planetary system depends, would seem an easy problem. The countless worlds, revolving, each in its appointed path, implicitly obey the law impressed on them at creation. Not so the moral universe, the world of will and passion. With these the Omnipotent himself must parley; tolerating much present evil for the sake of ultimate and greater good; yielding that he may conquer. When we say, that no man can confidently decide how far a people jealous of the right of self government should voluntarily limit its exercise, we do but affirm that human institutions are subject to the necessity inhering in the nature of things, which is one of the conditions of the moral government of the universe. Step forth, philosopher! you who have discovered the great *arcana*!—you who have ascertained how best to reconcile the present enjoyment of happiness with its perpetuity; the present exercise of freedom with security against its tendencies to self destruction!—step forth, and read a lesson to the Most High! He shall hear you gladly! He shall descend from the throne of his power, and, taking the place of the learner, shall meekly seat himself at your feet! For my part, while I see the nature of all earthly blessings; while I mark their liability to perish in the using; while I witness the hard servitude of those who yield themselves to the dominion of passion, I shall believe that none are capable of freedom, who are not "disposed to put moral chains upon their own appetites, and who are not more inclined to listen to the counsels of the wise and good, than to the flattery of knaves." When, therefore, the question arises, "what does wisdom teach, and what are the proper and salutary restraints to be imposed?" I am not ashamed to be baffled by a difficulty which for six thousand years has tasked the resources of almighty Power and all seeing Wisdom. The discipline of life,—the hopes of heaven,—the terrors of hell,—all have been employed to this end, and its accomplishment is yet remote.

"He is a freeman whom the truth makes free;"

and the truth that thus emancipates him, is that which teaches that there is no freedom for him, in whom there is not an abiding disposition to bring appetite and passion under the dominion of fixed laws, whose authority freedom must not dare to question. To him who is not content to be free on these terms, "chains under darkness" is the appointed lot in this world, as in the next. To this the Word of God and the experience of all mankind alike bear witness. This is all that can be known with certainty. This is the truth, from which the wisest of ancient sages learned that he knew no-

thing. Beyond this all is darkness. On the unsearchable mystery which lies buried in the depths of that impenetrable abyss of night, we can but muse and marvel at the presumption which pretends to have fathomed it. But while the pride of human wisdom stands thus rebuked, we find consolation in the thought, that the truth which thus baffles our researches, is of the number of "the hidden things that belong to God." To him we leave it.

But it is not alone of the great fundamental principles common to *all* free institutions, that I have ventured to speak with confidence. In the application of these principles to *our own* institutions, we have the aid of lights sufficiently clear to guide us to certain conclusions.

Thus, when we affirm, "that man has a right to live exempt from all human authority, to which he has not consented to submit, either by express compact, or by legitimate and fair implication," we perceive the necessity of showing the evidences of that consent, in virtue of which we ourselves are governed. Here we speak from the record, and we speak boldly. We find the charter which, more than two hundred years ago, constituted Virginia a body politic. We find the unanimous declaration of all the members of that body, solemnly proclaimed, sixty-three years ago, "that all power is vested in, and consequently derived from, the people; that magistrates are their *trustees* and *servants*, and at all times amenable to them; and that, when government shall be found inadequate to their happiness and safety, a majority of the community hath an indubitable, unalienable and indefeasible right to reform, alter or abolish it, in such manner as shall be judged most conducive to the common weal."

These propositions, thus affirmed by all whom it concerned, are true, because they have affirmed them, if for no other reason. They form the basis of the compact which they prefaced, and afford a clew to its interpretation. Guided by this, we arrive at the conclusion, that sovereignty, whether sleeping or awake, whether active or in repose, is in the people: that sovereignty cannot, therefore, be rightfully predicated of any government; and that where there is no people, there is no sovereignty.

Proceeding on these principles to analyse the structure of that great federal compact, which is the talisman of security, power, prosperity, and happiness to the people of these states, I have shown you the recorded evidence of its binding authority over you. I have laid before you the solemn act of Virginia, declaring "her assent and ratification of that instrument," and her mandate announcing to all whom it might concern that it is binding upon her people. I have thus endeavored to impress on your minds the conviction, that in giving your respect to the functionaries, and your obedience to the laws of the central government thereby established, you do but obey her; that you do this, because she has commanded it, and by no other authority; and that, should she ever think proper to revoke this mandate, her will, in that too, must be law to you. I have not presented those propositions as undisputed; but I have affirmed, that so long as we look to the *record* which *alone witnesses* of the obligation of the federal constitution; so long as we abide by the *law* and the *testimony*, they can never be rightfully or truly denied.

I have urged these thoughts the more strenuously,

because on the clear and distinct recognition of these depends the preservation of our cherished Union. So long as the federal government is professedly a government of opinion, opinion will uphold it. But, let it claim to rule by force, and the question will presently arise, whether a free people *can* be governed by force. The answer to that question will be written in characters of blood; and that answer, whatever it may be, must be fatal to union. The decision, thus made, must be followed by a violent disruption of the bond, and a separation of the inhabitants of this continent into a microcosm of petty states, weak factions and contemptible, or by the all pervading sway of one vast frightful consolidated despotism.

Of the truth, then, or the value of the fundamental principles *common to all* free governments, and of those which are *peculiar to our own*, I would not have you doubt. But for the means of giving security and efficacy to these, I must be content to leave you to the teachings of that school of *observation* and *experience*, into which you will pass from this. There it is, gentlemen, that honors are to be conferred, which a generous ambition well may covet. Of these, the parchment and the wax which you receive at our hands, are but the types; and, trust me, that your success in winning these higher honors, depends much less on what you may have learned here, than on your disposition to improve the lessons to be taught hereafter. Hence, I have rather studied to establish this disposition in your minds, than to implant there even those most cherished opinions, which can never be eradicated from my own. By a different course, I might but have led you to conclusions in which you might rest satisfied, forgetful of the arguments by which they had been deduced. You would thus only add yourselves to the number of those whose mouths are full of dogmas unsupported by reason, who, knowing nothing, claim to know every thing, and render their ignorance more conspicuous, disgusting and offensive, by misapplied presumption. Where certainty is attainable, it may be criminal to doubt. In matters of high moral or political duty, it is always so. But on questions in which mere expediency is an important condition, *experience* is the only teacher. If I have at any time forestalled the lessons of that faithful and candid instructor, I have done you wrong; and I beseech you, in justice to yourselves, and to me, to endeavor to divest your minds of all impressions, which you do not feel yourselves prepared to vindicate by reason. I should promise myself more honor from a pupil, who, dissenting from me, should be always found ready to give a reason for his faith, than from a hundred who might answer, by the book, every question in a political catechism of my own framing, giving no reason and no authority but mine for his answers. My business has been to teach you to observe; to compare; to think;—and he who, applying my lessons, arrives at results different from my own, will do me credit with the wise and candid, even in exposing my errors.

But I have proposed to myself a higher honor. When, instead of announcing an opinion, and enforcing it by argument, I lay before you the considerations that belong to both sides of any disputed question, or furnish your minds with thoughts and reflections susceptible of being variously applied by yourselves in the investigation of more than one truth, I establish for myself a

claim to some part of the credit of all you may discover or achieve. Not having been encouraged to sit down contented in a conclusion hastily adopted, you must remember the arguments for and against it, or you remember nothing. Not having made up your minds how to decide a question, you cannot cheat yourselves into the belief that you understand it. So long as it remains a subject of doubt with you, so long will you continue to meditate and reflect, and memory will tenaciously cling to every consideration, which, when first presented, seemed to throw light upon the subject. Your opinions thus formed, will be your own; yet, while you enjoy the pleasure of having arrived at truth by your own researches, you will perhaps be ready to attribute your success in part to me. But though I may deceive myself in this, of one thing I am sure; that whenever experience may, at any time, convince you of the error of opinions too hastily adopted, you will at least exempt me from any part of the blame of that error.

You see then, gentlemen, how large an interest I have in dealing candidly, fairly and impartially with you. So far from wishing to charge your minds with my opinions, it has not been without painful misgivings that I have sometimes discharged the duty of leading you to conviction, in cases where it might be criminal to doubt. The idea that such convictions may, at any time, be prejudicial to your advancement or your usefulness in life, is one which I cannot contemplate without anxiety. Should this apprehension be realized, you will be too generous to blame me; but I shall find it hard not to blame myself. Yet even in that event, we shall both enjoy high consolations. The perception of truth is sweet: the love of truth is ennobling; and an uncalculating devotion to truth is honorable even in the eyes of its enemies.

In these thoughts you may perceive the reason, gentlemen, why I have carefully avoided any remarks which might influence your inclinations in favor of any of those party leaders who claim to monopolize the confidence of the people. I presume it cannot be unknown to you, that I am not remarkable for indifference to the political occurrences of the day. I am aware too, that I am unfortunately, supposed to be much addicted to personal predilections in favor of distinguished men. In this particular I need not, at this day, tell you that I have been misunderstood. Such predilections I do not feel. *Nullius in verba*, is the cardinal maxim which I learned in early life, from the only politician who ever possessed my entire confidence. But though not only unpledged, but indisposed to follow any political leader, I am certainly not without my aversions and antipathies. With these, however, it was no part of my business to infect you. I have certainly not endeavored to do so; and hence it has always been with reluctance, that I have touched on topics connected with the characters and public history of political aspirants. You may, one of these days, be surprised to discover, that I have, in some instances, been careful not to advert to transactions which came directly within the scope of my remarks, on subjects of the most absorbing interest. But it would not have been just to you, to have invited or provoked the coöperation or resistance of any political prejudice which you might have already entertained. My business was, to lay my thoughts before you, and by fair and candid arguments to lead you into the light

of the truth. Why then, should I have introduced into the discussion an element which might have influenced you to adopt my views without a well founded conviction of their correctness, or to reject them, alike without reason? On the other hand, how uncandid and unworthy of the relation I bear to you, to take advantage of my position for the purpose of infecting you with my partialities or dislikings. If, at any time, I have fallen into this error, gentlemen, I beg you, in consideration of my inadvertence, to pardon a lapse which would admit of no other apology.

Sometimes, indeed, it has been my duty to express myself in a way, which, to the uncandid, might have savored of a wish to insinuate into your minds something of my own feelings of liking or aversion. "History," it has been said, "is philosophy teaching by example:" and he must be illy qualified to direct your researches after truth, who should reject the lessons of this sage instructor. From these, indeed, we learn all that can be known. Here it is, that we discover the connexion between events and their causes, and here we learn that lesson, so humbling to the presumption of the mere theorist, which I have so often labored to illustrate and enforce. I allude to the tendency of moral causes, in their ill-regulated action on the minds of men, to provoke reaction, and thus to produce results exactly the reverse of those intended or expected. Here, too, it is that we learn to contrast the *profession* of the aspirant, with the *practice* of successful ambition. As the experienced seaman augurs the storm from the slumbering calm that precedes it, and, in the cloud on the horizon, "no bigger than a man's hand," detects the tempest that may overwhelm him in the deep, so he who reads the future in the past history of man, is sometimes enabled to discover the approach of danger at the moment when the watchman on the wall is crying "peace, and all is well."

But, where shall we look for those facts which furnish this precious wisdom? Shall we find them in the fabulous legends of remote antiquity? Shall we seek them in histories more modern, perhaps more authentic, but which may mislead us, because we know not enough of the manners, habits and circumstances of ancient states, to determine all the conditions that may have influenced in the production of any result? Coming down to modern times, shall we take all our examples from the nations of Europe and Asia, at the hazard of being misled in the same way? In short, gentlemen, when, at any time, the history of our own country—the history of events happening in our own time, and under our own eyes, in which all that is done is the work of men whom we personally know and understand in all their relations—when this sure, authentic and ungarbled evidence discloses facts of which the political philosopher in other lands would be glad to avail himself, shall we alone be denied the advantage of it? We may speak of Miltiades and Camillus, of Pericles and Cæsar, of Alcibiades and Catiline—we come down to Elizabeth and Henry the 4th, to Cromwell and Bonaparte, to Chatham and Sully—we may even cite the example of WASHINGTON, consecrated to the use of all the world by liberty and virtue—and we may speak of Arnold and of Burr, whom the hangman, Infamy, has delivered up for dissection: But must we necessarily stop there? If, at any time, the best means of explaining and illustrating an impor-

tant truth cannot be employed, but by naming those who are still upon the stage of life, must we forbear to use these means, lest we be suspected of flattery or malignity? The necessity for doing this should indeed be always clear and strong: and you will bear me witness, that I have commonly done so with reluctance. Fortunately for me, gentlemen, (unfortunately for our country,) it has happened that I could not perform my whole duty in this particular, without showing you that there is not one among those sworn defenders of the Constitution, who stand most conspicuous as candidates for public favor, and public honors, at whose hands it has not received a wound. I have often indeed endeavored to give the history of the fact without naming the actor. Yet I have, from time to time, had occasion to name them all, and though I have never attempted to excite your indignation, yet there is not one of them whom I have foreborne to censure. I have felt it to be right that I should censure them: for, one of the most important lessons you can learn is the danger of yielding yourselves up to the impulses of that confidence, so natural to inexperienced and sanguine youth. "Put not your trust in princes, nor in the sons of men." If you go into life prepared to pin your faith upon the sleeve of any leader, to follow the fortunes and devote yourselves to the service of any political aspirant, my conscience ought to acquit me of having failed to warn you against conduct so dangerous and so criminal. It does acquit me. If such are the purposes which will accompany you into any station, to which your country may call you, the fault will not be mine. I have done what I could. With other powers I might have done more: and had I the eloquence which might inspire you with a just zeal for your country's rights, and a righteous indignation against all who invade them, I am not sure that it would not have been my duty to lay aside all reserve; to strip off all concealment; to show the assassins of the Constitution "hacking each other's daggers in its sides;" expose its bleeding wounds, and "bid them speak for me."

Yet I must not mislead you, gentlemen, by withdrawing your attention from the fact, that he, who, in political life would act alone, must always act without effect. His efforts must often be associated with those of men who do not fully possess his confidence, and to secure their coöperation, he must frequently tolerate, and sometimes support measures which his judgment condemns. This is one of those hard conditions, "twin-born with greatness," which gives the successful aspirant so much cause to envy him, who, in the independence of private life, chooses his company and regulates his conduct by the dictates of his own conscience.

In this, gentlemen, as in many other particulars, you will find that the ideas I have endeavored to inculcate, are not such as will qualify you to take an early and a prominent stand in the service of your country, or to win your way at once to the honors and emoluments of office. But if these last be the objects to which you purpose to devote yourselves, nothing that I have said will stand in your way. The political adventurer is never at a loss to divest himself of any inconvenient opinions, which might retard his progress in the career of ambition. Besides, there are no imaginable opinions which it may not at some time suit him to adopt. The devoted adherent of Cromwell the *Protector*, would

have awkwardly paid his court, by echoing the sentiments of Cromwell, the *commander of the army of the Parliament*. So long as parties retain their names, their watchwords and their leaders, their principles may vary indefinitely; and the very men who might now denounce as criminal, any sentiment expressed in this discourse, may, at a future day, take it as the watchword of their party.

But after all, gentlemen, the prize most worthy to reward the toils of him who gives himself to the service of his country, is one which does not depend on the capricious coincidence of public opinion with his fixed principles and convictions. The ostracism was the crowning glory of the life of Aristides. The exile of Camillus made him the saviour of his country: and the fame that lives and will live, when all the honors that contemporary approbation can bestow, shall be forgotten, is the meed of that virtuous constancy, that alike defies the tyrant's power, and resists the unbridled passions of the multitude. The man of virtuous wisdom cannot be withheld from the service of his country. Condemned to retirement, his unambitious life affords a pledge of sincerity, which gives sanction and authority to his known opinions. The man of virtuous wisdom cannot be hid. His brightness shines through the cloud that would obscure him, and, gilded with his beams, he wears it as a glory. His fame is the gift of him, whose approbation is the only true honor. Without the vantage ground of high station, he utters his voice, and it is heard by the listening ear that leans to catch his words. His post is the post of honor, whatever it be, and he occupies it without fear of change. Man conferred it not, and man cannot take it away. And above all, gentlemen, when that day shall come, which comes alike to all; when the warrior's wreath, and the statesman's civic crown, alike shall wither at the touch of death, the garland that decks his tomb shall bloom in immortal freshness, watered by the pious tears of a grateful country, and guarded by the care of him to whom the memory of the just is precious.

ADDRESS ON CIVIL ENGINEERING.

On Tuesday, July 2nd, Professor MILLINGTON completed the course of instruction, which he gives on the subject of Civil Engineering in William and Mary College, by a public examination of his class, and concluded with the following remarks, which are here published at the request of the class.

"Having closed this examination, my functions, as your teacher, cease for the present session, and we shall shortly have to part. I cannot, however, permit this event to take place, without some expression of my feelings on the occasion. After your experience, gentlemen, I need not tell you that the acquirement of knowledge is a dry and laborious occupation; and there is no doubt but that many (particularly among the juniors) who attend college, will look upon their instructors in the light of a set of tormentors, who are perpetually goading them onwards, in a rough and disagreeable path, to which they see no end; and even

when the end at length appears, they observe no reward to recompense them for their toil.

Far different are the views of the instructors, and those who have been instructed. Their previous labors have put them in possession of the facts, that as the world advances in civilization, the sinewy arm of the savage warrior sinks into impotence before the armed mind of the enlightened man—that virtue and knowledge are the elements of power, by which men can not only make themselves happy, but promote the welfare and happiness of those around them; and by which, not only individuals, but whole nations are made to rise in power and general estimation.

Such feelings cannot but engender an enthusiastic spirit in the breasts of instructors to promote the advancement of their pupils, so long as they find their precepts take root, and are not scattered before the winds; and such, gentlemen, have been my feelings during the progress of the session now about to close; for I can, without flattery, state to you, that the conduct of my philosophical and engineer classes, and of the major part of my junior class, has been such as not only merits, but commands my admiration and approval. They have convinced me, that they came to this place for the honorable purpose of improving themselves, that they might hereafter ornament their country; and this declaration, fortunately, does not depend upon my opinion alone, but upon the very excellent examinations they have gone through, in a manner so creditable to themselves, in the several departments of science in which they have embarked.

Still, gentlemen, you must keep in mind that the quantity and quality of instruction we can impart here, is not sufficient to make the perfect man. To some, perhaps, our course of instruction may appear long and minute; but those who duly view the subject, will find that it is a mere skimming over the surface, without attempting to fathom the depth. We may sow the seeds of a Bacon, a Newton, or a Locke, but it takes years for the plant to arrive at maturity. We may study the map, and become intimately acquainted with the roads, and the relative bearings and distances of places, but we know nothing of their beauties and deformities or comparative advantages without much tedious travelling, and perhaps encountering many hardships. So, gentlemen, it is with a college. All we can profess to do, is to act as your pilots—to steer you with safety from an unknown coast—to warn you of dangers and difficulties—to carry you through them, and to launch you into the wide ocean of public life, with ample sailing directions and precautions for your future safety—and here, like the pilot, we must leave you, that we may return to take charge of new adventurers.

Being now free, you may suppose that nothing more remains than to pursue your onward course and arrive at the haven of fame and prosperity. But the voyage through life is beset with many difficulties; and as the prudent mariner never ceases to keep watch for the shoals, the rocks and tempests that may assail his progress, so, like him, you must be watchful, and not permit indolence and apathy to lull you into the idea that your progress is certain and secure; for life, like the ocean, is beset with many obstacles—among the most prominent of which are, dissipation, idleness, and

vanity, upon any of which the moral frame may be as effectually stranded and lost, as the bark of the mariner may be upon the rocks and shoals of the ocean. It is against these I desire to warn you; and it will require your every effort to steer clear of them; for they are often so sunk and disguised that you may be entangled in their mazes even before you know you are encountering them; and should you find yourselves within these trammels, safety can alone be sought by a vigorous determination and effort of mind and body to abandon the former track, and by steering a new course in the never failing path of moral rectitude. This applies equally to every calling and occupation of life. But the observations I have just been making have been more particularly called forth by the subject of our late discussions on engineering. There is, perhaps, no profession that is beset with greater difficulties and temptations than that of the civil engineer, especially on his outset into life, and on this account I shall lay before you a few remarks, drawn from my own experience in the profession, and which may, perhaps, prove useful to such of you as intend to confine your future exertions to this useful branch of business.

Civil engineering, like all other professions, arises out of the necessities of society, for they all, in common, spring from the mutual dependence of men on each other, and the advantages that accrue to individuals from a division of talent and labor. No man would call upon the lawyer to plead his cause, or the physician to attend his family under sickness, if he felt convinced that his own talents and acquirements were superior to those of the person he employs. But a confidence is engendered by his knowledge, that the men he selects as his advisers have minutely studied their several professions in their younger days, and by devoting themselves exclusively to their pursuits in after life, he feels assured they must have become expert and proficient. And so it is with the more recently formed profession of the engineer. He must study in early life, not only to learn what has been done, but what yet remains to be done; for as the arts and manufacturing processes improve and multiply in an almost countless ratio—as the civilization of a country advances, structures are required beyond the skill and reach of the ordinary builder or mechanic, and then it is that the science and acquirements of the engineer are called into action; for I have before explained to you, that the skill of the engineer is not confined to the mere construction of rail roads, canals and bridges, for the easy transportation of goods, but to the construction of machinery of every kind, for converting raw materials to useful purposes, and to many other objects.

To obtain public confidence, the young engineer must, therefore, in the first place, convince the public that he has duly studied and made himself (to a certain extent) master of his subject; and he must also accomplish or produce some work which may show that he is capable of carrying his conceptions into practical effect. The certificates of competency about to be delivered from this venerable institution to such of her alumni as have successfully prosecuted the subject of engineering within her walls, will no doubt go far to accomplish the first of these desiderata; but the second is difficult of obtention, because it seldom happens that a young engineer, without experience, is entrusted with

the execution of a large work. Still, however, in a subordinate capacity, or while acting under a more experienced master, he will have many opportunities of evincing his proficiency and obtaining preferment. Independent of this, the genius of the young aspirant is free to digest new plans, and many of the most useful works both of this country and of Britain have originated in this way. The public mind is seldom excited to action until some object is brought before it, on which it can operate. And if a young engineer can suggest plans for the improvement of his country and is able to show their benefit and advantage, it seldom happens that they are brought forward in vain. They only require to be known that they may be adopted, and then in justice to the inventor he is rewarded by being made the superintendent or executor of his own designs.

The next difficulty in which the engineer is involved, arises from his great responsibility. He is frequently employed not only to design but to execute large and national concerns, in which vast capitals may be involved. His master or employer, from the nature of the concern, is seldom a single individual, but generally a board or committee, consisting of many persons, all of whom he has to conciliate and please. His original design, therefore, requires intense thought and consideration, for it is subject to the revision and animadversion of all his employers, and the almost impossibility of pleasing every body is universally admitted. It is therefore, necessary, that he shall be prepared with sound arguments to support every part of what he is about to execute, unless he sees good reason in the discussion of his plans for altering or amending any part of them. Firmness and decision of character will here prove of great value to him.

Another difficulty the engineer has to contend with, arises from the durability of his works. Men of all professions are liable to err; but it happens, fortunately for most of them, that unless their errors are very glaring, they are soon forgotten and fall into oblivion, and consequently do not leave an indelible stain on their professional reputation. Not so, however, with the engineer—his works are, in their very nature, permanent—and they are frequently large and open to public view—so that they become monuments which proclaim the skill or incompetency of their constructors to future generations, in language that cannot be disguised or misunderstood. Errors of construction, such as have just been alluded to, frequently arise from a desire on the part of the engineer to please his employer, (even at the risk of his own reputation,) a practice that every engineer should sedulously avoid. His skill should be such as will enable him to determine the least quantity of material which he can use with safety for a given construction, and if he swerves at all from rule, it should be on the side of additional strength rather than of insufficiency. If he introduces more material than what is palpably necessary for the strength of his construction, he will be justly blamed for a lavish expenditure of his employer's money. The error is, however, frequently on the other side; because, with the view of courting public favor or that of his employer, or for bringing his work within the first estimated cost, he frequently economizes materials and labor to such an extent as to introduce insecurity; and should a failure occur in consequence, he is never thanked for his laud-

able endeavor to diminish expense; but is universally blamed for want of skill, and perhaps loses his professional reputation forever.

The last point to which I wish to call your attention, regards your treatment of and demeanor towards contractors and workmen, who may be employed under your directions. In this respect, the engineer has a very important and responsible duty to perform, for he is in almost all cases the arbiter or judge between the employer and the employed. In making contracts, or valuing work after it has been executed, it becomes his duty to regulate all prices in such manner that they may be fair and equitable between both parties, without favor or affection to either. Contractors, and those who have spent years upon public works, you will in general find to be cunning and over-reaching, and ever ready to convert every thing, both in measure and price, to their own advantage. But I have always found, that when they meet a man who understands his business, and who is firm in his resolution to do justice to them, and no more, they are submissive, and ever ready to yield to what is fair and right. It has been the practice with some engineers, to grind down their workmen to the lowest cent, and barely to allow them living profits, for the sole purpose of currying favor with their employers; but such conduct never fails to lead to neglect and inattention to the work, as well as endless disputes and disagreements; and you may rest assured, on my own experience, that the only sure way to command the respect of the employer and workmen, is to observe the most strict and impartial justice between them.

It frequently happens, that the works of the engineer place him and his workmen in thinly populated, or even unfrequented places; and, as man is naturally gregarious and fond of society, intimacies may arise which ought never to be carried beyond the limits of propriety. Contractors, and the lower order of laborers under them, are naturally prone to indulgence in drinking and idle habits; and if these are once joined in, or sanctioned by the engineer, there will be an end of all future order and subordination—consequently, such practices should be scrupulously avoided. Public contractors are ever ready to stand treat, as they call it—that is to provide entertainments at their own cost; yet they probably never do so, but for the purpose of serving their own interests, by establishing friendships, in order that their omissions and defalcations may pass unnoticed, or that they may take advantage in some shape or another. Above all, the practice of borrowing money from contractors or workmen cannot be too much deprecated, for this is in fact giving up all hold upon the workman, and yielding him a degree of power which it is not right he should possess. The only true way of gaining the esteem and confidence of your workmen, is to set them a good example in your own conduct and demeanor. To be courteous and civil without being too intimate—to be punctual in all your own appointments and duties, and to exact a like return on their parts—never to find fault unless there is just cause for doing so, and then to be firm and resolute in having that which is wrong amended—to show strict and impartial justice and integrity in all your proceedings, and such a thorough knowledge of what you are about, as will give confidence in the propriety of your orders, which you must

never fail to see promptly executed. Such conduct will not only gain you the good will and esteem of your workmen, but of your employers and the public at the same time.

I have trespassed longer on your time, in laying these hints before you, than I had at first intended, but shall now conclude.

To you, gentlemen, of the engineer class, and of all my classes, I now beg to tender my warm thanks for the kind attention I have met with from you all, during the past session, and to hope that the instructions I have endeavored to lay before you, may ripen into the fruit of usefulness in your after lives. And as our relation of master and student here ceases, I wish you all health, happiness and prosperity, and trust that the friendship that has been engendered between us during our intercourse in the present session, may endure to the end of our lives, as I assure you it will do to the end of mine."

ADDRESS

Delivered before the Students of William and Mary College, on the 3d of July, 1839, by Professor Robert Saunders. Published at the request of the Students.

Gentlemen of William and Mary—

At the close of another college session, it becomes us to offer you a few words of farewell at parting, of congratulation at your success, and of cheering on your onward course. There can, indeed, be no more worthy cause of congratulation than the simple fact that you enjoy the privilege of education—that the mysteries of your own nature have been revealed to you—that the high endowments, the far-reaching aspirations, the vast capacities, which are the immortal heritage of man, are unveiled to your view, and put in action within you—that you are not of the mass who exist, and pass from existence, in unconsciousness of the treasures they possess, but that you have been adjudged worthy of kindling fires on the altars of science and philosophy—of opening the portals beyond which lie the hidden things of nature. Such being the magnificent results of intellectual cultivation, it would seem but necessary to place them in view of the youthful aspirant, to ensure untiring energy, and a sustained and sustaining ardor in their acquisition—and it would appear an infatuation little short of madness, were he to turn aside, or linger on his path. Could we, indeed, see things as they are—were nothing obscured from our sight by the mists of familiar error, or weakened in its influence by the force of accident and habit, we should be able to set a proper value upon the glorious privilege of education. But such is our constitution, that those who possess it have their perception of its value blunted by its possession—and those who possess it not, require its aid to invest them with the very knowledge of their deficiency. For these last, this is indeed a wise and beneficent provision. In this sense, but in this alone, the oft quoted line is true—that "if ignorance is bliss, 'tis folly to be wise." That those, however, having this inestimable gift, should yet esteem

it not as it deserves to be esteemed, but should advance with a slow and uncertain step (if indeed they advance at all,) in the career of acquirement, unless some powerful incentive be applied to urge them forward, is one of the innumerable evidences before us, that there is no good provided for man which does not demand voluntary exertion to acquire and to retain it. You have, my young friends, so far manifested a perfect appreciation of the value of knowledge. You have commenced your career most auspiciously. The time which you have passed with us, has afforded to you moments of golden opportunity, which most of you have grasped and made your own. But the impressions which you have thus received, will be weakened, and ultimately effaced, by contact with the world. Time itself will wear them out, unless they are constantly renewed and deepened by that continued exertion of which I have spoken as the only price of learning. Are you capable of this exertion? I will not flatter you. It is arduous. But its very difficulty should arouse your pride to achieve it. This difficulty is, however, greatest on the threshold. Action is unpleasant only to the mind which is unused to it. Soon it becomes a habit—and finally, (such is the happy constitution of our intellectual nature,) what was once an irksome and a weary task, becomes the source of the purest and most exalted gratification—and the mind is gradually led to the highest state of cultivation of which it is susceptible, by receiving as the reward of each additional effort, a corresponding increment of pleasure.

The tumultuous amusements, the evanescent pleasures, and exciting employments of youth, may cause to go unheeded the restless workings of the unsatisfied spirit; but age will come, to which those amusements will be as childish toys, on whose taste those pleasures will pall, and for whose strength those employments are too fervent; then, when the bright hues which floated in the atmosphere of life's morning, have faded away, and given place to the gray of its twilight, will the mild lustre of intellectual attainments beam with delightful radiance. Then can the cultivated mind look in upon itself, and find in its ample stores a solace for that heartless want of sympathy with which the world are wont to regard old age. How blank and dreary, then, is the life of one who has neglected the opportunities of his youth!—who, in the hey-day of enjoyment grasped the tinsel and the dross, and cast away or heeded not the pure gold. The mind of such a man, waste, uncultivated, and barren, compared with a mind richly stored with the fruits of reading and reflection, is as the homely piece of unsightly canvass compared with the same material glowing with magic tints and embodying the immortal conceptions of the painter. Can you, under the influence of these considerations, and with the lofty destiny of the intellect fully revealed to you, be satisfied with yourselves, if you press not on to the fulfilment of that destiny? Can you consent to the degradation, after having been within view of the sacred fane, of having it again hidden from your sight, by falling back upon those who, in the language of the Roman historian, "*Vitam transeunt veluti pecora?*"

Will you not rather hold fast what you have gained, and be able hereafter to say, with the Roman orator, "*quantum alie tribuunt tempestivis convivis, quantum*

denique alex, quantum pila, tantum mihi egomet-ad hæc studia recolenda sumpsit?" As one means of the greatest efficacy in promoting and perfecting mental culture, let me recommend to you to *think*. It has been remarked, that one element of characteristic difference between men, is the fact, that one man thinks, while another permits his fellows to think for him. The great importance of thinking, consists in the circumstance that it requires independent action of the mind, and thereby produces that intimate knowledge of the extent of one's own abilities which is absolutely essential to success. The man who adopts, without examination, the thoughts of others, may fancy them his own, and imagine himself wise. But no one can delude himself by the belief that his powers are great, who becomes acquainted with their weakness. It is not of great moment whether your reflections be at first altogether correct—that just diffidence in your own powers, which I have just spoken of as a consequence of the habit of thinking, will necessarily prompt you to seek support for your conclusions in the opinions of others. The mind will sit as arbiter between conflicting sentiments; and you will eventually establish habits of clear, precise and accurate thought; than which there is no faculty more valuable, and none more rarely possessed. The reason why this faculty so seldom appears, is plain. This exercise of the mind, is, to the beginner, as irksome as any other; and willing to enjoy the reputation of possessing a well stored mind, he is unable to resist the temptation of ministering to his indolence, by appropriating the thoughts of others, which lie in profusion around him courting his acceptance. He is, in fine, content to be one of those who use, and not of those who add to the store.

Labor in acquisition, invaluable as it is, suffices not then altogether to advance to their full grown vigor all the powers of the intellect. It may make you learned; but thought must accompany it, to make you wise and efficient.

"Study is like the heaven's glorious sun,
That will not be deep-search'd with saucy looks:
Small have continual plodders ever won
Save base authority from others' books."

To the considerations which I have already mentioned, as urging you to pursue the career of knowledge which you have commenced, may be added one peculiarly applicable to you as citizens of a republic.

The success of republican government depends, as all agree, upon the virtue and right thinking of the people. That republic must inevitably end in ruin, the moral rectitude of whose people is perverted, or their good sense bewildered. A sound and wholesome and overruling public opinion is essential to its existence. Whence is this public opinion to emanate? From the feverish atmosphere of politics?—from the reeking steam of faction, or from the midnight darkness of ignorance? To what source are we to look for this public opinion, but to those whose hearts, elevated by the precepts of virtuous wisdom, and whose minds, purified by the influence of literature and thought, raise them above the unwholesome vapors engendered by party strife? Every day is the importance of the establishment of a learned class in our country, becoming more and more palpable to the patriot's eye. A class, who, separated from politics, with intellect unclouded by

ambition and unbiassed by party spirit, may decide impartially upon the course of their fellow citizens; unheeding alike the blandishments of the courtier and the denunciations of the demagogue. As patriots, then, I call upon you to devote yourselves to your country. Be not deceived—think not, as is too generally imagined, that your services in public life are alone valuable to your country. Far more efficient will be your aid if you shall render your mind capable of directing the public course of others.

It is true, your recompense may be less brilliant—for action is more dazzling to men than thought. You may not be hailed by the plaudits of sycophantic partisans; but you will enjoy the pure and exulting satisfaction of being applauded by your own hearts! and who will compare the roar of the multitude with the still small voice of an approving conscience?

Be not discouraged either, if the sphere of your influence should be limited. Every one whose intellect has been advanced to the highest point of cultivation of which it is susceptible, will add something to the general store of proper thinking and virtuous feeling. Indeed, his power will be far more than he is himself aware of. For, as Shakspeare compares a good deed in this bad world to a little candle which shines from afar, so, most apposite would be the comparison to one whose mind, though naturally not of extraordinary force, is yet conspicuously elevated by careful and diligent training. But, young gentlemen, there is less in superiority of intellect than is usually supposed. Look around you in the world—even within your short experience you must have observed that men's influence and efficiency are not altogether commensurate with their mental powers. You often see a man distinguished for his success, who was originally not blessed with a commanding intellect—and, on the other hand, how many do you find of minds the most acute, and of information the most varied, who rest in inglorious apathy, and are known and felt, not beyond the sphere of their familiar acquaintance. There must be some cause for this—and the cause is one which should inspire every one who enjoys the blessings of education to press forward with unblanching eye to the light which blazes on

"The steep where fame's proud temple shines afar."

It is, that greatness and distinction are the result rather of moral effort than of mental superiority—rather of the determination than the ability to be great. It requires but the sustained exercise of the *will*—the concentration of the moral energy of man, to elevate him to any point which he may choose to attain.

I speak not here, of course, of those whose intellect is too feeble even to incite the possessor to this exertion of the will; nor, on the other hand, of those who seemingly descended from a higher sphere, speak but to command—put forth the hand but to subdue—and who see all things by the lightning glance of genius. But of all others, it may be confidently affirmed, that the will alone is wanting to elevate them before the world. Every man who has exercised much influence over his fellow man, has been distinguished by the imperiousness of his will—the invincible strength of his determination. The will, indeed, comprises the whole moral efficacy of man. He wills to do whatever he does. Since, then, greatness is, to a certain extent,

within your own control, resolve, my young friends, to be known to your generation. Exert the energy which adorns a man; let pride sustain the exertion, and you must succeed.

"On reason build *resolve*—that column of true majesty in man," is fraught with wisdom, short only of inspiration. But, alas! all this has been said "many a time and oft"—and with how little effect, we all know. What has been many times repeated, falls upon the ear like snow upon the water. The rich rewards of mental exertion have been so often set before youthful hearers, without effect, that it would seem as if language had lost its force; and yet, strange perversity of the human character! nothing is required of them but to appreciate themselves. Familiarity is the deadly foe of respect. It is our very familiarity with ourselves which prevents us from being great. Could men view themselves as they view others; free from the influence of narrow vanity on the one hand, and of want of self-confidence on the other, how many of those who die unknown, would fill the world with their fame: and yet this requires but the *will*. This cannot be too often reiterated. That young men could but be persuaded of this; that some master spirit,—some one whose high privilege—whose illustrious appanage it is to arouse and command the human intellect,—would but compel young men to look inward upon themselves; and would exhibit to them, as though a crystal, the noble capacities with which they are endowed, and the results which flow from their exercise!

May we not hope, however, my young friends, that the peculiarity of your situation, to which I have already alluded, will cause our counsels to be *not* altogether unheeded by you? that the evidences which are every day gathering around you, of the absolute necessity of exertion imposed upon you, will urge you to gird on your armor with a high and holy determination not to falter in the glorious cause?

If you are capable of forming this determination, in order that you may keep it inviolate, shun, as you would a pestilence, "*improba Siren Desidia*," the foul siren Sloth, and resist, with iron firmness, all her blandishments—for in her train marches every vice which degrades the soul. Let no portion of your time pass without improvement; stop the moments in their flight and extract from each all that it can bestow—for remember that the present only is your own; that time, like the fabled Pactolus, yields its treasures to those only who arrest its course, but, if unheeded, bears them on to the great ocean of the past. Remember too, that your sojourn here is but the commencement of your career—that you have here learned only to use the weapons with which you are to contend on the arena of the world, and that if you relax your exercise, not only will your weapons rust, but your hand will forget its familiar use of them.

To those of you, then, who have taken the high honors bestowed by our venerable institution, I would say—consider those honors as the champions in the olympic games regarded the voices of friends—cheering them to victory—and to those whose first efforts have received their appropriate rewards, I would liken those rewards to the trumpet-note, calling the combatants to the contest. To both, let the goal be your own honor and your country's good.

And now, my young friends, we must part. The allotted portion of instruction which it was at once our duty and our pleasure to bestow, has been accomplished. The intimate relation which has existed between us is at an end, and now it only remains for us to express to you as a body, our admiration of your conduct, which has rendered this relation (so often one of enmity and discord,) a relation of friendship and good feeling, and which has reduced college discipline to the grateful task of treating gentlemen as they deserve to be treated. So long as the students of William and Mary sustain the character for talent, for industry and gentlemanly demeanor, which has distinguished them during the past session, and which has never been excelled, there will be no fear that our beloved and venerable alma mater will lose the lofty character she bears. And now, my young friends, on behalf of each one of us, I wish each one of you a happy meeting with your friends at home, and bid you an affectionate farewell.

DESULTORY SPECULATOR;

NO. V.

The following paper was prepared for, and, I believe, published some time ago in a northern periodical, but not being much read south of the Potomac, the article may not, therefore, have been seen by the great mass of your readers. I have made some additions to it, and as one of the speculations of my leisure moments, send it to you for your valuable magazine, to be preserved, if it be worthy of it.

THOUGHTS ON FEMALE EDUCATION.

In proportion as mankind advance in civilization and refinement, the condition of the female becomes more propitious and happy. In the first rude state of society, woman is treated as a slave—she is compelled to bear all the burdens and endure all the toils which the necessity of contributing to the comfort, support and ease of her husband and master, devolves upon her. The painful experience of this wretched condition, has been, in many instances, so appalling, that females in that stage of society, have often been induced to take away the life of their infant daughters, to prevent the future misery and privation, which they know they were doomed to suffer, if permitted to live. From this state of degradation and wretchedness woman emerges as the human mind becomes refined and polished by christianity and civilization. The beautiful system of christian philosophy and benevolence introduced by the Son of God, has done more to civilize mankind, and meliorate the moral condition of society, than all the schemes of philosophy that the wisdom of man has ever introduced or created, and woman owes more to it than to all the intellectual refinement and culture to which the human race had previously attained. Even among those nations that had made considerable progress in civilization—the Egyptians, Phenicians, Babylonians and Persians—but little attention was paid to the cultivation of the female mind, and they were still held in a state of comparative degradation. It is said that the kings of

the Medes and Persians, were instructed by women; but it does not appear that this circumstance tended to improve their condition. In Greece it seems to have been still worse. Among this enlightened people, women were regarded in the light of slaves, and excluded from the benefits and advantages of education. The precepts of Solon and Lycurgus, the great lawgivers of Athens and Lacedemon, were calculated rather to make them bold, indelicate and masculine, than refined, chaste and intelligent. Woman, beautiful and devoted woman, was considered as the mere plaything of man, intended solely to minister to his pleasures or to contribute to his physical enjoyments. Sappho, Corinna, Aspasia, form splendid exceptions, it is true, but they stand alone upon the canvass.* Even in the romantic days of chivalry, when such ardent devotion was professed for the fair sex, it does not appear that any great efforts were made to cultivate their minds, or give them that intellectual improvement which adds new lustre to their beauty and enlarges the sources of their happiness. As the mild doctrines of christianity expanded, and the civilization resulting from it continued to advance, the female character took a higher tone—and she began to exercise a more ennobling and salutary influence upon the destinies and conduct of man. She began to be considered as the true helpmate, companion and friend of man, capable of guiding his actions as well as of soothing his sorrows and alleviating his miseries; and greater attention was, therefore, paid to her moral and intellectual culture, till it was found not only just, but expedient to afford all the facilities necessary to make her a useful and valuable, as well as a fascinating member of society. She now holds the rank for which her maker created and designed her, and which she would always have held, if man had consulted his own interest and happiness. Her present position in society, requires high intellectual cultivation. She is to be the mother of men in whose hands are to be placed the destinies of her country and the moral welfare of her species. It is highly important that she should be well instructed, to enable her to infuse into the minds of her offspring an early love of knowledge and the principles of virtue. In all republics this is more especially necessary, as the duration and stability of the government depend upon the virtue and intelligence of the people. "Heaven," says the celebrated Segur, "in creating woman, seemed to say to man, behold either the torment or delight of your present and future existence. Give a direction to this being, calculated by the extreme pliancy of her mind to receive all the impressions you may wish to bestow upon her. It is another self I offer to you: in taking charge of her you ought, in a certain degree, to identify her with yourself." "Her breast," says another writer on this subject, with great truth and beauty, "sustains and nourishes us; her hands direct our earliest steps; her gentle voice teaches us to lisp our first expressions; she wipes away the first tears we shed; and to her we are indebted for our chief pleasures. In fact nature seems to have confided man to her continual care; the cradle of infancy is her peculiar charge, and her kind compassion soothes the bed of

*The Grecian and Roman women were under perpetual guardianship, and never trusted with the management of their own fortunes; and every father had the power of life and death over his daughters.

death." The well educated mother, has it in her power to raise up citizens, who may be a blessing and ornament to their country and add new glory to its name; for the impressions which she makes upon the plastic minds of her offspring, are never eradicated, and seldom fail to influence their future conduct in life. Most of the great men who have shed lustre upon the annals of the world, owe to their mothers, the elements of their distinction. It is mental superiority and not mere personal beauty, that gives to woman her greatest and most durable attraction. The enlightened and virtuous mind is calculated and never fails to fix the esteem and love of man. "External accomplishments," says Fordyce, "are continually losing, and internal attractions are continually gaining. A beautiful character is as the morning light, that shineth more and more unto the perfect day. Sense, spirit, sweetness, are immortal. All besidea wither like grass. When beauty of looks loses its power to please, (and this will as inevitably follow as the night follows the day,) the soul will seek a soul—it will refuse to be satisfied with any thing else. If it find none, in vain shall the softest eye sparkle—in vain shall the softest eye entice. But if a mind appear—and wherever it resides, a mind will appear—it is recognized, admired and embraced, even though the eye possesses no lustre, and smiles at the moment be banished by sorrow."

"Mind, mind alone, bear witness earth and heaven!
This luring fountain in itself contains,
The beautiful and sublime! Here, hand in hand,
Sit paramount the Graces."

Education is, moreover, a source of happiness as well as of usefulness to woman. From the present organization of society, she must necessarily be much alone, her vocations are domestic and her duties solitary. She cannot mingle with the world like man, and has often to submit to the caprice and cruelty of her husband. In such a condition then, it will be obvious that her happiness must be greatly promoted by the resources with which a good education has furnished her, and upon which she can at all times draw, for her own gratification, and, as a social being, that of others. It has been correctly observed by an American writer, that "the instruction of women improves the stock of national talents, and employs more minds for the instruction and amusement of the world; it increases the pleasures of society by multiplying the topics upon which the two sexes take a common interest; and makes marriage an intercourse of understanding as well as of affection, by giving dignity and importance to the female character. The education of women favors public morals; it provides for every season of life, as well as for the brightest and best; and leaves a woman, when she is stricken by the hand of time, not as she now is, destitute of every thing and neglected by all, but with the full power and the splendid attractions of knowledge—diffusing the elegant pleasures of polite literature and receiving the just homage of learned and accomplished men."

The education of females should be as liberal as possible, but without being too masculine. As she is excluded, by her relative condition in society, from following any of the learned professions, it will not be necessary that she should study law, medicine or theology, as a science; nor is it at all important that she should make herself familiar with the higher branches of ma-

thematics; though the example of Mrs. Somerville would prove that such studies are far from being unsuited or uncongenial to the female mind. I would divide a proper system of female education into two branches, the useful and ornamental—on each of which I propose to make some cursory remarks. Reading, writing and arithmetic, constitute the foundation and most important elements of all learning, and those should of course be first attained. To read and write well is no ordinary accomplishment. Every female should be taught to read with correct emphasis and agreeable cadence, avoiding too great rapidity of utterance on the one hand, and a drawing and monotonous manner on the other. It is not enough to learn to read, merely to acquire ideas; but an effort should be made to reach, in this, as in the art of penmanship, the highest attainable degree of perfection. The reading of a beautiful passage of poetry or prose, with taste, sensibility and feeling, produces an agreeable effect on the hearer, and enhances the gratification which its literary merits are calculated to afford. Fine penmanship is a most desirable acquisition to both sexes. A slovenly hand is as offensive as vulgarisms in language; and a female should always strive to write with grace and elegance, and not to pause till she attains excellence in this art. Arithmetic is of more importance, in a course of female education, than is generally admitted or imagined; and too little attention is paid to it by the instructor, as well as the pupil. Women in this country are often placed in a situation where a knowledge of arithmetic becomes almost indispensable to their security and success. The cause of its neglect arises from a too general impression that they will have no occasion to employ it in the course of life to which they are destined; but they will find, that in the ordinary transactions of the world, its utility is much greater than they had supposed. To these branches should follow, or be simultaneously acquired, a knowledge of grammar, which should be carefully studied and well understood, not only with a view to correct speaking but to correct composition. It is very offensive to a well educated mind, to hear a beautiful young woman, or one mingling in genteel society, violating the ordinary rules of grammar in her common conversation, or to see them violated in her written compositions. It denotes an inattention and carelessness, if not an ignorance or vulgarity, extremely reprehensible. The rules of composition should also claim particular attention, and the art acquired, by frequent practice, as early as possible, as one combining utility and ornament. I know of scarcely any other more useful in the whole structure of female education. To be able, at all times, when required, to convey one's thoughts with facility, and in a neat, appropriate and elegant style, is an attainment which should excite the ambition and stimulate the exertion of every female mind. There is no condition in life in which this useful art may not be exercised with advantage and pleasure. The occasions will be numerous in which facility and skill in epistolary composition, will be required. A writer of distinction has correctly observed, that "the epistolary style deserves to be cultivated more than any other, since none is of more various and frequent use through the whole subordination of human life." Facility in this species of composition is not only highly useful, but it serves to give a charm to the communications of friendship, and

a grace and beauty to thought. Every female should, therefore, endeavor to make herself mistress of this pleasing and valuable art.

To the branches of education I have mentioned, should now be added the study of history, connected with geography and chronology, which have been justly termed its two eyes. History and geography are almost inseparable; the one should always accompany the other, for they elucidate and render each other interesting. The advantage of a correct knowledge of general history, to both sexes, must be obvious. It supplies them with food for reflection and conversation, and the examples it furnishes may serve to guide them in forming a judgment of men, and the policy of nations. It teaches them practical philosophy; for it is philosophy teaching by example; gives experience of the world, and expands and enlightens the mind. History is the school of philosophy, the mistress of life. Her precepts are the precepts of wisdom and virtue; her sphere the circumference of the world and the circle of time; her principles are the principles of rectitude, and her deductions the deductions of experience and truth. It is calculated to amuse the fancy, to improve the understanding, and to invigorate the sentiments of virtue. The pleasure derived from the perusal of a well written history, is nearly as great as that from a well written work of imagination, while the utility resulting from the former, is much greater. "Works of fiction," says Dr. Priestly, "resemble those machines which we contrive to illustrate the principles of philosophy; real history resembles the experiments made by the air pump, or electrical machine, which exhibits the operations of nature, and the God of nature himself." In the study of history, the student should endeavor to acquire and retain only that which may be useful and necessary; such as a knowledge of the virtues and vices, the genius and character, the laws and customs, the constitution and policy, the literature, sciences and arts of nations, and the causes which led to their rise, overthrow or decline. The most interesting portion of history, however, is biography, and its study is attended not only with great advantage, but with satisfaction and pleasure.

To open a wider field of usefulness to the female mind, the elements of some of the physical sciences should be acquired,—natural philosophy, botany and chemistry. The former embraces physical geography, astronomy, and natural history. "Astronomy," says Delauze, a French author, "is the foundation of geography, the guide of chronology, and the light of history. It serves not only to determine the position of places and to fix dates; but to rectify the relations of historians and discover the causes of their prejudices." Some acquaintance with natural history, will be found both useful and interesting. A knowledge of the history and operations of nature, will diminish or destroy the influence of superstition, delusion and error; for

"Nature well known, no prodigies remain."

Chemistry also should enter into a system of female education. It develops the various phenomena of nature, illustrates the physiology of vegetable life, and gives to the useful and domestic arts, their greatest power and excellence. "A young lady acquainted with the general principles of chemistry," says the authoress of "Thoughts on Domestic Education," "could, with increased intelligence and precision, direct many of the domestic opera-

tions of a household; and some knowledge of the laws of nature, (as developed in natural and experimental philosophy,) would tend to many useful results in the business of private life." Mineralogy might, also, be added, as these two sciences are closely connected; but all that it may be necessary to acquire of both, will be to class and distinguish one mineral from another; to know the component parts and properties of bodies, to be able to analyse them by tests, and to understand their nature, affinities and combinations, and the uses to which they may be applied. But of the physical sciences the most beautiful and alluring is botany. This science affords a source of endless pleasure to its votary, by the beauty it unfolds and the mysteries of nature it develops. Its moral influence is felt by begetting simple tastes, infusing into the mind ideas of order, and into the soul sentiments of benevolence and peace. There is something in this science that seems to assimilate to the female character, and to render it a desirable object of pursuit to the fair sex. To them

"The meanest flower that blows, can give
Thoughts that oft lie too deep for tears."

In this beautiful science there is not

"A tree,
A plant, a leaf, a blossom but contains
A folio volume. We may read and read,
And read again, and still find something new,
Something to please and something to instruct."

While acquiring a knowledge of the sciences I have mentioned, or before commencing their study, the modern languages might be attended to and learnt. An acquaintance with the French, Italian and Spanish languages should be attained by every well educated female, as valuable keys to knowledge, and as calculated to render their possessor more useful and fascinating in the various walks of life. German, if desired, might also be added to these; and I should not object to the study of Latin, because its attainment will make her better acquainted with the principles of grammar, and improve and refine her taste and give discipline to her mind. It will not be required that she should labor to make herself a mistress of this language; because, it would demand a longer time than could well be devoted to its attainment; but such an acquaintance with it as would enable her to read Virgil, with tolerable facility, might be useful, in rendering the acquisition of the modern languages more easy and pleasant, and the nomenclature of the sciences less difficult and unintelligible. In studying the modern languages, the learner should not stop short of the power of reading, writing and speaking them with correctness and facility.

There is another important branch of female education, which I think has been and still is too much neglected, from its being absurdly considered as degrading to, and unworthy of the character of a lady. I mean a knowledge of the domestic concerns of a family. In the proper management of a household, the future wife cannot be too early initiated. To know how to superintend and direct the affairs of a family with judicious skill and ability; to be able, when necessary, to give her personal aid, is a species of knowledge that every female, in this country, whatever may be the rank or affluence of her parents or her own expectations, should endeavor to obtain. Skill in the use of the needle, and the management of the household, is not at all incom-

patible with the most extensive literary attainments or the highest intellectual gifts, and will be found of great value to every woman who may become the mistress of a family. There is much truth in the following remarks, by the authoress of 'Thoughts on Domestic Education,' from which I have already had occasion to quote: "The first lessons of housewifery should be practiced under the eye of the mother. At fifteen years of age, a girl will know enough of arithmetic to be ready at accounts, and will have sufficient judgment to reason fairly on what she observes. At that age she may occasionally attend her mother in her daily visits to the kitchen and larder. Let her behold the arrangement of household business—the manner of giving directions—the plan of furnishing supplies. She will thus gradually imbibe a clear conception of all such matters; she will understand the usefulness of method; will find out the usual consumption of a family,—and know what to expect from the industry and what to pardon to the frailty of domestics."

I will now proceed to speak of the second or ornamental branch of female education. Under this division may be classed music, drawing, painting, dancing, and ornamental needle work. No accomplishments are more interesting or fascinating than the three former. They serve to beguile the tedium of solitude, to embellish the circles of society, and to throw around their possessor a charm and witchery which few can resist, and with which all must be delighted. In rural retirement, nothing can be more gratifying than the agreeable employment of copying the beauties of nature as they are unfolded to the eye of taste, and transferring the rich and varied tints of the landscape, or the more gaudy and flaunting beauties of the vegetable kingdom. The female who cultivates this fine art will never be at a loss for amusement or occupation. Every thing around her furnishes a model; and after she has exhausted all "the old," she can still imagine "new worlds" for the display of her pictorial skill, and by the magic of her pencil can "give to airy nothings, a local habitation and a name." If tired with this delightful occupation, she can resort to one equally charming and effective in calling up the most exquisite associations, and producing those sounds which fall upon the ear "like the sweet south upon a bank of violets, stealing and giving odor."

Music, both instrumental and vocal, should be acquired. The latter, Dr. Rush thinks should never be neglected in the education of a female. "Besides preparing her," he says, "to join in that part of public worship which consists in psalmody, it will enable her to soothe the cares of domestic life—and even the sorrows that will sometimes intrude into her own bosom may be relieved by a song, where sound and sentiment unite to act upon the mind." This eminent physician entertained the opinion derived from the experience his profession afforded—"that the exercise of the organs of the breast by singing, contributed very much to defend them from those diseases to which the climate and other causes exposed them. The Germans are seldom afflicted with consumptions, nor have I ever known but one instance of spitting blood among them." This he attributes to the strength which their lungs acquire by being frequently exercised in vocal music. There is a charm in music that few can resist. It is difficult to conceive the fascination which surrounds a woman to

whom nature has given a fine voice, and who has acquired skill in music. Mere personal beauty is lost in the charm which music infuses, and the senses are often taken captive by the "melody of sweet sounds." The heart forgets its hatreds and the feelings lose their bitterness and asperity under the influence of heavenly harmony.

Dancing, the "poetry of motion," is also an accomplishment which, by contributing to the grace and health of the body and the flow of the animal spirits, should not be neglected. The natural buoyancy of the young mind, and the pleasure derived from motion, will induce the young of both sexes to acquire this art, and it is, therefore, scarcely necessary to recommend its attainment. Women seem to have a kind of natural propensity for dancing, and usually excel in it. But to much excellence in this art, it is necessary to receive early instruction, which is now accessible to most young women. Connected with this accomplishment is the art of riding on horseback, which as it likewise conduces to the vigor and grace of the body, and to promote health, should not be neglected by any who have an opportunity to acquire it. To be able to manage a horse and to sit with ease in the saddle, is a desirable accomplishment to both men and women, and will be found agreeable and salutary. Every female should labor to attain grace in her attitudes and motion. She should endeavor to be like Venus, *dea apparuit motu*. This may be accomplished by the arts of dancing and riding, of which I have just spoken. The French women estimate grace as a paramount beauty, and often repeat the line of La Fontaine,

"Et la grace plus belle encore que la beauté."

The ancients seemed to have considered it inseparable from beauty; for Venus is never made to appear unaccompanied by the three Graces.

Tapestry, embroidery, and other ornamental needle work, are different sources of amusement, and serve to fill up a solitary hour agreeably. They give employment to the fingers, tend to vary the amusements of life, and may be useful in adversity, as affording means of support. The leisure moments of women are, from her condition in society, necessarily numerous; and the more her resources are multiplied, the more her happiness is promoted. These, however, are mere tributaries. The highest and most enduring source of happiness will be found in religion, which will be her friend in prosperity, and her support and consolation in adversity, and should be early and deeply implanted in the female heart. "Christianity," says an American writer, "is itself full of grace. It is a refiner of the heart; it imparts correctness of perception, delicacy of sentiment, and all those nicer shades of thought and feeling which constitute elegance of mind. Women imbibe more deeply the spirit of religion, when they carry its charm into the detail of life; when they are fascinating as well as faithful, and agreeable as well as good."

I shall not attempt, in this brief essay, to lay down the proper course of reading to be pursued by a young woman, after she has acquired the elements of knowledge I have endeavored to point out for her attainment. This would require more time and space than have been allotted to this essay, and will, after all, be regulated by the good sense and taste of the young lady, and

the judgment and experience of the literary friends whom she may consult. But I cannot, while on this subject, omit to impress upon the minds of young women the necessity of reading, if they are read at all, the works which issue in such profusion from the press, under the designation of romances, novels and tales, with great caution. The tendency of most of these productions is pernicious, by begetting a morbid sensibility, false notions of life, a distempered imagination, and a disrelish for graver and more useful works. History, biography, voyages, and travels, &c., should engross the most of the time she can devote to reading; and from that source, with the best literary periodicals of the day, both foreign and domestic, and the works of the most eminent poets of all nations, whose language she understands, she will derive a larger fund of knowledge, greater acquaintance with the world, and more abundant topics of conversation—the great charm of social intercourse. The society of a female whose mind has been thus cultivated and improved, will be eagerly sought and enjoyed by the virtuous and intelligent of the other sex. She will be fitted for the sphere in which she should revolve; be better prepared to discharge her appropriate duties in society, and be happier in herself, and the source of greater happiness to others.

August, 1839.

THE DYING SWAN;

A FABLE OF HERDEIS.*

"Shall I alone, then, hushed and silent be?"
Sighed the still Swan, whilst floating on the sea,
In that soft hour whose radiance from on high
Makes the clear wave the mirror of the sky—
"Shall I alone, of all the feathery race,
In silence gaze on Nature's glorious face?
In silence gaze, whilst, as I glide along,
My pent heart burns to pour its life in song?
I envy not the birds of glancing hues—
The Eagle's flight my state might well refuse—
I who, white-rocking on the lulling tide,
A living ship to cleave its waters glide—
I who, with dazzling neck and feathery snow,
Gleam o'er the wave, or seek the world below—
But thee, oh! Philomel! I envy thee,
When, spell-bound, loitering on the shining sea,
Slowly my waves along the deep are driven,
And bathe me raptured in the beams of Heaven—
How would I sing thee, Golden Evening Sun!
How breathe thy beauty and my bliss as one—
How in the mirror where thy blushes lie,
Plunge with a fatal joy, and gladly die!"

Even as he spake, the bright swan dived below,
Lighting the dim waves with his gleamy snow,
Piercing, with curving neck, the clear blue main,
To rear him sparkling from its deeps again.
But, as he rises, lo! with gentle lure,
A shape resplendent calls him to the shore.

* The German prose original affords only the simple outline, and is as short as it is beautiful. To the translation alone belong "slow length," and an attempt at ornament.

Even as he looks, the happy bird is won,
And hastes to greet the God of evening's sun.

"Hail, loveliest Swan!" the beamy Phœbus said—
And o'er his lips the light of kindness played—
"The prayer which, nourished in thy burning breast,
Only the worship of thy sighs confessed,
Apollo grants—by love deferred so long—
The hour is come—the hour that yields thee song!"

He touched the mute adorer with his lyre,
And woke the utterance of its hidden fire—
Enrapturing tones the Swan's soft breast pervade,
And lo! the minstrel of the sea is made.

Glowing with joy, he pours a godlike song—
Grateful he breathes a tribute warm and strong—
He sings the evening splendor of the sun—
The fires which thence the glancing sea hath won—
His own pure life, whose calm and happy flow
Is bright as streams that glitter as they go;—
Soft as his graceful form the lore-breathed lay,
And long and sleepy waves its charm obey,
Follow the gliding Swan with liquid roll,
Or, charged with music, faint on beach and shoal.

But soft!—as melts in song the sea-bird's heart,
A change—and lo! Elysium hears his art.
Still at Apollo's feet he weaves the strain,
So long desired, nor now desired in vain,
Since even the melody to life denied
To hymn his loftier state is now supplied.
All blest, he listens to immortal lays,
Even whilst a God's bright smile returns his gaze—
He rests adoring at Apollo's feet—
But, hark! what music renders mourning sweet?
What lay o'erburdened with the heart's excess,
Wakes his own soul to equal tenderness?
What gleamy shape of snow-light glides serene
Through the still glory of the immortal scene?
'Tis the companion of his ocean home—
'Tis she, more dazzling than that ocean's foam—
Pouring the wild song, blent of joy and grief,
That gave her voice, when Phœbus sent relief,
And bade the sad one in that anguished lay
Float to Elysium from the world away!

And Innocence beholds—the goddess bright,
Whose heavenly beauty clothes itself in light—
She sees—and claims, with loving heart, the pair—
Most happy they, to own her sacred care!—
To catch the glory of her smile from far,
Or through the blue waves guide her pearly car,
What time, descending to its waters free,
She bathes her young limbs in the glowing sea!

MORAL.

Patience and hope—all silent as thou art,
Thou of long griefs and trials—steadfast heart!
Await in calm and trust, nor yet repine
That Heaven in love conceals its high design—
Secure that all which warmed thy wishes here,
Shall be thine own in dying—and more dear.

T. H. E.

HINTS.

Show your equals candor—your inferiors civility—
your superiors respect.

Affectation is the aiming to seem to be what you are
not. Avoid it.

C. C.

LECTURES ON PHRENOLOGY AND ITS APPLICATION.

BY GEO. COMBE, ESQ.

Reported for the New Yorker.

LECTURE IV.

PHILOPROGENITIVENESS.

This organ is situated on each side the mesial line immediately above the cerebellum, and corresponds to the protuberance of the occiput. Gall remarked, that in the human race the occiput is in general more prominent in the female skull than in the male, and he inferred the brain lying beneath to be the organ of some faculty which is stronger in women than in men—but of what faculty he knew not. At length he noticed the corresponding part of the monkey's head to be similar in this respect to woman's, and he concluded it to be the probable seat of some faculty which is strong both in women and these animals. For a long time he tried without success to ascertain what the faculty could be, till one day during a lecture it occurred to him that monkeys were exceedingly fond of young, and the thought flashed upon his mind that this might be the long-sought faculty. He dismissed his class, retired immediately to his cabinet, and found that the female skull exceeded the male in this part throughout all species of animals. He now pursued his observations with vigor, which ended in the full establishment of the organ as that which gives attachment to children.

This feeling has been confounded with that of benevolence, but it is often large when benevolence is very small, and small when benevolence is very large. When large, it renders the office of rearing children pleasant, nay, delightful, even when they belong to others. Sir Walter Scott remarks, that among children there is a sort of freemasonry by which they detect almost instantly those who pay attention to them merely that they may be pleasing to the parents, and that they recognize by intuition those who take real pleasure in their society.

This faculty is frequently abused; people often pamper and spoil children instead of training them rationally. They forget that this feeling is not so much a virtue as a reward; that it is a blind feeling; indeed, all the propensities are blind—and by proving this, Phrenology will confer one of its greatest boons on MANKIND.

This faculty sometimes takes an interesting direction. In the United States, all ladies who have arrived at adult age seem to be married; but in my own country, this (alas!) is not the case; and among unmarried ladies we see the amiable feeling now under consideration lavished upon lap-dogs, cats or birds; these delightful and interesting little animals being used as substitutes for children. This practice is often ridiculed; but recollect that it is the manifestation of a feeling, which, under more favorable circumstances, would have rendered them excellent and devoted mothers.

The difference between male and female skulls is distinguishable at the earliest age. That of the male is the broadest; that of the female the longest. Owing to the greater size of this organ, the manifestations correspond. The girl, as soon as she can walk, wants her doll, whereas the boy seldom cares for such a plaything: he wants his whip and top.

Dr. Gall knew instances of ladies who never took any interest whatever in their children, though they tenderly loved their husbands. I found it difficult to realize this fact till I met with a case precisely similar. A lady in Edinburgh used to send her children away from home to be reared and educated, and never cared about seeing them till they were grown up, when she treated them, not as children, but as friends and companions. I was not sufficiently acquainted with her to examine her head, but a lady of my acquaintance, who was an excellent Phrenologist, did so, and found the organ to be uncommonly small. Her head appeared truncated behind.

It is a remarkable ordination of nature that this feeling bears a reference to the weakness and helplessness of its objects rather than to any other of their physical or moral qualities. A lady of this city told me that the very stupidity of a daughter three or four years of age strongly excited her affection.

In twenty-nine women who committed child-murder, twenty-

five had the organ very small. It may be thought from this that its absence leads to infanticide; recollect, however, that you can never bring a positive out of a negative. The murder depends upon certain exciting causes, operating on a peculiar organization. Were this feeling strong, it would supply a powerful restraining motive.

Here is the skull of a negro; this of a Scotch highlander; this of a Charib from the island of St. Vincent; see how largely the organ is developed—and these people strikingly manifest love of children. When at Brussels, I was talking with a woman concerning the behavior of the Scotch highlanders. She said they were as gentle and affectionate in the house as they were brave in the field, and that they were very fond of children. See what a large development in the skull of the poet Burns—and how beautifully is the feeling manifested in his poetry! In the Esquimaux it is very large; here is a specimen. Captain Parry says that love of children is almost the only amiable feeling they manifest. He met a party of them without food and almost dying with hunger; he relieved them, and the first thing they did was to feed their children, not attending to their own wants till the little ones were fully satisfied.

The superiority of the feeling in females is beautifully exemplified in a story told by Morier, in his Persian travels. The small-pox was very destructive in Persia, and the surgeons of the embassy commenced vaccinating. The women took their children in crowds. The priests disliked this, but wishing to put it down without appearing to do so, and being well skilled in human nature, they got government to put ferashes at the ambassador's gate, under the pretence of doing him honor, but in reality to prevent women from bringing their children. They said the *fathers*, and not the *mothers*, must bring them. This produced a remarkable decrease in the amount of applications.

This organ is sometimes diseased. Mental derangement is one of those subjects on which Phrenology throws a flood of light. Afflictions of the mind, by reason of men's ignorance, have been a source of immense anxiety and maltreatment. People have known not what to do. Sometimes terrified, sometimes horrified, sometimes mystified, they have had no idea that it was the disease of a *material* organ, which was probably in a state of exalted action, and which, like inflammation of the eye, might be got rid of by a proper remedial course. A woman attended by Dr. Combe had intense pain in this organ, attended by great anxiety about her children. Under proper treatment, the pain and anxiety diminished simultaneously. I saw a woman in a lunatic asylum in whom this organ was very large, and whose sole anxiety seemed about her children. She thought they had been stolen; and she uttered the most piercing shrieks and plaintive moans. She fell on her knees to the superintendent, and implored him to restore them, with a depth of feeling which I could not have thought it possible to express.

A lady of New York, in whom this organ is very large, told me that she frequently dreams of children. She described one dream which imparted to her the most exquisite delight, in which she seemed to have her whole lap full of babies, which were smiling, sprawling, raising their hands, and tossing about in the most interesting manner imaginable.

I now come to what is called the *Natural Language of the Organs*. Up to this time you will perhaps grant that I have been talking with a show, at least, of reason; but now you will probably set me down as fanciful and absurd. I am prepared for this; but I doubt not that you will acknowledge its truth before the end of the course; for as most of you have some predominant organ, and as each organ has a language of its own, though you may think my description of the natural language of those organs in which you are weak to be ridiculous, you will recognize the language of your own strong organs, and be convinced that there is something in it after all.

The law of action, as laid down by Gall, is, that the motions are all in the direction of the seat of the organs. That natural language does exist all will allow when they reflect, that by mien, walk and gesture the actors of pantomime are enabled to operate powerfully on the feelings without uttering a word. The natural tendency of Philoprogenitiveness is to throw the head backward.

Near Manchester I saw a young woman bring her husband's breakfast to him and sit by the road-side till he ate it, spending the time in caressing her child. Her whole manner was expressive of the highest delight. She kissed and fondled the infant,

and then she threw back her head and pressed it toward the neck as close as possible, repeating the same action several times. It would have formed a most beautiful subject for a painter. The great painters of Italy noticed the same expression, and in their representations of the murder of the innocents, they place the bereft mothers with their heads thrown back and the extreme of agony depicted in their faces.

CONCENTRATIVENESS.

This organ is situated immediately above Philoprogenitiveness, and below Self-Esteem. I shall not occupy much time upon it. Spurzheim, from observing it large in animals fond of dwelling in one place, called it *Inhabitiveness*. I observe persons whose thoughts, like clouds, come and go without regularly—whose sentences have succession without relation. In them I have found the organ very small. I observed others, of less mental capacity, remarkable for continuity of thought, and for the natural relationship existing between the successive subjects of their conversation. In these I have found the organ large. It appeared to me, therefore, that its function is to *keep two or more organs in continuous and simultaneous activity*. Dr. Hoppe and the Rev. Dr. Welch agreed with me in this view. I have already mentioned that I noticed some years ago a convolution of the brain running from the region of this organ near the base of the cleft between the two cerebral hemispheres and terminating in the anterior lobe, and that Dr. Solly has since proved this to be a commissure.

Dr. Vimont of Paris has made some observations which, if established, will reconcile the views of Dr. Spurzheim and myself. Having directed his attention to birds which live on fish, and which hover over water, watch with intense fixedness and then dart downward as though they were arrows rather than living beings, and having compared them with ducks and other such animals which practice no such concentrated watchfulness and action, he found in the first a great development of the lower part of this region, and in the others great deficiency. This he calls *Concentrativeness*. He found that this organ did not occupy the whole space, but left a region immediately above it and below Self-Esteem, which, he is convinced, appertains to the faculty of *Inhabitiveness*. If this view be correct, and I am pretty well satisfied that it is, then are Dr. Spurzheim's views and my own reconciled.

ADHESIVENESS.

This organ is situated at the middle of the parietal bone, on each side of the lower part of *Concentrativeness* and the upper part of *Philoprogenitiveness*. Dr. Gall was requested to mould the head of a lady who was a model of friendship. He did so, and found two large symmetrical protuberances, one on each side. The lady had suffered great mutations of fortune. She had been rich, and then poor—again rich, and again poor; but amid all these changes she remained firmly attached to her friends. The idea naturally suggested itself that this part might be the organ of the disposition to attachment. Many subsequent observations confirmed the conjecture.

You will seldom find this organ in an isolated protuberant state. Its large size is generally indicated by the breadth and fullness of this region. Compare these two skulls; this is the skull of an Esquimaux in which *Amativeness* and *Philoprogenitiveness* are very large, and *Adhesiveness* small; this is the skull of a Swiss, in which all three are very large.

Those in whom this organ is large feel the instinctive tendency to embrace and cling to the object of their affections. Boys manifest it by their attachment to dogs and rabbits, and in girls, to the feeling of *Philoprogenitiveness* it adds the hug of affection which they bestow upon their dolls. I have seen the poet Moore, and know this organ to be very large in him, and his poetry breathes its very spirit:

"The heart, like a tendril accustomed to cling,
Let it grow where it will cannot flourish alone;
But will lean to the nearest and loveliest thing
It can twine with itself and make closely its own."

Again—how it glows in the following lines:—

"The heart that has truly loved, never forgets,
But as truly loves on to the close;
As the sun-flower turns on her god when he sets,
The same look which she turn'd when he rose."

In general this organ is larger and the faculty stronger in woman than in man; and the extreme ardor and constancy of

their attachment may be attributed to this circumstance. In them alone can friendship be found in the fullness of perfection. Taking advantage of this proneness to attachment—this consecration of the heart to the object of affection—some men, for the gratification of a most despicable vanity, or from a worse motive, sport with this beautiful trait of female nature—conduct which would subject them to double infamy, but which is too often counted nothing of,—the seducer, glorying in his successful villany, while the wronged one is mourning in utter wretchedness over ruined hopes and a blighted name.

We often find strong attachment subsisting between persons of very different mental characters, in whom there are many points of repulsion; but the strength of this feeling serves as an eternal bond of union. There are husbands and wives in whom the attracting and repelling forces are so balanced that they can be happy neither together nor apart. They are forever quarrelling and making matters up; they part and unite, part again and again unite; again fly off, and again come together. They are a complete puzzle to their friends, who can place no dependence on their assertions or protestations. In these cases, Adhesiveness will generally be found largely developed in both parties.

This faculty is the bond of union among men, and gives rise to society. It is found large in many animals; but there are some, as the fox and magpie, which live in the marriage state; that is, they are attached for life: some, again, as the dog, live in society, but are not attached for life. Spurzheim thought attachment and attachment for life as modifications of the same faculty. Gall inclined to think them distinct faculties; and Dr. Vimont thinks he has proved this to be the case, and considers the region which we ascribe to Philoprogenitiveness as comprising two organs—love of young in the middle, and on each side attachment for life.

This organ is sometimes so active in oxen and horses, that they become sick when deprived of their accustomed companions. This diseased condition of the organ in man is called nostalgia. Many are unaware of the strength of this feeling till they have occasion to leave home. When away from their friends and companions they feel a yearning toward them, and a longing and craving to be again at home.

Amativeness, philoprogenitiveness and adhesiveness form the group of domestic affections, in the due regulation and proper exercise of which so much of our happiness depends.

The natural language of this faculty is to embrace and cause the organs to approach, as you see in this plate of two little girls, and this of a girl and dove. When a dog or cat is under the influence of this faculty, and wants to show great attachment, it will rub this part of the head against its master's leg. When two persons meet in whom this organ predominates, they feel an involuntary attachment toward each other springing up in their minds, unless their other faculties be very incongruous. Those who have it large give the hand a hearty shake on meeting; those who have it small, hardly press the hand at all. With the first, absent friends are ever present; they think of them with a warm glow of affection. With the last, out of sight out of mind. The organ was large in Burns, and his poetry is full of its spirit. It was large in Mary Mac Innes the murderer, and she strongly manifested the feeling. A person to whom she was firmly attached had sent her a pocket-handkerchief with his name written on one corner, and also half an orange, requesting that she would eat it on the scaffold in token of their mutual affection, he having eaten the other half the preceding morning at the corresponding hour. She held the corner of the handkerchief on which his name was written, in her mouth all the night preceding her execution. When seated on the drop she took the orange from the turnkey, saying, "Tell him that I die perfectly satisfied that he has done all in his power for my life, and that I eat the orange as he desired me. May God bless him. Say to him that it was my dying request that he may avoid drink and bad company, and be sure never to be late out at night." She forgot eternity in the ardor of her attachment.

In 1836, Dr. John Scott, of Edinburgh, had a patient whom he examined after death, and in whom he found the lungs extensively diseased. This was conceived to be a sufficient cause of death, and the examination proceeded no further till the brother of the deceased asked them with eagerness what they had found to be the condition of the brain; and when he learned that no examination had taken place, he requested that they would proceed to examine it. They did so, and to their astonishment

found 27 abscesses, 11 in the cerebellum and 16 or 17 more in the posterior lobe, there being but one in the intellectual region. The brother then stated his reason for making the request he had. His brother, he said, had been a resident of London, where his family then resided, and that he was formerly very much attached to his family; that when he first came to Edinburgh he manifested about them the usual anxiety, but that before he died attachment to them was utterly lost, and that he would hardly have mentioned them in his will if he had not been urged to do so.

COMBATIVENESS.

The organ of this faculty is situated immediately backward and upward of the ear. Gall discovered this organ by collecting together a number of the lower classes of society, studying their characters and comparing their developments. He found such as were remarkable for being *brave* to have this part large, such as were noted for cowardice to have it very small. Subsequent observations established the discovery. In Vienna animal combats were frequently exhibited, and one man was so intrepid that he often presented himself alone in the arena to sustain the attack of a bull or a wild boar. In him Gall found it very large. He found it very large in a young lady who had repeatedly dressed herself in male attire and maintained battles with men.

Dr. Brown speaks of this faculty. "There is," says he "a principle in our mind which is to us like a constant protector, which may slumber, indeed, but which awakes only at seasons when its vigilance would be useless; which awakes, therefore, at the first appearance of unjust intention, and which becomes more watchful and more vigorous in proportion to the violence of the attack which it has to dread." "Courage," says Dr. Johnson, "is a quality so necessary for maintaining virtue, that it is always respected even when it is associated with vice." Sterne's Uncle Toby is a personification of great combativeness, benevolence and integrity.

This faculty produces active courage—the instinctive propensity to oppose. It gives that boldness to the mind which enables it to remain undaunted amid opposition. A considerable endowment of it is therefore indispensable to all great and magnanimous characters. I know a gentleman in whom the moral sentiments are large and combativeness very small. He confessed that he felt the want of a proper development of this organ as a great deficiency in his character. He lacked the courage to oppose even manifest wrong. He felt that he should have been a much more useful man with a proper endowment of combativeness, and he sometimes shed tears at his own pusillanimity. A man without proper combativeness is always trodden under foot.

This organ is very large, as you may see by this head, in General Wurmsier, who defended Mantua against Bonaparte. Fighting was his chief delight. His intellect was by no means remarkable, and Napoleon said he gave him more trouble than ten better men. By his sudden and fierce attacks, made in defiance of all military principles, he kept the French in a continual state of alarm. It is very large, as you may see, in King Robert Bruce, and all know how strongly he manifested the faculty. Let the skull of either of these heroes be compared with this of a Cingalese boy.

The faculty is of great service to the barrister. It causes his energies to rise in proportion as he is opposed. Combined with destructiveness it inspires authors with the love of battles. Sir Walter Scott, who possessed this combination, was above his usual energy when describing the fight, the slaughter, and the shouts of victory. From this sympathy of authors with warriors, a successful butcher is too often elevated to the rank of a hero, and success in arms considered glorious without reference to the merits of the quarrel.

This faculty, large, gives the love of contention. Thus you find persons who dispute every thing. They say it is the love of truth which instigates them; but it is in reality the love of quarrelling. If you say to such a one that it is a fine day, he will perhaps ask you who is finding fault with the day. When combativeness is large and undirected by the moral sentiments, it becomes a great disturber of domestic peace. The hours which should be devoted to pure and quiet enjoyment are embittered by strife and contradiction.

This organ it is for the gratification of which the prize-fights of England are sanctioned. It is generally very large in those who murder from sudden impulses, as Haggart and Mac Innes.

It is generally more developed in man than in woman, but sometimes it predominates in the latter, and gives her a bold, forward air. It gives girls a tendency to romp. You see this organ very large in the statue of the ancient gladiator.

Those in whom it is large are very pugnacious when intoxicated, though at other times they may restrain the propensity within proper bounds.

Here is the skull of a native of one of the British Isles, where the people have the propensity so strong that it is said in song that "when one meets his friend he for love knocks him down." An Irish gentleman told me that at their fairs it was not uncommon for one of his countrymen, after becoming excited by whiskey, and unable any longer to repress his pugnacity, to range along the booths till he could see a head poking out somewhere, when he would give it a blow which would bring out its owner in quick time, when a regular fight would ensue. Contrast this head with that of the Hindoo, in whom combativeness is feeble: what a difference you perceive! Bull-dogs are always broad here, grey-hounds narrow. When horses are narrow behind the ears they are shy, when broad they are bold; when broad here and low in the forehead they are vicious; when broad here and high in the forehead, they are both bold and good-natured.

In our intercourse with men the knowledge of the mode in which this faculty operates is most useful. Knowing that such men constantly desire to oppose, the best plan is to state your opinion or arguments as clearly as possible, and if your meaning is perverted and your expressions distorted and the question embarrassed by extraneous matter, to drop the argument and leave your opponent in quiet possession of the field. This will be to him a real punishment and give a better chance for your views to sink into his mind.

This organ is often diseased. Penil says, "A maniac naturally peaceful and gentle in disposition, appeared to be inspired by the demon of malice during the fit. He was then in an unceasingly mischievous activity. He locked up his companions in their cells, provoked and struck them, and at every word raised some new quarrel and fighting." I have before related a case in which diseased manifestation was attended with abscess in the organ.

The natural language of this propensity is to throw the head backward and to one side, as in the attitude of boxing. The painters have noticed this. It gives a cutting expression to the lips, and a harsh thumping sound to the voice. Boys who have it large, stand up boldly when fighting, and look their adversary in the face. Those who have it small rarely fight, but if they do they generally poke their head as soon as possible to the breast of the adversary. It has been objected to this view of the natural language, that men put themselves into the described attitude because it is the best position both for attack and defence. We reply that boys who are quite young instinctively assume this attitude without in the slightest degree considering its propensity; and that this attitude is best is an inevitable consequence of its being natural.

TO MY MOTHER.

Yes! we have met again! Tho' Time's cold fingers
Have pressed that pale and lovely brow of thine,
A hallowed beauty 'round it mildly lingers—
Wreathing the pathway of thy life's decline:
And in thine eye so bright yet softly beaming,
Whene'er sweet thoughts are clust'ring in thy heart.
We see the light of sacred feeling gleaming
On those of whom I form a cherished part.
Thou wert my teacher, where the dark woods bending
O'er the glad waters woo'd the soft blue air;
And there thy voice, with winds and waters blending,
For thy soul's treasure breathed a fervent prayer—
The starry poems of creation shining
On the broad page of Heaven's bright mystic dome,
Whilst in the shade of its dim light reclining
Thou pictured'st forth the spirit's final home.

VOL. V.—77

How earnestly thou watched the boy unfolding
Into the dawn of manhood's iron age,
And with no eye but the UNSEEN's beholding
Open'd the wisdom of the sacred page!
How leaped his heart whene'er thou told the story
Of thy land's struggle on the dark sea's foam,
Or when its banner flashed in deathless glory
Amid the foliage of our forest home.

Oh! for that hour again, when softly stealing
In the dim twilight from all stranger eyes,
I marked thee weeping and together kneeling
By a low grave looked on the glowing skies—
Dreaming we saw the husband, sire, imploring
For us amid the white-robed seraph-band,
That we at last might bow with him adoring
Among the armies of the "Better Land!"

It may not be! The hour when Life's young roses
Wreathed every moment, hath departed! Now
The iron crown of manhood's day reposes
Weary and dark upon its wrinkled brow;
Fierce looks of hate, from eyes once mildly beaming,
Have steel'd the soul (whose daring pinions woo
The lofty stars) to Nature, in her earth-deeps gleaming,
Where vestal burns, but not for me, the True.

Have not deep wrongs, to wild remembrance calling,
Closed that young soul to sympathy and love,
Like murky clouds, black, stern, and thickly falling
Where God's bright rainbow glittered once above?
Here! here! forever here we feel the fire,
Unquenched by blood-drops of the heart and frame,
Nor wealth, nor tall Ambition's glory can aspire
To ease the spirit of its torturing flame.

Yet unto thee, dear mother! when a-weary
With the world's strife, would I a boy return,
And like a child lost in the forest dreary,
Weep o'er the dust of Memory's holy urn—
And with thee kneel beneath the spherèd air,
And know, that as of old our God watched o'er us there!

Louisville, Ky., 1839.

W. WALLACE.

IS THERE A GOD?

Is there a God? Go gaze upon the stars,
Whose course is ever to his bidding true;
Whose bright glad beauty nought of sorrow mars!
Go! gaze upon them in their homes of blue,
Undimmed by age, unchanged by aught that's new;
Will they not tell thee there is One whose might
Holds up that gorgeous arch of azure hue,
And placed the keystone of the "solemn night"
Within its broad blue bosom, beautiful and bright?

Is there a God? Look round on this green earth,
Upon the Iris-tinted flowers that lay
In wild profusion where he gave them birth!
Will they not in their silent beauty say,
"The One who made us is our shield and stay?"
"Tis He sustains each pale and fragile stalk,
Who beautifies, or smites us with decay,
"In garden bower, or simple forest walk!"
"Mortal! we dare not his high power to mock?"

Clark's Mills, O.

EGERIA.

MY COUSIN HELEN.

ONLY A SKETCH.

When I first saw my cousin Helen, she was just seventeen, and the very image of Hebe. Image, did I say? Alas! the word was ill selected—for Helen, besides being the most beautiful and sentient creature in life, was also, at that time, the wildest—the gayest—and the most uncontrolled. She laughed! How she did laugh! at the old and the ugly—the good and the bad—the cross and the careless—the harsh and the indulgent—and all this out of the mere overflow of high spirits, and without the smallest admixture of malice. She was only irrepressibly happy—so cheerful and so good natured, that it was infectious even to look at her. She loved climbing—she loved walking. She followed, on horseback, all her male cousins over fence, ditch, and stream, with as bold a consciousness of competence to the amusement, as they themselves experienced. She danced like a sylph run mad—so easy, so graceful, yet so free and capricious were her motions. She ran like Atalanta—she bounded like a fawn. Equal muscular spring did I never yet see; and withal her figure was, even then, the perfection of form—a little full in its proportions, but grace itself. And then her face! Such a complexion—so utterly fair, and yet so clear that the blood flowed about her cheek as if shown through a half transparent medium; whilst, if you had judged from the blue veins that streaked her temples, you would have thought the creature's life fed by some celestial essence. Never did darkly auburn locks part over a beautiful forehead in lines so wavy or so shining—never yet did flowing curls arrange their rich rings around a face in adaptation to it so clinging and entire—never were brows so delicate, yet so marked, or lashes so long, so dark, so soft. And never looked life more laughingly from human eyes, than from the clear hazel depths of hers. Her features put all other lineaments to shame, for separate beauty and combined harmony. Her lips too, bright and fragrant as some matchless bud. Neck, bosom, hand, arm—I think the keenest fault-finder could have found none with either. She was, of course, an acknowledged beauty, and the best of her beauty was that it left upon your mind the memory of perfect agreement and perfect grace. And these were characteristics also of her conduct—manners she had none—and not less so of her heart and mind, ungoverned and ungovernable as they certainly were. Nothing could be less hoyden than her ways. She laughed more than any body I ever saw, and yet she did not laugh too much, for you could not for your soul help joining her. And she sang like a bird, though she never could be kept quiet long enough to acquire the remotest idea of music, as a science—Nature having vouchsafed to her all the tones, and all the taste, of which she ever was mistress. As for study—she ran away if any one even spoke of it—and “in respect of” painting, she loved the coloring that God has spread upon the world by far too well, to have the preliminary patience, with crooked lines and blotches, by virtue of which alone good imitators are formed. And so of the sister art. She really (after her fashion) loved poetry. She felt its influence even in life and action, which contain more of its spirit than is generally

comprehended. Her eyes could fill for the tragic, and shine for the comic muse; but then she could no more have read the *Paradise Lost* than she could have written it. What could be received without effort, she received with enthusiasm. What cost her trouble, she repelled with all her might—and Heaven knows that was far from inconsiderable. Add to all this, that Helen was a most incorrigible mimic, and I think I have pretty well showed up her defects.

The daughter—the only child indeed—of people bred in the courtesies and indulgences of the first station, and withal extremely wealthy, she had never known restraint, far less repulse; and she was, for this reason, confiding, naïve, and sincere. I said she had never known restraint, nor said I so, forgetting the frequent exhortations of her maiden aunt—a person high in the family esteem—but, as they were never heeded by reckless Helen, they could never be said to have imposed a check upon her exuberant spirits.

“Helen! Helen!” would the old lady exclaim, as the young lady's laugh, or too active motions occasionally invaded her own most starched and proper repose,—“You startle me to death! When, when will you acquire even the rudiments of propriety? Indeed, my dear, you really are becoming a very rude girl!”

“Girls will be girls, Miss Molly.”

Such would sometimes be the old housekeeper's indulgent apology. But this was a truism of which the spinster's experience was so far removed from the date then present, that she very seriously thought of questioning it; and Helen, as she turned away with another laugh, as gleeful as that which had drawn upon her the admonition, did not say, but thought, that “It was impossible aunt Molly could ever have been young!” A great many other people had come to the same conclusion.

“My ears have been singing all day, Helen, and so have you!” This remark was always made fretfully, nor was it by any means unfrequent. Helen generally ceased to sing for half a minute, forgot the reproof, and went on with louder cheer than ever. She was incorrigible; but then, as she was so only because she really could not help it, she was generally allowed so to be in peace—nobody ruling her—because (though she was the sweetest tempered and gentlest creature in the world) it must be confessed, to her endless shame—nobody could. She would have been delighted to comply with every body's wishes, only she never exactly knew how, and so it always ended at last by her pleasing herself, and, in her mode of doing so, charming every body else.

Her mother, though she entertained a housekeeper, was herself a great “notable,” and would gladly have made Helen so likewise; but for such things she had neither head nor hands. Both were a thousand times too beautiful—and Helen knew it, though she was not vain. Only she had good sense enough to appreciate her natural advantages, and, therefore, though her literary papa could never coax her to one hour of serious study, she was as familiar with all the mysteries and magic “effects” of dress, as if she had been born heiress of all the sorcery of the toilette. No painter could have clothed her beauty with more admirable arrangements than those which emanated from her own skill, and no painter could have brought out such results—at once so various and so striking. Yet I do

not think she had any design to use this knowledge as a means of winning admiration. She only dressed with care, because she sincerely admired herself as long as she was before the mirror—for, afterwards, her own idea, I dare affirm, never crossed her mind until she was again pictured on its surface. In her way an original, Helen was yet very simple—and she neither spoiled her hands in learning to make pastry, nor allowed study to imprint one line on her smooth forehead. She saw that aunt Molly made beautiful filagree and rice baskets, and embossed paper and card-board boxes, and pincushions like harps, and needle-cases like guitars, and velvet cherries and strawberries that looked exactly like any thing but their originals, and that she painted and embroidered natural flowers that looked very unnatural, and worked the meeting of Joseph and his brethren, and several other interesting occurrences, in tent-stitch—besides she could not but observe that she worked collars and cuffs, and then “did them up” to admiration—but she was never the girl to ask that aunt Molly would teach her to do so too. Assuredly Helen could have worn the collars and cuffs, (if aunt Molly would have let her,) and that with an arrangement so becoming, that the old lady would herself hardly have recognized her own work, but, as the respectable person in question never once thought of allowing the trial to be made, its issue was matter only of conjecture—whereas, it was beyond contradiction certain, that my cousin could turn her hands neither to this branch of female industry, nor to any other useful thing in the whole world.

But, like other people, she could do mischief, if not good—and I was not long in making the discovery. After I had laughed with her a whole evening, galloped at her side an entire forenoon, danced with her at a party given in the neighborhood, walked myself to death next-morning, and followed her accustomed amusements all the rest of the day, just before dinner I found myself utterly exhausted, and as I lay upon a sofa, with which (thank Fortune!) my own apartment was enriched, I came to the full conclusion that my cousin Helen was as restless as a monkey, and ten times more troublesome. Then I slid into a reverie, I do not exactly even now remember how, in which her face and figure flitted about, as they incessantly did in the real world, and yet left an impression of preëminent grace and beauty. And when I rose to descend to the dining room, I found my study of my hair and neckcloth unusually interesting. Perhaps even then I cared for Helen!

At dinner, I found her in the full tide of conversation with a young and very handsome officer, then only a lieutenant, but, as I recollected as soon as I heard his name, of high character for gallant and gentlemanly conduct, and social qualities. I remembered too, that he was just from the Mediterranean; and happening to catch some half dozen words, respecting “parties on shore,” “curiosities,” and “a ball on board,” I could perfectly comprehend the interest displayed by my cousin. I perceived at once too the enthusiasm with which Mr. Neville joined in the laugh he created, and the admiration with which he regarded the glowing effects his descriptions excited in her face; but, either because the young are unapt to forestall evil, or because

I had not then any definite “idea” of Helen, I watched their proceedings without uneasiness. This employment was the more easy, as, when I came in late, I found but one seat vacant, and that beside Miss Wharton. She looked round as I occupied it.

“Oh! is it you, Frederick? Where have you been all this time? And, for pity’s sake, what is the matter? You look fatigued to death.”

“Yes, you have almost killed me! I am so tired I can hardly move.”

“Tired of what?”

“You are *too much* for me, fair cousin. I cannot follow you. You are gifted with powers beyond my attainment. Either of your favorite exercises is enough to kill an ordinary man, when its duration is left to your discretion. Do you not see my appetite is gone? Absolutely I am dying—and to-morrow it will devolve upon you to compose my epitaph.”

“I fear such a task would be as fatal to me, as my poor diversions threaten to be to you. I do not think I could be quiet long enough to write it—and, besides, I may anticipate a greater difficulty.”

“Indeed! What?”

“Something might be expected in the way of eulogy?”

“Ah! that, I am sure, could never be a difficulty.”

“And yet what could I say?”

“To determine that would tax my modesty. Try and think.”

“Try and think! Alas! thought is an exercise to which I am not inured. Would you have me also a victim? Ah! pardon if I cannot consent. Excuse me, and I will attend your obsequies, if not with panegyric, at least with pity.”

“Will you not shed one tear of sorrow?”

“Two—if you require it of me.”

“Not speak one word to the assembled throng?”

“Indeed, indeed I will.”

“And what?”

“I come to bury Cæsar—not to praise him.”

“There—that will do! That suffices to finish my earthly course!”

“Then rest in peace! And as it would be unreasonable in us to expect exertion from a person so disposed of, I shall not look for more. You will really be a great loss to me, and I feel uncommonly annoyed.”

Here Lieut. Neville addressed some words to my cousin Helen, and she forgot thereafter again to honor me with her attention. I continued for some time to listen to their conversation, in which, after a little while, I began to be interested, but during the discussion of our repast, I made no effort to participate in it.

Lieut. Neville was at this time a newly arrived visitor at the house of his brother—a gentleman of large landed property in the neighborhood—and as he was but just returned from a long cruise, it may reasonably be supposed that he was not unwilling to prolong, as much as possible, the time during which he “waited orders.” His brother’s family was intelligent, gay, and liberal. Large parties were frequently formed there. His sister-in-law was an exceedingly pretty woman, of fashionable tastes and manners; and her having three or four engaging little children, contributed no further to check her devotion to large entertainments at home and abroad and to the young and agreeable of both sexes, than did the presence of certain pet dogs, which, as well as the

human "responsibilities," were inmates of Hollywood. The neighborhood was then very populous, and its inhabitants were, for the most part, people of fortune, and, whether sensible or otherwise, at least familiar with the forms and civilities of what was once called "genteel life." There has been of late years, by the way, an infinite deal of contempt accumulated upon this word "genteel"—and why? I confess I cannot discover. To be sure there is, in our country, always some danger of its too great extension and consequent misapplication, but even that abuse tends to good. It gives the second class, both in station and qualifications, a motive to "come up higher"—and its substitutes, as the reflecting cannot but perceive, have a decided tendency to reverse this interesting process, and bring lower that standard of manners, which, in the days of yore, was erected by the chivalry and the courtesy immediately derived from Britain—the nursery of our fathers. "Fashionable," "ton," "the thing," (and for Heaven's sake, my masters, *what* thing?) may be words very imposing upon certain ears, but, precisely because they are the slang of a set who carry every thing by words, they seem to me to insult the good sense of the whole community. In short I have my fears, that since the antiquation and disuse of that proper old English dissyllable "genteel," a great portion of the thing signified, has accompanied the exile of the name significant, and that it may be looked for long, and seldom seen, among people whose lips are, nevertheless, entirely familiar with those tiresome continuals, "ton," "distinguish," and "quite the thing." But all this, though a very sensible digression, delays the history of my cousin Helen.

Her father's neighborhood, as I said, was populous and wealthy. Indeed, in my frequent visits to that mirth-loving district, I could never make out how its limits contrived to contain so many rich and extensive farms—so numerous and yet so opulent a community. The consequences were, however, as inevitable as the fact was certain. A round of gaiety—as people phrase it—expensive and hospitable habits of life—large and liberal establishments—continual visiting—entertainments at the various houses—parties of pleasure, on horseback, in carriages, on foot, in any way, by any means, with any—sometimes without any object—filled the time of its happy inhabitants, who continued the pleasures of extreme youth, even to the period of extreme age; and lived in joyous exemption from the cares, foresight, and troubles of existence, in order that the next generation might possess the delightful option of taking up the burden which themselves let slip from their free shoulders, or of emigration from the scene of their progenitors' merry-makings. In the midst of this social glee, the young men were naturally attracted to Hollywood, and to the residence of Helen's father—by name Oakley,—and, as within these two mansions were indwellers the two handsomest girls within many miles—Miss Wharton and Charlotte Neville—there was scarcely a time when you might not find at either half a dozen idle youngsters in attendance. A pleasant "situation" for a naval officer, who, like Neville, had been, for many months past, tied to ship-mates, ship-duties, and, more recently, to ship-fare. He made the most of his present advantages.

How we did "keep it up" in the six succeeding

weeks of my stay at Oakley. I began, by degrees, to find riding with Helen through the fresh woods, then in height of beauty, the most agreeable exercise I had ever enjoyed. Sometimes we went out in large parties, but, with the exception of Miss Neville, Helen was generally the only lady. I had at first been content to take my place beside either of these two, to fall back with other gentlemen, or with them to ride forward. But in less than a fortnight I began to consider my cousin Helen a much better rider than Miss Neville, and to that circumstance ascribed my preference for a canter neck and neck with her palfrey. By degrees too, I grew very petulant when I found that Lieut. Neville rode like a landsman, and was naturally willing to leave the care of his sister to other gentlemen, whilst himself kept pace with Helen and myself. Then it was exceedingly disagreeable, when, in our evening rambles, or in the frequent dances to which we were parties, he became as forward and as successful as myself in obtaining companionship or partnership with Helen. I had long since learned to think all her ungoverned and useless habits the dearest ways in the world, when they brought me, as her cousin and escort, into close communion with her; but now I began very often to find serious fault with them, for they frequently afforded to Neville this very advantage. On such occasions I angrily, but, as in truth I must add, *secretly*, characterised them as "wild, unusual, unladylike, proceedings;" and vowed internally, at the very moment when I would have given my eyes to profit by them, as my rival was then profiting, to my own exclusion, "that I would not have such a wife or sister for the universe." And yet, fifty times in the day, I trembled upon the brink of a proposal.

Meanwhile Lieutenant Neville was becoming very intimate with Helen. That I could not but see, and I detested the former in proportion as the intimacy grew. Yet I did not blame Helen for this. She was candid herself. Countenance and lips alike were perfect truth; and though she rendered it apparent, without particularly designing to do so, that she found his society agreeable, yet, even to my apprehensions, there had never appeared in her conduct towards him any thing that looked like intentional encouragement. I did her justice when I loved the natural delicacy which prevented her discovering either his admiration—already obvious enough to every body else—or her own interest in it, which at last my jealousy could only *suspect*. But whilst my observations had the effect of increasing my passionate desire to obtain her hand, it had also that of heightening my abhorrence for Neville, whenever a dread of his growing influence invaded the dreams with which I now filled my whole existence.

Things were, however, drawing to a crisis. I received a sudden summons home. My mother was extremely ill—it was feared in immediate danger—and it was necessary that I should leave Oakley within an hour, in order to meet a stage-coach, which would forward me upon my journey with greater expedition than could be commanded from my own horses. At this time Helen was out riding with Lieutenant Neville. He had called to propose this excursion in the morning, whilst I chanced to be out of the way, and they were mounted and off before my return. It was exactly when I was fretting at this circumstance, that the letter

which was to take me from Oakley was brought by the post. It is wonderful what consequences wait upon trifles. Had I remained this morning half an hour later with Helen in the drawing-room, I also should have accompanied her in this ride, and should at least have had a parting word with her—perhaps I might have been emboldened to make my proposals. In the distress of the moment, her kind heart might not have repelled them. At all events I should have left at work for me in her bosom the interest of sympathy—but all this is nonsense now!

As it was, the hour elapsed, and Helen was still away. As I heard the last stroke upon the clock, I felt my face burn with causeless indignation. I took leave of the family at Oakley, and with stately stride, marched out to take horse, in all the anguish of offended majesty. Once mounted, I galloped off at full speed, leaving the field, as I felt, to no unskilful foe. Two days of rapid travelling took me to my mother's bedside. She was indeed ill, changed, worn to the shadow of the merry old lady I had left at home two months before, presiding in her hospitable house with dignified, though placid courtesy. I always hated sick scenes, so I shall spare the reader the detail of my thousand ignorant miseries, and only ask him to put this narration forward two months, at the end of which my good mother walked out of her chamber, having, during her three last weeks of duration therein, been so well attended by her daughter Madge, and her fat maid Eusebia, (both of whom, besides being capital nurses, were practised hands at making the various insipids to which the appetites of convalescents are commonly restricted,) that she appeared once more in the drawing-room, as plump and fresh as when she left it; and she had not graced it three days, before I began to find my heart on the road to Oakley, and a sort of spur at the sides of my imagination, which impelled me to remove my body also to the field of contest.

My mamma was greatly surprised at my design.

"I had not been at home more than two months. My late visit to Oakley had occupied as long a time."

"Undeniable—but my stay at home had been so gloomy! I was tired of it. Her illness had spoiled my pleasure—the place was not itself, unless she presided."

"That compliment was contradicted by my departure. She was now entirely well."

"Yes, madam, but"—here I totally forgot what I had intended to say.

My gracious mother laughed good humoredly. Mamma had lovely teeth even then, and liked to show them. Besides, she had never in her life voluntarily caused a disagreeable sensation. She was also a little shrewd.

"My dear son, how silly you are," was her tender remark. "What is there to confuse you? You are naturally fond of gaiety, and I am growing old. Moreover, I suspect you are in love with my niece. I should soon be tired to death if you staid with me in this dull humor. When will you go? I hope you will to-morrow! Better see at once how Helen will dispose of you!"

"How she will dispose of me, ma'm?" I colored to the eyebrows.

"Certainly, my dear. Do you fancy the matter beyond doubt?"

I bit my lips at this maternal inquiry; and seeing the old lady about to second it, I caught up my hat, and strolled to the stables. I contented myself with ordering my horses to be in readiness at sunrise on the morrow, and then kept out of my mother's way till dinner time. At this meal, her two favorite neighbors, a clergyman, and Col. M., were voluntary guests. I never shook their hands more cordially. They staid late, and I pressed them to stay later. I was just in such a mood of impatient apprehension, as made my mother's raillery the greatest possible annoyance. They left us, and I braced myself for the encounter. But the polite old lady had, I suppose, by this time discovered the effect of her insinuations, for they were not renewed. On the contrary, her conversation was for the rest of the evening, kind, serious and agreeable, and it was not till next day, in charging me with messages to her sister and niece, that she ventured to wish me success, and that in a voice and manner that inspired good humor.

It was about dinner time, on the day which concluded my journey, that I dismounted at the gate of Oakley. I was—my apprehensions notwithstanding—in marvelous spirits. I thought the very sunshine brighter, the breeze softer, than either had ever before been observed to be. But this was of course the anticipated influence of Helen's presence. Never before had I loved any thing half so well. I had thought of little else since I left her. My journey had been full of her—nothing beautiful—nothing charming that I had failed to associate with her, as I encountered it. And, now, that I was about to see her, my heart bounded—but not unpleasantly.

A large party was expected to dinner—so I was informed by the servant who met me as I entered. The ladies of the family were invisible, and I was shown in a few minutes to my own apartment. It was the same I had occupied during my visit in June. It was now the end of August, but so mild had been the summer heats, that the foliage and turf upon which I looked from the open windows, were green and unchanged.

"Would Helen also be the same?"

I threw myself upon the accustomed sofa. "The sofa of reverie"—as I used to call it. But how is this? Only two months have elapsed since I lay on it before, and I revert to that period as if to an old time, of which my recollections were alike cherished and melancholy. I felt a sort of tender foreboding, to which lovers I fear are prone. In a few minutes the servant entered, bearing in his hands the fresh and limpid element which a long and dusty journey renders so grateful an accessory to our dinner preparations. Gladly did I avail myself of the refreshment—becomingly did I arrange my chestnut locks—a dozen times did I contemplate in the mirror the close, yet easy fit of a black suit, of unimpaired novelty—the delicate whiteness of my vest—the snowy folds of linen beneath it, which absolutely gave effect to the unobtrusive but costly diamond which reposed upon them. I could not withhold from the "*toute ensemble*" a nod of approbation; but as I bestowed it upon my image in the glass, I was annoyed by perceiving that a domestic belonging to the house—who, in pity to the fatigue of my own servant, had supplied his place—was grinning behind me, in full consciousness of the meaning of my com-

placent gesture. I hastily turned from the smooth surface which revealed the fact, and took my seat upon the sofa.

"You have had a gay time of it here, since I left you, Hyperion?" said I to the dignified sable, who had by this time composed his countenance, and stood very respectfully waiting to be dismissed. Mr. Hyperion Hopkins gave token of assent.

"Many visitors, I suppose?"

"Oh! a great many, indeed, sir!"

"And you happen to recollect who they may have been?"

"Oh! yes, sir. Several ladies to visit my mistress; a great many elderly gentlemen to see my master, and no end to the beaux that have waited on Miss Helen."

I detected a sidelong glance towards myself. "Very agreeable beaux, no doubt, Mr. Hopkins. Miss Helen could only have agreeable beaux."

"None of our family ever had any other, sir," answered Hyperion with a flourish of honorable pride.

"Of course not. And who may have some of these sparks have been?" I asked with apparent carelessness, but real interest.

My dark associate paused, as if for recollection, relieved the leg upon which he had been standing, approached to his noddle his agitated fingers, remembered his dignity, and forebore that method of cajoling memory, and then, having cast an eye to the ceiling, protruded the forefinger of the right hand, and extended all the digits of the left, he finally, with the one, began to number Miss Helen's admirers upon the many.

"Mr. John Sandford, sir, is here every week—Mr. Tom Henderson very nearly as often. Mr. Hardwicke constantly—I could not say how often, sir; and Mr. Bridgeley was turned off, sir—absolutely discarded—I got his horse myself last week—a most mortified man as ever I saw. I really was quite sorry for him, though he was not the sort of man to marry Miss Helen."

"And pray, Mr. Hopkins, what is the sort of man, who, in your opinion, may be worthy of Miss Helen?"

"Exactly such a man as is here every day, sir—and will be here to dinner this very day—Lieutenant Neville, Master Frederick. *There's* the sort of man! As handsome as a lord and as generous as a prince! I never saw a gentleman give such 'vails! He should have my good word, sir, with Miss Helen—that is, if I could only make bold to give it for him."

I declare, even from Hyperion Hopkins, it went to my heart! When I had inquired, half in jest, concerning "the sort of man," I had not been thinking of Lieutenant Neville.

"The dinner-bell, Master Frederick! Nothing more wanted, sir?"

"Nothing, I thank you." I ran down stairs and reached the drawing-room before the guests had left it. I bowed to those agreeable persons, shook hands with aunt and uncle, and hastily advanced to greet my cousin Helen. I colored, stammered, and pressed her hand. Suddenly I had the pleasure to observe that Helen's color was a hundred times more brilliant than that which burned upon my own less delicate cheek. I hailed the omen. Alas! it was not for me.

"How are you, Mr. Helmsley?" I knew at a sound that hateful voice, and the naval frankness with which

the greeting was made. In the new impression I forgot the blush of Miss Wharton, and my inference from it. I could not refuse the hand which was cordially offered, but I was thrown into a confusion of sensations, and it was with considerable constraint that I returned his salutation. In this brief exchange of civilities, however, I encountered his eyes—his eyes that had many times looked on storm and battle—and in their glance I could not but discover surprise and inquiry, mingled perhaps with something of concern. I took a chair beside my cousin. Why it was vacant, I never thought of asking—but a minute or two afterwards, John Sandford rose from that which he had occupied next her on the other side, and Neville, who had loitered near us, speaking to another lady, as soon as he could, disengage himself, made it his own. I chanced at the instant to look up, and caught Sandford's slight but significant gesture towards us, and the smile of a gentleman to whose side he had retreated. I was now very angry, and a good deal confused. Naturally, I suspected my case to be apparent to every body, though I could not understand how I had betrayed it. I lost all presence of mind, and surrendered myself to an embarrassment which might have disgraced crude eighteen.

Neville perceived it, and, though unconscious of the cause, good naturedly attempted to lend me his aid.

"Your mother's health took you from Oakley, Mr. Helmsley?"

"Her illness did," I answered peevishly.

Neville smiled at my petulance.

"Never mind the blunder," he said, "I only meant to preface an inquiry. I hope she is again quite well?"

"Quite—thank you."

There was a pause. I made an effort—

"My mother has charged me with a thousand messages to you, Miss Wharton."

What could Miss Wharton do but express her interest? Yet, as she did so, it was with a sort of smile which I could not entirely approve, and when I observed a gleam of sympathetic merriment upon the lips of Neville, my enthusiasm for family civilities was effectually checked. Helen never knew the nature of those of my mother; for whilst I was hesitating from the mere want of ideas, Mr. Hyperion Hopkins threw open the folding doors, made his reverence, and announced "dinner!" Neville offered his arm to Helen. I was in a cold rage. I could have annihilated him. But in order properly to support my dignity, I haughtily drew back, and was the last to enter the dining room.

I obtained a seat remote from Helen, ate in moody silence, and, without seeming to observe her, noted diligently her whole course of conduct during a long, but, except to myself, not a tedious dinner. Wit and wine flowed together, and Helen, rather more blushing perhaps, yet even more gay than usual, was the inspiration of the time. She, Neville, and young Hardwicke, kept up an unremitting play of ideas, and as they encouraged their opposite neighbors to take part in it, every one within hearing soon began to sympathize. All was mirth and good humor among them. At the end of the table to which I had sentenced myself, my aunt, and an old lady of the dullest possible qualifications, entertained each other to my perfect oppression. It was impossible not to appreciate the

contrast. But my motives for self sacrifice did not therefore give way. On the contrary, I felt as savage as a bear, and should have gloried in my own gloomy precincts, could I only have extended their influence to my enemies. But with them all was glow—sparkle—sunshine. And Helen's papa did listen so complacently!

The ladies rose from table, and we were left to the wine. After a few minutes I followed them to the drawing room. Helen was there. Most of the ladies were gathered about the piano-forte, in unison with which, a juvenile, just from school, was torturing a guitar. Helen was standing near a window when I approached her. She had no business with the instruments. I have said before that she could never be taught to use them. I wish only professional people ever could! The moment seemed propitious—for the few guests who were not entranced in the twangle which they styled a "performance," were either deep in the mysteries of a citron pudding, with Mrs. Wharton, or spell-bound in Miss Molly's fool's-paradise. I was not to blame this time, for I did not "slight my opportunity."

I hazarded some distant preliminary, but not without confusion. As Helen listened with attention, and answered kindly, this embarrassment wore away. Then my voice grew low and confidential, and its tones exceedingly tender. Helen looked surprised. My eyes fell—my heart beat rapidly—but it was too late to recede. I poured forth a passionate avowal. Her silence encouraged me to proceed. At last I raised my eyes, and then, to my horror, I perceived, that, though a deep flush had settled on her cheek, she was perfectly calm, and though hesitating a little, she was not the least confused. I allowed this discovery to silence me for a moment—and of that moment she promptly availed herself.

"Cousin Frederick, this ought not to be! I have never suspected the nature of your feelings, or it should not have occurred. I will, however, be as frank as our relationship and my regard for you can require that I should be. I cannot return your affection, cousin Frederick—and I am already engaged to Mr. Neville." She walked away and left me—absolutely stunned.

As soon as I could breathe, I stole out of the room, and went to take a walk. Reader, if you have ever been discarded, it is unnecessary that I should explain to you my feelings upon this occasion; and if you have not, it is the less requisite that you should pry into my distresses, inasmuch as there is every probability that, sometime or other, you will practically understand them far better than you could by means of description. If you are a lady, I know you have a hundred times imagined what such miseries must be—and so, to proceed—

I returned from my walk—it was a very unsatisfactory ramble—and went myself to the stables to demand my steed. I fancy I must have felt some indefinite horror of the valedictory sympathies of Mr. Hyperion. I am afraid, moreover, that I was too much agitated to think of leaving 'vails. I blush to remember it; but I am sure it was so. I threw myself on horseback, and spurred away to an inn about six miles distant, whither my servant had orders to follow me. Next day I pursued a very miserable journey—but not homewards. A

fortnight elapsed before I saw my mother, and when I did see her, it was to present to her so changed and worn, and attenuated a presence, that she listened without objections to my plan for a voyage to another hemisphere. I went abroad immediately, nor did I return for several years.

I had begged my mother not to make allusion to Helen in her letters. I myself had made no inquiry concerning her, previous to leaving the country; and I endeavored with my whole force to direct my thoughts to other objects. It was enough that she was, or soon would be, the wife of Mr. Neville. I could have no further interest in her fortunes—and my own, though injured, could not be irretrievable whilst I still possessed resolve, energy, and affluence to vary their scene of action. My mother was faithful to her promise—I to myself. Our letters never contained the name of Helen, and time and a succession of events gradually wore away the painful impression of her rejection. When at length I returned to my native country, I fancied myself pretty well cured of the old attachment, though no other had replaced it; and my mother was delighted to find me, as she was good enough to say, "improved in mind, manner and looks"—"more formed—more manly—more imposing."

I directly began to pry into family arrangements, and found that my mother had been literally upon the eve of a journey, which my unexpected return had suspended.

I insisted upon the preparations 'being resumed,' and asked whither it had been her purpose to travel.

"To say the truth, my son—to Oakley."

I felt an unexpected thrill—"Well, why not go?" I spoke steadily.

"Unless you could accompany me, I cannot," said my mother decidedly.

"To part so soon, after a long separation, would be any thing but pleasure."

I hastily considered the unmanliness of shrinking from what I must encounter—what I had imagined myself able to endure. I comprehended from my mother's manner, that Helen was at Oakley—but what then? Could I not meet her?

"Well, mother, and why should I not accompany you? Do you fancy me still the boyish lover of Mrs. Neville?"

"Of Mrs. Neville!"—My mother's eyes dilated.

"Certainly, madam; or of Helen—if I must be more familiar—my cousin Helen."

"Your cousin Helen, she certainly is, poor thing; but not Mrs. Neville."

"Not Mrs. Neville!—How do you mean?"

I do not know how it was. Assuredly I had no suspicion of what followed, for my eyes blazed with sudden delight, and my heart bounded as it had not for many a bygone day.

"I left her, as I fancied, on the eve of marriage, ma'am."

"Yes, but the evening that brought you from Oakley, carried to your rival orders to join his ship, and that without delay. Your uncle had given his consent to their marriage, but only upon condition of its being deferred for a year. Possibly he might have dispensed with this condition if Lieutenant Neville would have resigned his commission. But Neville, besides the disadvantage of possessing only that commission in the

world, had also a good deal of what I really think very just pride. He had no desire to become dependant upon a father-in-law, and would not hear of leaving the Navy. What then could be done? He tried every means he could honorably adopt to get off from the present service, but all in vain. The farewell said that evening to Helen, made the last spoken language that ever reached her from poor Neville. He addressed to her a few lines when about to sail, and a longer letter from a port in the West Indies. The week succeeding the date of the latter, he fell a victim to some disorder incident to the climate. All this I was told by my poor sister a little before her death, which followed close on that of Neville."

"Her death! my dear mother. Is my aunt then dead?"

"She died four years ago."

"And in your letters you never alluded to it!"

"Why should I have done so? You desired that I would not advert to Helen, and I supposed that your regrets required no addition."

I was touched by this delicacy, but, though greatly shocked by the communication just made by my mother, I hope I shall be forgiven the natural delight with which I reflected, even at this moment, that Helen was free. To my mother I only said, however, that I desired to accompany her to Oakley; and hopeless as I might justly consider a passion which had evidently only slumbered through the course of four long years, and which had been awakened by so inauspicious a circumstance as the death of Helen's lover, I yet did no longer deny myself certain day-dreams which I had long conscientiously repressed, as tending to enervate my own character, and to lessen all my best energies. Now I pictured to myself Helen—once so beautifully gay—a saddened creature, subdued for life into listless sorrow, and wearing the gloomy dress which should teach in silence, respect for her misfortunes. This picture roused all my pity—all my tenderness—and when we arrived at Oakley, I was prepared to love without return.

It was evening, and a few minutes before sunset, when we drove to the gate. There was soft summer weather upon the landscape, and, familiar as I was with the scenery around me, I thought on this evening that it possessed a beauty which I had not formerly appreciated. It seemed hallowed by the influence of the sweet and suffering Helen. I felt—I am ashamed to say how much!

Helen met my mother in the hall. Her appearance threw all my reveries into confusion. She was exquisitely beautiful—so beautiful that, in my first bewilderment, I failed to perceive that which I afterwards observed, that she was dressed with her accustomed care, and in white, without much ornament, and with a little silken scarf, in color blue, about the most delicately pure and unexceptionable neck I ever saw. There was in her arrangements, both of hair and apparel, the finish of exact but graceful taste, and its effect was infinite attraction. She was herself changed only as in the bud in the fulfilment of its promise. Her figure had gained dignity, but lost neither symmetry nor lightness. Her face, with increased nobleness of character—a sort of saintly calm—and the quiet expression of perfect self-possession, had added to its earlier loveliness a hundred indescribable claims upon the heart. Her

complexion was as delicate, as pure as ever, and, where the rose was due, as rich and vivid—her eyes as lustrous, but more serious—her smile more winning, because more soft,—her laugh, rare and slight, though never restrained. All these observations I could not, of course, make at once. On the contrary my first impressions were only those of general surprise and admiration. But in a few days I had taken note of all, and understood the change. The more one knew of Helen, the more one was obliged, I felt, to love her. It was all based upon a freedom from selfish feeling which I had never before seen exemplified,—though I had heard of such things.

"At first," as I learned from Mrs. Neville, who was frequently at Oakley, "Helen had been utterly overcome by the death of her lover—for it was emphatically her first grief. It had previously seemed the care of Providence to steep her days in sunshine. Her sorrow was perfectly unobtrusive—shown chiefly by the sensitiveness with which she shunned allusion to its cause, and by her seclusion from the society even of her dearest friends. What she felt was inferred from the gloomy change which fell upon her manner and pursuits. Hers was no nature to communicate its own sufferings to others. Its delicacy was as fastidious as its feeling was profound; and the silence of such a heart, was the proof that its anguish was intense. She was fortunately the child of people whose refinement could comprehend her wishes, and her sorrow was respected. Its indulgence was never invaded. She was left to herself and to nature—perhaps the wisest and kindest course—but the blow seemed to have been too heavy for her strength, and her life to be forever clouded. Her mother's health, about this time, began to decline. It had long before been extremely delicate, but, perhaps from the influence of misfortune, it became particularly precarious about the time when her sister—the old maiden lady, you remember—Miss Molly—left Oakley for a distant home. You know she was greatly valued by Mrs. Wharton, and as they had always lived in love and parted in perfect peace, the force of habit rendered her absence a severe trial to Helen's mother. Her illness at length alarmed and aroused poor Helen. From that moment she seemed to forget all else. She exerted all her energies—and they are great—not to seem cheerful—for seeming is no power of Helen's nature—but to be so. I believe she is very pious; though this, like all her subjects of deep feeling, is also one of great reserve. The effect is most gentle, most serene—and the religious principles which have been formed in her heart, render it quiet, calm, even happy. Look! there is nothing of blight about her. She is as fresh and glowing as a new blown rose!"

"You seem very fond of her?"

"It is a compliment to my heart to say so. After the death of her mother, there was, of course, an interval in which Nature would assert her claims; but, even then, her self-denying generosity was in continual exercise, and had powerful influence in consoling Mr. Wharton. Since that sad time, she has presided in his house—you see with what dignity. She enters into his studies, tastes, amusements—and, in becoming his greatest blessing, has also become his idol. It is almost amusing to observe his admiration and respect for her person and character. And well may he entertain for

her both sentiments, for she has not only allured happiness again to these once sad scenes, but also every where else, whither she herself can come. Of late she has laid aside the garb of mourning—she mingles freely in society, and endeavors from its resources both to gain and give pleasure. Never, however, does she allude to former pain. When she first renewed her intercourse with society, she was sometimes evidently touched by different little circumstances associated in her memory with the past. But this softness, slightly expressed even in its first pain, was soon entirely repressed, for Helen is as firm as she is patient—as self-possessed as saintly.”

“And does she shun her former pursuits?”

“No, certainly not,” was the prompt reply. “She walks and rides with her father, or with the different gentlemen who are often about her; though, I dare say, you will find her love of both exercises rather more reasonable than it once was.”

I smiled, and Mrs. Neville went on:

“She dances, too—is that not very unsentimental? But it pleases her father, and that is enough for Helen. And, as I told you, she has added most of his tastes to her own. She reads with him a great many things which she could not have endured formerly. You may perceive that she has not lost her skill in dress. And she endeavors to give a general supervision to the household economy.”

“That is an accomplishment I should least have looked for.”

“Otherwise she is by no means industrious, and scarcely knows the names of most of the implements of female usefulness.”

“I am glad to find something, in which she is the same.”

“Yes—it’s quite as well—perhaps better, as she will be affluent.”

“Better?”

“Yes—her inability will pay its own tax to the industrious poor.”

“A good view of a bad case?”

“A common one.”

“Yes.”

Was not Mrs. Neville loquacious? And yet I liked her to talk as long as her theme was Helen.

Miss Wharton had met me with composure on my arrival, and she had afterwards conversed with me with a degree of calmness and presence to the subjects we discussed, which I myself could not always command. Every night I left the drawing-room more convinced of the hopelessness of all future attempts to acquire her affection, and yet myself more in love if possible than ever.

Still she was not fettered. That was something, and I continued at Oakley, sharing most of her amusements, and endeavoring to interest her, not as a lover, but as a friend. I suffered any suspicions she might have conceived, to go quietly to sleep, and, in truth, at this time, I had not ventured to form any definite plan for the future. Indeed I could not judge of her feelings through the calmness of her manner, and I would not for worlds have wounded them, even ignorantly. For myself, therefore, I could resolve upon nothing; but I tried to mark my superiority to a former mortification, and my respect for her sentiments and wishes, when-

ever I understood them. This delicacy could not be lost upon a heart like Helen’s, and as I was now really a different creature from the passionate unformed youth she had rejected, and also possessed some of the attributes which had attracted her towards poor Neville, I obviously made some advance in her esteem. She became confiding in her demeanor; and her attentions, though never open to misconstruction, were marked by kindness, which seemed an attempt at atonement. She was a thousand times more attractive than ever.

After a few weeks we left Oakley—but, though I hoped nothing, I soon returned. There were now no visitors staying in the house, and our communion was necessarily more intimate. Neither of us thought to what it was tending, and though each day I felt more and more dependant upon Helen, I made no attempt to control my feelings, secure that no effort of mine could lessen the misery of refusal. I was compelled to love her, let the consequences be what they might.

A third visit, within a very short time, brought the blush to Helen’s cheek as she greeted me. I saw it—but I had learned not to trust to blushes. I passed a week in her society, and at its close had said nothing, and felt as if I never could say any thing on the subject first in my mind.

One morning, however, during the summer, we were sitting together in the drawing room. The windows were open, and the sunshine and still fresh and dewy air came together into the apartment, and brought with them a cheerful influence. We were very gay. Mr. Wharton had not yet descended to breakfast, and we were alone. We were speaking, I remember, of my travels. I was describing a painting I had seen abroad. Helen thought she had an engraving from it, and rose to look for it in a small cabinet which stood near a window. I did not like to see her there. In that very place she had rejected me. Yet I followed her. As she opened a drawer, I espied something which seemed composed of green and red velvet.

“Oh, dear aunt Molly!” I exclaimed, seizing it. “Does a shred of the old lady’s labors continue to ornament the world?”

Helen could not help smiling, as I drew out a red needle case, provided with the accustomed crimson cherries (which contained iron filings for the polishing, I believe, of rusty needles) and sundry dark green leaves, designed, as I think, less for use than ornament.

“Poor aunt Molly! Are you not ashamed to make me laugh? and all the time that very needle book was given as a keepsake, and made to incite me to future industry.”

“Made to very little purpose, I am afraid, then—if all tales be true.”

“Not to much, indeed.”

“Pray, is aunt Molly married?”

“What a question! No.”

“So industrious a lady should have extended her sphere of usefulness—should she not?”

Helen smiled.

“You don’t insinuate by that smile.”

“Indeed I insinuate nothing. Let dear aunt Molly alone.”

“If I must!” I twisted up the leaves of the needle book with an air of reverence, but with a real disregard

of arrangement which would have agonized its maker, and replaced it in the drawer.

"I wish," said I, lounging back to the sofa, upon which Helen was already re-seated, having given over her search for the print—"I wish that all ladies were obliged by law to fill the very station in which they can be most useful."

"In many cases that might be a cruel law," said Helen.

"Not when their own good sense should perceive its salutary influence."

"Perhaps their own good sense might be difficult to convince. And, upon the whole, I dare say they generally are placed as is most advantageous to themselves and others."

"And yet I have an idea," said I.

"That what?" asked Helen.

"Perhaps you will think me impertinent?"

"Not at all—go on."

"Then I cannot help thinking, Helen, that your power to confer happiness might be turned to greater account."

Helen's face crimsoned, but she made no answer. I saw that she comprehended me, and, gathering courage, I proceeded seriously—

"You might at least make one more individual perfectly happy—an individual upon whom you have imposed nearly five years of infinite misery. He deserves some atonement at your hands. Speak, my sweet cousin—tell him what he may expect?"

"If he will not require a very romantic return for his affection," answered Helen, with a deeper blush, and a grave smile, "he may be as happy as he pleases."

Reader! I have now been married for six months to my cousin Helen, and I still think her, though the most useless, yet also the most charming of human creatures. I am afraid there are some people who will like her the less for having admitted into her heart a new object, but, upon my honor, I think her conduct has been perfectly accordant with good feeling, as well as good sense. Is it not best to be as happy as we can—especially when it enables us to render others happy too?

T. H. E.

CHILDHOOD.

BY WILLIAM B. FAIRCHILD.

Oh beautiful! most beautiful
Each impulse of the heart,
Ere care hath twined its meshes round,
And planted there its dart;—
When youthful blood is coursing through
Each clear, transparent vein,
With a beauty and a mystery
That spurn at reason's rein.

Oh, then the "tell-tale countenance"
Each thought embodies forth,
And like the gems of night, the eyes
Do sparkle, bright with mirth—
And shadowings that sit across
The clear and polished brow,
Tell but of feelings in the heart,
As pure as love's first vow.

No trial of this dark, dark world,
No loads of feverish care,
Hath bowed the spirit down in pain,
Nor set its signet there:
But like the flowers that bloom in spring,
Or like the angels bright,
It scatters round a joyousness,
A beauty and a light.

A bright connecting link it is,
Of more than human birth,
'Twixt scenes of God's own Paradise
And dwellers on this earth.
Oh, worlds that we could bear for aye
The feelings of a child—
How sweet would be our path thro' life,
Our death how calm and mild.

Xenia, Ohio.

LETTERS FROM OUT THE OLD OAK.

NO. I.

MR. EDITOR:—So general has become the mania for letter and periodical writing, that the untutored rustic is not wholly unaffected by its influence. Of humble origin, and obscure as the inhabitant of an old oak must be, I confess I feel startled at the height to which ambition would aspire in seeking to make the great Literary Messenger the vehicle through which to convey my small ware. Freightened with the rich and costly merchandise of all the wealthy intellects of Virginia; Time her ocean, and Immortality her port of destination, the consummate and skilful pilot of this great national vessel, may smile at the folly of the peasant boy, who would seek to enskip his perishable property for so long a voyage. A faint heart never wins a fair lady—so says the proverb; and but for the effort and daring of one man, the wild Indian might have been the occupant of my neat-natural home; ergo, with these facts right before me, and the say-so of some one, that

Our doubts are traitors,
And make us lose the good we oft would win
By fearing to attempt—

leaving you to decide whether I am right, I will lay hold on Crockett's popular dictum, and "go ahead."

But who is this bold aspirant, who quotes without giving credit, and with unparalleled affectation, would blazon his paltry production with 'Letters from out the Old Oak,' apeing the great Mr. Willis, in his fanciful style of 'Letters from under a Bridge,' &c? Well, I would cater for the public, and like a true democrat, must answer queries. My first vocation in life, ere I had assumed the modern *toga* of boyhood, was picking up chips, bringing water, and making fires—acting somewhat in the capacity of scullion. This, for awhile, I thought pleasant enough. I worked during the day, and was permitted to sleep unmolested during the night. My mother was in the habit of preparing our meals; and I was taught from infancy to reverence, respect, and obey her. My father, however, being a stirring sort of somebody, in the course of a few years purchased a family of negroes. This relieved my mother of the drudgery of her domestic matters, and I, with her, was removed from the kitchen. My next appointment was that of manager-general of the stock. I was delighted with my promotion. I had been sent to the Sunday school, and my nights were now usually spent in poring over such small books as formed our little family library.

My father's next purchase was a mill. I was then sufficiently advanced to take charge of the establishment. I was now admirably situated; and having acquired a fondness for reading, I thought a few new books were all that was wanting to render me "lord of creation." I was so diligent and attentive to my charge, that at length, as the reward of my industry, my kind sire consented to send me one session to a neighboring academy. Here I learned English grammar, Latin, and Arithmetic. To my great mortification, the following year I was returned to the mill. The friendly benevolence of a neighboring lawyer, kindly extended to me the use of his books, and he even condescended so far as to visit me sometimes, and lend me instruction. Thus I lived for two years, when my father dying, I was called to take charge of the family concerns. My mother is since dead, my sister married, and I am left alone. I live upon my hereditary estate, containing just four acres; but my little cottage being recently burned, I am now residing in an old oak. I move in good society, boast an honest lineage, am in love with the prettiest little brunette in all Virginia, and am writing to the great Mr. White. I am slightly acquainted with the philosophy of books; but nature is my chosen study. The deep silence of the unbroken forest, where no echo is heard to reverberate the sound of the woodman's axe; the grassy bank of the woodland stream, where the wild flower exhales its odor to the wooing breeze; the mountain cliff and river's bank, are scenes which I delight to frequent. About the former there is a calm serenity, which courts, with irresistible attractions, the human heart to quiet and repose; a solitude omnipotent to quell the wildest emotion of the human bosom, and hush to stillness the very storm of its passion. Its tranquillizing influence chastens the feelings, and smooths down the asperities of man's character. Educated, or rather raised as I was, I was addicted to the sports common to the boys of my condition, and in my coon hunts, learned early to admire, yea, to gaze with enthusiasm, on all the numberless beauties of a clear sky. I was a wayward boy; and oft of a moon-lit night have I watched my cork floating on the smooth surface of some tributary stream of the Potomac, listening to the hoarse croakings of the frog, and the mocking-bird, which, under the influence of the mild and balmy atmosphere of a summer's night, would steal from her thicket of bramble, and break in upon the surrounding silence with notes of dulcet sound, according well with the softness and beauty of the scene. Yet it has not been amongst these scenes of calm beauty alone that I have delighted to linger. Others, in which grandeur was the most striking feature, have presented charms no less attractive. The foaming wave, dashing mountain high, has borne aloft my slight and fragile skiff, as it flew nimbly over the dark waters. Even this was familiar, and I was charmed with the very peril of my seemingly daring adventure, and have wished there were some second golden fleece which might require a modern Argonautic Expedition, in which I might play the part of Jason. The very fury of the raging elements contributed to my pleasure—yea, I delight to witness the vivid flash of the fiery lightning, and listen to the pealing thunders.

Yet the sublimities and beauties of inanimate nature, though my chief, have not been my sole study. Man—that mysterious volume—the wonderful mechanism of his yet more wonderful mind, his passions, and his social relations, have each formed the subject of my reflections. Fear not, however, that I shall trouble you with a metaphysical disquisition. I have studied them but to ascertain the practical philosophy of human life, by observing the principles upon which human action is founded. The nice and finely spun theories of the moral philosopher, have met with but a cursory perusal at my hands; and though fond of reading, yet

in this instance, I have taken *man*, the original, as my volume, in preference to the writings of the voluminous Stewart, or the acute and admired Brown.

This is the outline of the history of him, who, from the humble and homely avocations of the mill-boy, has dared aspire to the proud eminence of a *literary* scribbler; who would fain make the *Messenger* the medium through which to convey the dwarf children of his brain, dressed in rustic and unseemly garb, to the centre-tables of the wise and the wealthy; who would unfold his simple repast to the fastidious taste of the learned amateur, and

"Building his little Babylon of straw,
Cry—Behold the wonders of my might."

"Egotistical f—! your philosophy is comprised in a single word, and that one of no signification; self is the whole tenor of your song." Hold, Mr. Editor, I have but answered the inquiry commencing this epistle; if my answer has been prolix—candor required it; and Horace somewhere says, "*Edi-di monumentum ebro durissimum*," &c., which far surpasses me.

I had intended devoting this my first letter to the consideration of the scenery, antiquities, and prospects of my county; but as I can, at best, ask only one small corner in your usually well filled magazine, I must run up my pegasus, and asking your pardon if I intrude, bid you good night.

NUGATRITE.

THE OCEAN-BURIED.*

BY REV. E. H. CHAPIN.

"Bury me not in the deep, deep sea!"
The words came faint and mournfully,
From the pallid lips of a youth, who lay
On the cabin couch, where, day by day,
He had wasted and pined, till o'er his brow
The death shade had slowly passed—and now,
When the land and his fond-loved home were nigh,
They had gathered around him to see him die.

"Bury me not in the deep, deep sea,
Where the billowy shroud will roll over me—
Where no light can break through the dark cold wave,
And no sunbeam rest sweetly upon my grave.
'It boots not,' I know I have oft been told,
'Where the body shall lie when the heart is cold'—
Yet grant ye, oh! grant ye this boon to me,
Bury me not in the deep, deep sea!"

"For in fancy I've listened to well known words—
The free, wild wind, and the song of birds—
I have thought of home, of cot and bower,
And of scenes that I loved in childhood's hour.
I have ever hoped to be laid, when I died,
In the church-yard there on the green hill side—
By the bones of my fathers my grave should be—
Bury me not in the deep, deep sea!"

"Let my death slumber be where a mother's prayer
And sister's tears can be blended there.
Oh! 'twill be sweet, ere the heart's throb is o'er,
To know when its fountain shall gush no more,
That those it so fondly has yearned for will come
To plant the first wild-flowers of spring on my tomb.
Let me lie where the loved-ones can weep over me—
Bury me not in the deep, deep sea."

* Selected.

"And there is *another*—her tears would be shed
For him who lay far in an ocean-bed.
In hours that it pains me to think of now,
She hath twined these locks and kissed this brow—
In the hair *she* hath wreathed shall the sea-snake hiss?
The brow *she* hath pressed shall the cold wave kiss?—
For the sake of that bright one who waits for me,
Bury me not in the deep, deep sea.

"She hath been in my dreams." His voice failed there.
They gave no heed to his dying prayer.

* * * * *
They have lowered him slow o'er the vessel's side—
Above him hath closed the solemn tide.
Where to dip her wing the wild fowl rests—
Where the blue waves dance with their foamy crests—
Where the billows bound and the winds sport free—
They have buried him there in the deep, deep sea.

DIFFERENCES

IN THE INTELLECTUAL CHARACTER OF THE SEVERAL VARIETIES OF THE HUMAN RACE.

BY HARVEY LINDSLY, M. D.

In taking a survey of man, as he exists in different parts of the world, it cannot have escaped the attention of the most casual observer, that he exhibits striking differences of physical organization, and no less remarkable diversity of intellectual character. We can see at a glance, that the civilized and polished European, is in many respects an essentially different being, from the savage red man of America, the wandering and ignorant Tartar, or the degraded and brutish Hottentot.

But it will hardly be expected, on a subject presenting so wide a field for discussion, and entering so largely into all that is interesting in the moral and physical history of man, that we shall do more than to notice a few leading facts and some of the more prominent arguments by which these differences are established.

As a preliminary step in this discussion, it will be proper to present a brief view of the several varieties of which the human race is composed, with their peculiar and distinguishing characteristics. Physiologists generally make five distinctive varieties, viz. Caucasian, Mongolian, Ethiopian, American and Malay. The Caucasian is regarded as the primitive stock. It deviates into two extremes, most remote and different from each other—the Mongolian on one side and Ethiopian on the other. The other varieties come in between these two extremes—that is, the American comes in between the Caucasian and Mongolian; and the Malay between the Caucasian and Ethiopian.

The following marks will serve to define and distinguish these different classes. But here, we must observe, that as in the brute creation the different species are connected together, and pass into each other, by almost imperceptible gradations; so in the human race, individuals of distinct but approximating varieties may often be found, so nearly resembling each other, that it would be no easy matter to assign each his peculiar and proper place. The changes in our world, consequent upon migration, wars, invasions and conquest, and the

intermarriage to which these lead, will account for much of this uncertainty. Thus the Caucasian and Mongolian varieties have been much intermixed in Asia; the latter and the Ethiopian in Africa.

The characters of the Caucasian variety are—a white skin, either with a fair rosy tint, or inclining to brown; hair abundant, soft, and generally more or less curved or waving. Large cranium with small face, and the upper and anterior regions of the brain peculiarly developed. Face oval and straight, with a high and expanded forehead. Moral and intellectual qualities most energetic, and susceptible of the highest development and culture.

It includes all the ancient and modern Europeans, except the Laplanders and Finns, the former and present inhabitants of western Asia, as far as the rise of the Caspian Sea and the Ganges, including the Assyrians, Medes and Chaldeans; the Sarmatians, Scythians, and Parthians; the Philistines, Phenicians and Jews; the Tartars, Persians and Hindoos of high caste; the northern Africans, Egyptians* and Abyssinians.

2nd.—The Mongolian variety is characterized by olive color, straight and thin hair, little or no beard, square head with small and low forehead, broad and flattened face, nose small and flat, and stature generally inferior to the Caucasian variety.

It includes the numerous tribes which inhabit northern and central Asia—as the Mongols, Calmucks, the Chinese and Japanese, the Finnish races of the north of Europe, and the Esquimaux tribes in America, extending from Bhering's Straits to the extremity of Greenland.

3rd.—In the Ethiopian variety, the skin and eyes are black; hair black and woolly; the skull compressed laterally and elongated towards the front; forehead low, narrow and slanting; the cheek bones prominent, and nose broad, thick and flat. All the inhabitants of Africa not included in the first variety, belong to this.

4th.—The American variety is marked by a dark skin, of a more or less red tint; black, straight and strong hair; little beard, which is generally eradicated; countenance and skull very similar to the Mongolian tribes; forehead low, eyes deep, and face broad; the mouth is large and lips rather thick.

This variety includes all the aboriginal Americans, except the Esquimaux.

5th.—The Malay division exhibits a brown color, from a slight tawny tint not deeper than that of the Spaniards and Portuguese, to a dark brown approaching to black. Hair black, more or less curled and abundant—head narrow, nose full and broad, and mouth large. This division includes the inhabitants of the peninsula of Malacca, Sumatra and Borneo—of New Holland, New Zealand, and the innumerable islands scattered through the whole of the South Sea. It is called Malay, because most of the tribes speak the Malay language.

* I am well aware that the propriety of placing the ancient Egyptians in the Caucasian variety, has been denied by some writers of high character. My attention, however, was particularly directed to the consideration of this question, a few years since, and after a careful examination, I came unhesitatingly to the conclusion stated above. The paper, which was the result of this examination, may, perhaps, on a future occasion, be spread before the readers of the Messenger.

Having thus given a rapid and cursory sketch of the physical distinctions of the different varieties of the human race, it remains to be considered, whether similar peculiarities exist in their moral and intellectual qualities. If there is really no coincidence between the physical structure and moral and intellectual phenomena which man exhibits, then it is self-evident that the most lofty talents and splendid intellect, which have ever adorned or dignified our race, may be combined with the meanest organization; but if, on the contrary, the moral and intellectual character bear a close analogy to the body it inhabits—if the former be nearly allied to, and dependant upon the latter, the varieties of both will generally correspond.

That there is a marked and striking difference in the capacity for improvement and the intellectual endowments of the most perfect and the most degraded of our species, I think no one can doubt, who has attentively considered the progress of different nations in civilization and refinement, in the cultivation of the arts and sciences, and in the nature, character and excellence of their various forms of government. How else can we account for the fact, that from the earliest periods of which history presents any record, to the present day, the Caucasian variety has invariably held the same undisputed and enviable superiority over all the other races? The highest advances in civilization—the greatest improvements and most useful inventions in the mechanic arts—the most profound discoveries in the various sciences, and their application in innumerable modes to the relief of our wants and the supply of our necessities—the most complicated, beneficial and perfect forms of government—the most extensive and varied plans of charity and benevolence, and, in fine, every thing that tends to adorn and elevate human nature, have been exhibited to the greatest extent among the white races. While the other races, in precisely the same proportion as their physical organization has varied from, and been inferior to ours, have manifested those traits of character which belong to savage life—ignorance, debauchery, sensuality, cruelty—idolatry in its most degraded and disgusting forms—indifference to the pains and pleasures of others, and an almost total want of all that we comprehend under the name of elevated sentiments, manly virtues and moral feelings.

A single glance at the history of the world, shows conclusively the truth of these positions. There cannot be found either in ancient or modern times, a single tribe or nation, among the four inferior varieties, which has made any advances in civilization and learning, that will bear a comparison with the state of the white division of the same period. That there have been and are individual exceptions to this general rule, is readily admitted; but this proves nothing against the position, as our business is not with individuals but with communities. We all know that the most talented and intellectual persons of an inferior variety, may, and often do, equal and even excel the lowest of a superior class. It must also be admitted, that all the white races have not made those distinguished advances in knowledge and civilization, which have been claimed as indicating their superior organization and endowments. But when this is the case, some artificial causes can always be assigned for the deficiency.

Loss of liberty, a bad government, oppressive laws,

fanaticism, bigotry and intolerance, may counteract and wither the noblest gifts of nature, and plunge into ignorance, degradation and misery—nations, which are capable of the highest cultivation and are equal to the most splendid moral and intellectual achievements. Modern Greece, Italy and Spain, are most melancholy examples of this afflicting truth. But attentive and careful observers, can find even among these victims of cruelty and fanaticism, the germs of those intellectual powers, which require only an opportunity of developing themselves, to place their possessors in a high rank for talents and accomplishments.

That the white nations may degenerate and fall from their high and elevated rank, is rendered manifest by the history of the Greeks and Romans. The forum and the capitol, which have been rendered illustrious through all future ages, by the Scipios, the Brutuses and Catos—by Horace and Virgil and Cicero—by Hortensius and Cæsar and Tacitus—are now degraded and disgraced by ignorance and superstition and fanaticism—by monks without learning, and priests without piety—and those streets which were once enlivened by the splendid triumphs of returning conquerors, and which rung with the shouts of happy and prosperous freemen, are now trodden by a priest-ridden populace, ignorant, superstitious and servile. But notwithstanding all this weakness, degradation and misery—this classic ground has still maintained a high intellectual rank, and has sent forth men not unworthy to be the descendants of those who rendered Rome the mistress of the world. What country can boast in the same period of time, of having produced a greater variety or more splendid displays of genius, than the immortal names which adorn modern Italy? Dante, Petrarch and Boccaccio—Tasso, Ariosto and Alfieri—Raphael, Michael Angelo, and a crowd of others.

But even in a state of comparative barbarism, the superiority of the white races over the dark colored tribes is almost equally manifest. To be convinced of this, we need but read the account given by Tacitus and Cæsar of the manners and habits of the ancient Germans, and compare them with the hideous savages of New Holland or Van Dieman's Land—or look at the difference between the ancient Spaniards or any of the Celtic tribes and the modern Mongolians, Africans, or Indians of our own country.

And indeed the history and character of the aborigines of America, present, perhaps, one of the strongest arguments in favor of our position—that there is an essential and inherent difference in the capacity of the various races for improvement. Although placed for more than three hundred years, almost in immediate contact with knowledge and civilization and refinement—although every inducement has been held out, and vast exertions made, to reclaim them from their erratic mode of life, and to introduce among them the arts and conveniences of their more polished neighbors—although missionaries and teachers have devoted their time and talents for their instruction, and government has extended its fostering aid—yet how little has been accomplished? And even that little has been effected more by their intermarriages with whites, than by any actual improvement in the manners and habits of the Indians themselves.

The superiority of the whites, is almost universally

felt and acknowledged by the other races. The most intelligent negro, whom Mr. Park met in his travels in Africa, after witnessing only such evidences of European skill and knowledge as were exhibited at the English settlement on the coast, would sometimes appear pensive—and exclaim, with an involuntary sigh, “black men are nothing.” Similar facts have been noticed by other travellers. And indeed this consciousness of inferiority is the only rational mode of explaining the docility and patience with which the blacks submit to slavery—and especially when, as is the case in some of the West India islands, they vastly outnumber their masters. Suppose the situation and proportions of these people were reversed—that the Europeans were the slaves and the negroes were the masters, and the former five or six times as numerous as the latter, how long would such a state of things last? And even when an attempt at regaining their freedom is made by this unhappy people, their plans are so illy contrived—and so often betrayed through cowardice and ignorance and treachery, as to be frustrated with ease and almost without an effort.

The distinction of color between the white and dark races, is not more striking than the superiority of the former in intellectual energy and character. The latter, it is true, sometimes exhibit astonishing acuteness in their external senses, particularly in hearing and sight. But no doubt their preëminence here, is to be attributed entirely to their want of those mechanical aids and contrivances, which civilized man adopts to assist the powers of nature; and, therefore, their excellence in this respect is but another proof of their mental inferiority.

The wretched and degraded beings who inhabit Van Dieman's land and the adjacent islands, are perhaps the lowest and most debased in the scale of human existence. Peron describes them as examples of the rudest barbarism—“without chiefs, properly so called; without laws, or any thing like regular government; without arts of any kind; with no idea of agriculture, of the use of metals, or of the services to be derived from animals; without clothes or fixed abode, and with no other shelter than a mere shed of bark to keep off the cold winds; and with no arms but a club or spear.”

Although these people inhabit one of the most fertile countries in the world, with a mild and equable climate, suited to all the productions which strengthen the body and gratify the appetite of man—yet they derive no other sustenance from the earth than a few roots and plants—and are frequently driven by the failure of these, and of fish, which is their principal resource, to the most disgusting food, as frogs, lizards, serpents, spiders, the larvæ of insects, and especially a large kind of caterpillar, which is found in great abundance on some of their trees.

Who can, for a moment believe, that this besotted and ignorant and degraded people are cast in the same intellectual mould with those races who have produced a Homer, a Demosthenes, a Milton, a Chatham and a Franklin?

And these general traits of character, exist in a more or less modified form, in most of the dark races—in the American Indian, the Africans, and Mongolian nations of Asia, in the Malays and most of the inhabitants of the South Sea islands—we see every where the same

unrelenting and exterminating cruelty to enemies—the same brutal apathy and indolence—and the same unmanly treatment of their defenceless women.

We would not be understood, however, as asserting, that all the nobler qualities of the mind are wanting in the dark races. We know that courage in repelling danger and fortitude, in enduring suffering, and even some of the softer virtues, may be occasionally witnessed among them, in all their native loveliness and beauty—but when they are so exhibited, they are usually either exceptions to the general rule or closely allied to the neighboring vice. The Mongolian tribes of central Asia, when united under a Tengeris Khan or a Tamerlane, could achieve the most brilliant victories and overturn kingdoms and empires—but their wars were wars of extermination, to destroy and darken, not to build up and enlighten.

In order to appreciate fully the intellectual differences in the human race, we must not take two approximating varieties, between which, perhaps, the distinction is not very striking, and in some aspects of the case hardly perceptible—but we must compare the two extremes—as for instance the Caucasian and Malay, or the Caucasian and Ethiopian—and the most incredulous, I think, can hardly doubt, that *here* an essential difference exists. And indeed a regular gradation in their intellectual powers, can be observed through the Caucasian, Mongolian, American, and Ethiopian varieties. And this gradation is in pretty exact proportion to the more or less perfect form of the head—the anterior and superior parts of the brain, being larger and more fully developed in the first, and more and more flattened and compressed as we descend in the scale.

It may be objected to this theory that some of the white races have, in former times, been in a semi-barbarous state, little, if at all superior, to that of many of the inferior varieties at the present day. But this objection, upon examination, will be found rather specious than solid.

In the first place, no period can be found in the history of the Caucasian race, when their situation was in any respect as low and degraded as that of the dark races. Agriculture and the pastoral state, and even some of the mechanic arts have—so far at least as the most minute research into their former history and manners have informed us—always existed among them. And besides, if we admit that this race were once sunk to the lowest depth of ignorance and barbarism, how does it happen that they, and they *only*, have emerged from this state—have gone on progressively advancing in civilization and knowledge to their present pitch of refinement, while the other races remain in nearly the same situation in which they existed centuries ago?

The present and past state of the Chinese empire, is another striking illustration of the truth of the position we are endeavoring to establish. Here we behold a whole nation, which three thousand years ago enjoyed a considerable share of civilization—which had made some progress in the arts and sciences, and advanced far enough, if they had been endowed by nature with a high intellectual capacity for improvement, to have reached the noblest pitch of mental greatness, and taken an elevated rank among the most gifted nations of the earth; but instead of this, we see them year

after year, and century after century, plodding on in the same beaten path, with no inventions in the arts or discoveries in science to mark and distinguish their progress—resembling in this respect the brute creation—which, guided by instinct, never excels or falls short of the skill displayed by their predecessors, rather than rational beings—endowed with natures susceptible of continued and indefinite advancement. A single glance at the history and present situation of any European nation, will present in vivid colors the great difference between them and the Chinese in this particular. Look at the English, the French, or the Germans—five hundred years since, they were perhaps, little if at all superior to the inhabitants of China or Japan—but while the one has remained nearly stationary, or made but trifling advances, the others have marched on, with rapid and gigantic strides, in the path of knowledge and improvement. Science has diffused its genial influence over every corner of Europe, dispelling the dark clouds of ignorance and superstition—and the various mechanic arts have been carried to a degree of perfection, never dreamt of in the philosophy of the Chinese.

It is worthy of remark too, that it is only among the white races that any correct notions of religion, or rational views of a superintending Providence can be found. While the darker varieties have, from time immemorial, been immersed in the lowest and most disgusting species of idolatry, or have been totally ignorant of the existence of a God, and of a future state of rewards and punishments—the Caucasian race has either possessed a perfect form of religion, as Judaism and christianity—or where they have been Pagans and ignorant of the Bible, their ideas of their own responsibility, and of the true character of the Supreme Being, have been more rational and more nearly allied to the truth. The comparatively reasonable system of Heathenism, contained in the Grecian and Roman mythology, with its elegant and fanciful allegories, when compared with the senseless and often disgusting jargon of the Hottentot and Ethiopian, strikes us, at least, as the production of a higher and more cultivated intellect.

In forms of government, also, is the same marked superiority manifest. Not only are the white races the only ones who have enjoyed a free and republican government—but, with the exception of the Mongolian variety, the only race among which a form of government can with strict propriety be said to exist at all. For surely, the casual and irregular and ill-defined authority, which the chiefs exert over savage tribes, can hardly be dignified with the name of government. The complicated and extended, but useful and important machinery of a well regulated empire, can nowhere be found among savage nations—and hence the number subject to the same authority, must necessarily be very limited—and in fact seldom exceeds a few hundreds or thousands. Among barbarous tribes, no institutions can be found which secure freedom of conscience and opinion to all—which protect the feeble and defenceless against the strong and powerful—and which are administered upon principles, and according to rules, which have obtained the consent of all. In the language of another—"The spirit of liberty, the unconquerable energy of independence, the generous glow of patriotism, belong chiefly to those nobler organiza-

tions, in which the cerebral hemispheres have received their full development. The republics of Greece and Rome, of Italy in the middle ages, of Switzerland and Holland, the limited monarchy of England, and the United States of America, have shown us what the human race can effect, when animated by these sacred feelings—without which, nothing has ever been achieved truly great or permanently interesting. This is the charm, that attaches us to the history, the laws, the institutions, the literature of the free states of antiquity—and that enables us to study again and again, with fresh pleasure, the lives and actions of their illustrious patriots."

Notwithstanding, however, the decided superiority of the white races, we do not mean to assert, that there are not individuals among our darker brethren, capable of fathoming the most abstruse questions in philosophy, and of taking a high comparative rank among the gifted spirits of our race—nor even that the whole of the inferior varieties are not susceptible, to a limited degree, of civilization and refinement.

Numerous examples may be found among the Africans even, of individuals who have made great proficiency in some of the sciences, in polite learning, and the useful and ornamental arts.

A negro by the name of Hannibal, became a colonel in the Russian service, and was much distinguished for his attainments in mathematics and physics.

In 1734, Arno, an African from the coast of Guinea, took the degree of Doctor of Laws at the University of Wirtemberg, and, according to Blumenbach, displayed extensive and well digested reading in the physiological books of the time.

John Capitein, who was bought by a slave dealer when eight years of age, studied theology at Leyden, and published several sermons and poems. His dissertation, "*de servitute Libertati Christianæ non contraria*," went through four editions in a very short time.

These, and numerous other instances which might be adduced, however, are merely individual cases, and prove nothing as to the general comparative capability of these races for intellectual improvement—as this is a question, which must be decided by more extended and varied observations.

The different varieties of the human race, do not exhibit the same difference in their moral, which is so manifest in their intellectual character. And indeed, it is very doubtful, whether any well founded superiority in this respect can be established among the white over the darker nations. That particular vices are more prevalent in some portions of the world than in others, and even that some nations are more moral and more virtuous than others, cannot be denied—but this is generally owing to local and peculiar circumstances in their situation; and at any rate, this superiority of virtue and order can never be predicated of a whole variety, which should be the case, if it were commensurate with the intellectual distinctions we have been endeavoring to demonstrate.

Most travellers among the more barbarous and uncultivated nations agree in representing them as hospitable, generous, and benevolent, to as great an extent, as the same virtues will be found among the civilized nations.

The travels of Barrow, Park, and others, in different parts of Africa, abound with anecdotes highly honorable to the moral character of the ignorant and unpollished inhabitants of that quarter of the globe. In speaking of the Hottentots, Barrow observes:

"They are a mild, quiet and timid people; perfectly harmless, honest and faithful; and though extremely phlegmatic, they are kind and affectionate to each other and not incapable of strong attachments. A Hottentot would share his last morsel with his companions. They have little of that art or cunning which savages generally possess. If accused of crimes of which they have been guilty, they generally divulge the truth. They seldom quarrel among themselves, or make use of provoking language. Though naturally fearful, they will run into the face of danger, if led on by their superiors—and they suffer pain with patience and fortitude."

I am aware, that the inferiority of the dark to the white races, has been abused as an argument in favor of involuntary slavery. It has been contended, that as the difference between them and ourselves is so great, it is obviously the order of nature that they should be subservient to our wishes, and be made to minister to our wants and caprices. But a precisely contrary inference would be drawn from this fact by every well-regulated and benevolent mind—that it gives them so much the stronger claim upon our charity and humanity—that if we have more knowledge than they, we should instruct them—if we are more refined and polished, we should civilize them—if we are more powerful, we should protect them—if we alone possess a knowledge of the true God, we should deem it a privilege, as well as a sacred duty, to extend to them the light of revelation and the blessings of christianity.

THE HEN.*

Was once a hen of wit not small,
 (In fact 'twas most amazing,)
 And apt at laying eggs withal,
 Who, when she'd done would scream and bawl,
 As if the house were blazing.
 A turkey-cock, of age mature,
 Felt therent indignation;
 'Twas quite improper, he was sure,—
 He would no more the thing endure;
 So after cogitation,
 He to the lady straight repaired,
 And thus his business he declared:
 "Madam, pray what's the matter,
 That always when you've laid an egg,
 You make so great a clatter?
 I wish you'd do the thing in quiet,—
 Do be advised by me, and try it!"
 "Advised by you!" the lady cried,
 And tossed her head with proper pride—
 "And what do you know, now I pray,
 Of the fashions of the present day?
 You creature ignorant and low!
 However, if you want to know,
 This is the reason why I do it:
 I lay my egg, and then *revivie* it."

* Selected.

MOTHER GOOSE'S MELODIES.*

We are true lovers of our country. We are genuine admirers of our country's literature. We read every thing that issues from its prolific press. We have *trav-ailed* over the travels of her sons. Their novels are not novel to us. Their romances are *hi-stories* with us. In short, nothing is written on, and nothing is printed in America that we do not peruse, including *all* the "Fourth of July" orations. "What an extraordinary patriot!" exclaims one of our credulous readers, after getting through the latter part of the last sentence; "what! read *all* the Fourth of July orations?" Yes, even so, my good friend; but truth requires that we should give you some explanation on this score. We will illustrate by giving an anecdote in point:

A father, who was weary of receiving duplicate originals from his son in college, took the following method of putting a stop to the evil. He wrote thus to his lineal descendant:

"My dear Bob,—For the last three years I have received a weekly epistle from you; and after a diligent comparison of the one hundred and fifty-six letters I have thus obtained, I find their purport and substance to be substantially the same, and as follows: 1st. A statement of your continued health, and a wish expressed that the few (the very few) lines you send, may find me in the enjoyment of the same blessing. 2nd. An assertion that you are improving vastly in your studies, and in the affections of your tutors. 3rd. An intimation, very forcibly conveyed, that you are in want of money. Now, my dear Bob, as I am anxious that you should improve more and more in your studies and the affections of your tutors, I have hit upon the expedient of economising your time, by furnishing you with a quire of printed letters, containing the substance and purport of your one hundred and fifty-six communications, and you will have nothing more to do, than to date and direct one weekly to your affectionate father, J. B."

Now, do you understand us, kind friend, when we assert that we have read all the orations of the "glorious day?" We mean, then, that we have read *two* or *three* of them, and as we found the two or three to be something upon the same principle as the printed letters of Bob, we take it for granted we have read *all*.

This digression and this story have carried us away from the description and discussion of the immortal book, whose name heads our article. With our hand upon our hearts, we say, that we have never read any thing like it. It is a happy union of rhyme, wit, pathos, satire, description. It teems with sentiment. It is prolific of condensation. It abounds with colored, wood engravings, and pictorial representations. It is the most unique specimen of Yankee enterprise and talent.

But these are *generalisms* which require some special proofs to sustain them. We proceed to the delightful task. We open at random.

"Little boy blue, come blow your horn.
 The sheep 's in the meadow, the cow 's in the corn.
 What! is this the way you mind your sheep.
 Under the haycock fast asleep?"

*The only pure edition. Boston—printed and published by Munroe & Francis—p. 96.

Now we ask the reader to pause and admire each line, (for each line contains a moral,) of this poem. Observe how cautiously and properly the master, employer or parent (whichever he was,) of the "little boy blue," approaches him. Notwithstanding the breach of trust, the palpable omission, the dormant position of the delinquent, the master flies not into a passion, he suffers not the sheep to remain in the meadow, and the cow in the corn, whilst he gratifies his excited feelings by stripping and *striping* the juvenile youth azure. No, he goes to work very differently. He first applies himself to the correction of the *evil*, instead of the *offender*. He directs the latter to blow his horn. It is done; and having been done, he next proceeds to give (what all good masters and parents should always do,) his reason for the order, which reason is to be found in the second line,

"The sheep 's in the meadow, the cow 's in the corn."

The reason having been given, he then bursts forth in the tones of indignant reproach—

"What! is this the way you mind your sheep,
Under the haycock fast asleep?"

We are to suppose, (although the poem does not say so,) that this reproach was made with some *emphasis*—that it was accompanied with some *black* and *blue* marks or memorandums, which would be a kind of *vade mecum* to the "little boy blue," inasmuch as they would be inscribed upon a tablet, and written upon a *parchment*, very well adapted to retain the impressions. Altogether, then, we say, the poem is an exquisite production. And the engraving is alike excellent. It also requires a description. In the back ground is a village church, the loftiness of whose spire may be imagined, when we assert, that it touches the clouds; but the haystack is a more astonishing one than we have ever witnessed. It "o'ertops the rainbow's home,—it out vies the rainbow's hues." If we had not met with it in so veritable a book as Mother Goose's Melodies, we should be inclined to doubt whether such a haystack ever existed. Finding it there, we cannot doubt that such a haystack *has* existed—in the imagination of Mother Goose. We must, as impartial critics, notice what we consider an instance of bad taste. A *rake* (we don't mean the "little boy blue") is lying by the haystack. Now whether this be allegorical or rustical, it is bad taste. There is no moral beauty in a rake of any kind. It should have no place in so moral a poem, or book, as the one under discussion. We are also called upon to notice what may be called a *glaring* defect in the engraving. We allude to the dress of the "little boy blue." He is clothed in a suit of *crimson*. We think this an inconsistency, unless, indeed, it is intended to show that *all* his *habits* are bad. Still we do not understand why he should be *dressed* in *red*, and *ad-dressed* as "little boy blue." We think both him and this matter, should be *re-dressed*. We hope that future editions of this book will be *read*, but that the "little boy blue" will not be *red*. Perhaps, after all, we are hypercritical. Perhaps he is called "*blue*" to represent a *quality*, a state of mind or body of the *minute youth cerulean*. Perhaps the painter or the poet was *blue*. Perhaps—but pshaw! what is the use of bothering the little brain we have. There is a mystery in all great works—in all small men. The author of Junius is unknown. The meaning of Mother

Goose must remain, like the haystack and the village spire, in the clouds.

Let us shut the book and open again at random. Here goes. Page 72. Let us see what we have got. By all that's good, a *matrimonial* moral.

"Jack Sprat could eat no fat,
His wife could eat no lean."

"Pshaw!" says some censorious reader—"Now we are going to have the history of that daily occurrence, that hourly episode, a *Hymenial* squabble. I suppose Mrs. Sprat said to Mr. Sprat, 'Sir, you are a selfish brute—you are a gormandizing monster—a gross eater; and I assure you, Mr. Sprat, that although I have now the misfortune of being your wife, I am still a mourner for my dear *late* husband.' And I suppose Mr. Sprat rejoined, 'And I assure you, Mrs. Sprat, that your dear *late* husband has not a more sincere mourner than your present unfortunate spouse; and that it would give me a melancholy pleasure to lay you down beside the dear departed, and to raise a tablet to your *joint* virtues, with this inscription, 'they were lovely in life, and in death they are not divided.' I suppose," continues the censorious reader, "this is what the poem tells us." Not at all—dear old lady. Not at all. "Well then," exclaims the classical reader, "you are going to give us a second edition of the old Roman story of the grandsons of Tarquinius Priscus, and the daughters of Servius Tullius. You are going to remind us, that the Roman king married his angel daughter to the fiery grandson of Tarquin, and his devil daughter to the mild scion of Priscus in order 'to *cross* (?) their tempers, by giving each to him of a contrary turn of mind"—*Consequence was*—as Samuel Weller, Esquire, says—the angels were killed, and the devils after some *slight* murders, &c., came together; and now you are going to give us an humble illustration of the truth of this story in the history of Mr. and Mrs. Sprat." Not at all, learned sir—not at all. "Then, what are you going to give us?" exclaims a fair reader. Well, dear young lady, we should like to give you a kiss, if you were near enough to us; but as you are not, we are going to show you, upon the undoubted authority of Mother Goose, that matrimony is not so complicated a machine as you take it to be; that with common patience and forbearance, persons of different sexes and contrariant dispositions, may live together like Law and Justice are said to do, in beautiful and harmonious concert. Behold the proof.

"Jack Sprat could eat no fat,
His wife could eat no lean,
So" —

Mark, gentle, fair, censorious, classical reader, mark the moral—observe the sequel—

"So, twist them both they—cleared the cloth,
And lick'd the platter clean."

And to make the impression more lasting, there is the pictorial representation of Mr. and Mrs. Sprat, with great unanimity, "licking the platter clean."

Patience, kind readers, patience! I will soon be done. I am sure if you have had perseverance enough to read through "the last new novel," your patience is nonsense proof. Let us open once more. Page 57.

"Three wise men of Gotham
Went to sea in a bowl,
If the bowl had been stronger
My song had been longer."

Now, match me that, my masters, for brevity and condensation of expression. How different from the inflated verbosity of the present poets. Suppose now, for example, the three wise men of modern Gotham, should go to sea in a bowl—(and by-the-bye, we expect they have all been *half seas over with a bowl*)—what an excitement would be produced—what a fuss would be made. The Courier, the Star, the Herald, would have “black lines drawn around and through them;” paragraph upon paragraph would be written—column (typographical) upon column, would be devoted to the history of their fate—their sufferings—their virtues. Mother Goose, although she had quite as much capital to bank on with *her* three wise men, records *their* fate, *their* sufferings, *their* virtues, in four lines. No doubt, as she says, “if the bowl had been stronger, the story had been longer.” We are very glad the bowl was weak.

Again—page 67,—

“John O’Gudgeon was a wild man,
He whipt his children now and then;
When he whipt them, he made them dance
Out of Ireland into France.”

The only remark we have to make upon this is, that although it may be very laudable, (and Solomon says it is,) in a parent to whip his children “now and then,” and though it may be rare fun and uncommon diligence to make them dance “out of Ireland into France,” yet our opinion of the poetry in which the sentiment is clothed, is, that it would require a miracle to make any man write *worse*.

We conclude our extracts, by giving page 75 entire, to which we will add nothing, for the simple reason that we have nothing to add.

“Five children playing on the ice,
All on a *summer’s* day,
As it fell out, they *all* fell in,
The *rest* all ran away.

Now had these children been at home,
Or skidding on bare ground,
Ten thousand pounds to one penny,
They had not *all* been drown’d.

You parents, that have children dear,
And you too that have *none*,
If you would have them safe *abroad*,
Pray keep them safe at *home*.”

We close this critique with the observation that Messrs. Munroe and Francis, the enterprising publishers, have immortalized themselves as long as Mother Goose lives; and we add, that acting upon the principle of the Parisian widow, who erected a splendid mausoleum to the memory of her departed husband, with this inscription, “This tablet is reared by his disconsolate widow, who keeps perfumery and gloves in Rue St. Germain, No. 156, and will be happy to serve all who call”—so we say to Mother Goose, to Messrs. Munroe and Francis, to the Messrs. Harpers, to Mr. Colman, to all and singular the booksellers, that for a *quid pro quo*, we are willing to read, (!) we are willing to review (we are content to be martyrs,) any of their *heavy*—*light* productions, and to draw out the beauties, and shovè in the defects thereof, in the same manner, and with the same talent, that we trust we have exhibited in criticising the “Melodies of Mother Goose.”

A GEORGIA REVIEWER.

Savannah, Georgia.

AUTUMNAL STORMS.

BY PARK BENJAMIN.

I.

Off in the West there is a sea of blue:—
While gloomiest vapors, clustering on high,
Tell that the hour of storm is drawing nigh;
For dark they rise, and darker to the view.
Oh, coldly from the East careers the gale—
Sharp as Adversity or the pang of grief,
Which seres the heart like Autumn’s wither’d leaf,
When those we love in their affection fail.
Now from the scattering mists, relentless Rain,
Falls in chill drops, precursors of the shower,
That soon will prostrate the unsheltered flower,
Blooming of late securely on the plain.
It comes! in sudden gusts it rushes down—
And angry clouds o’er all the landscape frown.

II.

The Northern wind hath blown his bugle blast:—
And troops of clouds come hurrying on the fields
Of the dark sky, and wide their banners cast,
And lift above the earth their massive shields.
Now, all unordered, all unmarshalled, they
Make preparation for the dire affray;
Their weapons are the sleet, the rain, the hail—
Concealed behind those parapets of mist:
Lo! now, their keen-edged fury doth assail
The guarding atmosphere, and o’er the land—
Save where its breast is cased in rocky mail,—
Pours devastation, at thy stern command,
Oh, Northern wind! Nor will the war desist,
Till thou art conquered by some hostile gale!

DESULTORY THOUGHTS ON LOVE.

BY A BACHELOR.

All thoughts, all passions, all delights,
Whatever stirs this mortal frame,
All are but ministers of Love,
And feed his sacred flame.

Thus sings Coleridge, bard of the visionary eye, and thus all nature and all experience proclaim.

We are told that God is Love; and this divine principle was made to act a primary part in all the ancient systems of theology and cosmogony. Aristophanes in his *Artes*, rendering an account of this primitive philosophy, observes, that “at first was nothing but Night and Chaos, which producing an egg, from thence proceeded Love, that mingling again with Chaos, begot heaven and earth, and animals and all the gods.” In the earliest opinions of mankind there appears a certain harmony, which would seem to indicate a common source, and the passage just quoted from the Greek poet, will not fail to call to mind the Spirit of God moving upon the face of the waters, of the Mosaic Record. But this Love does not correspond with the sense in which the term is popularly employed—and we are told, indeed, in the following old version of the Wings of Simmias Rhodias, a hymn made in the honor

of Love, that it is not Cupid, the soft and effeminate son of Venus, but another kind of love.

I'm not that wanton boy,
The sea-froth goddess' only joy ;
Pure heavenly love I hight, and my
Soft magic charms, not iron bands, fast tye
Heaven, earth and seas. The gods themselves do readily
Sloop to my laws. The world dances to my harmony.

This is clearly the animating soul of nature, the *ratio mersa et confusa*, which is so beautifully depicted in the well known lines of Virgil, a passage which—to employ the phrase of a quaint old writer—has a “strong spice and haust-gout” of Pantheism.

Principio cœlum ac terram, camposque liquentes
Lucentemque globum lunæ, Titaniaque astra
Spiritus intus alit, totosque infusa per artus
Mens agitât molem, et magno se corpore miscet.

Which—not having a copy of “glorious John” at hand—we venture to paraphrase thus :

Earth, Heaven's expanse, the liquid fields of light,
The silvery moon and stars serenely bright,
One life pervades, whose animating soul,
Extends through every part and stirs the mighty whole.

Moreover, this cannot be that love either, which is described in Plato's Symposium, which “is nothing but *φιλοκαλία*, or the love of pulchritude—as such, which though rightly used, may perhaps wing and inspire the mind to noble and generous attempts, and beget a scornful disdain of mean, dirty and sordid things ; yet is capable of being abused also, and then it will strike downwards into brutishness and sensuality. But at best it is an affection belonging only to imperfect and parturient beings ; and therefore could not be the first principle of all things. Wherefore, we see no very great reason but that, in a rectified and qualified sense, this may pass for true theology—that Love is the Supreme Deity and original of all things, namely—if it be meant eternal, self-originated, intellectual Love, or essential and substantial goodness, that having an infinite overflowing fulness and fecundity ; dispenses itself uninvadously, according to the best wisdom, sweetly governs all, without any force or violence, (all things being naturally subject to its authority and readily obeying its laws,) and reconciles the whole world into harmony. For the Scripture telling us that God is Love, seems to warrant thus much to us, that love in some rightly qualified sense, is God.”

These speculations may seem barren of interest or instruction, yet we confess that both from taste and reason, we are fond of those lofty contemplations which give dignity to our nature, and elevate its sentiments and affections to something of a divine origin and sympathy. Indeed, those who take a merely physical and grovelling view of human nature in this regard, voluntarily degrade themselves ; and of them it may be said what Bacon has so finely observed of another class of material philosophers : “They that deny a God, destroy man's nobility ; for certainly man is of kin to the beasts by his body ; and if he be not of kin to God by his spirit, he is a base, ignoble creature. It destroys likewise magnanimity and the raising of human nature ; for take an example of a dog, and mark what a generosity and courage he will put on, when he finds himself maintained by a man, who to

him is instead of a God or *melior natura*. Which courage is manifestly such, as that creature, without that confidence of a better nature than his own, could never attain. So man, when he resteth and assureth himself upon divine protection and favor, gathereth a force and faith which human nature in itself could not obtain.” So it may be remarked, that those who take an elevated and spiritual view of love, give a nobility, purity and permanence to that passion to which it could not otherwise attain.

Indeed, human love seems to ascend by gradual transition to the divine, from which it cannot be disjoined altogether. Something superior to the idea commonly conveyed by the term, has always been recognized by high and spiritual natures, of which the Socratic and Platonic passions are illustrations. Socrates, who defined Love to be “a desire for happiness, through the medium of beauty,” delivers himself as follows : “There is but one eternal, immutable, uniform beauty ; in contemplation of which, our sovereign happiness does consist : and therefore a true lover considers beauty and proportion as so many steps and degrees, by which he may ascend from the particular to the general—from all that is lovely of feature, or regular in proportion, or charming in sound, to the general fountain of all perfection. And if you are so much transported with the sight of beautiful persons, as to wish neither to eat or drink, but pass your whole life in their conversation ; to what ecstasy would it raise you to behold the original beauty, not filled up with flesh and blood ; or varnished with a fading mixture of colors, and the rest of mortal trifles and adornments, but separate, unmixed, uniform and divine,” &c. In the Sacred Scriptures the phraseology of love is constantly employed in a manner which has led some weak and ardent minds to sensualize religion itself. With such persons, the song of Solomon is a favorite book, in which they discover peculiar treasures of grace, and from which they derive a language and illustrations in harmony with their excited feelings. From the origin of christianity, there have always been those who con-founded the sentiments and mingled the phraseology of earthly love with the divine. That voluminous and ingenious collection of curious opinions and facts, Bayle's Dictionary, presents many proofs of this assertion, some of which are as amusing as they are strange. The evanescent popularity of certain sects, has been in a great measure owing to the ardent and almost amatory phraseology with which they promulgated their peculiar tenets. The *Quietists* of France—who, if we mistake not, derived their origin from Spain—indulged in a strain strongly imbued with the fervor and phrases of earthly passion, as may be seen in the spiritual songs of Madame Guion, whose saintly enthusiasm captivated the loving soul of Fenelon. The Moravians have been accused of a similar error—we know not with what justice—though we recollect a hymn of that truly pious and benevolent people, in which the epithets *fatr* and *ruddy* are applied to the Saviour. For a similar cause, the followers of Wesley have incurred the coarse ridicule of Anstey, the author of that amusing work, the Bath Guide, as well as of other profane scoffers, which has perhaps been slightly, we will not say justified, by the extravagances of some of the weaker brethren. We know one clergy-

man who enjoys a great popularity among a certain class, which is chiefly owing to his effeminate manner, soft voice and sentimental air, combined with an impassioned and insinuating address. He is in manner, at least, a pulpit Lothario—the very sybarite of saints. Spurious religious enthusiasm has certainly a singular connection with sensual ardor—so much so, that the morals of a rhapsodical sentimental religionist, without rational and well-matured principles, are ever to be suspected. Such persons always find their first disciples and apostles among weak and susceptible women.

Still we believe that there is not only a love in religion, but also a religion in love, and that when this is pure and exalted it is more than any other feeling expressive of the spiritual and immortal part of our being; approximating us to the nature and happiness of those higher essences, whose thoughts and affections are not depressed and manacled by the bonds of flesh and blood—for they too love, according to the declaration of Raphael, the “sociable angel” to our first parent:

Let it suffice thee that thou know'st
Us happy; and without love no happiness,
Whatever pure thou in the body enjoy'st
(And pure thou wert created) we enjoy
In eminence; and obstacle find none
Of membrane, joint, or limb, exclusive bars.

But to come down from these elevated regions—through the pure ether of which it is sometimes refreshing to soar, as with angelic wings—we shall now treat somewhat discursively, indeed, of that earthly passion of love, which is the delight or torment, the boon or bane of the children of men.
